**Type analysis:**

Appearance. ..... brown, viscous liquid
Assay. ..... 28,2-31,2 % (HCl)

Brindi acid is the trade name of a descaler, made on the basis of hydrochloric acid which is inhibited from corrosion.

The chemical cleaning of metal surfaces by Brindi acid makes it possible to dissolve deposits consisting of rust, ferric oxide, boiler scale and other acid soluble compounds.

Brindi acid dissolves such deposits with the same efficacy like a strong acid.

But at the same time, the use of Brindi resin as corrosion inhibitor protects the metal surface against the corrosion normally caused by acid.

For application the product has to be diluted with 3 to 6 times the amount of water. Not suitable for aluminium and zinc.
