Indicator buffer tablets

Indicator buffer tablets

for determination of water hardness with EDTA

Dissolve one tablet in 50 ml water sample and bring to pH 11 with approx. 1 ml ammonia solution 30 % (art. CP17). Titrate with EDTA disodium salt volumetric solution (art. T136 or T137) from red to green.

For total germ count in liquids or on surfaces. Suitable for analysis of cosmetics and of preservative containing products or after disinfection. Contains two neutralizers.

WGK 2

Warning H319

Formulation:

Agar side 1 (PCA):
Casein peptone ..... 5,0 g/l
Glucose. ..... 1,0 g/l
Yeast extract. ..... 2,5 g/l
Agar. ..... 15,0 g/l
pH value. ..... 7,2 ±0,2
Colour. ..... amber, slightly opalescent
Growth of test strains. ..... complies
Agar side 2 (TSA-Letheen):
Pancreatic digest of casein. ..... 15,0 g/l
Soy peptone (papain hydrolysate). ..... 5,0 g/l
Sodium chloride (NaCl). ..... 5,0 g/l
Lecithin. ..... 0,7 g/l
Polysorbate 80. ..... 5 g/l
Agar. 15,0

Roti®fair BBS

Roti®fair BBS

for 500 ml/tablet, for biochemistry and molecular biology

Coating of ELISA plates and blocking supplement.

1x BBS solution is prepared by solubilization of 1 tablet in 500 ml highly pure water.

Borate Buffered Saline (tablets)

WGK 1

Danger H360FD

Composition:

Prepared 1x BBS solution contains: 0,15 M NaCl, 10 mM borate buffer, pH-value 8,2 ±0,05, when prepared in deionized or distilled water.

Roti®fair BSC

BSC buffer powder (pouch), Buffered Sodium Citrate

WGK 1

Roti®fair BSC

for 100 ml pouch, for cell biology

Buffer solution for isolation of blood cells.

0,109 M BSC solution is prepared by dissolution of 1 pouch in 100 ml highly pure water.

Formulation:

Prepared BSC solution contains: 0,109 M (3,2 %) buffered Na-citrate, when prepared in deionized or distilled water.

For research use only. Not approved for human or veterinary use, for application to humans or animals, or for use in clinical or *in vitro* diagnostics.

Silicon oils

Thermal stability

In the presence of air, silicone oils M are stable up to 150 °C for a long time. If you impede the air supply they are even stable up to higher temperatures. If you stop the air supply totally, i.e. the oil is used in a closed system or in an inert atmosphere, e.g. in an atmosphere of nitrogen or carbon dioxide, the oils can be used up to peak temperatures of about 300 °C, but the viscosity will decrease continously.

Solubility

All silicone oils M can be solved easily in aliphatic and aromatic hydrocarbons, higher alcohols, ether, ester and chlorinated hydrocarbons, e.g.

petroleum benzin	ethyl acetate
benzene	butyl acetate
toluene	carbon tetrachloride
ether	chloroform
butyl alcohol	trichloroethylene
amyl alcohol	tetrachloroethane

Silicon oils are not soluble in water, methanol and ethylene glycol. The solubility in organic solvents increases with decreasing viscosity. Therefore, in addition, silicone oils M 50 and M 100 are soluble in isopropanol and n-butanol and partially miscible with n-propanol. Silicone oils M with a viscosity below 20 mm · s^{-1} can be solved in n-propanol and also in acetone and dioxane. Silicone oils M with a viscosity of 10 mm · s^{-1} are even soluble in ethanol.

Lubricant and gliding properties

The lubrication properties of silicone oils M depend on the bearing material to a high degree. They give the best results with plastics, e.g. polyamides, polystyrene, phenol resins and with rubber. They are also suited as lubricants for some special combinations of metallic materials, e.g. steel combined with bronze, brass, chromium, zinc or cadmium, also chromium combined with bronze.

However there is no lubricity when you combine steel with steel in the range of the critical friction. In each case you have to decide whether the use of pure silicone oils M is to be taken into account. It is necessary to distinguish between the lubricity and the gliding properties of the oils. Silicone oils M are excellent gliding agents in many cases, e.g. in the treatment of special plastics and man-made fibres. This property is not due to the building up of a load-bearing lubrication film, but to the separation effect of the silicone oils M.

Surface tension

The surface tension of the silicone oils M is in the range of about 19-21 mM · s^{-1} , so it is extremely low. It increases only a little with viscosity of the oils.

Refractive index

The refractive index of silicone oils M increases from 1,3941 for M 3 to 1,4000 for M 20, and it is almost constant at 1,4042 for M 1000 and higher.

Density

At 25 °C the densities of silicone oils M range between 0,90 and 0,97. So they are not very different from the density of water. With increasing viscosity the densities of the oils increase too. They depend on temperature nearly linear: The values mentioned above were measured between -40 °C and 175 °C.

Chemical inertness

Generally silicone oils M are inert. They are stable in contact with water, organic solvents, pure oxygen and many other chemicals. In contact with most metals they will not be changed, and on the other hand they will not corrode metals, wood, paper and plastics. Strong oxidising agents like concentrated nitric acid or elemental chlorine decompose silicone oils M especially at higher temperatures.

Main properties of silicone oils:

- Heat and cold resistance
- Low setting point
- Low temperature and pressure dependency of viscosity
- Low steam pressure
- Good dielectric strength, little depending on temperature and frequency
- High interfacial tension to water and organic polymers
- High surface activity
- High compressibility
- Chemical and physiological inertness

Due to these properties silicone oils M are ideal as:

- Heat transfer agents
- Hydraulic fluids
- Fluid dielectrics
- Surface agents
- Separating agents
- Gliding agents
- Defoamer
- Auxiliary agents in varnishes
- Damping fluids

Silicone paste

Heat resistance
Silicone pastes are stable within temperature range of -50 to +200 °C without any considerable change in their consistency.

Chemical resistance
Silicone pastes are resistant to steam, sulphur dioxide, diluted acids and alkaline solutions.They are chemically indifferent to metals and different kinds of metals.

Application range:
- Laboratory techniques as an antiseize agent and lubricant for stopcocks, taper ground joints and regulating valves. Also suitable for sealing various glass apparatus.
- Apparatus engineering
- Electrotechnology
