Sekuroka® Decon-Bags are a simple method for removal of ethidium bromide from solutions. The bags contain a special type of activated carbon which absorbs ethidium bromide effectively and safely. One bag can absorb 2.5 mg ethidium bromide. Efficiency is >99 %. The application is extremely simple: Place the absorber bag in the ethidium bromide solution, incubate for 24 hours under stirring and dispose of the bag as hazardous waste in accordance with local regulations.
Bag size: 6 x 2.5 cm.
**Also suitable for absorption of propidium iodide, PicoGreen® and SYBR® Green!**

## Ethidium bromide solution 0,025 % in dropper bottle

**aqueous solution (250 µg/ml)**

For staining of DNA or RNA in agarose gels during electrophoresis.

In spite of newly developed fluorescent staining reagents ethidium bromide remains the standard staining technic for nucleic acid in electrophoresis. Ethidium bromide is a carcinogenic substance which shouldn't come in contact with skin.
In order to minimise this danger we offer ready-to-use ethidium bromide solution in dropper bottles for easy handling and maximum safety.

**Application:**
Two drops will suffice for staining a 50 ml agarose gel.
Add directly to melted agarose.

**Please store in the dark!**

| | | | |
|---|---|---|---|
| **HP47.1** | 15 ml | plastic | 29,60 € |
| **HP47.2** | 5 x 15 ml | plastic | 104,20 € |

## Ethidium bromide solution 0,5 % in dropper bottle

**aqueous solution (5 mg/ml)**

For counterstaining of nuclei in histology and cytology.
For staining of DNA/RNA after electrophoresis.

**Warning** H332

**Application:**
In order to prepare a staining solution add 5 drops of ethidium bromide solution to 500 ml water, buffer, or electrophoresis running buffer, respectively. Nuclei / nucleic acids are stained red.

**Please store in the dark!**

| | | | |
|---|---|---|---|
| **HP46.1** | 15 ml | plastic | 29,60 € |
| **HP46.2** | 5 x 15 ml | plastic | 104,20 € |

## Ethidium bromide solution 1 %

**1 % solution in water (10 mg/ml)**

Homidium bromide, 3,8-Diamino-5-ethyl-6-phenylphenanthridinium bromide

**Warning** H332-H341

Stock solution for fluorescent detection of nucleic acids.
Detection limit: 1.5 ng/mm$^2$.
Excitation maxima (unbound): 210 nm, 285 nm, 470 nm
Excitation maximum (bound to DNA): 330 nm, 500 nm
Excitation possible via DNA at 254 nm
Emission maximum: 605 nm.
**Please store in the dark!**

## Ethidium bromide

**≥98 %**

For DNA-staining.

Homidium bromide, 3,8-Diamino-5-ethyl-6-phenylphenanthridinium bromide

$C_{21}H_{20}BrN_3$
M 394,33 g/mol
Storage temp.: +20 °C

**Danger** H330-H341-H302

Fluorescent dye with specific DNA binding capacity. Intercalates between base pair stacks of dsDNA, causing weaker staining of ssDNA or RNA. For staining of DNA/RNA in gels and for counterstaining of nuclei in histological and cytological analyses. Store in the dark!
Excitation maximum: 518 nm
Emission maximum: 605 nm

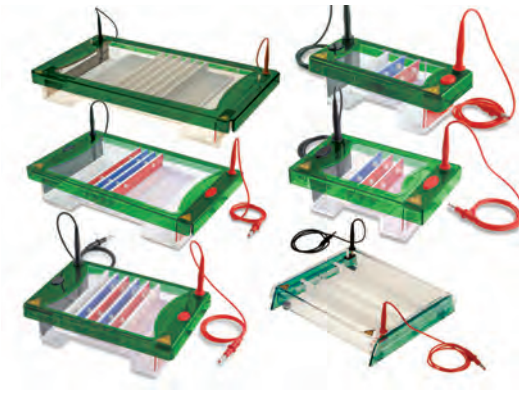
# Horizontal Electrophoresis: Systems & Modules

A large range of different electrophoresis chambers for agarose or acrylamide gel electrophoresis is available.

- Corrosion-free, gold-plated contacts. Conducting cables are linked directly to the safety lid, current flow is automatically stopped by opening the lid.
- The safety lid can only be closed in one direction, a mix-up of orientation is excluded
- The platinum electrodes are protected by a special construction
- Our entire range of electrophoresis chambers is CE-certified
- For all chambers a wide range of accessories is available, such as combs, spacers and gel casting trays
- All gel casting trays are **UV-transparent**

Depending on the model, the gels can be cast directly in the chamber or on a special gel casting tray. The different combs can be adjusted in height and are available in three or four colour-coded thicknesses.



### Overview of Horizontal Electrophoresis Units acc. to Gel Size

| Gel Size | Suitable for | Unit | Art. No. |
|---|---|---|---|
| 6 x 7.5 cm | Agarose | MINIeasy | N562.1 |
| 7 x 7 cm | Agarose | PROfessional I | 2788.1 |
| 8 x 10 cm | Agarose | MINIeasy | N817.1 |
| 10 x 10 cm | Agarose | PROfessional II | 2799.1 |
| 10 x 11.5 cm | Agarose | MIDI 1 | N576.1 |
| 15 x 15 cm | Agarose | PROfessional III | 2850.1 |
| 15 x 15 cm | Agarose | PROfessional runVIEW | 4849.1 |
| 15 x 15 cm | Agarose | MIDI PLUS | HP70.1 |
| 15 x 7 to 15 x 20 cm | Agarose | VARIA 1 | AE17.1 |
| 15 x 20 cm | Agarose | PROfessional III Stretch 20 | 9940.1 |
| 15 x 25 cm | Agarose | PROfessional III Stretch 25 | 9941.1 |
| 20 x 20 cm | Agarose | PROfessional IV | 2941.1 |
| 20 x 20 cm | Agarose | MIDI 2 | N596.1 |
| 20 x 20 cm | Agarose | MIDI 2 cooled | N618.1 |
| 24 x 20 cm | Acetate | PROfessional Acetate | 3099.1 |
| 25 x 25 cm | Agarose, IEP, Membrane | MULTI (flat bed) | CP51.1 |
| 25 x 30 cm | Agarose | MAXI | N610.1 |
| 25 x 30 cm | Agarose | MAXI cooled | N619.1 |
| 26 x 32 cm | Agarose | PROfessional V | 3000.1 |

TIP

Maximum voltage for horizontal gels: 10 V/cm gel length

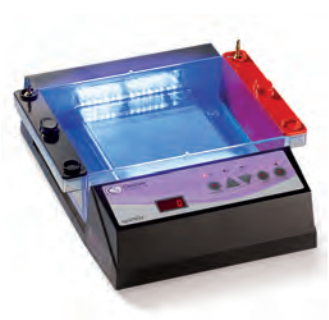
# Rotiphorese®-PROfessional - Product Line for Lab Bench and Student´s Courses

- Made of robust acrylic glass
- High-grade quality
- Injection moulded without bonding
- Absolutely leak proof
- Extremely easy to operate
- Wide range of accessories
- Easily replaceable electrodes
- Excellent value for money
- UV-transparent gel trays

TIP

- **PROfessional runVIEW real-time Electrophoresis**

# PROfessional runVIEW
# Real-time Electrophoresis under Blue Light



## Rotiphorese® Unit PROfessional runVIEW

**Gel size (w x l): 15 x 15 cm**
**Dimensions gel unit (w x l x h): 26.5 x 17.5 x 9 cm**
**Number of samples: max. 210 samples (using 6 comb slots)**
**Buffer volume: 500 ml**

- **All-in-one system for real-time electrophoresis:** unit, power supply and illuminator combined
- Watch your bands migrate through the gel in blue light - without mutagen or retina damaging effects
- Recommended for use with Roti®-Load DNAStain (green), compatible with ethidium bromide (red) and SYBR® Green (green)
- First choice for rapid gel analysis, gel elution and all control gels
- The unit Rotiphorese® PROfessional III (Art. No. 2850.1) may be customised by the runView Base station (Art. No. 4850.1)

Innovative, new all-in-one system for electrophoresis - with integrated Power Supply and illuminator. Stained DNA is made visible during the run by excitation with blue light of 470 nm wave length and a special lid with integrated emission filter for green fluorescence. Another special lid with an intergrated ethidium bromide filter is available as accessory (Art. No 8549.1). DNA stained during the run by Roti®-Load DNAStain (green), ethidium bromide (red), or SYBR® Green (green), can be watched in real-time without having damaging effects caused by short wave lengths.

Unit under blue light, without lid

Unit under blue light, with green-filtering lid

**Delivery incl.** Rotiphorese® PROfessional runVIEW Base (base station with integrated blue light and power supply), horizontal gel unit Rotiphorese® PROfessional III, special lid for blue light with integrated spectral emission filter (green filter) and electrophoresis power leads (4 mm plugs), 1 UV-transparent gel casting tray (15 x 15 cm) with gel casting gates, and eight double sided combs: 2x 4-sample / 16-sample (1 mm); 4x 20- / 28-sample (1 mm, multichannel compatible); 1x 4- / 16-sample (3 mm); 1x 20- / 28-sample (3 mm, multichannel compatible).

| Art. No. | Pack Qty | € |
|---|---|---|
| **4849.1** | 1 unit | 1746,90 |

## Rotiphorese® PROfessional runVIEW Base

**Base station for real-time electrophoresis.**
- Combination of power supply and blue light illuminator
- Special lid for detection of green fluorescent dyes
- Optimal supplement to electrophoresis unit Rotiphorese® PROfessional III

The special lid is also separately available (Art. No. 8557.1), as well a lid for red fluorescent dyes (Art. No. 8549.1).

**Delivery incl.** power supply with blue light illuminator, power cord, special lid with integrated spectral emission filter for green fluorescence, **suitable for electrophoresis unit PROfessional III** (Art. No. 2850.1).

| Art. No. | Pack Qty | € |
|---|---|---|
| **4850.1** | 1 unit | 1488,90 |

## Rotiphorese® PROfessional runVIEW Base MINI

**Base station for real-time electrophoresis.**
- Blue light illuminator, adaptable-size
- Special lid for detection of green fluorescent dyes
- Optimal supplement to electrophoresis units Rotiphorese® PROfessional I and II

The special lid is available in 2 different sizes and can also be bought separately: Art. No. 9959.1 for PROfessional I, Art. No. 9962.1 for PROfessional II. Convenient power supplies are EV1450 (Art. No. CP56.1) or Roth MINI (Art. No. 2907.1).

**Technical data base station MINI:**

| | |
|---|---|
| Wave length (excitation) | 470 nm (blue) |
| Ambient temperature | 15-40 °C |
| Rated voltage | 100-240 V |

**Delivery incl.** blue light illuminator (adjustable to 2 different sizes), power cord, special lid with integrated spectral emission filter for green fluorescence.

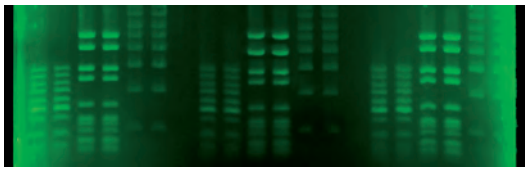
**For electrophoresis unit Rotiphorese® PROfessional I**

| Art. No. | Pack Qty | € |
|---|---|---|
| **9958.1** | 1 unit | 819,15 |

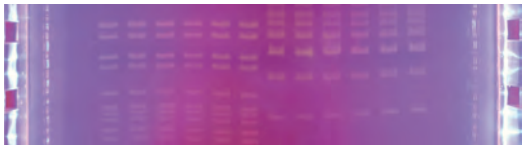
**For electrophoresis unit Rotiphorese® PROfessional II**

| Art. No. | Pack Qty | € |
|---|---|---|
| **9961.1** | 1 unit | 826,70 |

▶ For technical data see product description on the Internet!



## Rotiphorese® PROfessional runVIEW lid



**Special lid for real-time electrophoresis** with the runVIEW system.

Every lid has a built-in fan and an integrated spectral emission filter for blue light (orange for red fluorescence, yellow for green fluorescence). Together with the runVIEW system they make stained DNA visible during the run.

The lids are different in size. They are suitable for the electrophoresis units PROfessional I, II and III. Together with the lids and a runVIEW base device the chambers can be upgraded for real-time electrophoresis (for detailed information see Rotiphorese® PROfessional runVIEW base devices, Art. No. 9958.1 / 9961.1 / 4850.1).

Marker DNA with Roti®-Load DNAstain under blue light (green filter lid). Picture taken during the run. 100 bp Ladder, pBR328 Mix I and 1 kbp Ladder (1.2 µg each) in 1 % agarose / 0.5x TBE.

Marker DNA with Roti®-Load DNAstain under blue light (red filter lid). Picture taken during the run. pBR328 Mix I and kbp Ladder (1.2 µg each) in 1 % agarose / 0.5x TBE.

| Type | Filter type | Colour filter insert | Use | Art. No. | Pack Qty | € |
|---|---|---|---|---|---|---|
| **for unit PROfessional I** | green filter | yellow | green fluorescence | **9959.1** | 1 unit | 193,50 |
| **for unit PROfessional II** | green filter | yellow | green fluorescence | **9962.1** | 1 unit | 204,25 |
| **for unit PROfessional III** | red filter | orange | red fluorescence | **8549.1** | 1 unit | 149,45 |
| **for unit PROfessional III** | green filter | yellow | green fluorescence | **8557.1** | 1 unit | 145,15 |

| blue | 2,0 mm |

# PROfessional Standard Units

## Rotiphorese® Unit PROfessional I

**Gel size (w x l): 7 x 7 cm**
**Unit dimensions (w x l x h): 21 x 9 x 9 cm**
**Number of samples: max. 32 samples (using 2 comb slots)**
**Buffer volume: 225 ml**

- First choice for rapid single-bench analyses
- Seven different combs available in four thicknesses, including preparative combs with broad wells
- Gel trays with 7 and 10 cm length available
- Compatible with multi-channel pipettors (see table)
- For real-time electrophoresis upgradeable with Rotiphorese® PROfessional runVIEW Base MINI (Art. No. 9958.1)

**Delivery incl.** horizontal gel chamber, safety lid with integral power leads (4 mm plugs), 1 UV-transparent gel casting tray (7 x 7 cm) with gel casting gates, and two combs (1 mm, 8 teeth).

| Art. No. | Pack Qty | € |
|---|---|---|
| **2788.1** | 1 unit | 396,70 |

## Rotiphorese® Unit PROfessional III Stretch 25

**Gel size (w x l): 15 x 25 cm**
**Unit dimensions (w x l x h): 17,5 x 41 x 9 cm**
**Number of samples: max. 350 samples (using 10 comb slots)**
**Buffer volume: 1000 ml**

- First choice for all standard analyses
- For high flexibility in application: Gel trays with 7, 10, 15, 20 and 25 cm length available
- Seven different combs available in four thicknesses, including preparative combs with broad wells
- Compatible with multi-channel pipettors (see table)
- For gel trays, combs and further accessories see Rotiphorese® unit PROfessional III (Art. No. 2850).

**Delivery incl.** horizontal gel chamber, safety lid with integral power leads (4 mm plugs), 1 UV-transparent gel casting tray (15 x 25 cm) with gel casting gates, and 4 combs (1 mm, 28 teeth).

| Art. No. | Pack Qty | € |
|---|---|---|
| **9939.1** | 1 unit | 611,70 |

## Rotiphorese® Unit PROfessional IV

**Gel size (w x l): 20 x 20 cm**
**Unit dimensions (w x l x h): 39.5 x 23 x 9 cm**
**Number of samples: max. 500 samples (using 10 comb slots)**
**Buffer volume: 1200 ml**

- For large gels or higher sample numbers
- For high flexibility in application: Gel trays with 10, 20 and 25 cm length available
- Eight different combs available in four thicknesses, including preparative combs with broad wells
- With practical and easy-to-use gel cooling, independently of water supply or temperature baths
- Compatible with multi-channel pipettors (see table)

**Delivery incl.** horizontal gel chamber, safety lid with integral power leads (4 mm plugs), 1 UV-transparent gel casting tray (20 x 20 cm) with gel casting gates, and two combs (1 mm, 20 teeth).

## Rotiphorese® Unit PROfessional V

**Gel size (w x l): 26 x 32 cm**
**Unit dimensions (w x l x h): 50 x 28 x 9 cm**
**Number of samples: max. 672 samples (using 12 comb slots)**
**Buffer volume: 1400 ml**

- For very long gels or high sample numbers
- For high flexibility in application:
  Gel trays with 16, 24 and 32 cm length available
- With practical and easy-to-use gel cooling, independently of water supply or temperature baths
- Compatible with multi-channel pipettors (see table)

**Delivery incl.** horizontal gel chamber, safety lid with integral power leads (4 mm plugs), 1 UV-transparent gel casting tray (26 x 32 cm), and six combs (1 mm, 28 teeth). For sealing of the tray during gel pouring we recommend to use the temperature stable Sekuroka®-adhesive tape, Art. No. L035.1

| € | 70,90 | 70,90 |

TIP

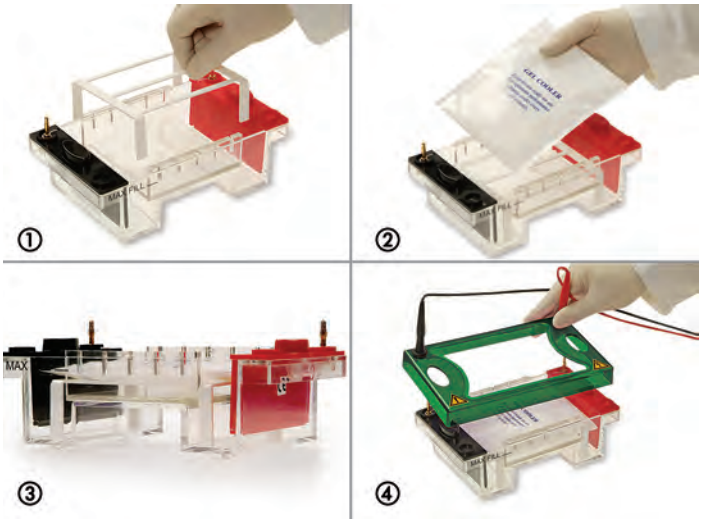
Maximum sample size depends on the height of the gel.
Rule of thumb (all values in mm): Max. sample per well =
Broadth of teeth x comb thickness x (gel height - 3)

## Rotiphorese® Unit PROfessional Acetate

**Max size of analysis (w x l): 24 x 20 cm**
**Unit dimensions (w x l): 30 x 30 cm**

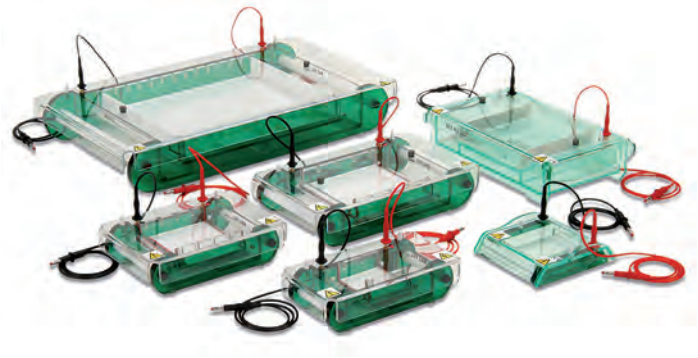
- Compact high resolution system for electrophoresis of acetate strips and membranes
- Suitable for both standard and wet cellulose acetate electrophoresis
- For high flexibility in application

**Delivery incl.** horizontal gel chamber, safety lid with integral power leads (4 mm plugs), adjustable support for different lengths of membrane strips.



| Art. No. | Pack Qty | € |
|---|---|---|
| **3099.1** | 1 unit | 642,85 |

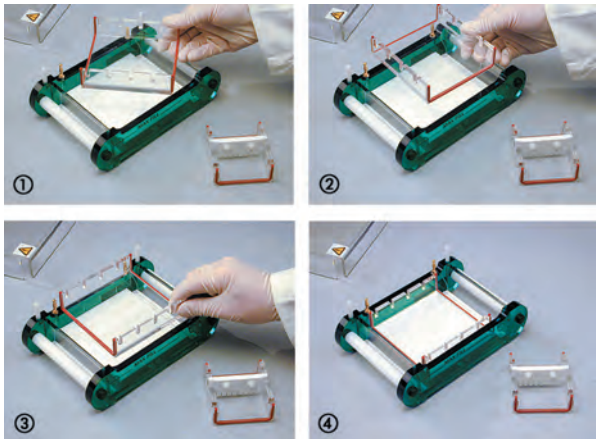
PROfessional gel casting dams (example)



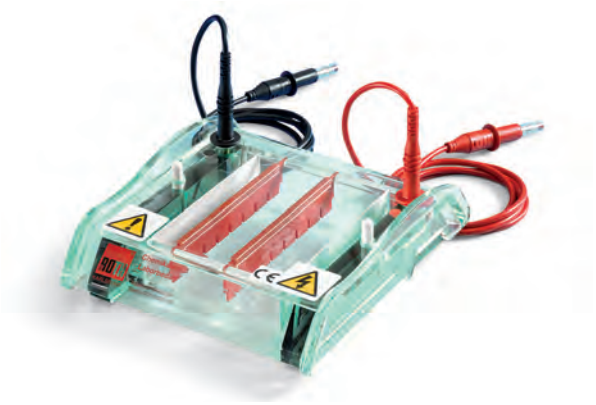
## Convenient Gel Cooling System

Larger Rotiphorese®-PROfessional units may be cooled by a highly efficient and very easy to applicate cooling system via precooled pads.

① Set cooling frame into buffer-filled chamber covering the gel
② Load gel and carefully apply precooled cool pack
③ Side view
④ Add lid and start gel run



# The Classic Line - Compact Horizontal Electrophoresis Chambers



- High-grade quality
- Firmly standing
- Robust construction made of acrylic glass
- Chemically bonded contact points
- Platinum electrodes are protected by a special construction
- Wide range of accessories
- UV-transparent gel trays

## Convenient in-Tank Gel Pouring

Big benefit: Several instruments of the classic line allow very convenient in-tank gel pouring - fast and definitely leak-proof.

① Remove the gel tray from the chamber. Turn the tray by 90°.
② Press the tray carefully into the chamber so that the silicone rubber forms a tight, leak-free seal with the walls of the chamber. Pour slightly precooled agarose into the tray.
③ Allow the agarose to polymerise, then lift the tray from the chamber and insert it back by positioning it in the direction of the run.
④ The gel is ready for sample loading and for electrophoresis.

## MINI*easy* Electrophoresis Unit

**Gel size (w x l): 8 x 10 cm**
**Unit dimensions (w x l x h): 13.5 x 15 x 3 cm**
**Number of samples: max. 32 samples (using 2 comb slots)**
**Buffer volume: 50 ml**

- Complete gel chamber for speedy analysis
- The entire chamber can be placed on a UV-transilluminator
- Low buffer quantity needed
- Tank-gel casting (casting tray cannot be removed)

**Delivery incl.** horizontal gel chamber, safety lid with integral power leads (4 mm plugs), two gel casting gates and two combs (1.5 mm; 8 teeth).

## MIDI PLUS Electrophoresis Unit

**Gel size (w x l): 15 x 15 cm**
**Unit dimensions (w x l x h): 21,5 x 33,5 x 7 cm**
**Number of samples: max. 120 samples (using 4 comb slots)**
**Buffer volume: 1200 ml**

- Platinum electrodes are protected from damage by a special construction
- Convenient in buffer recirculation
- Eight different combs available in three thicknesses, including preparative combs with broad wells
- Compatible with multi-channel pipettors (see table)
- Gold standard for all routine gels in the lab

**Delivery incl.** horizontal gel chamber, safety lid with integral power leads (4 mm plugs), two connections for buffer recirculation, removable gel casting tray with gel casting gates, and two combs (1 mm, 16 teeth).

## VARIA 1 Electrophoresis Unit

**Gel size (w x l): variable, 15 x 7 to 15 x 20 cm**
**Unit dimensions (w x l x h): 31.5 x 19 x 7 cm**
**Number of samples: max. 60/90/120/180 samples (using 2/3/4/6 comb slots in a 7/10/15/20 cm long gel tray)**
**Buffer volume: 700 ml**

- Superior flexibility in one chamber through 4 gel trays of different lengths
- Convenient in buffer recirculation
- Asymmetric electrode offset preventing accidental polarity reversal
- Colour coded combs with five different tooth sizes
- Developed by Scientists for Scientists

**Delivery incl.** horizontal gel tank, safety lid with integral power leads (4 mm plugs), two connections for buffer circulation, two gel casting gates, four removable gel casting trays of 7, 10, 15 and 20 cm length, respectively, two combs (1 mm, 15 teeth).

# Electrophoresis · Units

## MIDI 2 Electrophoresis Unit

**Gel size (w x l): 20 x 20 cm**
**Unit dimensions (w x l x h): 27 x 47.5 x 8 cm**
**Number of samples: max. 160 samples (using 4 comb slots)**
**Buffer volume: 2200 ml**

- Platinum electrodes are protected from damage by a special construction
- Convenient in buffer recirculation
- Four different combs available in three thicknesses
- Compatible with multi-channel pipettors (see table)
- Very robust unit, optimised for large standard gels
- Available with cooled base plate

**Delivery incl.** horizontal gel tank, safety lid with integral power leads (4 mm plugs), two connections for buffer recirculation, removable gel casting tray, two gel casting gates and two combs (1 mm, 16 teeth).

## MAXI Electrophoresis Unit

**Gel size (w x l): 25 x 30 cm**
**Unit dimensions (w x l x h): 33 x 56 x 9 cm**
**Number of samples: max. 624 samples (using 12 comb slots)**
**Buffer volume: 3000 ml**

- Platinum electrodes are protected from damage by a special construction
- Convenient in buffer recirculation
- Two different combs available in three thicknesses
- Compatible with multi-channel pipettors (see table)
- Optimised for very high sample numbers and for long separation distance
- Available with cooled base plate

**Delivery incl.** horizontal gel tank, safety lid with integral power leads (4 mm plugs), two connections for buffer recirculation, removable gel casting tray, two gel casting gates and six combs (1 mm, 26 teeth).

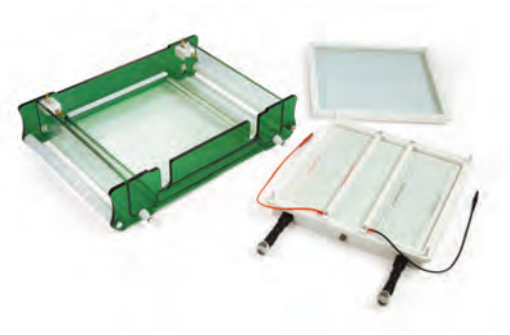
## Flat Bed Electrophoresis Unit MULTI

**For all precast horizontal gels and for Iso Electric Focussing**
**Gel size (w x l): max. 25 x 25 cm**
**Unit dimensions (w x l x h): 46 x 41 x 11.5 cm**
**Number of samples: variable**



- For high voltage electrophoresis up to 5000 Volt
- Variable applications using tank mounted electrodes or adjustable electrodes for wicked horizontal gels/IEF
- Including cooling unit and buffer drainage system
- Superior separation quality and robust construction

**Technical data:**
Length 46 cm, width tank only 34 cm, width incl. cooling connectors 43 cm, height 11.5 cm, weight 9.6 kg.

We recommend using Circulation Cooler Accel 250 (Art. No. PE51.1) and Power Supply EV 233 (Art. No. A541.1).

**Delivery incl.** horizontal flat bed electrophoresis chamber with buffer chambers and integral electrodes, safety lid, one removable ceramic cooling plate (27 cm width x 27 cm length), one glass electrode frame, one adjustable anode- and cathode electrode, glass electrode weight, drainage tubing (outer ∅ 12 mm), cable set (2 mm plug) and adapter pair for 4 mm socket.

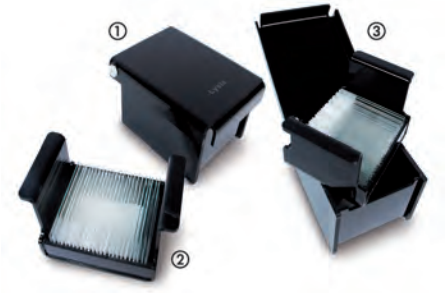
| Art. No. | Pack Qty | € |
|---|---|---|
| **CP51.1** | 1 unit | 1779,15 |

## MULTI Accessories

| Type | Art. No. | Pack Qty | € |
|---|---|---|---|
| **Ceramic cooling plate 27 x 27 cm** | **CP54.1** | 1 plate | 333,25 |
| **Glass electrode frame** | **CP55.1** | 1 frame | 317,15 |
| **Anode electrode** | **CP52.1** | 1 electr. | 239,75 |
| **Cathode electrode** | **CP53.1** | 1 electr. | 239,75 |

## COMPAC-50™ Comet Assay System

Complete system for rapid high throughput single cell gel electrophoresis (SCGE).



- Space-saving, compact system
- Chamber and accessories are made of ebony acrylic material to protect DNA samples against light
- 2 slide carriers for processing of up to 50 slides simultaneously
- Time-saving electrophoresis (length per run ca. 20 min)
- Integrated ceramic cooling platform with cool pack, no additional chiller necessary

**Technical specifications:**

| | |
|---|---|
| Dimensions (W x L x H) | 26,5 x 15 x 15 cm |
| Total slide capacity | 50 slides (25 x 75 mm) |
| Slide capacity per slide carrier | 25 slides (25 x 75 mm) |
| Volume | 550 ml |
| Recommended running conditions | 27 V / 450 mA for 20 min |
| Recommended power supplies | Roth-STANDARD, EV2310, EV2650 |

**Delivery incl.** 1 Comet Assay tank, 1 safety lid incl. power cables, 2 slide carriers for 25 slides each, 10 treatment dishes, 1 cool pack, 1 level bubble

| Art. No. | Pack Qty | € |
|---|---|---|
| **9963.1** | 1 piece | 1825,35 |

## COMPAC-50™ Comet Assay System Accessories

① treatment dish for slide carrier
② slide carrier
③ open dish with slide carrier

| Type | Art. No. | Pack Qty | € |
|---|---|---|---|
| **COMPAC-50™ slide carrier for 25 slides** | **9964.1** | 1 piece | 169,85 |
| **COMPAC-50™ treatment dish** | **9965.1** | 1 piece | 92,45 |
| **COMPAC-50™ treatment dish** | **9984.1** | 4 pieces | 310,70 |
| **COMPAC-50™ positive electrode** | **9966.1** | 1 piece | 120,40 |
| **COMPAC-50™ negative electrode** | **9967.1** | 1 piece | 120,40 |
| **Electrophoresis cables Rotiphorese® PROfessional** | **6848.1** | 1 pair | 52,85 |

# Vertical Electrophoresis Systems & Modules

- Simultaneous electrophoresis of minimum two gels
- Inner buffer volume ensures even distribution of heat in gel and prevents "smiling"
- Gel casting module enables speedy and simultaneous casting of two gels
- **Suitable for standard ready-to-use gels**

**Wide field of application**
- Separation of proteins, nucleic acids and peptides
- Isoelectric focussing
- Electro-transfer of proteins and nucleic acids

**Safety lid with integral power leads**
Orientation cannot be mixed up as the lid can only be closed if properly used. Power supply is automatically interrupted when lid is opened.

**Platinum electrodes - gold-plated, corrosion-free contacts**
Electrodes are made of pure platinum. They are protected by a special construction and can be replaced easily by the user.

**Colour coding of spacers and combs**
Regular colour coding of spacers and combs facilitates selection of the right tool during gel preparation, preventing assembly of wrong components.

| Colour | Thickness | Application |
|---|---|---|
| violet | 0.5 mm | for ultra finely resolved bands |
| black | 0.75 mm | for finely resolved bands |
| white | 1.0 mm | standard |
| red | 1.5 mm | for bigger sample volumina and gels of 2nd dimension |
| blue | 2.0 mm | for big sample volumina and preparative gels |

# Rotiphorese®-PROclamp - Units with Clamping System for Vertical Electrophoresis

- Double electrophoresis unit - **for running of up to 4 gels in parallel**
- With fast-clamping technique - for rapid and easy-to-handle insertion of glass plates and gels
- MINI: Compatible with all major brands of 10 x 10 to 8 x 10 cm precast gels
- Effective buffer cooling independent of running water or chillers
- Colour coded spacers and combs in 5 thicknesses available - 0,5 up to 2 mm
- Extensive range of accessories available incl. glass plates with fixed spacers and blotting modules
- Compatible with multi-channel pipettors (combs are marked *)
- Version MINI for 10 x 10 cm gels, version MAXI for 20 x 20 cm gels

Tight and leak-proof insertion of glass plates in seconds - by modern **fast-clamping techniques:** (MINI: clamps, MAXI: waves).

① Position running module on bench surface
② Insert glass plates (incl. spacers) from above
③ Tighten clamps - Ready-to-go!

## Rotiphorese® Units PROclamp MINI

**Glass plates: 10 x 10 cm**
**Max. sample capacity per gel: 20**
**Buffer volume (upper / lower tank): 100 ml/300 ml**
**Unit dimensions (w x l x h): 19 x 13 x 15 cm**

- Double electrophoresis unit - **for running of up to 4 gels in parallel**
- With fast-clamping technique - for rapid and easy-to-handle insertion of glass plates and gels
- Compatible with all major brands of 10 x 10 cm to 8 x 10 cm precast gels
- Effective buffer cooling independent of running water or chillers
- Colour coded spacers and combs in 5 thicknesses available - 0.5 up to 2 mm
- Extensive range of accessories available incl. glass plates with fixed spacers and blotting module (Art. No. 3517.1)
- Compatible with multi-channel pipettors (combs are marked *)

**Delivery incl.** (basic equipment):
1 vertical electrophoresis chamber incl. buffer tank, safety lid incl. cable (4 mm plugs) and 1 running module for electrophoresis of up to 4 gels in parallel, dummy plate for run of one gel only and gel cooling set. For run of 3 or 4 gels, please additionally order PROclamp MINI notched glass plates with fixed spacers (thickness 1 mm: Art. No. 3563.1) and suitable combs, e. g. Art. No. 3638.1.

**Complete Set with accessories and gel casting module**
**Additionally included:** 2 glass plates with fixed spacers (thickness 1 mm), 2 notched glass plates, 2 combs (thickness 1 mm, 12 wells), gel opener and 1 gel casting module for rapid and leak-proof gel casting.

| Art. No. | Pack Qty | € |
|---|---|---|
| **3501.1** | 1 unit | 747,15 |

**Set with Accessories**
**Additionally included:** 2 glass plates with fixed spacers (thickness 1 mm), 2 notched glass plates, 2 combs (thickness 1 mm, 12 wells), gel opener.

| Art. No. | Pack Qty | € |
|---|---|---|
| **3502.1** | 1 unit | 640,70 |

**Set for precast gels** (without further accessories)
Run of max. 2 gels in parallel possible.

| Art. No. | Pack Qty | € |
|---|---|---|
| **3503.1** | 1 unit | 602,00 |

## PROclamp MINI Spare Parts

| Type | Art. No. | Pack Qty | € |
|---|---|---|---|
| **PROclamp MINI buffer tank without lid** | **3509.1** | 1 tank | 85,05 |
| **PROclamp MINI running module** | **3504.1** | 1 module | 321,45 |
| **PROclamp MINI lid for buffer tank (w/o cables)** | **3511.1** | 1 lid | 64,90 |
| **PROclamp MINI gel casting module** | **3506.1** | 1 module | 162,35 |
| **Replacement rubber mat for gel casting module** | **3507.1** | 1 mat | 43,20 |
| **PROclamp MINI cooling set** | **3512.1** | 1 set | 39,30 |

## Rotiphorese® Unit PROclamp MINI Wide

**Glass plates (w x l): 20 x 10 cm**
**Max. sample capacity per gel: 48**
**Buffer volume (upper / lower tank): 250 / 600 ml**
**Unit dimensions (w x l x h): 26 x 16 x 16 cm**

- For vertical electrophoresis of wide mini gels (20 x 10 cm)
- Double electrophoresis unit - **for running of 4 gels in parallel**
- Up to 48 samples per gel (capacity equivalent to 2 mini gels)
- Innovative new wave-screw-clamp technology
- Effective buffer cooling independent of running water or chillers
- Extensive range of accessories available, combs of the PROclamp MAXI and spacers of the PROclamp MINI unit are compatible

**Delivery incl.:** 1 vertical electrophoresis unit consisting of buffer tank, safety lid incl. 2 cables (4 mm plugs), running module, gel cooling pack. For the run of 3 or 4 gels, please additionally order PROclamp MINI Wide notched glass plates with fixed spacers, thickness 1 mm (Art. No. 1427.1) and suitable combs, e.g. Art. No. 5957.1.

**Additionally included:** 2 standard glass plates with fixed spacers (thickness 1 mm), 2 notched glass plates, 1 dummy plate (for run of one gel only), 2 combs (thickness 1 mm, 24 wells), 4 yellow wave-clamps for electrophoresis of 3 or 4 gels (substitute green clamps), 1 gel casting module.

## Rotiphorese® Unit PROclamp MAXI

**Glass plates: 20 x 20 cm**
**Max. sample capacity per gel: 48**
**Buffer volume (upper/lower tank): 640 ml/1000 ml**
**Unit dimensions (w x l x h): 30 x 18 x 27 cm**

- For large-format vertical gel electrophoresis (20 x 20 cm)
- Double electrophoresis unit - **for running of up to 4 gels in parallel**
- Innovative new wave-screw-clamp technology
- Detachable inner cooling coil for optional cooling
- Spacers and combs in 4 thicknesses available - 0,75 up to 2 mm
- Compatible with multi-channel pipettors (combs are marked *)
- Extensive range of accessories available incl. glass plates with fixed spacers and blotting module (5816.1)

**Delivery incl.:** 1 vertical electrophoresis chamber incl. buffer tank, safety lid incl. 2 cables (4 mm plugs), detachable cooling coil, and 1 running module for running of up to 4 gels in parallel. For run of 3 or 4 gels, please additionally order PROclamp MAXI notched glass plates with fixed spacers (thickness 1 mm: Art. No. 5906.1) and suitable combs, for example Art. No. 5957.1.

**Accessories included:** 2 standard glass plates with fixed spacers (thickness 1 mm), 2 notched glass plates, 1 dummy plate (for run of one gel only), 2 combs (thickness 1 mm, 24 wells), 4 yellow wave-clamps for electrophoresis with 3 or 4 gels (substitute green clamps), and 1 gel casting module for rapid and leak-proof gel casting.

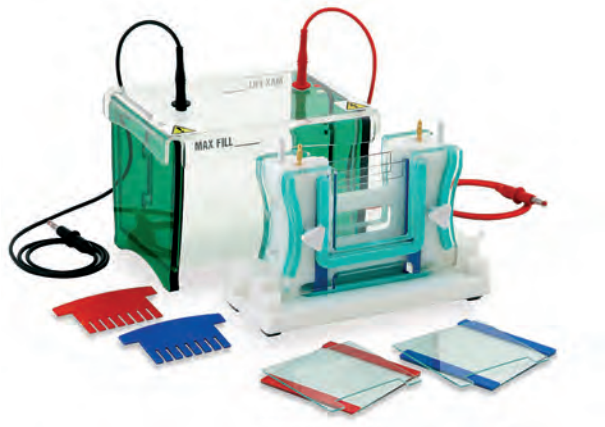
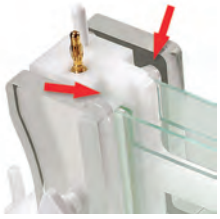
# The Classic Line -
# Compact Vertical Electrophoresis Chambers with Glass Plate Stops

- Double electrophoresis unit - **for running of up to 2 gels in parallel**
- High-grade quality and robust, made of acrylic glass
- With glass plate stops
- MINI: compatible with most 10 x 10 cm ready made gels (max. width 10,0 cm)
- Chemically bonded contact points
- Wide range of accessories
- Coolable versions with reliable water cooled system
- Version MINI for 10 x 10 cm gels, version MAXI for 20 x 20 cm gels, and 33 x 45 cm unit for sequencing gels



**Modular system**
Tanks are compatible with different electrophoresis modules, keeping costs and space to a minimum. The electrophoresis units are available as *standard* and as *coolable* device.

Different versions of MINI and MAXI vertical dual plate electrophoresis chambers are available.
The **full version** includes the buffer tank (*standard* or *coolable*), the running module for gel run and a gel casting module including glass plates and combs for immediate electrophoresis.



▶ Roti®-Page ready-made gels, compatible with Roth' vertical units, see page 1151

## MINI Vertical Dual Plate Electrophoresis Units

**Glass plates: 10 x 10 cm**
**Max. sample capacity per gel: 20**
**Buffer volume (upper/lower tank): 100 ml/300 ml**
**Unit dimensions (w x l x h): 20 x 15 x 14 cm**

With glass plate stops – for reliable pouring of gels and optimised results

- Double electrophoresis unit - **for running of up to 2 gels in parallel**
- High-grade quality and robust, made of acrylic glass
- With glass plate stops
- Compatible with most 10 x 10 cm to 8 x 10 cm ready made gels (max. width 10,0 cm)
- Chemically bonded contact points
- Wide range of accessories
- Coolable versions with reliable water cooled system

**Delivery incl.** 1 vertical electrophoresis chamber with buffer tank, lid and cables (4 mm plugs), 1 running module for simultaneous electrophoresis of two gels. The chamber is available as *standard* and as *coolable* device.
**Accessories included:**
2 glass plates, 2 separate spacer pairs (spacer thickness 1 mm), 2 notched glass plates, 1 dummy plate (for electrophoresis of one gel only), 2 combs (12 teeth, 1 mm thick).

**Y001.1 and Y002.1:** With additional gel casting module.

**Standard**, with buffer tank, running module, gel casting module and accessories

| Art. No. | Pack Qty | € |
|---|---|---|
| **Y001.1** | 1 unit | 912,70 |

**Coolable**, with buffer tank, running module, gel casting module and accessories

| Art. No. | Pack Qty | € |
|---|---|---|
| **Y002.1** | 1 unit | 1101,90 |

**Standard, without gel casting module**, with buffer tank, running module and accessories

| Art. No. | Pack Qty | € |
|---|---|---|
| **Y003.1** | 1 unit | 686,95 |

**Coolable, without gel casting module**, with buffer tank, running module and accessories

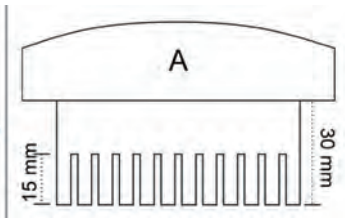
| Art. No. | Pack Qty | € |
|---|---|---|
| **Y004.1** | 1 unit | 912,70 |

## MINI Vertical Spare Parts

| Type | Art. No. | Pack Qty | € |
|---|---|---|---|
| **MINI Buffer tank without lid** | **Y005.1** | 1 tank | 256,95 |
| **Spare lid for MINI buffer tank** | **Y009.1** | 1 lid | 170,95 |
| **MINI Running module** | **Y007.1** | 1 module | 600,95 |
| **U-shaped fixing plate with seals for MINI running module** | **Y010.1** | 2 plates | 149,45 |
| **Seals for MINI running module** | **Y011.1** | 2 sets | 98,80 |
| **Spare screws for MINI running module** | **Y012.1** | 4 screws | 54,85 |
| **MINI Gel casting module** | **Y008.1** | 1 module | 267,70 |
| **Sealing pads for MINI gel casting module** | **Y013.1** | 1 set | 21,40 |
| **Platinum spare electrode ∅ 0.2 mm, 650 mm** | **T794.1** | 1 electr. | 127,95 |

## MINI Vertical Glass Plates

| Type | Art. No. | Pack Qty | € |
|---|---|---|---|
| **Standard glass plates (10 x 10 cm)** | **0513.1** | 2 plates | 35,30 |
| **Notched glass plates (10 x 10 cm)** | **0520.1** | 2 plates | 74,75 |
| **Dummy plate** | **0537.1** | 1 plate | 24,75 |



## MINI Vertical Spacers

| Thickness (mm) | Width (mm) | Length (mm) | Art. No. | Pack Qty. | € |
|---|---|---|---|---|---|

## MAXI Vertical Dual Plate Electrophoresis Units

**Glass plates: 20 x 20 cm**
**Max. sample capacity per gel: 48**
**Buffer volume (upper/lower tank): 650 ml/1000 ml**
**Unit dimensions (w x l x h): 28,5 x 15 x 27,5 cm**

With glass plate stops – for reliable pouring of gels and optimised results

- Double electrophoresis unit - **for running of up to 2 gels in parallel**
- High-grade quality and robust, made of acrylic glass
- With glass plate stops
- Chemically bonded contact points
- Wide range of accessories
- Coolable versions with reliable water cooled system

**Delivery incl.** 1 vertical electrophoresis chamber with buffer tank, lid and cables (4 mm plugs), 1 running module for simultaneous electrophoresis of two gels. The chamber is available as *standard* and as *coolable* device.
**Accessories included:** 2 glass plates, 2 separate spacer pairs (spacer thickness 1 mm), 2 notched glass plates, 1 dummy plate (for electrophoresis of one gel only), 2 combs (24 teeth, 1 mm thick).

**X950.1 and X951.1**: With additional gel casting module.

**Standard**, with buffer tank, running module, gel casting module and accessories.

| Art. No. | Pack Qty | € |
|---|---|---|
| **X950.1** | 1 unit | 1300,75 |

**Coolable**, with buffer tank, running module, gel casting module and accessories.

| Art. No. | Pack Qty | € |
|---|---|---|
| **X951.1** | 1 unit | 1574,90 |

**Standard, without gel casting module**, with buffer tank, accessories and running module

## Capillary Running Modules

**For Isoelectric Focussing (IEF) during 2D-gel electrophoresis and for preparative capillary protein gels**

**Capillary length: max. 8 or 17 cm, resp.**
**Max. sample capacity per gel: 10**

- Versatile - for 1 to 10 capillary gels in parallel
- Applicable for capillaries of 1 mm and 4 mm internal diameter
- Protected and highly resistant platinum electrodes
- Easy handling and reliable, distinct separation

Moduls for Vertical Double Electrophoresis Units of the classical line. Easy-to-use, modular system compatible with the vertical electrophoresis systems MINI (Art. No. Y001-Y004) and MAXI (Art. No. X950-X953).
**Delivery incl.** capillary running module. Please order glass capillaries, blanking ports, and gel extraction platform separately.

**MINI Capillary Running Module, capillary length max. 8 cm**

| Art. No. | Pack Qty. | € |
|---|---|---|
| **2811.1** | 1 | 600,95 |

**MAXI Capillary Running Module, capillary length max. 17 cm**

| Art. No. | Pack Qty. | € |
|---|---|---|
| **2816.1** | 1 | 934,20 |

## Blanking Ports

Made of silicone, suitable for MINI and MAXI Capillary Running Modules.

| Art. No. | Pack Qty. | € |
|---|---|---|
| **2815.1** | 10 | 37,00 |

## Glass Capillaries for Electrophoresis

Glass capillaries for capillary protein electrophoresis.

| Type | Length (cm) | Inner ∅ (mm) | Art. No. | Pack Qty. | € |
|---|---|---|---|---|---|
| MINI | 8 | 1 | **2812.1** | 10 | 93,45 |
| MAXI | 17 | 1 | **2817.1** | 10 | 101,50 |

## Gel Extraction Platforms

Preformed platforms for safe and easy collection, cutting, and transfer of fragile capillary gels. Please order blanking ports separately.

| Type | For gels of | Art. No. | Pack Qty. | € |
|---|---|---|---|---|
| MINI | max. 8 cm | **2814.1** | 1 | 51,20 |
| MAXI | max. 17 cm | **2819.1** | 1 | 81,20 |

Recommended Combination for 2D-Gel Electrophoresis:

| Unit | MINI (Art. No.) | MAXI (Art. No.) |
|---|---|---|
| Vertical electrophoresis unit | Y001.1 | X950.1 |
| Capillary running module | 2811.1 | 2816.1 |
| Blanking ports | 2815.1 | 2815.1 |
| Glass capillaries | 2812.1 | 2817.1 |
| Gel extraction platform | 2814.1 | 2819.1 |
| Power Supply EV3150 | A542.1 | A542.1 |
| 1 pair of spacers, 1.5 mm thick (2. dimension) | 3579.1 | 5921.1 |
| 1+1 comb, 1.5 mm thick (2. dimension) | 3642.1 | 5962.1 |

## Sequencing Electrophoresis Unit

**Glass plates (w x l): 33 x 45 cm**
**Max. sample capacity per gel: 96**
**Buffer volume (upper/lower tank): 500 ml/500 ml**
**Unit dimensions (w x l x h): 50 x 21,5 x 63 cm**

- Robust construction made of acrylic glass
- Safety cover with integral connectors
- User-replaceable electrodes made of pure platinum
- Removable lower buffer tank for easy cleaning
- Optional thermostatic fan kit
- Accessories may be bought separately
- Heavy duty aluminium back plate helps disperse heat evenly
- CE certified
- For SSCP-gels, DDRT-PCR analyses, and extra long protein gels

**Delivery incl.** chamber with safety lid and integral power leads (2 mm plugs), one set of glass plates (1x plain, 1x notched) one pair of spacers (0,35 mm), one sharktooth comb (0,35 mm, 48 teeth).

| Art. No. | Pack Qty | € |

# Power Supplies

**CONSORT**
**Well-known Power Supplies in new outfit**

## Power Supply Series EV

**Low cost power supplies for all applications**

The upgraded Consort series with new design - powerful, easy to operate and low priced.

- Small and compact devices
- On screen help in 4 languages for application and for solving errors
- Automatic cross-over to show which of the 3 parameters (V, mA, W) is kept constant during the run
- Automatic recovery after power failure
- Connection of up to 4 units possible (4 mm sockets)
- Password protection
- High safety standard
- 3 years warranty

Further properties of the devices (except EV0220):

- Storing of up to 9 methods possible
- Setting of a voltage gradient (Voltage Ramp Mode)
- Timer Mode
- Data logging of electrophoresis runs (of about 100 hours)
- Firmware updates via USB interface possible
- Remote control by PC possible

**Technical specifications:**
**Units in the small and medium performance range**

When connecting several units, a higher voltage must be applied in order to attain the same intensity of current and output and, subsequently, the same separating capacity.

## Roth Power Supplies

**The Roth series - upgraded version and new design**

Three units for all applications in electrophoresis:
Roth MINI, STANDARD and BLOT.

- Compact and easy to operate
- Constant parameters
- Timer with alarm function
- Comply to all relevant safety standards
- 1 year warranty

Models Power Pro (Roth STANDARD and BLOT):
- Up to 30 individual protocols with 1-6 steps savable
- Pre-programmed options for special applications
- Connection with up to 5 units possible

**Technical specifications:**

| Type | ① MINI | ② STANDARD | ② BLOT |

# Accessories

## Electrophoresis Cables

Suitable for up to 1000 volt. Cable length 1 m.

| Image | Model | ∅ socket (mm) | ∅ plug (mm) | Art. No. | Pack Qty. (pair) | € |
|---|---|---|---|---|---|---|
| ① | Classic Line | 4 | 4 | **N843.1** | 1 | 85,50 |
| ② | Rotiphorese® PROfessional | 4 | 4 | **6848.1** | 1 | 52,85 |

## Semi Dry Blotter Cables

Suitable for up to 1000 volt. Cable length 1 m. Narrow socket sheaths.

| ∅ socket (mm) | ∅ plug (mm) | Art. No. | Pack Qty. (pair) | € |
|---|---|---|---|---|
| 4 | 4 | **6072.1** | 1 | 57,85 |

## Adapters

By using the appropriate pair of adapters, electrophoresis cables may fit to any customary power supply.

| ∅ socket (mm) | ∅ plug (mm) | Art. No. | Pack Qty. (pair) | € |
|---|---|---|---|---|
| 2 | 4 | **T843.1** | 1 | 16,85 |
| 4 | 2 | **K294.1** | 1 | 8,10 |
| 4 | 4 | **K295.1** | 1 | 5,95 |

## Silicone Sealing Hose

for horizontal gel casting trays (Art. No. N575.1 and N595.1), ∅ 4 mm, ~1 m.

| Art. No. | Pack Qty | € |
|---|---|---|
| **T811.1** | 1 pieces | 21,00 |

## Platinum Spare Electrode

for vertical and horizontal electrophoresis units, ∅ 0,2 mm

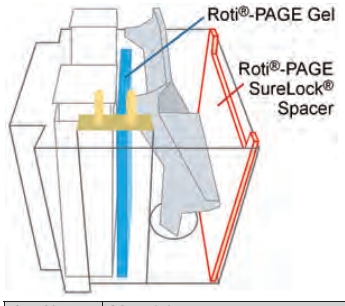
| Art. No. | Pack Qty. | € |
|---|---|---|
| **T794.1** | 1 electr. (650 mm) | 127,95 |
| **1428.1** | 1 electr. (500 mm) NEW | 98,40 |

TIP

## Roti®-PAGE buffer dam

Special buffer dams made for running of a single Roti®-PAGE gel in **PROTEAN®** units made by BioRad®.
The Roti®-PAGE PROTEAN® buffer dams are somewhat longer than the original buffer dams from BIORAD®, providing the full height needed for building the inner buffer reservoir for runs of single 9x10 cm Roti®-PAGE gels.

Suitable for BioRad® Mini PROTEAN® I, II, III, Tetra, and Ready Gel® Cell.
Size (w x h x t): 10.1 x 9.3 x 0.4 cm



| Art. No. | Material | Pack Qty. | € |
|---|---|---|---|
| **4715.1** | Acrylic glass | 1 | 24,20 |

TIP

## Roti®-PAGE-Spacer

Spacer for insertion into **Novex® XCell SureLock®** Mini-Cell units made by Invitrogen™.
This spacer compensates the slightly less thick Roti®-PAGE gels, enabling the simultaneous run of two Roti®-PAGE gels in Novex units. When running two Roti®-PAGE gels, the SureLock® Spacer is simply inserted into the tank (see figure).
Size: Width 10 cm, thickness 0.2 cm, height 9 cm (notch) and 10 cm (full heigth).

| Art. No. | Material | Pack Qty. | € |
|---|---|---|---|
| **4731.1** | Acrylic glass | 1 | 19,90 |

## Glass Plate Racks

ROTH MINI and MAXI glass plate racks for safe drying and storage of glass plates for vertical gel electrophoresis. Black acrylic glass.

| Type | Dimensions L x W x H (cm) | for max. | Art. No. | Pack Qty. | € |
|---|---|---|---|---|---|
| **Mini** | 27 x 8 x 9 | 20 glass plates (up to 2 mm thick) | **N860.1** | 1 | 57,85 |
| **Maxi** | 17 x 17 x 17 | 10 glass plates (up to 5 mm thick) | **N861.1** | 1 | 85,95 |

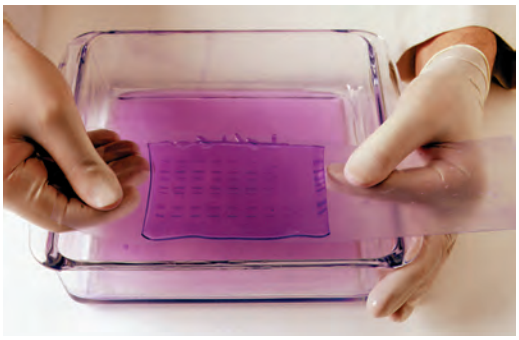
## MINI and MIDI Gradient Mixer

For preparing polyacrylic amide gel gradients or centrifugation gradients (sucrose or caesium chloride gradients).

The mixers are manufactured from one acrylic block. They consist of two chambers, a storage area and a mixing chamber with a connecting valve. A second valve regulates the discharge from the chamber. A magnetic follower placed into the mixing chamber enables a steady and constant gradient to be produced with the magnetic stirrer. The mixers have a flat bottom and come with a rod on the back which can be attached to a holder. Connection for 4 mm FEP- tubes.

| Type | Total filling volume (ml) | Art. No. | Pack Qty. | € |
|---|---|---|---|---|
| MINI | 30 | **N857.1** | 1 | 543,95 |
| MIDI | 100 | **N858.1** | 1 | 628,90 |

▶ Tube Pump Sci-Q 323 for gradient mixers see page 353
▶ Rotilabo®-FEP-hoses see page 371



## Levelling Table

ROTH levelling tables enable casting of horizontal gels of equal thickness, featuring easy-to-turn rotating feet on the corners. Tables also have an air bubble in the centre for precise horizontal alignment.

Table surface: 20 x 30 cm.

| Art. No. | Pack Qty. | € |
|---|---|---|
| **N854.1** | 1 | 213,95 |

## Gel Handler®

**Flexible UV transparent sheets for supporting, manipulating and photographing gels**

Made of polyolefin material. Gel Handler® sheets are slid under gels in solution for easy lifting and moving.

**Properties:**

- **Cuttable** - may be cut with scissors into convenient pieces
- **Chemically inert** - autoclaving and washing with diluted acids and bases is possible
- **UV-transparent** - higher transparency than UV-transparent acrylic material
- **Very flexible** - slide easily under the gel and eliminate air bubbles when placed on a transilluminator
- **Resistant** - the surface of the transilluminator is protected from scratching when excising segments of a gel with a razor or spatula

**Technical specifications:**

| Optical density 3896.1 | |
|---|---|
| 254 nm emission wave length | 0.14 OD |
| 300 nm emission wave length | 0.04 OD |

| Dimensions L x W (cm) | Thickness (mm) | Art. No. | Pack Qty. | € |
|---|---|---|---|---|
| 21 x 28 | 0,13 | **3896.1** | 10 | 67,40 |
| 21 x 28 | 0,26 | **3897.1** | 5 | 67,40 |

## Gel Multi Caster

Multiple gel casting system, tailored for use with Rotiphorese® PROclamp vertical electrophoresis units (10 x 10 cm gel glass plates). The number or the thickness of gels being poured is variable. After pouring the glass plates can be easily separated by the included separation sheets. With level bubble for optimal levelling of gels.

**Delivery incl.** gel casting chamber, 1 bottom silicone gasket for top filling, 1 level bubble, 1 clip, 12 separation sheets, 9 spacer plates with different diameters: 1 x 12 mm, 5 x 5 mm, 3 x 3 mm

| Type | for max. gels | Art. No. | Pack Qty. | € |
|---|---|---|---|---|
| **Multi Caster 12 x** | 12 | **3118.1** | 1 | 607,40 |

## Gel Scoops

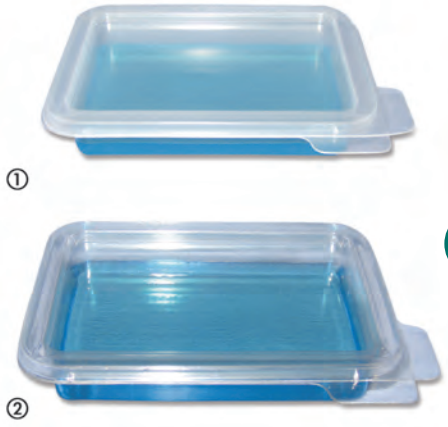
ROTH gel scoops enable easy transport of gels in staining solutions or to a transilluminator. Even low concentrated agarose gels are protected against breaking.

ROTH gel scoops are UV-transparent.

| Type | Overall length (mm) | Scoop width (mm) | Length of scooping surface (mm) | Art. No. | Pack Qty. | € |
|---|---|---|---|---|---|---|
| **MINI** | 235 | 60 | 82 | **N850.1** | 1 | 68,80 |
| **MIDI 2** | 430 | 200 | 250 | **N852.1** | 1 | 85,90 |
| **MAXI** | 520 | 250 | 330 | **N853.1** | 1 | 98,40 |

121 °C

Wiederverwendbar
Reusable



## Blot incubation trays

**Compatible with Western- and Southern blotting methods**

Developed for incubation of filter membranes during signal detection after Western- and Southern blotting. The incubation trays can safely be stacked, and, due to the tightly sealing lids, evaporation of solution is prevented even during long incubation periods. The size, adapted to typical membrane sheets, reduces the amount of buffer needed during incubation. In case of version MINI, the 5 trays may be used separately as well as in uniform. Stabile, autoclavable, and reusable.

Made from polypropylene.

| Model | Material | Dimensions W x L (mm) | Art. No. | Pack Qty. | € |
|---|---|---|---|---|---|
| **MINI** | PP | 16 x 115 | **4810.1** | 5 | 56,55 |
| **MIDI** | PP | 90 x 90 | **4811.1** | 5 | 83,75 |
| **MAXI** | PP | 165 x 165 | **4812.1** | 5 | 182,75 |

① ②

Wiederverwendbar
Reusable

## Gel Staining Trays

**Compatible with all standard staining methods**

- tightly-sealing, recessed lids
- can be stacked safely and without slipping on the shaker

The staining trays, available in two sizes, are a practical and cheap alternative to plastic household bowls. The asymmetric array of the marking on the edges and drainage outlets on all corners guarantee easy handling and simple orientation of gel.

① The **PP** (polypropylene) trays are heat-resistant, **microwave-proof** and excellent for staining protein/peptide gels.

② The **PETG** (polyethyleneterephtalate) trays have a clear, **UV-permeable bottom** for fluorescence staining of agarose gels (wave length ≥330 nm).

| Type | Material | Inner-Dimensions L x W x H (mm) | Art. No. | Pack Qty. | € |
|---|---|---|---|---|---|
| **MIDI** | PP | 143 x 100 x 25 | **CP58.1** | 20 | 116,10 |
| **MINI** | PETG | 113 x 75 x 25 | **CP59.1** | 20 | 85,95 |
| **MIDI** | PETG | 143 x 100 x 25 | **CP60.1** | 20 | 116,10 |

❄❄

## Staining chamber

By Nalgene®. Made of **PMP** for staining, fixing, and bleaching membranes, electrophoresis gels etc. With lid made of **PP**-copolymer and leakproof drain plug made of **LDPE** for problem-free draining of liquid without gel manipulation. Chamber with handles on both side for easy transport. Capacity with gel under shaking conditions: 500 to 750 ml. Temperature stable from -70 to +70 °C.

**Not UV-transparent.**

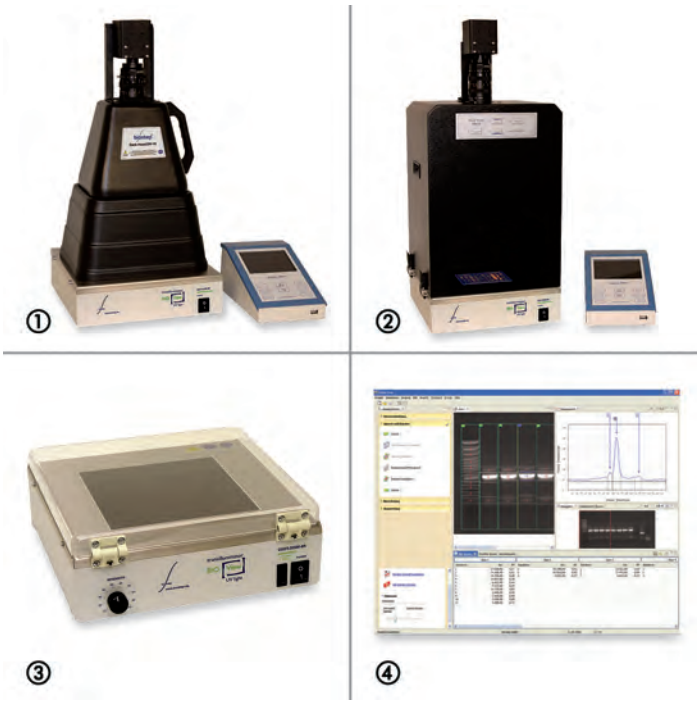
| L x W x H (mm) | Art. No. | Pack Qty. | € |
|---|---|---|---|
| 125 x 125 x 50 | **H591.1** | 1 | 33,00 |

## FlowMesh™

Permeable support mesh for gels and filter membranes. Sturdy, versatile, and convenient. Re-usable and easily cut to size.

FlowMesh™ max be used for the following applications (e.g.):

**Gel support** - Place FlowMesh™ above or below a gel to protect from tearing, bending, or folding. May be used during gel staining, destaining, probing, equilibration etc.



**Spacing** - Use FlowMesh™ as permeable spacer for separation of gels and membranes during stacking.

**Membrane stabilisation** - Use on one or both sides of membranes during storage or hybridisation, while keeping the membrane fully accessible for blocking, probing and washing.

FlowMesh™ is made of polypropylene mesh approximately 0,3 mm thick with 1 mm strand spacings and approx. 70 % void volume. Between two flat sheets separated by FlowMesh™ is 2,7 ml/100 cm² void volume. Size: 27,8 cm x 21,7 cm.

| Art. No. | Pack Qty. | € |
|---|---|---|
| **2796.1** | 20 | 71,50 |

# Gel Documentation

## Gel documentation systems

By Biostep. PC-independent imaging systems e.g. for acquisition of DNA/RNA bands in agarose gels or protein bands in polyacrylamide gels. Standard version with ethidium bromide filter.

**CCD-Camera** model B8-437G
- Resolution 752 x 582 pixel
- Manual zoom objective 8 - 48 mm
- Camera control via external operation terminal 5,6″ LCD display, keypad and USB-connection
- Functions: Live image mode for easy positioning of gels, setting of exposure time (manual or automatic), image inverting, recognition of image manipulation (GLP), staring image settings and storage data onto a USB-stick

① **Typ Gerix 1005**
Attachable dark hood for use in combination with a transilluminator with UV-protection shield.

② **Typ Gerix 1020**
Stationary dark hood with white top light and sliding door. Integrated UV protective shield can be pushed up for gel positioning. Attachable to transilluminator with 4 clamps. Transilluminator will automatically switch off in the case of overheating.

**Delivery incl.** dark hood, CCD-camera and operation terminal. Please order transilluminator, thermal printer and evaluation software separately.

| Type | Dimensions W x D x H (cm) | Art. No. | Pack Qty. | € |
|---|---|---|---|---|

## Rotiphorese® runDOC gel documentation system

By Cleaver Scientific. Gel documentation system for the Professional runVIEW real-time electrophoresis system.
It consists of
- Darkroom hood
- Digital camera (12.1 MP)
- One filter for green and one for red fluorescence

The darkroom hood fits exactly to the runVIEW gel unit. After excitation by the blue light illuminator of the runVIEW base station the fluorescent gel bands are made visible by the filter slide integrated in the darkroom hood. Subsequently, they can be documented by the integrated camera.

**Technical data camera:**

| | |
|---|---|
| Typ | 5x optical /4x digital zoom |
| | DIGIC-5 processor |
| Effective pixels | 12.1 MP |
| Image resolution | 640 x 480 up to 400 x 3000 |
| Sensor | 1/1.7" type high sensitivity CMOS |
| File format | RAW, JEPG |
| Computer interface | USB 2.0 Hi-speed (Mini-B-jack) |
| Video out | NTSC / PAL |

**Technical data lens:**

| | |
|---|---|
| Focal length | 6.1-30.5 mm |
| Aperture | f/1.8(W)-f/2.9(T) |
| Shutter speed | 15-1/4000s |

**Technical data filters**:

| Filter type | Colour filter | Use |
|---|---|---|
| Green filter | yellow | EvaGreen, Roti®-Load DNAstain, green fluorescence |
| Red filter | orange | Roti®Gelstain Red, Ethidiumbromid, red fluorescence |

**Delivery incl.** darkroom hood with integrated camera (12.1 MP), green filter for blue light, red filter for blue light.

NEW

## Rotiphorese® PROfessional runVIEW darkroom hood

By Cleaver Scientific.
The runVIEW darkroom hood is a portable, lightweight hood designed exclusively for use with the runVIEW system. It aids viewing the samples in bright lit areas during the run and has no further functions. For complete gel documentation please order the runDOC system (Art. No. 1315.1).

The hood is placed directly over the runVIEW unit, which includes an integrated power supply and a blue light illuminator. The illuminator provides the excitation source for the DNA and the special lid of the unit makes the gel bands visible.

| Art. No. | Pack Qty. | € |

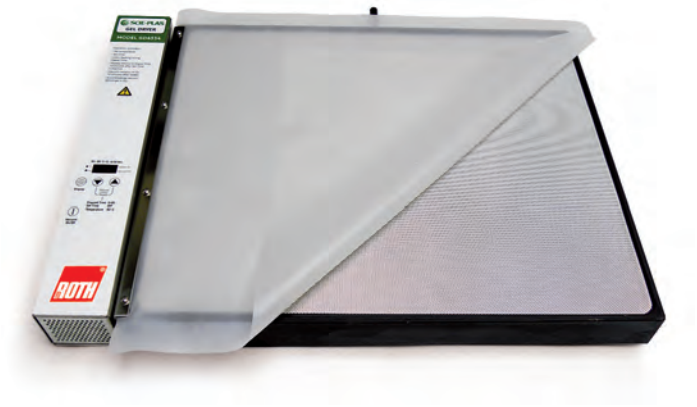
TIP

## Fluorescent Rulers

For documentation of DNA fragments in agarose gels. Rulers fluoresce within the same range as EtBr-DNA complexes, are clearly visible on both types of transilluminators (300 nm and 350 nm) and are therefore an excellent aid when photographing agarose gels.
Rulers are only 7 mm wide and therefore fit into one lane of the gel.
The kit contains 4 rulers:
2 x 20 cm for long gels and 2 x 10 cm for mini gels.

| Art. No. | Pack Qty. (Kit) | € |
|---|---|---|
| **K162.1** | 1 | 49,40 |

## Gel Drying Frames



For easy drying of gels between 2 cellophane papers. Enables drying of gels without heat or vacuum. The cellophane sheets (spare packs) may also be used for drying of gels on vacuum gel dryers (60 °C). Cellophane sheets (cell glass) are uncoated. Each set contains 2 frames, 2 backs, 8 clamps and 50 cellophane sheets.

**MINI gel drying frames,**
**size 14 x 14 cm (overall), 11,7 x 11,7 cm (cutout)**

| Type | Art. No. | Pack Qty. | € |
|---|---|---|---|
| **MINI Set** | **K420.1** | 1 set | 134,40 |
| **Spare clamps for frame MINI** | **T826.1** | 4 clamps | 21,40 |
| **Spare pack of cellophane MINI** | **K422.1** | 50 sheets | 21,00 |

**MAXI gel drying frames,**
**size 24 x 24 cm (overall), 22,5 x 22,5 cm (cutout)**

| Type | Art. No. | Pack Qty. | € |
|---|---|---|---|
| **MAXI-Set** | **K421.1** | 1 set | 203,20 |
| **Spare clamps for frame MAXI** | **T827.1** | 4 clamps | 24,20 |
| **Spare pack of cellophane MAXI** | **K423.1** | 50 sheets | 29,25 |

## Vacuum Gel Dryer

- Heatable
- For fast and even gel drying
- For drying protein and sequencing gels
- Particularly even distribution of temperature over entire drying surface
- Precise adjustment of temperature of up to 80 °C
- Digital display of temperature
- Timer for heating element and vacuum pump (1-minute increments)
- Very robust construction
- All accessories are also available individually

**Technical Specifications:**

| Model | MIDI | MAXI |
|---|---|---|
| Drying surface | 44 x 34 cm | 49 x 41 cm |
| Measurements (H x W x D) | 85 x 550 x 435 mm | 85 x 680 x 480 mm |
| Weight | 8 kg | 13 kg |
| Heating element | 800 W | |
| Vacuum timer | 0-10 h | |
| Temperature timer | 0-10 h | |
| Digital display | 40-80 °C | |
| Accuracy | ±2 % | |
| Mains connection | 220-240 V, 50-60 Hz | |

**IMPORTANT:**
In order to achieve efficient drying, the vacuum pump should achieve a flow rate of 1000-6000 l/h (equals 1-6 $m^3$/h). We recommend use of the Membrane Vacuum Pump (Art. No. T789.1) and the Rotilabo® vacuum silicone tube (Art. No. 9746.1).

| Type | Art. No. | Pack Qty. | € |

# Blotting Units

## Tank Blotting

- Electro tank blotting system for blotting of up to 4 gels in parallel
- For transferring proteins and nucleic acids
- Ideal for large and temperature-sensitive proteins
- The short distance between the electrodes guarantees an evenly high current strength across the blotting area and reduces the amount of heat generated
- Hinged cassettes – for most easy handling and rapid blot set up
- Open design, rigid cassettes for maximum current transfer and even blotting contact
- Colour coded cassettes and asymmetrical lid ensure correct blot set up and blotting direction
- **Modules fit the vertical electrophoresis system Rotiphorese® PROclamp (see page 1180)**

### Rotiphorese® PROclamp MINI Tank Blotting System

**Maximum blotting area: 4 gels of up to 10 x 10 cm**

- Can be used with all gels of 10 x 10 cm in maximum
- Compatible with the Rotiphorese® PROclamp MINI unit for vertical electrophoresis (Art. Nos. 3501.1-3503.1)

**Delivery incl.** 1 Rotiphorese® PROclamp MINI buffer tank, safety lid with cables and 1 PROclamp MINI blotting module for max. 4 gels, incl. 4 cassettes and 4 pairs of fibre blotting mats.

| Art. No. | Pack Qty | € |
|---|---|---|
| **3513.1** | 1 unit | 693,40 |

### Rotiphorese® PROclamp MAXI Tank Blotting System

**Maximum Blotting area: 4 gels of up to 20 x 20 cm**

- Can be used with all gels of 20 x 20 cm in maximum
- Compatible with the Rotiphorese® Unit PROclamp MAXI for vertical electrophoresis (Art. No. 5769.1)

**Delivery incl.** 1 Rotiphorese® PROclamp MAXI buffer tank, safety lid with cables, removable cooling coil, and 1 PROclamp MAXI blotting module for max. 4 gels, incl. 4 cassettes and 18 fibre blotting mats.

| Art. No. | Pack Qty | € |
|---|---|---|
| **5814.1** | 1 unit | 1116,95 |

### Rotiphorese® PROclamp MINI Tank Blotting Module

**Rotiphorese® PROclamp MINI Tank Blotting Module**

Blotting insert compatible with the Rotiphorese® PROclamp MINI system for vertical electrophoresis (Art. Nos. 3501.1-3503.1). Blotting module for max. 4 gels, incl. 4 cassettes and 4 pairs of fibre blotting mats.

| Art. No. | Pack Qty | € |
|---|---|---|
| **3517.1** | 1 unit | 412,80 |

### Rotiphorese® PROclamp MAXI Tank Blotting Module

**Rotiphorese® PROclamp MAXI Tank Blotting Module**

Blotting insert compatible with the Rotiphorese® PROclamp MAXI system for vertical elektrophoresis (Art. No. 5769.1). Blotting module for max. 4 gels, incl. 4 cassettes and 18 fibre blotting mats.

| Art. No. | Pack Qty | € |
|---|---|---|
| **5816.1** | 1 unit | 594,50 |

### PROclamp MINI Blotting Accessories

| Type | Art. No. | Pack Qty | € |
|---|---|---|---|
| **PROclamp MINI compression cassette (no mats)** | **3518.1** | 1 unit | 43,20 |
| **PROclamp MINI blotting mats** | **3519.1** | 4 pairs | 43,20 |

### PROclamp MAXI Blotting Accessories

| Type | Art. No. | Pack Qty | € |
|---|---|---|---|
| **PROclamp MAXI compression cassette (no mats)** | **5827.1** | 1 unit | 72,05 |
| **PROclamp MAXI blotting mats** | **5829.1** | 6 mats | 72,05 |

# Semi-Dry-Blotting

## Semi Dry Blotters

**For transfer of proteins and nucleic acids.**

- Durable, corrosion-free electrodes
- Fast, steady transfer
- Minimum heat development
- Low buffer use

As the electrodes are made of high-grade steel (cathode, lid) and platinised titanium (anode, base), they will last indefinitely if used correctly. There is no build-up of deposits on the transfer surface, the buffers cannot penetrate into the electrodes. The extremely constant electric field over the entire transfer surface guarantees optimal results with all transfer membranes.

**MINI Semi-dry-blotter, transfer surface 10 x 10 cm**

| Art. No. | Pack Qty. | € |
|---|---|---|
| **T787.1** | 1 | 665,45 |

**MAXI Semi-dry-blotter, transfer surface 20 x 20 cm**

| Art. No. | Pack Qty. | € |
|---|---|---|
| **T788.1** | 1 | 1342,70 |

## Semi Dry Blotters PROfessional

**For transfer of proteins and nucleic acids.**

- Fast transfer with uniform heat dispersion
- Superior blotting quality due to screw down lid and long life electrodes
- Minimum heat development and buffer use

Semi Dry Blotters PROfessional offer rapid transfer times for blotting of proteins, as well as nucleic acids, being compatible with gel thicknesses from 0,25 up to 10 mm.

Semi Dry Blotters PROfessional utilise a screw down lid, which secures the blot sandwich (optionally) and allows complete control of pressure ensuring even transfer. Uniform heat dispersion across the transfer surface ensures stable blotting parameters and no heat induced sample loss or transfer distortions. The electrodes (platinum coated anode, base, and stainless steel cathode, lid) will exhibit no corrosion when used with accurately prepared transfer buffers, and provide many years of trouble free use.

Unit dimensions (w x h x d): 16,5 x 15 x 5,5 cm (MINI)
and 26 x 26 x 7 cm (MAXI)

**Semi dry blotter PROfessional MINI, transfer surface 10 x 10 cm**

| Art. No. | Pack Qty. | € |
|---|---|---|
| **KK58.1** | 1 | 663,30 |

**Semi dry blotter PROfessional MAXI, transfer surface 20 x 20 cm**

| Art. No. | Pack Qty. | € |
|---|---|---|
| **KK59.1** | 1 | 1340,55 |

**Buffers recommended for Tank blotting**

Acc. to **Towbin** *et al.*, 1997: 25 mM Tris, 192 mM glycin, 20 % methanol. Optional: 0-0,1 % SDS.

Acc. to **Bjerrum und Schaefer-Nielsen**, 1986: 48 mM Tris, 39 mM glycin, 0-20 % methanol. Optional: 0-0.1 % SDS.

Acc. to **Dunn**, 1986: 10 mM $NaHCO_3$, 3 mM $NaCO_3$, 20 % methanol.

**Buffers recommended for Semy Dry blotting**

**Discontinuous buffer system:** Roti®-Blot 1 - for standard proteins or Roti®-Blot 2 - for hydrophobic proteins.

Continuous **Tris-glycin buffer** acc. to Bjerrum and Schaefer-Nielsen, 1986: 48 mM Tris, 39 mM glycin, 0-20 % methanol. Optional: 0,01-0,1 % (usually 0,0375 %) SDS.

Continuous **CAPS buffer** for blotting of basic proteins and prior to N-terminal sequencing: 0,22 % CAPS (pH 10,5-11,0), 10 % methanol.

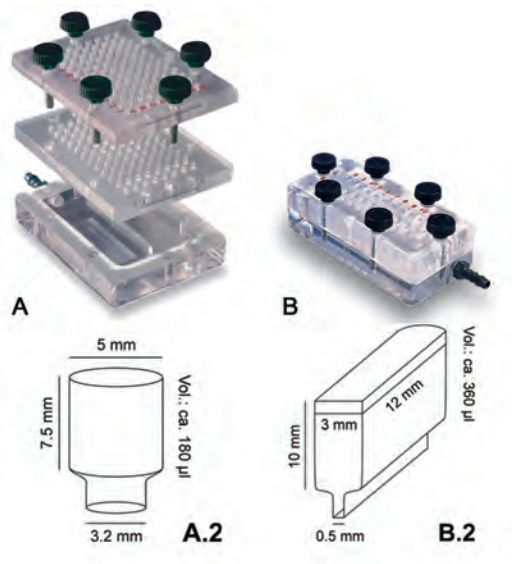
**Do not adjust pH of the buffer** (exception: CAPS stock solution). Adding acid or base to the buffer will result in higher conductivity, leading to increased formation of heat as well as ions. Subsequently, this results in brown, "burnt" looking blotting paper and damage to the electrode plates.

**Methanol** prevents the gel from swelling during transfer (mandatory for gradient gels!) and improves the absorption of proteins to NC membranes. For transfer of native or big proteins, reduce or omit methanol.

**SDS** improves transfer efficiency of large proteins and protein binding to PVDF membranes, however increasing relative current, power and temperature. Don't use SDS for Semi-Dry blotting of small proteins to NC membranes. For tank blotting use 0,02 % SDS in minimum.

For **blotting of native proteins** use buffer acc to Bjerrum and Schaefer-Nielsen with 0,04 % SDS and 0-10 % methanol.

## Rotilabo®-sealing roller



Frame made of **metal**, with **rubber** roller. For more effective sealing of microtest-, PCR- and Deep-Well-plates with sealing foil or sealing mats because the roller presses them on more evenly. Also usable for evenly smoothing out gel, transfer membrane and blotting-paper during blot-assembly. Roll width: 100 mm, ∅ roll: 30 mm.

| Art. No. | Pack Qty. | € |
|---|---|---|
| **HE23.1** | 1 | 37,85 |

Please note our **Technical Information Brochure** on the Internet next to the products:

**Transfer Buffers**

Tips and protocols

## Dot Blotter and Slot Blotter

**For rapid transfer of DNA,**
**RNA and immunological antibody screening methods.**

- Robust acrylic construction
- Precision lapped mating surfaces prevent sample leakage
- Steady transfer
- Very simple assembly
- Alpha-numeric sample identification

A permanent filter template is provided with each manifold to simplify the cutting of filters to exact size.

A vacuum of approximately 600 mm Hg (0,8 Bar, relative pressure) is required during sample application. We recommend LABOPORT®-Membrane vacuum pump (Art. No. Y371.1) with hose stems for hose inner ∅ 8 mm (Art. No. EL44.1) and the following hoses: Rotilabo®-Vacuum-Silicone hose, inner ∅ 8 mm (Art. No. 9746.1) or Rotilabo®-Vacuum-Rubber hose, inner ∅ 8 mm (Art. No. 0680.1).

### Dot-blotter (A)

**Max. sample capacity: 96 per transfer**
**Wells per row: 12**
**Wells per column: 8**
**Volume per well: approx. 180 µl (for shape of wells, see figure A.2)**

| Type | Art. No. | Pack Qty. | € |
|---|---|---|---|
| Dot-Blotter | **T790.1** | 1 | 657,90 |

### Slot-blotter (B)

**Max. sample capacity: 48 per transfer**
**Wells per row: 16**
**Wells per column: 3**
**Volume per well: approx. 360 µl (for shape of wells, see figure B.2)**

| Type | Art. No. | Pack Qty. | € |
|---|---|---|---|
| Slot-Blotter | **T791.1** | 1 | 703,05 |

**Instructions for use**
can be found on the Internet next to the product description.

# Transfer Filter Membranes

## Transfer Membranes Made of Nitrocellulose

Pure nitrocellulose membranes for reliable protein standard applications

- Free of cellulose acetate
- High absorption capacity
- Very low background
- 0,2 µm or 0,45 µm pore size
- Easy to block
- For all standard detection systems

Please note: Membranes made of nitrocellulose age and should be replaced anually!

### Roti®-NC

**Transfer membrane for protein analyses, colony- and plaque-lifts**
**Binding capacity for proteins: 125-200 µg/cm²**
**Made of 100 % nitrocellulose**

**Warning** H228

High-quality transfer membrane for all detection systems - extremely suitable for all protein transfer and detection methods. The membrane stands out for its particularly high mechanical stability. The pure 100 % nitrocellulose quality membrane is easy to block and allows for background-free blots with perfect bands. The pore size of 0,2 µm is suitable for proteins and peptides of all sizes. The best retention rate is achieved when blotting proteins of up to 70 kDa. Its excellent protein binding capacity not only efficiently prevents the blot from going through during transfer, but also guarantees highly sensitive detection of even low protein amounts.

Membrane thickness: 0,15 ± 0,05 mm

Pore size: 0,2 µm

**Applications:** Optimised for proteins of ≤70 kDa. Western- and far-western-blot, colony- and plaque-lifting of nucleic acids and proteins, immunoblots, dot-blots.

| Pore size | Dimensions W x L (cm) | Art. No. | Pack Qty | € |
|---|---|---|---|---|
| 0,2 µm | 30 x 400 | **9302.1** | 1 roll | 381,65 |
| 0,2 µm | 30 x 300 | **HP40.1** | 1 roll | 266,60 |
| 0,2 µm | 20 x 300 | **HP41.1** | 1 roll | 261,25 |
| 0,2 µm | 10,2 x 13,3 | **HP42.1** | 10 sheets | 91,40 |
| 0,2 µm | 20 x 20 | **HP43.1** | 10 sheets | 209,65 |
| 0,2 µm | ∅ 9,0 | **HP44.1** | 50 disks | 170,95 |

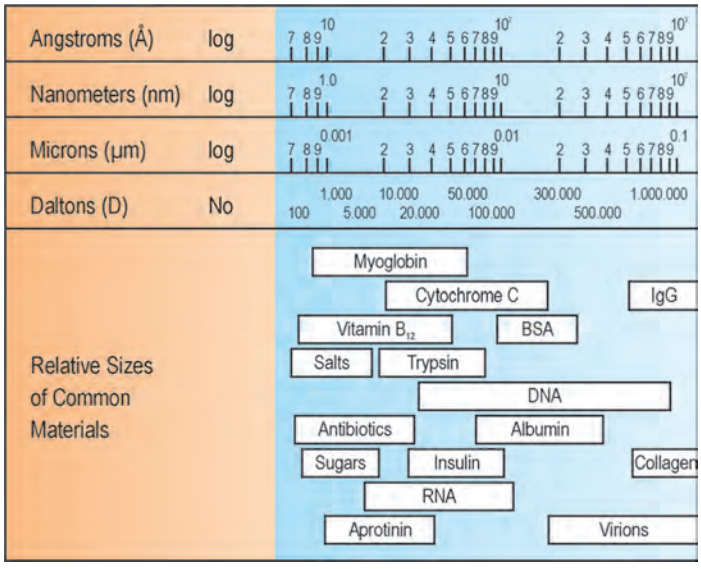
## Roti®-NC 0.45

**Transfer membrane for protein analyses, Southern- und Northern-Blots**

**Binding capacity for proteins: ≥125 µg/cm²**

**Made of 100 % nitrocellulose**

**Warning** H228



High-quality transfer membrane for all detection systems - extremely suitable for all protein transfer and detection methods. The Roti®-NC 0.45 membrane offers very good mechanical stability, standing out for its particularly smooth structure and even membrane thickness. The pure 100 % nitrocellulose quality membrane is easy to block and allows for background-free blots with perfect bands. The pore size of 0,45 µm is suitable for proteins and peptides of all sizes. The best retention rate is achieved when blotting proteins of ≥20 kDa. Having a high protein binding capacity, the membrane not only efficiently prevents protein loss during transfer, but also guarantees very sensitive detection of even low protein amounts.

Membrane thickness: 0,15 ± 0,01 mm

Pore size: 0,45 µm

**Applications:** Optimised for proteins ≥20 kDa. Western- and far-Western-blots, Southern- and Northern blots, colony- and plaque-lifting of nucleic acids and proteins, dot- and slot blots.

| Pore size | Dimensions W x L (cm) | Art. No. | Pack Qty | € |
|---|---|---|---|---|
| 0,45 µm | 30 x 400 | **9201.1** | 1 roll | 381,65 |
| 0,45 µm | 30 x 300 | **9200.1** | 1 roll | 284,90 |

## Amersham Protran®

**Transfer membrane for most nucleic acid and protein immobilising techniques**

**Binding capacity: 80-90 µg/cm² (0,2 µm) or 75-85 µg/cm² (0,45 µm)**

**Made from 100 % nitrocellulose.**

**Warning** H228

Multiple use - ideal for most nucleic acid and protein immobilising techniques. Pure nitro-cellulose, free from cellulose acetate and triton. They have a high binding capacity and low background. The fibre-reinforced version allows extensive handling of membrane, easier cutting, repeated hybridisation and automated immobilising.

**Applications:** Southern, Northern, Western transfer, colony and plaque hybridisation, immunoblots, nucleic acid and protein dot-blot, slot-blot, electrophoretic transfer of proteins. (Nitrocellulose should only conditionally be used for electrophoretic transfer of nucleic acids, because of the high salt concentrations required for the transfer).

Membranes of 0,45 µm pore size allow for DNA transfer (minimum 300 bp) and protein transfer (minimum 20 kD).

**Amersham Protran® 0.2 µm NC**

**Replaces Protran® BA 83 from Whatman®**

Ideal for all protein and nucleic acid transfers.

**Pore size 0.2 µm**

| Pore size | Dimensions W x L (cm) | Art. No. | Pack Qty | € |
|---|---|---|---|---|
| 0,2 µm | 20 x 20 | **4684.1** | 25 sheets | 532,15 |
| 0,2 µm | 10,2 x 13,3 | **0028.1** | 10 sheets | 202,10 |
| 0,2 µm | 30 x 400 | **4685.1** | 1 roll | 559,00 |
| 0,2 µm | 20 x 400 | **0031.1** | 1 roll | 428,95 |

**Amersham Protran® 0.45 µm NC**

**Replaces Protran® BA 85 from Whatman®**

Ideal for all protein and nucleic acid transfers.

**Pore size 0.45 µm**

| Pore size | Dimensions W x L (cm) | Art. No. | Pack Qty | € |
|---|---|---|---|---|
| 0,45 µm | ∅ 2,5 | **4589.1** | 100 disks | 114,00 |
| 0,45 µm | ∅ 8,2 | **4592.1** | 50 disks | 220,00 |
| 0,45 µm | 20 x 20 | **4674.1** | 25 sheets | 535,35 |
| 0,45 µm | 10,2 x 13,3 | **0030.1** | 10 sheets | 166,65 |
| 0,45 µm | 30 x 400 | **4675.1** | 1 roll | 481,60 |
| 0,45 µm | 20 x 400 | **0041.1** | 1 roll | 407,45 |

**Amersham Protran® supported 0.2 µm NC**

**Replaces Protran® BA-S 83 from Whatman®**

Reinforced with a synthetic, inert material for improved elasticity and reaction to wetness. Suitable for protein and nucleic acid transfers which require a better resistance to wetness, such as repeated screening of the same blot.

**Pore size 0.2 µm**

| Pore size | Dimensions W x L (cm) | Art. No. | Pack Qty | € |
|---|---|---|---|---|
| 0,2 µm | 20 x 20 | **5945.1** | 25 sheets | 623,50 |
| 0,2 µm | 30 x 400 | **4756.1** | 1 roll | 639,65 |

**Amersham Protran® supported 0.45 µm NC**

**Replaces Protran® BA-S 85 from Whatman®**

Reinforced with a synthetic, inert material for improved elasticity and reaction to wetness. Suitable for protein and nucleic acid transfers which require a better resistance to wetness, such as repeated screening of the same blot.

**Pore size 0.45 µm**

| Pore size | Dimensions W x L (cm) | Art. No. | Pack Qty | € |

# Transfer Membranes Made of PVDF

For optimal results with all protein transfer techniques

- Well suited for all protein blots
- Best signal-to-noise ratio
- Very robust
- 0,2 µm or 0,45 µm pore size
- Suitable for long-term exposition
- Suitable for all detection systems
- May be used for peptide sequencing

## Roti®-Fluoro PVDF

**Premium PVDF membrane from ROTH, suitable for direct fluorescence detection**

Roti®-Fluoro PVDF is a white, microporous membrane made from naturally hydrophobic polyvinylidene fluoride. The membrane is of superior protein binding capacity, making it perfectly suited for all standard and special applications in the field of protein analysis.

Roti®-Fluoro PVDF is of 0.2 µm pore size and binds proteins tenaciously via hydrophobic interactions. It enables very sensitive protein detection by keeping the background very low, resulting in a good signal-to-noise ratio with all standard detection systems. The mechanically rigid membrane is of high tensile strength and tear-proof, and does not crack or curl during handling. Therefore, signals remain clear and distinct, and are undisturbed by false-positive signals caused by membranes crinkles.

Roti®-Fluoro PVDF has been **specially optimised for direct detection via fluorescence.**

Briefly immerse Roti®-Fluoro PVDF membrane in 100 % methanol prior to transfer until no more white areas are visible. This transfer membrane is then compatible with every aqueous blot system.

**Applications:** Western- and Far-Western-Blot, analysis of small peptides, Immunoblot, Dot-blot, binding assays, N-terminal sequencing

**Detection systems:** Fluorescence, radioactivity, colour

| Pore size | Binding | Dimensions W x L (cm) | Art. No. | Pack Qty | € |
|---|---|---|---|---|---|
| 0,2 µm | hydrophobic | 13 x 20 | **2831.1** | 2 sheets | 33,00 |
| 0,2 µm | hydrophobic | 26 x 330 | **2803.1** | 1 roll | 332,20 |

## Roti®-PVDF 0.2

**PVDF membrane with 0,2 µm pore size**

**Binding capacity for proteins: ≥125 µg/cm²**

Roti®-PVDF 0.2 is a hydrophobic, microporous polyvinylidene membrane, free from adjuvants and detergents. It has been optimised for transfer and highly sensitive detection of proteins of up to 70 kDa, but is also perfectly suited for blotting of bigger proteins. The membrane shows superior protein binding parameters and stands out for its particularly low background. It may also be used very well after repeated stripping and harsh washing processes.

This mechanically rigid transfer membrane can be easily cut to the desired gel size and it remains flexible and tear-proof even when dry.

Briefly immerse Roti®-PVDF 0.2 membrane in 100 % methanol prior to transfer until no more white areas are visible. This transfer membrane is then compatible with every blotting system.

Membrane thickness: 140 ± 20 µm

Pore size: 0,2 µm

Due to production processes, the membrane shows two different sides - one smooth and one raw. For optimally distinct bands, please use the smooth side for protein binding.

**Applications:** Optimised for proteins of ≤70 kDa. Western-blot, Dot-blot, lipopolysaccharide- and amino acid analysis, bindings assays, N-terminal peptide sequencing.

**Detection systems:** Chemoluminescence, radioactivity, colour

| Pore size | Binding | Dimensions W x L (cm) | Art. No. | Pack Qty | € |
|---|---|---|---|---|---|
| 0,2 µm | hydrophobic | 30 x 300 | **8989.1** | 1 roll | 338,65 |

## Roti®-PVDF

**PVDF membrane from ROTH.**

Roti®-PVDF is a hydrophobic, microporous polyvinylidene membrane. It is free from adjuvants and detergents. This membrane enables efficient transfer of proteins over a wide molecular weight range.

This mechanically rigid transfer membrane can be easily cut to the desired gel size and it remains flexible and tear-proof even when dry.

Briefly immerse Roti®-PVDF membrane in 100 % methanol prior to transfer until no more white areas are visible. This transfer membrane is then compatible with every aqueous blot system.

Membrane thickness: 125 ± 25 µm

Pore size: 0,45 µm

**Applications:** Optimised for proteins ≥20 kDa. Western-blot, Dot-blot, lipopolysaccharide- and amino acid analysis, binding assays, N-terminal peptide sequencing.

**Detection systems:** Chemoluminescence, radioactivity, colour

**Not suitable for use with infrared densitometers (700 nm/800 nm).**

| Pore size | Binding | Dimensions W x L (cm) | Art. No. | Pack Qty | € |
|---|---|---|---|---|---|
| 0,45 µm | hydrophobic | 26,5 x 375 | **T830.1** | 1 roll | 349,40 |

## Immobilon-P

**Original PVDF membrane from Millipore, for outstanding Western Blots.**

The Immobilon-P membrane consists of microporous polyvinylidene fluoride (PVDF) with a high binding capacity for all biomolecules, particularly for proteins, independently of the transfer method or gel used. The efficient signal-to-noise ratio allows long exposure times and provides a high sensitivity during detection even when working with low protein amounts.

Membrane thickness: 100-145 µm

Pore size: 0,45 µm

**Instructions for use:** Compared to nitrocellulose the Immobilon-P membrane is much easier to handle and much better to stain, and shows superior resistance to organic solvents. Furthermore, the open pore structure provides easy access of antibodies or other peptides used for detection to bound protein, and enables efficient removal of unbound molecules, efficiently reducing the background.

Immobilon-PVDF membrane is ideal when performing immunodetection. The rapid immunodetection method additionally provides a tool to reduce the time span needed for the process by several hours. During Western Blot, the superior qualities of the PVDF membrane not only supersede a blocking step, but also reduce number and time span of washing steps considerably without compromising on specificity or sensitivity.

**Applications:** Western-blot, Dot- and Slot-blot, amino acid analysis, binding assays, detection of glycoproteins, N-terminal peptide sequencing.

**Detection systems:** Radioactivity, chemoluminescence, colour

| Pore size | Binding | Dimensions W x L (cm) | Art. No. | Pack Qty | € |
|---|---|---|---|---|---|
| 0,45 µm | hydrophobic | 26,5 x 375 | **T831.1** | 1 roll | 436,45 |

## Technical Parameters of ROTH-Transfer Membranes

| Membrane | Material | Characteristics | Thickness (µm) | Binding capacity (µg/cm²) | Pore size (µm) | Immobilisation |
|---|---|---|---|---|---|---|
| **Roti®-Fluoro PVDF** | Polyvinyliden fluoride | hydrophobic | 125±25 | 300 | 0,2 | not necessary |
| **Roti®-PVDF 0.2** | Polyvinyliden fluoride | hydrophobic | 140±20 | ≥125 | 0,2 | not necessary |
| **Roti®-PVDF** | Polyvinyliden fluoride | hydrophobic | 125±25 | ca. 200 | 0,45 | not necessary |
| **Immobilon P** | Polyvinyliden fluoride | hydrophobic | 120±25 | 150-300 | 0,45 | not necessary |
| **Roti®-Nylon 0.2** | Nylon 6,6 | neutral/amphoteric | 150±20 | 500 | 0,2/0,45 | UV, baking |
| **Roti®-Nylon plus** | Nylon 6,6 | hydrophilic, positively charged | 160±20 | 500 | 0,45 | not necessary, UV and baking possible |
| **Roti®-NC** | Nitrocellulose | electrostatic, hydrophobic | 150±50 | 125-200 | 0,2 | UV, baking (max. 80 °C) |
| **Roti®-NC 0.45** | Nitrocellulose | electrostatic, hydrophobic | 150±10 | ≥125 | 0,45 | UV, baking (max. 80 °C) |
| **Amersham Protran®** | Nitrocellulose | electrostatic, hydrophobic | Unknown | 11-72 | 0,2/0,45 | UV, baking (max. 80 °C) |
| **Amersham Protran® supported** | Nitrocellulose | electrostatic, hydrophobic | Unknown | 86-110 | 0,2/0,45 | UV, baking (max. 80 °C) |

# Transfer Membranes Made of Nylon

For perfect Southern- and Northern-Blots

- Very low background
- Suitable for all staining techniques
- Superior performance in nucleic acid absorption
- Available as roll, easy-to-use pre-cut membranes and disks – the perfect size for each application

## Roti®-Nylon plus

**Ideal for DNA/RNA-transfers.**

Roti®-Nylon plus is a cationic, einforced nylon 6.6-membrane with 0.45 µm pore size and extremely high tensile strength. The positively charged membrane surface guarantees rapid and efficient binding of DNA and RNA. May be steam sterilised.

Also available in convenient pre-cut sheets of standard gel size.

Membrane thickness: 150 ± 20 µm

**Instructions for use:** Nucleic acids can be cross-linked to the membrane by baking (80 °C, 15 min) or through UV exposure. No cross-linking is required for alkaline transfer as the negatively charged DNA forms a very stable complex with the positively charged Roti®-Nylon membrane.

**Applications:** Southern- and Northern-blot, Dot-blot, DNA fingerprinting, macro- and microarrays

**Detection systems:** Radioactivity, chemoluminescence, fluorescence

| Pore size | Load | Dimensions W x L (cm) | Art. No. | Pack Qty | € |
|---|---|---|---|---|---|
| 0,45 µm | positive | 30 x 300 | **K058.1** | 1 roll | 305,30 |
| 0,45 µm | positive | 10 x 10 | **HP34.1** | 10 sheets | 134,40 |
| 0,45 µm | positive | 10 x 15 | **HP35.1** | 10 sheets | 160,20 |
| 0,45 µm | positive | 20 x 20 | **HP36.1** | 10 sheets | 241,90 |
| 0,45 µm | positive | 22,2 x 22,2 | **HP37.1** | 10 sheets | 274,15 |

## Roti®-Nylon 0.2

**Ideal for DNA/RNA transfer, particularly for colony- and plaque-lifting, as well as for all multiple rehybridisations.**

**Especially recommended for Northern-blots.**

Roti®-Nylon 0.2 is a neutral, enhanced Nylon membrane. Based on the material it provides a superior tensile strength and is extremely resistant against alcohol, acetone, and many other organic solvents. In a buffer pH of 6,5 Roti®-Nylon 0.2 is uncharged and by means of the surface-standing amino- and carboxy-groups has superior hydrophilic qualities. The charge of the membrane (ζ-potential) may be altered through the pH of the buffer - the membrane is positively charged at pH <6,5 and negatively charged at pH >6,5.

Membrane of particulary high DNA-binding capacity. Available as roll (pore size 0,2 µm) for high-flexible usage, and as disks (pore size 0,45 µm) for colony- and plaque-lifting. May be steam sterilised.

Membrane thickness: 150 ± 20 µm

**Instructions for use:** Covalent bondage of transferred nucleic acids is achieved by cross linking (baking for 15 min at 80 °C or UV-cross linking for 20 sec at 260 nm). Due to the excellent signal-to-noise ratio of the membrane, very sensitive detection (single copy-gene detection) and multiple rehybridisation is possible without loosing sensitivity.

**Applications:** Southern- and Northern blot, Dot blot, DNA fingerprinting, ELISA, colony- and plaque lifting, macro- and microarrays

**Detection systems:** Radioactivity, chemoluminescence, fluorescence

| Pore size | Load | Dimensions W x L (cm) | Art. No. | Pack Qty | € |
|---|---|---|---|---|---|
| 0,2 µm | neutral | 30 x 300 | **AE50.1** | 1 roll | 317,15 |
| 0,45 µm | neutral | ∅ 13,2 | **HP39.1** | 50 disks | 342,95 |

**Size Comparison of Membrane Pores and Biomolecules**

| Biomolecules / Membrane Pores | Size (kD) |
|---|---|
| genomic DNA (human) | >11000000 |

# Blotting Papers

**Programme extension!**

## Rotilabo®-Blotting Papers

High quality paper for blotting, chromatography and filtration.
With good absorption qualities and smooth surface - for distinct bands and sample spots.

| Thickness | Weight | Capillary rise (acc. to Klemm) |
|---|---|---|
| 0,17 mm | 81 g/m² | 70-90 mm / 10 min |
| 0,35 mm | 192 g/m² | 55-65 mm / 10 min |
| 0,75 mm | 320 g/m² | 150-160 mm / 10 min |
| 1,0 mm | 400 g/m² | 130-145 mm / 10 min |
| 1,5 mm | 570 g/m² | 250-300 mm / 10 min |

### Thickness 0,17 mm

| Dimensions | Art. No. | Pack Qty. | € |
|---|---|---|---|
| 100 x 130 mm | **CL68.1** | 100 | 46,00 |
| 200 x 200 mm | **CL69.1** | 100 | 49,70 |
| 460 x 570 mm | **CL70.1** | 100 | 198,90 |
| 580 x 600 mm | **CL71.1** | 100 | 227,90 |

### Thickness 0,35 mm

Conventional thickness for all general protocols. Equivalent to 3MM.

| Dimensions | Art. No. | Pack Qty. | € |
|---|---|---|---|
| 100 x 130 mm | **CL64.1** | 100 | 30,65 |
| 200 x 200 mm | **CL65.1** | 100 | 56,55 |
| 460 x 570 mm | **CL66.1** | 100 | 223,60 |
| 580 x 600 mm | **CL67.1** | 100 | 256,95 |

### Thickness 0,75 mm

Paper of optimised thickness, perfectly suited for Semi Dry- and Tank-Blotting. Superior transfer efficiciency due to high liquid absorption, with being nicely flexible and to cut easy.

| Dimensions | Art. No. | Pack Qty. | € |
|---|---|---|---|
| 100 x 130 mm | **0942.1** | 100 | 47,20 |
| 200 x 200 mm | **0943.1** | 100 | 99,15 |
| 580 x 600 mm | **0945.1** | 100 | 436,45 |

### Thickness 1,0 mm

| Dimensions | Art. No. | Pack Qty. | € |
|---|---|---|---|
| 150 x 150 mm | **CL72.1** | 25 | 21,90 |
| 200 x 200 mm | **CL73.1** | 25 | 36,50 |
| 580 x 600 mm | **CL74.1** | 25 | 145,90 |

### Thickness 1,5 mm

| Dimensions | Art. No. | Pack Qty. | € |
|---|---|---|---|
| 580 x 600 mm | **CL75.1** | 25 | 199,00 |

## Gel Blotting Papers

Original Whatman®-blotting paper for wicking, blots and drying. Made from specially selected cellulose. Superior for applications in electrophoresis and chromatography.

**Thickness 0,34 mm** (Whatman® 3MM), flow rate 130 mm/30 min.
**Also available in convenient rolls!**

| Dimensions | Art. No. | Pack Qty. | € |
|---|---|---|---|
| 102 x 133 mm | **0043.1** | 100 | 19,95 |
| 200 x 200 mm | **0048.1** | 100 | 71,00 |
| 460 x 570 mm | **4926.1** | 100 | 259,00 |
| 580 x 680 mm | **4928.1** | 100 | 392,00 |
| 10 cm x 100 m (roll) | **CL87.1** | 1 | 142,00 |
| 15 cm x 100 m (roll) | **CL88.1** | 1 | 196,00 |
| 19 cm x 100 m (roll) | **CL89.1** | 1 | 245,00 |

**Thickness 1,5 mm** (GB005) extra thick, mass per unit area: 550 g/m².
Particularly recommended for Semi-Dry-Blotting.

| Dimensions | Art. No. | Pack Qty. | € |
|---|---|---|---|
| 150 x 150 mm | **A125.1** | 25 | 74,20 |
| 200 x 200 mm | **AE19.1** | 25 | 92,75 |
| 580 x 580 mm | **A126.1** | 25 | 376,00 |

## Whatman® Chromatography Papers

Whatman® chromatography papers for blotting, chromatography and filtration. Made from specially selected cellulose.

**Thickness 0,18 mm** (Whatman® 1CHR), flow rate 130 mm/30 min.
**Also available in convenient rolls!**

| Dimensions | Art. No. | Pack Qty. | € |
|---|---|---|---|
| 100 x 300 mm | **CL37.1** | 100 | 44,50 |
| 200 x 200 mm | **CL38.1** | 100 | 50,80 |
| 250 x 250 mm | **CL39.1** | 100 | 79,00 |
| 460 x 570 mm | **CL40.1** | 100 | 171,00 |
| 580 x 680 mm | **CL41.1** | 100 | 268,00 |
| 20 mm x 100 m (roll) | **7606.1** | 1 | 27,95 |
| 30 mm x 100 m (roll) | **CL42.1** | 1 | 37,80 |
| 40 mm x 100 m (roll) | **CL43.1** | 1 | 42,65 |
| 50 mm x 100 m (roll) | **7607.1** | 1 | 51,00 |
| 100 mm x 100 m (roll) | **CL44.1** | 1 | 96,75 |
| 150 mm x 100 m (roll) | **7608.1** | 1 | 124,00 |

**Thickness 0,36 mm** (Whatman® 3CHR), flow rate 130 mm/30 min.
For general applications with medium/heavy solute loadings.

| Dimensions | Art. No. | Pack Qty. | € |
|---|---|---|---|
| 460 x 570 mm | **7604.1** | 100 | 343,00 |

**Thickness 0,92 mm** (Whatman® 17CHR), flow rate 190 mm/30 min.
For the heaviest solute loadings.

| Dimensions | Art. No. | Pack Qty. | € |
|---|---|---|---|
| 70 x 90 mm | **7600.1** | 100 | 66,50 |
| 25 x 220 mm | **7601.1** | 100 | 67,95 |
| 460 x 570 mm | **7602.1** | 25 | 256,00 |
| 460 x 570 mm | **7603.1** | 100 | 952,00 |

# Blotting Reagents

## TRIS

**≥99,9 %, Blotting-Grade**

For Western blotting and immunodetection

**Warning** H315-H319-H335

Tris of very high purity, tested for absence of heavy metals and protease. Particularly suitable for Western blotting and protein immunodetection.

| | | | |
|---|---|---|---|
| **0188.1** | 250 g | plastic | 35,40 € |
| **0188.2** | 500 g | plastic | 60,75 € |
| Original pack 6 x 500 g | | | 57,71/500 g |
| **0188.3** | 1 kg | plastic | 98,80 € |
| Original pack 6 x 1 kg | | | 93,86/1 kg |
| **0188.4** | 2,5 kg | plastic | 188,15 € |

## Glycine

**≥99 %, Blotting-Grade**

For Western blotting

Glycin of very high purity, tested for absence of heavy metals, ammonia, and hydrolysable substances. Well soluble and particularly suitable for Western blotting.

| | | | |
|---|---|---|---|
| **0079.1** | 250 g | plastic | 25,30 € |
| **0079.2** | 500 g | plastic | 47,20 € |
| Original pack 6 x 500 g | | | 44,84/500 g |
| **0079.3** | 1 kg | plastic | 75,15 € |
| Original pack 6 x 1 kg | | | 71,39/1 kg |
| **0079.4** | 2,5 kg | plastic | 149,45 € |

## SDS

**≥99,5 %, Blotting-Grade**

For Western- and Southern blotting

**Danger** H228-H302+H332-H315-H318-H335-H412

SDS of particularly high purity, tested for absence of heavy metals and for UV-absorption qualities. Particularly suitable for Western- and Southern blotting, as well as for immunodetection and assays in molecular biology.

| | | | |
|---|---|---|---|
| **0183.1** | 100 g | plastic | 48,30 € |
| **0183.2** | 250 g | plastic | 101,60 € |
| **0183.3** | 500 g | plastic | 165,45 € |
| Original pack 6 x 500 g | | | 157,18/500 g |

## Methanol

**≥99,9 %, Blotting-Grade**

For Western blotting

**Danger** H225-H301+H311+H331-H370

Methanol of very high purity, tested for absence of heavy metals, sulphates, and organic impurities. Particularly suitable for Western blotting.

| | | | |
|---|---|---|---|
| **0082.1** | 500 ml | glass | 22,05 € |
| **0082.2** | 1 l | glass | 29,60 € |
| Original pack 6 x 1 l | | | 28,12/1 l |
| **0082.3** | 2,5 l | glass | 60,75 € |
| Original pack 4 x 2,5 l | | | 57,71/2,5 l |

## Roti®fair TG-Western

**for electrophoresis**

Buffer for protein electrophoresis and transfer.

TG buffer powder (pouch), Tris-glycine buffer

**Warning** H315-H319-H335

Exactly pre-weighed pouches for convenient and rapid preparation of TG-Western solution.
SDS-free running buffer for native protein gel electrophoresis. Optimum base for preparation of Western blot transfer buffer by addition of 5-20 % methanol (Blotting-Grade, Art. No. 0082).
Prepared solution may be sterilized by filtration (0,22 µm). For long-term storage, buffer solution should be kept at room temperature.
1x TG-Western solution is prepared by dissolution of 1 pouch in 1000 ml respectively 5000 ml highly pure water.

**Formulation:**

Prepared 1x TG-Western solution contains: 25 mM Tris, 0,192 M glycine, pH-value 8,3 ±0,05, when prepared in deionized or distilled water.

**For 1000 ml/pouch**

| | | | |
|---|---|---|---|
| **1269.1** | 10 pouches | box | 81,20 € |

**For 5000 ml/pouch**

| | | | |
|---|---|---|---|
| **1276.1** | 10 pouches | box | 170,95 € |

## Roti®-Stock 20 % SDS

**BioScience-Grade, ready-to-use, 0,2 µm filtered**

S ready-to-use

For molecular biology and electrophoresis.

SDS 20 % ready-to-use solution

**Danger** H318-H315-H335

20 % stock solution sodium dodecyl sulphate. Store the solution away from light in a dry place. SDS-stock solution and other solutions containing SDS should not be cooled below 24 °C otherwise the SDS may precipitate. The crystals can be easily resolubilised by heating them between 30 to 50 °C.
With original seal.

**Composition:**

20 % SDS in deionised water, 0,2 µm filtered

| | | | |
|---|---|---|---|
| **1057.1** | 1 l | glass | 138,70 € |
| Original pack 6 x 1 l | | | 131,77/1 l |

## Ponceau S (C.I. 27195)

**for histology and electrophoresis**

For reversible protein staining on membranes and for microscopy.

Scarlet red

**Warning** H315-H319-H335

Compatible with PVDF and NC membranes.
Staining of NC membranes: 0.2-2 % Ponceau S in 3 % trichloroacetic acid (Art. No. 8789.1) + 3 % sulphosalicylic acid (Art. No. 4119.1), incubate for 1-5 mins. at room temperature. Enhance contrast by incubation in water acidified by a few drops acetic acid.
Staining of PVDF membranes: 0.1-1 % Ponceau S in 10 % acetic acid (Art. No. 6755.1), incubate 1-5 mins. at room temperature. Ponceau S stained bands on PVDF only appear bright and distinct after drying (not recommended if Western blotting shall be performed).
Prior to Western blot analysis decolourise in PBS (Art. No. 1058.1) or TBS (Art. No. 1060) for 10-20 mins. at room temperature.

| | | | |
|---|---|---|---|
| **5938.2** | 10 g | glass | 25,70 € |
| **5938.1** | 25 g | glass | 52,15 € |

## Roti®-Blot 1

**Discontinuous transfer buffer for semi dry blotting.**

ready-to-use

Storage temp.: +20 °C

**Warning** H315-H319

- Optimised for semi dry blotting
- Superior blotting results for peptides and proteins of every size
- Special formulation with reduced acid formation - for optimal electrode protection

Roti®-Blot has a much better transfer efficiency than a tris-glycine buffer. Roti®-Blot also enables proteins >100 kD to be transferred completely by simply extending the transfer time.
**A kit consists of:**
Anode buffer Roti®-Blot A, 1 l (10 x concentration) (Art. No. L510)
Cathode buffer Roti®-Blot K, 1 l (10 x concentration) (Art. No. L511)
Both solutions may be bought separately.

| | | | |
|---|---|---|---|
| **L509.1** | 1 Set | glass | 98,80 € |

## Roti®-Blot A

**anode buffer to Roti®-Blot 1, 10x conc.**

ready-to-use

Storage temp.: +20 °C

**Warning** H315-H319

| | | | |
|---|---|---|---|
| **L510.1** | 1 l | glass | 59,70 € |
| Original pack 6 x 1 l | | | 56,72/1 l |

## Roti®-Blot K

**cathode buffer to Roti®-Blot 1, 10x conc.**

ready-to-use

Storage temp.: +20 °C

| | | | |
|---|---|---|---|
| **L511.1** | 1 l | glass | 61,85 € |
| Original pack 6 x 1 l | | | 58,76/1 l |

## Amido black 10 B (C.I. 20470)

**p.a.**

For irreversible staining of proteins on membranes and for quantification of proteins in detergent containing solutions.

Naphthol blue black

Compatible with PVDF and NC membranes.
Staining solution: 0.5 % amido black in 50 % methanol (Art. No. 4627.1) / 10 % acetic acid (Art. No. 3738.1). Stain for 1-5 min at room temperature. Reduce background in 50 % methanol at room temperature.

| | | | |
|---|---|---|---|
| **9590.1** | 25 g | glass | 37,55 € |

## Roti®fair SSPE

**for 200 ml/tablet, for molecular biology**

Buffer solution for DNA- and RNA hybridisation.

Sodium sodium phosphate EDTA, SSPE buffer (tablets)

Exactly pre-weighed tablets for convenient and rapid preparation of phosphate buffered salt solution (SSPE).
SSPE is frequently used for Southern- and Northern hybridisations, as well as for washing steps during Microarray techniques. Roti®fair SSPE may also be used very well in imunocytochemistry and for cell suspension prior to FACS analyses.
Prepared solution may be sterilized by filtration (0,22 µm). For long-term storage, buffer solution should be kept at +4 °C.
1x SSPE solution is prepared by dissolution of 1 tablet in 200 ml highly pure water.

**Formulation:**

Prepared 1x SSPE solution contains: 0,15 M NaCl, 1 mM EDTA, 10 mM Na-phosphate, pH-value 7,4 ±0,05, when prepared in deionized or distilled water.

| | | | |
|---|---|---|---|
| **1233.1** | 100 tablets | plastic | 99,90 € |

## Roti®fair 20x SSC

**for 1000 ml/pouch, for molecular biology**

Concentrated buffer solution for Southern- and Northern transfer.

SSC buffer powder (pouch), Sodium sodium citrate

Exactly pre-weighed pouches for convenient and rapid preparation of SSC solution.
Prepared solution may be sterilized by filtration (0,22 µm) or autoclaving. For long-term storage, buffer solution should be kept at +4 °C.
20x SSC solution is prepared by dissolution of 1 pouch in 1000 ml highly pure water.

**Formulation:**

Prepared 20x SSC solution contains: 3,0 M NaCl, 0,3 M Na-Citrat, pH-value 7,0 ±0,05, when prepared in deionized or distilled water.

| | | | |
|---|---|---|---|
| **1232.1** | 5 pouches | box | 153,20 € |

## Roti®-Stock 20x SSC

**BioScience-Grade, ready-to-use, steam sterilised**

S ready-to-use

For molecular biology.

SSC 20x ready-to-use solution

20fold stock solution sodium/sodiumcitrate. Undiluted or after dilution with sterile water to 10x, 6x, 1x or 0,1x SSC one receives a versatile buffer for blotting, hybridising or washing of Southern- or Dot/Slot-Blots of DNA as well as for *in situ* hybridisation. Undiluted buffer is also suitable for neutral transfer of RNA onto unloaded membranes (e.g. Roti®-Nylon 0.2, Art. No. AE50.1).
With original seal.

**Composition:**

3 M NaCl, 300 mM sodium citrate in deionised water, pH-value 7.0, steam sterilised

| | | | |
|---|---|---|---|
| **1054.1** | 1 l | glass | 66,55 € |
| Original pack 6 x 1 l | | | 63,22/1 l |

# DNA-/RNA Isolation

## Roti®-Phenol

### Roti®-Phenol solutions for DNA- and RNA extraction

- Reduce exposure to toxic chemicals
- Prepared from phenol of highest purity
- Packed under argon for maximum stability
- Successfully tried and tested in many research laboratories

ready-to-use

**Mechanism**

Phenol and chloroform lead to denaturation of proteins which accumulate in the interphase. Isoamyl alcohol prevents foaming and very efficiently inhibits RNAses.

For distinct phase separation, Roti®-Aqua-Phenol needs a pH of ≤4.0 in the aqueous upper phase. If needed, the upper phase may be acidified by adding 1-2 drops of 1 N HCl. Draw solution from lower phase. Do not shake before use!

### Roti®-Phenol

**for extraction of nucleic acids**

Redistilled, in TE buffer equilibrated phenol, pH 7,5-8,0.

Storage temp.: +4 °C

**Danger** H301+H311+H331-H314-H341-H373-H411

Phenol solutions for nucleic acid isolation must be buffered and adjusted to the correct pH-value prior to use. Roti®-Phenol is a redistilled, in TE-buffer equilibrated ready-to-use phenol. Roti®-Phenol has been successfully tried and tested for isolating nucleic acids in many research laboratories. This quality product for molecular biology replaces the time consuming preparation of phenol and subsequently any exposure to toxic vapours. Covered with buffer and packed under argon. Store in the dark!
Draw solution from lower phase. Do not shake before use!

| | | | |
|---|---|---|---|
| **0038.1** | 100 ml | glass | 25,70 € |
| **0038.2** | 250 ml | glass | 50,45 € |
| **0038.3** | 500 ml | glass | 76,90 € |

### Roti®-Phenol/Chloroform/Isoamyl alcohol

**for extraction of nucleic acids**

Redistilled, in TE-buffer equilibrated phenol, chloroform and isoamyl alcohol at a ratio of 25:24:1, pH 7,5-8,0.

Storage temp.: +4 °C

**Danger** H301+H331-H312-H314-H341-H351-H361d-H372-H411

Ready-to-use solution for extraction of nucleic acids. Covered with buffer and packed under argon. Store in the dark!
Draw solution from lower phase. Do not shake before use!

| | | | |
|---|---|---|---|
| **A156.3** | 100 ml | glass | 36,05 € |
| **A156.1** | 250 ml | glass | 71,95 € |
| **A156.2** | 500 ml | glass | 119,90 € |

### Roti®-C/I

**for extraction of nucleic acids**

Chloroform/Isoamyl alcohol at a ratio of 24:1.

Storage temp.: +20 °C

**Danger** H331-H372-H351-H361d-H302-H315-H319

Mixture of chloroform and isoamyl alcohol of highest purity.
Ideal for extraction of DNA/RNA in combination with Roti®-Phenol.

| | | | |
|---|---|---|---|
| **X984.3** | 100 ml | glass | 11,00 € |
| **X984.1** | 250 ml | glass | 16,70 € |
| **X984.2** | 500 ml | glass | 25,70 € |

### Roti®-Aqua-Phenol

**for RNA extraction**

Redistilled, in water saturated phenol, pH 4,5-5.

Storage temp.: +4 °C

**Danger** H301+H311+H331-H314-H341-H373-H411

Optimal for RNA-isolation and other procedures, requiring a low phenol pH-value. The low pH results in interphase-enrichment of the DNA, reducing DNA-contamination in the RNA-eluate.
Also ideal for self-adjustment of pH-value. If required, buffer solution (e.g. TE buffer) may be added directly into the bottle, as Roti®-Aqua-Phenol comes in the following bottle sizes:
A980.2 - 100 ml in a 250 ml bottle
A980.1 - 250 ml in a 500 ml bottle
A980.3 - 500 ml in a 1 l bottle

Packed under argon for protection. Store in the dark!
Draw solution from lower phase. Do not shake before use!

| | | | |
|---|---|---|---|
| **A980.2** | 100 ml | glass | 21,40 € |
| **A980.1** | 250 ml | glass | 41,85 € |
| **A980.3** | 500 ml | glass | 62,90 € |

### Roti®-Aqua-P/C/I

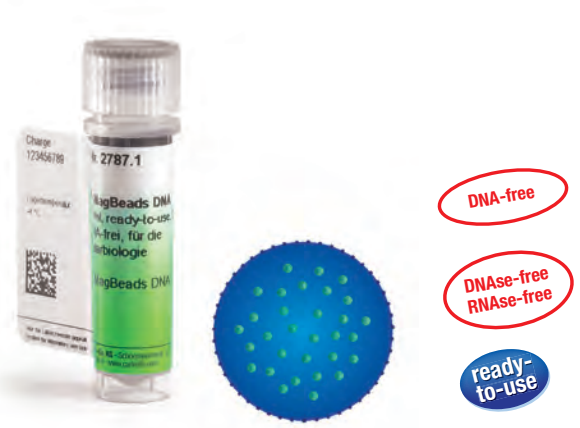
**for RNA extraction**

Redistilled, in water saturated phenol, chloroform and isoamyl alcohol at a ratio of 25:24:1, pH 4,5-5.

Storage temp.: +4 °C

**Danger** H301+H331-H312-H314-H341-H351-H361d-H372-H411

Optimal for RNA-isolation and other procedures where a low phenol pH-value is desired. The low pH results in interphase-enrichment of the DNA, reducing DNA-contamination in the RNA-eluate.
Packed under argon for protection. Store in the dark!



| | | | |
|---|---|---|---|
| **X985.3** | 100 ml | glass | 27,85 € |
| **X985.1** | 250 ml | glass | 48,95 € |
| **X985.2** | 500 ml | glass | 74,10 € |

# Extraction Systems & -Kits

## Roti®-MagBeads DNA

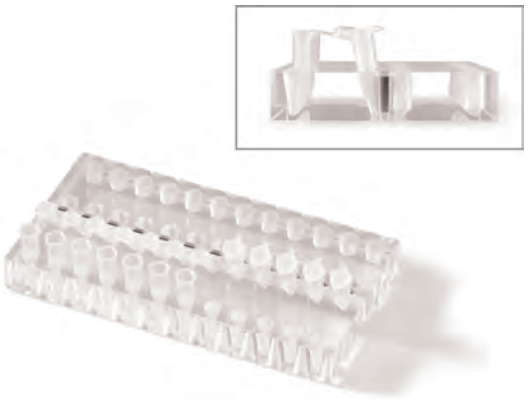
**20 mg/ml, ready-to-use, DNAse- and DNA-free, for molecular biology**

Magnetic silica gel beads for isolation of genomic DNA.
Storage temp.: +4 °C

- For isolation of highly pure genomic DNA from blood, cell and tissue extracts and bacteria suspensions
- High DNA binding capacity for exceptional recovery rates
- High magnetic strength guarantees very efficient collection of the beads
- Suitable for manual and automated preparations

Roti®-MagBeads DNA is a matrix for simple and efficient isolation of DNA from solutions like blood, cell and tissue extracts and bacteria suspensions. Due to the high binding capacity, a very high magnetic strength, and fast bead collection, Roti®-MagBead DNA is particularly suited for manual and automated preparations.

The magnetic properties enable easy and quick washing steps, allowing one preparation to take place in approx. 20 mins. The small bead size of 1.2 µm in average provides a large surface with excellent coupling capacities. Handling is easy and identical to standardized protocols for beads of other suppliers, providing easy establishment of the assays. The high DNA binding capacity guarantees high recovery rates from a variety of buffer systems as well as directly from cell lysates. Isolated DNA can be easily eluted in small volumes.



The Matrix of Roti®-MagBeads DNA consists of uniform, superparamagnetic silica beads with a deliberately designed uneven surface optimised for DNA binding. In those beads, nanometer-sized particles of magnetic iron(II/III)oxide are embedded in silicium oxide, resulting in high magnetic mobility with low aggregation potential. The surface is made from pure silicium oxide and allows application in pH values between 3 and 13, as well as at 95 °C in maximum.
Well suited for automated applications.

**Type analysis:**

Concentration. ..... 20 ±1 mg/ml
Size distribution. ..... 0,7-2,5 µm

## Roti®-Mag Tube-Separator

For collection of magnetic beads in reaction tubes.

The Roti®-Mag Tube Separator has been designed for fast and efficient collection of Roti®-Mag Beads magnetic particles during elution of biological molecules in reaction tubes. The separator has been equipped with 12 particularly strong permanent magnets, providing magnetic force for separation in 1 to 24 tubes in parallel. It, therefore, enables for single tube preparation as well as high-throughput applications.

Short separation times (under 2 mins.) are allowed by the close proximity of magnets and tubes. The use of transparent acrylic glass ensures permanent visual control of the separation process without the need to remove the tubes from the block. 24 non-magnetic sockets for reaction tubes have been included to provide a whole working station for both, magnetic separation and resuspension.

Usable with 2 x 12 tubes of 1,5 and 2,0 ml volumes.

| Usable for | Art. No. | Pack Qty | € |
|---|---|---|---|
| 2 x 12 tubes á 1.5 and 2 ml | **2807.1** | 1 | 394,55 |

## Roti®-Mag 96well-Separator

For collection of magnetic beads in 96well plates.

The Roti®-Mag Tube Separator has been designed for fast and efficient high-throughput collection of Roti®-Mag Beads magnetic particles during elution of biological molecules in 96well plates. Each separator is made from acrylic glass and is equipped with 24 particularly strong permanent magnets of 7,5 mm diameter.

The close proximity of the magnets strongly pulls the beads of four adjacent wells, collecting the beads very efficiently and in short time (under 2 mins.) and, hence, enabling high speed and quantitative buffer exchange. For resuspension of the beads, plates are removed from the magnet stand.

Usable with 96well plates of 300 µl up to 2 ml well volume.

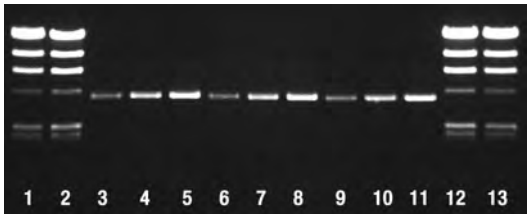
| Usable for | Art. No. | Pack Qty | € |
|---|---|---|---|
| 96well plates (300 µl - 2 ml) | **2808.1** | 1 | 394,55 |

## Roti®-Prep Plasmid MINI

**for molecular biology**

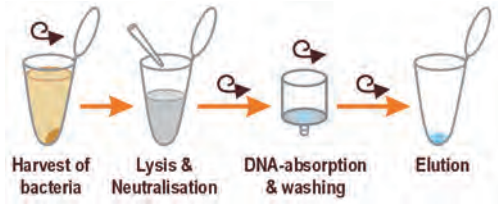
For fast and easy isolation of plasmid and cosmid DNA from recombinant bacteria.

Storage temp.: +20 °C



**Danger** H290-H302-H314

- Preparation by well-known mini spin-column system
- Fast, easy and efficient
- For all plasmids and cosmids of up to 10 kb length
- Up to 20 µg highly pure DNA, directly applicable to restriction digest, sequencing etc.
- 12 preparations in approx. 30 minutes



**New, optimised formulation. Coloured tracer for ideal DNA/membrane binding included.**

Designed for the isolation of high-purity plasmid or cosmid DNA from bacteria, Roti®-Prep Plasmid MINI Kit is based on the well-known "mini-prep" method, an alkaline lysis of bacteria followed by purification of the DNA from the cell debris, RNA and genomic DNA. The kit uses the easy-to-handle spin column technique, eliminating the need for time-consuming techniques like phenol-chloroform extraction and alcohol precipitation. The highly efficient and DNA-specific silica-gel membrane DNA absorption provides reliably high amounts of DNA, independently from vectors or bacterial strains used.

Up to 20 µg DNA can be isolated from up to 10 ml bacterial culture (5 preparations per column). DNA is free of RNA or protein contamination and can be directly applied to all standard down-stream applications like restriction digest, sequencing, *in vitro* transcription, transfection etc.

The **figure** depicts DNA of a 4 kb plasmid isolated by three equivalent kits
Lane 6, 7, 8: Roti®-Prep Plasmid MINI, 3 / 6 / 9 µl (1:10 dilution)

**The kit contains:**
RNAse A (Art. No. 3953), Lysis buffer (Art. No. 3970), Neutralisation buffer (Art. No. 3971), Washing buffer (Art. No. 3975), Elution buffer (Art. No. 3978), Column activation buffer (Art. No. 3980), Mini spin columns (10/50/250), 2 ml Collection tubes (10/50/250), detailed instructions-for-use. Excluding the columns, contents of this Kit may not be bought separately.

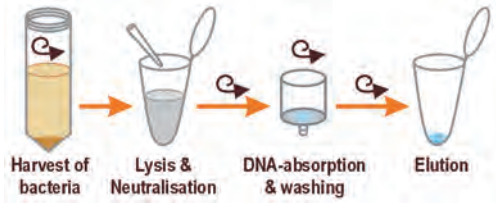
## Roti®-Prep Plasmid MINI-XL

**for molecular biology**

For easy isolation of plasmids from up to 15 ml bacterial culture.



Storage temp.: +20 °C

**Danger** H225-H290-H302-H315-H318-H336

- Preparation by well-known mini spin-column system
- Fast, easy and efficient
- Preparation from 5-15 ml bacteria culture
- Preparation within approx. 20 minutes
- Yield 60-70 µg (on average)

**MIDI preps in MINI size-fomat**

Roti®-Prep Plasmid MINI-XL is a further development of the classical Plasmid Mini extraction kit, which is based on an alkaline lysis and binding of the plasmid to the spin filter.
The binding capacity of the spin filter has been, compared to usual plasmid mini kits, considerably increased (approx. 80 µg plasmid DNA) and allows now a plasmid extraction from 5-15 ml bacteria culture. Since filter dimensions correspond to the usual miniprep spin filters, its application differs only slightly from other plasmid mini kits. Most significant difference is the afore done convenient lysis in a 15 ml tube.
The elution resulting in highly concentrated pure DNA in 100 µl, takes then place in a 1,5 ml tube, like in standard mini kits. Isolated DNA is free of RNA or protein contamination and can be directly applied to all standard down-stream applications like restriction digest, sequencing, *in vitro* transcription, transfection etc.

**The kit contains:**
Resuspension Buffer RB, Lysis Buffer LS, Neutralisation Buffer NB, Washing Buffer PA, Washing Solution PB, Elution Buffer XEB, spin columns, collection tubes, elution tubes, detailed instructions-for-use. Contents of this Kit may not be bought separately.

Please order ethanol 96-99,8 % (p.a., Art. No. 9065) separately.

| **2929.2** | 50 | 43,55 |

## Roti®-Prep Genomic DNA MINI

**for molecular biology**

For isolation of genomic DNA from tissues, rodent tails, FFPE tissues, buccal swabs, cell cultures.

Storage temp.: +20 °C

**Danger** H225-H315-H317-H318-H334-H335-H336-H411

- Preparation by well-known mini spin-column system
- Fast, easy and efficient
- Preparation in approx. 15 minutes (excluding lysis)
- Yield up to 65 µg gDNA, depending on source material

Roti®-Prep Genomic DNA MINI has been developed for the isolation of genomic DNA from various sources.
The isolation is carried out through the proven and reliable spin column technique, which is very easy to handle and needs only few steps.

In addition to the especially on proteinase K adapted lysis buffer, the filtration spin column has been optimised, permitting particularly high extraction rates. Extraction from up to 40 mg tissue, therefore, allows a yield of up to 65 µg DNA. The thereby extracted DNA is free of RNA and proteins, and can directly be stored or used for downstream applications.

Suitable source material:
- Tissue (up to 40 mg)
- Rodent tails (0,5-1 cm)
- FFPE tissue (formalin-fixed, paraffin-embedded)
- Buccal swabs
- Cell culture (up to 5x10$^6$ cells)

**The kit contains:**
Lysis Buffer LSA, Binding Buffer BSN, Proteinase K, Washing Buffer WST, Elution Buffer EB, spin columns, collection tubes, elution tubes, detailed instructions-for-use. Contents of this Kit may not be bought separately.

Please order ethanol 99,8 % (p.a., Art. No. 9065), RNase A (Art. No. 7156, not for FFPE tissue), and for FFPE tissue xylole (Art. No. 4436) or octane separately.

| | | |
|---|---|---|
| **8472.1** | 10 prep. | 38,60 € |
| **8472.2** | 50 prep. | 145,15 € |

## Roti®-Prep Blood Genomic DNA MINI

**for molecular biology**

For isolation of DNA from whole blood

Storage temp.: +20 °C

**Danger** H225-H317-H319-H315-H334-H335-H336-H400

- Preparation by well-known mini spin-column system
- Fast, easy and efficient
- Preparation in approx. 25 minutes
- Yield up to 30 µg gDNA

Roti®-Prep Blood Genomic DNA MINI has been specially designed for the isolation of high purity genomic DNA from blood samples.
The isolation is carried out through the proven and reliable spin column technique, which is very easy to handle and needs only few steps.

The Roti®-Prep Blood Genomic DNA MINI kit has been adapted to gain high purity DNA from fresh or frozen blood (EDTA or citrate stabilised) or whole blood, respectively. In order to get optimal results, two protocols, depending on sample amount, are provided. Furthermore, the properties of the binding buffer have been optimised to reach highest binding capacity with blood samples, permitting a yield of up to 30 µg gDNA out of 400 µl blood. Utilisation is uncomplicated and fast to achieve (approx. 25 minutes, lysis included), and offers best conditions for following downstream applications.

Isolated gDNA is free of EDTA, RNA, or proteins, and may directly be applied to all standard downstream applications like, for instance, restriction digest, PCR etc.

**The kit contains:**
Lysis Buffer LSN, Binding Buffer BR, Proteinase K, Washing Solution WSO, Washing Buffer WSH, Elution Buffer EB, spin columns, collection tubes, elution tubes, detailed instructions-for-use. Contents of this Kit may not be bought separately.

Please order ethanol 99,8 % (p.a., Art. No. 9065) and RNase A (optional, Art. No. 7156) separately.

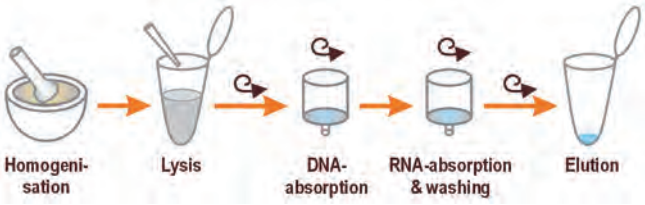
**Instructions for use**
can be found on the Internet next to the product description.

## Roti®-Prep RNA MINI

**for molecular biology**

For RNA isolation from eukaryotic cells, tissues, bacteria, biopsies.

Storage temp.: +20 °C



**Warning** H302+H312-H412-EUH032

- Preparation by well-known mini spin-column system
- Fast, easy and efficient
- Use of DNase not necessary
- Preparation in approx. 15 to 40 minutes
- Yields up to 100 µg RNA, depending on source material
- Elution in 30-80 µl

Roti®-Prep RNA MINI has been developed for the isolation of total RNA from various sources.
The isolation is carried out through the proven and reliable spin column technique, which is very easy to handle and needs only few steps.

One of the critical points in RNA extraction is the presence of endogenous RNases, which can lead to high losses very early in extraction of the (in comparison to DNA) very sensitive RNA. Therefores the lysis buffer has been specially optimised to inactivate RNases, with highest efficiency, already at the early stage of the extraction.
Furthermore, in order to get a high-pure total RNA, one particularly for this purpose developed prefilter is used. This filter exclusively serves for binding and targeted removal of DNA impurities, and is discarded after use with the bound DNA. Thus, it is possible to omit application of DNase I.
Total RNA is then obtained from the DNA-free eluate through a simple "Binding-Washing-Elution" process.
In each preparation, up to 100 µg highly pure total RNA may be isolated.
One preparation takes (excluding lysis) approx. 10 mins.
Isolated RNA is free of DNA and enzyme inhibitors, and may directly be applied to RT-PCR or other downstream applications.

Suitable source material:
- Tissues (up to 20 mg)
- Eukaryotic cells (up to $5x10^6$)
- Bacteria Gram + and Gram - (up to $1x10^9$)
- Biopsies

**The kit contains:**
Lysis Buffer LSR, Washing Buffer WSA, Washing Solution WSL, RNase-free Water, spin filters (blue), spin columns (violet), collection tubes, elution tubes, detailed instructions-for-use. Contents of this Kit may not be bought separately.

Please order ethanol 99,8 % (p.a., Art. No. 9065) and 70 % (p.a., Art. No. T868) separately.

| | | |
|---|---|---|
| **8485.1** | 10 prep. | 55,80 € |

## Roti®ZOL RNA

**for molecular biology**

Ready-made solution with green dye for isolation of total RNA

RNA isolation reagent

Storage temp.: +4 °C

**Danger** H290-H302+H312+H332-H314-H341-H373-EUH032

- Easy and very rapid two-step RNA isolation
- High recovery rates of intact, very pure total RNA
- Applicable on a broad range of tissues and cell types
- The purified RNA is ready for use in standard downstream applications such as RT-PCR

Roti®ZOL RNA is a ready-to-use, green-coloured solution for isolating total RNA from biological samples such as cells or tissue.
Roti®ZOL RNA is based on the phenolic isolation procedure known from Chomczynski and Sacchi (*Anal. Biochem.* (1987) 162:156-9). Due to the advanced and optimized formulation, Roti®ZOL RNA results in very high recovery rates of highly pure total RNA. Application is very convenient and preparation of several samples in parallel is finished in less than one hour. Additionally, the green colour significantly simplifies the separation of the RNA containing aqueous phase, the DNA containig interphase, and the protein containing phenolic phase during the process.

Typical RNA yield from $5x10^6$ cells: 30-35 µg
Typical purity of RNA prepared from $5x10^6$ cells: 2,08 ($A_{260}/A_{280}$)

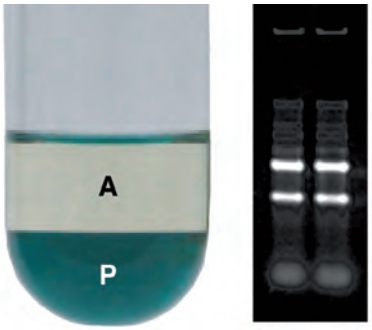

**Figure 1 and 2:**
Isolation of totalRNA by Roti®ZOL RNA.
Left: Tube after centrifugation.
A: Aqueous phase - RNA containig, P: Phenolic phase - protein containing. DNA accumulates in the A/P interphase.
Right: Typical gel of total RNA isolated by Roti®ZOL RNA (extracted from $5x10^6$ HL-60 cells).

1 ml Roti®ZOL RNA is used for RNA isolation from 100 mg tissue or $10^7$ cells, respectively.

| | | | |

## Roti®-Quick kit

**for molecular biology**

For RNA-isolation from cells and tissues.

Storage temp.: +4 °C

**Danger**

H225-H314-H301+H311-H330-H341-H351-H373-H336-H412-EUH032

- Easy, most versatile application
- High recovery rate of intact, very pure total RNA
- Column-free two-step isolation
- Applicable on nearly any tissue type

Column-free, ultra-flexible isolation system designed for reliable isolation of total RNA from almost any tissue. The Roti®-Quick Kit is suitable for use with cell culture material, biopsies, high-fat or high-protein tissue, blood (Üçeyler *et al. Neurology* (2007) 69:42-9), solid plant material, mitochondria (Backert *et al. Plant Molecular Biology* (1997) 33:1037-50), mycoplasms (Weiner *et al. Nucleic Acids Res.* (2000) 28:4488-96) and many more. The kit can be used for both fresh tissue and frozen material.

The Roti®-Quick Kit is based on the GITC isolation method by Chomczynski and Sacchi (Chomczynski and Sacchi. (1987) *Anal. Biochem.* 162:156) and includes three optimised ready-to-use solutions that were developed by molecular biologists and have proven effective for many years.

After the tissue has been homogenised, the RNA is purified in a single step and isolated by precipitation. Each isolation takes approximately 2,5 hours, and multiple isolations can easily be performed simultaneously. The incubation and centrifuging steps take about 2 hours. Preparation as given in the instruction-for-use is optimised for RNA isolation from approx. 0,2 g of tissue or cell material. The amount of material isolated per batch may easily be up- or downscaled to larger or smaller amounts of tissue.

The isolated total RNA is highly pure and may be used directly for all common down-stream applications, such as RT-PCR, Northern blotting and reverse transcription. Detailed instructions-for-use are enclosed with each kit.

**This Kit contains:**
Roti®-Quick Kit 1 (Art. No. A976), Roti®-Quick Kit 2 (Art. No. A977), and Roti®-Quick Kit 3 (Art. No. A978). Contents of this Kit may not be bought separately.

The Roti®-Quick Kit is sufficient for 20 isolations from 0,2 g tissue each.

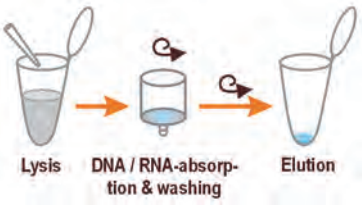
| | | | |
|---|---|---|---|
| **A979.1** | 1 kit | cardboard | 87,65 € |

## Roti®-Prep Viral RNA/DNA MINI

**for molecular biology**

For isolation of viral DNA and RNA

Storage temp.: +20 °C



**Danger** H225-H315-H317-H319-H334-H335-H336-H411-EUH032

- Preparation by well-known mini spin-column system
- Fast, easy and efficient
- Preparation within approx. 25 minutes
- Elution in 60 µl

Roti®-Prep Viral RNA/DNA MINI has been developed for the isolation of viral DNA and RNA from various kinds of source material.
The isolation is carried out via the proven and reliable spin column technique, which is very easy to handle and needs only few steps.

The kit enables the simultaneous extraction of viral ssDNA, dsDNA and ssRNA. The purification happens by using a carrier RNA, which engenders a higher binding of the nucleic acid (resp. its complex with the carrier RNA) on the spin filter and thus a higher recovery rate.
Furthermore, in order to achieve a maximum of nucleic acid purity for each source material, 5 specifically optimised protocols are provided.
Thus, within approx. 25 mins high-pure viral nucleic acid is eluted, free from inhibitors. This nucleic acid may directly be applied to further downstream applications, like RT-PCR, PCR, packaging etc.

Suitable source material:
- Tissues and biopsies (up to 20 mg)
- Cell culture supernatants, serum, plasma, cell-free body fluids (up to 400 µl)
- Swabs

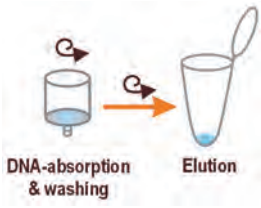
**The kit contains:**
Lysis Buffer LSV, Binding Buffer BSN, Carrier CS, RNase-free Water, Proteinase K, Washing Buffer WSA, Washing Solution WSL, spin columns, collection tubes, elution tubes, detailed instructions-for-use. Contents of this Kit may not be bought separately.

Please order ethanol 99,8 % (p.a., Art.-No. 9065) separately.

| | | |
|---|---|---|
| **8547.1** | 50 prep. | 213,95 € |

## Roti®-Prep PCR Purification

**for molecular biology**

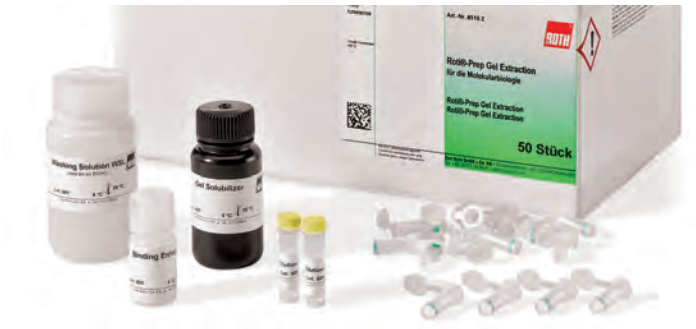


For concentration and purification of PCR products.
Storage temp.: +20 °C

**Danger** H225-H319-H336

- Preparation by well-known mini spin-column system
- Fast, easy and efficient
- Purification in approx. 3 minutes
- For fragment length of 60 bp-30 kb
- Recovery rate up to 95 %
- Elution in 10 µl

Very fast purification and/or concentration of PCR products, between 60 bp and 30 kb length, through simple but effective spin column technique.



The high performance membrane used for the Roti®-Prep PCR Purification columns, allows purification or concentration of PCR products within approx. 3 minutes. The PCR product to be extracted (50 µl in maximum) is first mixed with binding buffer, which can be done separately or directly in the spin filter column. The nucleic acid is then eluted by centrifugation, without any additional washing step, in a minimum of 10 µl of water or buffer. Isolated DNA is free of residual nucleotides or PCR additives, and may directly be applied to all standard downstream applications like cloning or sequencing.

**The kit contains:**
Binding Buffer, Elution Buffer EB, spin columns, collection tubes, elution tubes, detailed instructions-for-use. Contents of this Kit may not be bought separately.

## Roti®-Prep Gel Extraction

**for molecular biology**

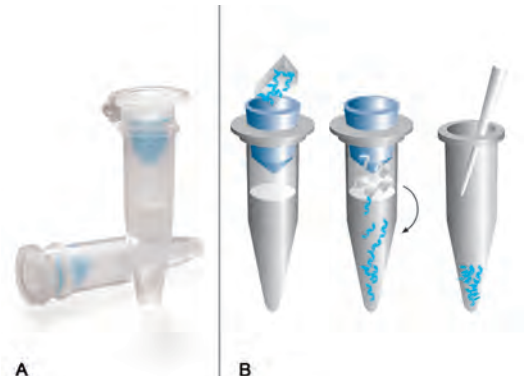
For DNA extraction from agarose gels.
Storage temp.: +20 °C

**Warning** H290-H302+H312+H332-H315-H319-H412-EUH032

- Preparation by well-known mini spin-column system
- Fast, easy and efficient
- Extraction within approx. 20 minutes
- For fragment length of 100 bp-30 kb
- Recovery rate up to 90 %

DNA extraction from agarose gels through incubation and subsequent spin column process.
The gel slice to be extracted (up to 300 mg) is first solubilised in a lysis buffer through a simple 10 minute incubation.
After that, DNA is elutied via convenient spin filter centrifugation in approx. 10 mins.
A specially developed Binding Enhancer is admixed in order to enhance binding efficiency of the DNA to the filter, and thus yield and purity of the isolated DNA.
Furthermore, the Roti®-Prep Gel Extraction kit allows, if needed, to reduce elution volume down to 10 µl in order to obtain particularly highly concentrated DNA.

For gel runs both, TAE and TBE may be used. The kit is compatible with all standard gel loading buffers and gel staining reagents, even non-toxic ethidium bromide replacements like, for instance, Roti®-GelStain.



Isolated DNA is free of residual agarose, PCR- and ligase inhibitors, and cytotoxic reagents, and can directly be applied to all standard downstream applications like cloning, PCR, transformation and transfection.

**The kit contains:**
Binding Enhancer, Gel Solubizer, Washing Solution WSL, Elution Buffer EB, spin columns, collection tubes, elution tubes, detailed instructions-for-use. Contents of this Kit may not be bought separately.

Please order ethanol 96-99,8 % (p.a., Art. No. 9065) separately.

## Ultrafree®-DA gel extraction kit

Made by MERCK MILLIPORE
**for molecular biology**

For easy and speedy extraction of DNA fragments from agarose or polyacryl amide gels.

- Extraction in 10 minutes
- High recovery of fully intact DNA
- Highly efficient with all gel running buffers
- Easy application - even during student courses
- Convenient handling even of large sample numbers

Recovery of functionally intact DNA in one spin-step. The agarose slice is placed directly into the pre-assembled device and centrifuged for 10 minutes (fig. B). Melting or enzymatic digestion is not required. The agarose slice is nebulised and the DNA is filtered and purified during centrifugation. The eluate may simply be stored away in the extraction tube or collected from the tube in order to apply the DNA to subsequent analyses.

**Application:**

Compatible with all agaroses with standard gelling temperature (not compatible with Low-Melting agarose). Suitable for fragments of 100 bp up to 10,000 bp. Ideal also for labelled DNA, e.g. after fluorescence- or radioactive labelling. Reliable recovery rates for fragments of 100 bp up to 2,000 bp. The gel extraction units may be used with all standard gel running buffers. Following elution from gels run with Rotiphorese® 10 x TAE buffer *light* (Art. No. 0122.1), the DNA may be applied **directly** to cloning or sequencing.

One extraction unit consists of a 1,5 ml standard reaction tube and a removable nebuliser/filter unit.

Compatible with all standard Mini-centrifuges.

| Art. No. | Pack Qty | € |

**Instructions for use**
can be found on the Internet next to the product description.

## Roti®-Elution Tubes

**RNase-free, DNase-free and proteinase-free, free of PCR products. For gel elution and purification of DNA/RNA and proteins.**

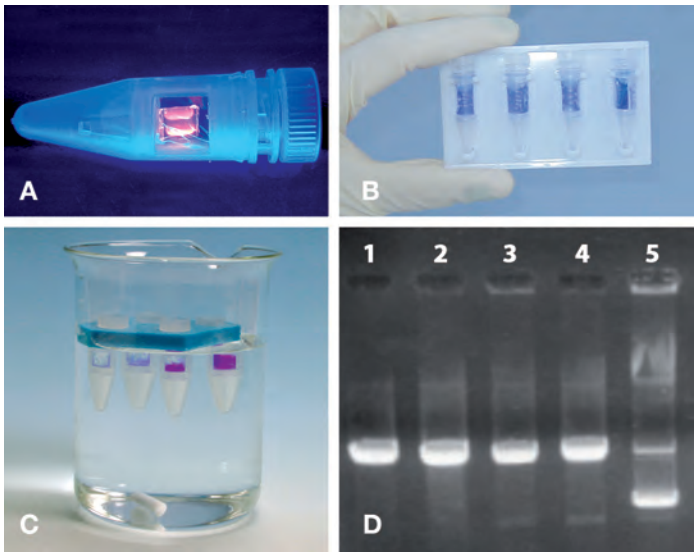
- Ultrapure
- Easy-to-handle
- Very gentle process
- Typical recovery rate of >95 %
- Suitable for elution from agarose and PAGE
- Suitable for dialysis of biomolecules
- Suitable for oligoncleotides, dsDNA, ssDNA, RNA, proteins and protein/ nucleic acid complexes
- Compatibel with all popular electrophoresis units

Easy-to-handle system for gel elution and purification of DNA/RNA and proteins in solution (electro elution).

This very gentle method guarantees the non-disruptive purification of high-molecular or genomic DNA as well as of native protein complexes and long peptides. Using membranes of low MWCO, elution of very small DNA fragments is possible, making the tubes a very useful tool for the efficient desalting of primers within 60-100 min as well as for purification of siRNA (ss or duplexes).

Roti® elution tubes are suitable for elution of ssDNA (≥20 nt), dsDNA (15 bp-100 kb), RNA of each size, proteins of each size, and of protein/ nucleic acid complexes. The tubes may be applied to elution procedures from agarose- and polyacrylamide gels, as well as to all popular electrophoresis units. Used in floating racks, they are ideal for the purification of DNA, RNA or proteins by means of dialysis.

All Roti® Elutions Tubes are free of DNase, RNase, Proteinase and PCR products. All membranes are made from regenerated cellulose and can thus be exposed to a pH range of 2-12, to a temperature of +60 °C, and also to a variety of organic solvents. Additionally, the membranes are free of sulphate and heavy metals and were treated with EDTA. Hence, macromolecules (like proteins or nucleic acids) or other biological particles may be eluted and dialysed in native conformation, and are very well suited for subsequent activity tests.



**Application:** Roti® elution tubes are very easy to handle, and therefore can be used in both individual tests and high-throughput applications. Thanks to the screw cap, the vials are easy to open, can easily be filled with gel slices and buffer and can be securely sealed.

The practical elution vial holder has sufficient stability for safe use in electrophoresis cell. Under current flow, the DNA/RNA/protein molecules initially migrate from the gel slice until they are halted by the dialysis membrane. By briefly reversing the polarity of the electrical field, the molecules can be separated from the membrane and pipetted out of the tube together with the buffer. By carefully selecting the tube and the amount of buffer, it is in many cases possible to achieve a high concentration directly within the elution buffer. The buffer can then easily be concentrated by using the usual methods (e.g. precipitation).

Roti® elution tubes with MWCO 1, 25 and 50 kDa are wet packed in stabilising solution (25 % ethanol, 2 mM EDTA) and should stored under refrigeration. All other elution vials are dry packed and can be stored at room temperature.

**Colour code of the Roti®-Elution Tubes MEGA**

| Colour | MWCO | Application |
|---|---|---|
| Blue | 3,5 kDa | Nucleic acids from 50 nt or 25 bp, proteines from 10 kDa |
| Red | 8 kDa | Nucleic acids from 250 nt or 100 bp,proteines from 25 kDa |
| Green | 14 kDa | Nucleic acids from 1000 nt or 500 bp,proteines from 45 kDa |

**Figures:**
**A:** Roti®-Elution Tube under UV-light with a DNA containing agarose slice stained by ethidium bromide
**B:** Roti®-Elution Tubes MIDI positioned in Roti® Elution Tube Tray
**C:** Dialysis of the restriction enzyme *Pst*I in enzyme buffer/8 M urea against pure enzyme buffer
**D:** Detection of enzymatic activity after dialysis by digestion on plasmid DNA (1-4). Untreated control (5).

**Typical applications:** Purification of DNA and proteins from gels, elution of genomic DNA or total RNA, preparation of DNA fragments prior to cloning, purification of siRNA for RNAi assays, purification/desalting of oligonucleotides/primers, purification of RNA or DNA for transfection or transformation, desalting or buffer change of protein solutions.

**Recommended choice of MWCO:**

| MWCO (kDa) | RNA/ssDNA | dsDNA | Proteins |
|---|---|---|---|
| 1 | 20-50 nt | 15-25 bp | 3-15 kDa |
| 3,5 | 50-250 nt | 25-100 bp | 10-30 kDa |
| 8 | 250-1000 nt | 100-500 bp | 25-50 kDa |
| 14 | 1-5 knt | 0,5-2 kb | 45-100 kDa |
| 25 | 5-30 knt | 2-10 kb | 80-200 kDa |
| 50 | >30 knt | 10-100 kb | >150 kDa |

# FTA® Technology

**Collect, transport, archive and isolate nucleic acids - all at room temperature.**

FTA® Cards utilize patented Whatman FTA® Technology that simplifies the handling and processing of nucleic acids. The cards contain chemicals that lyse cells, denature proteins and protect nucleic acids from nucleases, oxidative and UV damage.

FTA® Cards rapidly inactivate organisms, including blood-borne pathogens, and prevent the growth of bacteria and other microorganisms. Capture of nucleic acid is a most simple and highly rapid process which can be performed quite easily also by untrained personal. The captured DNA is stable for years at room temperature.

Indicating FTA® Cards change colour upon sample application to facilitate handling of colourless samples. Since FTA® Cards are suitable for virtually any cell type, this is a very versatile, ready-to-use and easy-to-handle tool for storage and isolation of genomic DNA.

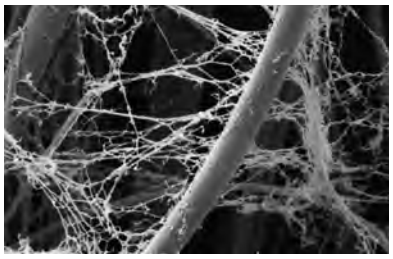

**Figure:**
Electron micrograph showing DNA entrapped within the FTA Matrix (magnification x 10,000).

**Instructions for use**
can be found on the Internet next to the product description.

## FTA® Cards

Made by GE Healthcare.
**Speciality cards for space- and time-saving collection, archival storage, and isolation of genomic DNA from a variety of sample material. Originally Whatman.**

- Capture nucleic acid in one easy step - simply apply blood or tissue material to the card
- Captured nucleic acid is ready for downstream applications in less than 30 mins.
- Genomic DNA collected on FTA® Cards is stable for years at room temperature
- Suitable for virtually any cell type
- Indicating FTA® Cards change colour upon sample application in order to facilitate handling of colourless samples

Simply apply your sample to the FTA® Card. Liquids are pipetted or trickled, tissue samples are pressed onto the surface. Cell membranes and organelles are automatically lysed and the released nucleic acids are entrapped in the fibres of the matrix (see figure). The nucleic acids remain immobilized and are stabilized for transport, immediate processing or long-term storage. Libraries and species DNA collections can be stored simply in a folder; single DNA samples can be filed in your lab manual. FTA® Cards facilitate sample collection in remote locations and simplify sample transport, thus, you can collect samples in the field without worrying about refrigeration.
Captured nucleic acids are used for downstream experiments by simply taking a small punch from the FTA® Card, wash with FTA® Purification Reagent and rinse with TE buffer (Roti®-Stock 100 x TE Buffer, Art. No. 1052.1). DNA on the washed punch is ready for use in a variety of applications given below. Genomic DNA stored on FTA® Cards at room temperature for over 14 years (and counting) has been successfully amplified by PCR. For RNA, being more sensitive than DNA, we recommend rapid analysis after only few weeks' storage at room temperature.

FTA® Cards contain chemicals that lyse cells, denature proteins and protect nucleic acids from nucleases, oxidative and UV damage. FTA® Cards rapidly inactivate organisms, including blood borne pathogens, and prevent the growth of bacteria and other microorganisms. Each card can be used for archival storage or multiple downstream applications of 1-2 (MINI) and 1-4 (CLASSIC) independent samples.

**Suitable for** blood, cultivated cells, buccal cells, plant material, bacteria, microorganisms, tissue and tissue homogenisations, virions, M13 plaques and more.

**Applications:** Storage of genomic DNA samples and libraries, collection of nucleic acid from animal tissue or cell cultures, or from plants or microorganisms during in-field-experiments.

**Downstream-Experiments:** E. g. PCR, real-time PCR, SNP and STR analysis, transgenetic identification, whole genome amplification, HLA typing, and genotyping **in** forensics, molecular biology, food and agriculture testing, drug discovery, genomics, species identification, and more.

## FTA® CloneSaver Cards

Made by GE Healthcare.
**Speciality cards for space- and time-saving archival storage and isolation of Plasmid and BAC DNA. Originally Whatman.**

- Capture DNA in one easy step by simply applying the samples (recombinant bacteria, glycerol stocks etc.) to the card
- Captured nucleic acid is easily accessible for downstream applications
- DNA collected on FTA® CloneSaver Cards is stable for years at room temperature
- Store up to 96 clones on each card
- Standard 96well plate format and compatible with multi-channel pipettors

Apply few µl bacterial culture, resuspended colony or glycerol stock. Cells are lysed and plasmid or BAC DNA is stabilized for long-term storage or immediate processing. Captured nucleic acids are used for downstream experiments without the need for culture regrowth and plasmid purification. Simply take a small punch from the FTA® Card and wash with TE buffer (Roti®-Stock 100x TE Buffer, Art. No. 1052.1). DNA on the washed punch is ready for elution or for direct use in PCR, transformation, amplification by rolling circle followed by sequencing, and so on.

## Harris Uni-Core Punches

Made by GE Healthcare.
**GE Healthcare's disposable Uni-Core Punch addresses your laboratory's manual punching requirements. Designed for use with Whatman FTA® Cards, FTA® Elute Cards, and EasiCollect device.**

Uni-Core Punch is a disposable punch which has a polished steel tip that is case-hardened and can be sterilized. Each tip provides up to 500 punches before disposal. Uni-Core Punch is available in diameters from 1,0 to 6,0 mm for a variety of sampling needs. It is housed in a plastic handle and disposable for contamination control. Stainless steel cutting edges enable manual coring, retrieval, and controlled ejection of the FTA punch. Manual punching is preferred for laboratories with low sample volumes punching 1 to 50 samples per day.

Very easy application: By pressing the Micro tip down a tiny slice is punched from the FTA® card. This DNA containing sample is then washed and directly applied to downstream experiments.

Two cutting mats are included in the small packages (4 punches). Colour of the punches supplied may differ to that shown in the picture.

## FTA® Foam Tip Applicator

Made by GE Healthcare.
**For application of saliva and buccal cells to FTA® Cards. Originally Whatman.**

Sterile. Non-abrasive foam head is same size as sample area on FTA® Cards and is, therefore, best suited for application of buccal samples. The oral mucosa is grazed with the foam head, which is then pressed onto the card field. We recommend the use of FTA® Cards with colour indicator (CLASSIC Art. No. CL 91.1 and MINI Art. No. CL94.1) for buccal and saliva samples.

M 168,36 g/mol

**Warning** H361

Can be used for isolation and purification of nucleic acids in ultracentrifugation. Is a low cost alternative to CsCl ultra-quality, ideal for applications where extreme purity is not essential.
Highly concentrated solutions can show traces of cloudiness or opalescence as a result of 25 ppm water-insoluble ingredients.

## Caesium sulphate

**≥99,99 %, p.a.**

Reagent for density gradient centrifugation.
$Cs_2SO_4$
M 361,89 g/mol

**Warning** H302-H361

Cesium sulphate produces a gradient which is almost twice as steep compared with cesium chloride in similar centrifugal fields.
Floating densities in cesium sulphate gradients are approx. 1.4 g/cm³ for DNA and approx. 1.6 g/cm³ for RNA.

| | | | | |

# Enzymes

## Ribonuclease A

DNAse-free Protease-free

**90 U/mg (Kunitz), BioScience-Grade, free from salt**

Acc. to Hirs, extracted from bovine pancreas.

RNase A

M ~13 700 g/mol

Storage temp.: -20 °C • Transport temp.: room temp.

Extracted from bovine pancreas for RNA separation, especially when isolating RNAfree DNA. The enzyme cleaves RNA and produces 3' terminal nucleoside phosphates. This quality product for molecular biology is free from salt, without proteases and is chromatographically homogeneous. Unit definition acc. to Kunitz.
DNAse content of the RNAse powder ist below detection limit. However, we nevertheless recommend pretreatment of the ribonuclease prior to using it for DNA isolation. DNAse free RNAse ist prepared by cooking the water-solubilised ribonuclease aliquots for 15 min.
Let cool to room temperature on bench top.

**Application:**
Stock solution: 10 mg/ml in water (pH ≤6,0) or 0,01 M sodium acetate (pH 5,2). Do not heat RNAse prepared in sodium acetate.
Working solution: 2-10 µg/ml in 10 mM Tris (pH 7,5), 15 mM NaCl.
Note: RNAse precipitates when concentrated solutions are heated/cooked at pH ≥7,0.
Store in aliquots at -20 °C.

| | | | |
|---|---|---|---|
| **7156.1** | 100 mg | glass | 72,60 € |
| **7156.2** | 500 mg | glass | 321,45 € |
| **7156.3** | 1 g | glass | 525,70 € |

## Ribonuclease

**>70 U/mg (Kunitz), free from salt and protease**

Purified by chromatography, for biochemistry.

RNase

Storage temp.: -20 °C • Transport temp.: room temp.

Extracted from bovine pancreas; free from salt, without proteases and chromatographically cleaned with specific activity of 70 U/mg (Kunitz). RNAse mixture containing approx. 70-80 % RNAse A.

**Application:**
Stock solution: 10 mg/ml in water
Working solution: 5-20 µg/ml in 10 mM Tris (pH 7,5), 15 mM NaCl.
DNAse free RNAse ist prepared by cooking the solubilised ribonuclease aliquots for 15 min. Let cool to room temperature on bench top and store in aliquots at -20 °C.

| | | | |
|---|---|---|---|
| **7164.1** | 100 mg | glass | 30,00 € |
| **7164.2** | 1 g | glass | 196,20 € |

## Lysozyme

**≥35000 FIP U/mg, BioScience-Grade, lyophilised**

From chicken egg white, free from albumin.

M ~14000 g/mol

Storage temp.: -20 °C • Transport temp.: room temp.

Salt and albumin free lyophilised powder. Quality product for molecular biology. Ideal for lysis of bacteria for preparing DNA.
1 FIP-Unit equals the amount of enzyme which reduces the absorbance by 0.001 per min. at 450 nm, 25 °C, pH 7.00 using a suspension of FIP *Micrococcus lysodeikticus* as substrate (acc. to *Pharmaceutical Enzymes* 1997).
1 FIP-Unit resembles approximately 1 Shugar-Unit.

| | | | |
|---|---|---|---|
| **8259.1** | 1 g | glass | 26,80 € |
| **8259.3** | 25 g | glass | 310,70 € |
| **8259.2** | 10 g | glass | 165,05 € |

▶ For further information on these enzymes see chapter Biochemistry!

## Zymolyase® 20T

**≥20 U/mg, for biochemistry and molecular biology**

For lysis of yeast cells. Isolated from *Arthrobacter luteus*.

Lyticase, β-1,3-glucan laminaripentaohydrolase

Storage temp.: +4 °C • Transport temp.: cooled

Zymolyase® 20T, produced by a submerged culture of *Arthrobacter luteus,* has strong lytic activity against living cell walls of various strains of yeast cells. Hence, it is frequently used in order to produce protoplasts or spheroplasts.
The essential enzyme for the lytic activity of Zymolyase®20T is β-1,3-glucan laminaripentaohydrolase. It hydrolyzes linear glucose polymers with β-1,3-linkages and releases specifically laminaripentaose as the main and minimum product unit. Zymolyase® 20T is prepared by ammonium sulfate precipitatation.
One unit of lytic activity is defined as the enzyme amount causing a decrease of 30 % in absorbance at 800 nm using 6 mg Brewer's yeast as substrate in Phosphate buffer (pH 7,5) at 25 °C. Lytic activity varies depending on the particular yeast strain, the growth stage of the yeast, and cultural conditions.

**Application:**
**Other enzymatic activities contained:** β-1,3-glucanase, protease, mannanase. Trace amounts of amylase, xylanase, phosphatase.
**Stability:** At 30 °C 70 % of the lytic activity is lost after 3 months.
**Optimum temperature and pH:** at pH 7,5 - 35 °C for lysis of viable yeast cells, at pH 6,5 - 45 °C for hydrolysis of yeast glucan.
**Specificity (lytic spectrum):** *Ashbya, Candida, Debaryomyces, Eremothecium, Endomyces, Hansenula, Hanseniaspora, Kloeckera, Kluyveromyces, Lipomyces, Metschnikowia, Pichia, Pullularia, Torulopsis, Saccharomyces, Saccharomycopsis, Saccharomycodes, Schwanniomyces*, etc.

| | | | |

## Zymolyase® 100T

**≥100 U/mg, for biochemistry and molecular biology**

For lysis of yeast cells. Isolated from *Arthrobacter luteus*.

Lyticase, β-1,3-glucan laminaripentaohydrolase

Storage temp.: +4 °C • Transport temp.: cooled

Zymolyase® 100T is prepared by ammonium sulphate precipitation, and is further purified by affinity chromatography.
For further information on product and application, see Zymolyase® 20 T.

| | | | |
|---|---|---|---|
| **9329.1** | 100 mg | glass | 278,45 € |
| **9329.2** | 500 mg | glass | 880,45 € |

## Proteinase K

DNAse-free RNAse-free

**lyophil., ≥30 mAnson U/mg**

Isolated from fungi (*Tritirachium album)*.

Storage temp.: +4 °C

**Danger** H315-H319-H334-H317-H335

A non-specific protease with strong proteolytic activity for degrading proteins in biological samples. A quality product for molecular biology with a broad scope of application.

| | | | |
|---|---|---|---|
| **7528.1** | 100 mg | glass | 90,20 € |

# Precipitation & Concentration

## Glycogen

**lyophilised, from oysters**

DNA-free

For molecular biology and biochemistry.

Glycogen type 2.
Long-chain polysaccharide made of glucose. Most frequently used in biochemistry and as 'carrier' during precipitation of nucleic acids.
Recovery of precipitated DNA is significantly enhanced by addition of 50 µg/ml glycogen; even starting from solutions with very low DNA concentrations, efficient precipitation can be performed.
Contains no nucleic acid and doesn't hinder enzymatic *down-stream* applications.
Glycogen contains a central protein and should not be applied if DNA is to be used in protein binding-assays following precipitation. In these cases we recommend to use our glycogen-free coprecipitants.
Stock solution: 5 mg/ml in distilled, sterile water
Working concentration: 50 µg/ml

**Type analysis:**

Appearance. ..... bright powder
Origin. ..... oysters
Solubility (0,25 %, 1 M NaCl). ..... complies
Loss on drying. ..... ≤15 %
Specific rotation $[\alpha]_D^{20}$. ..... +170° to +200°

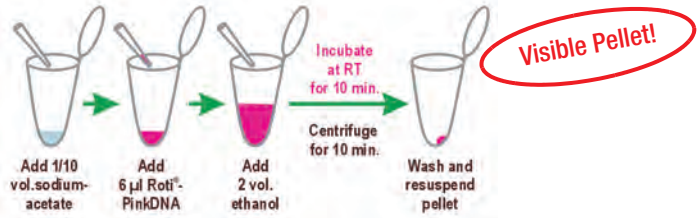
| | | | |
|---|---|---|---|
| **HP51.1** | 1 g | glass | 24,65 € |
| **HP51.2** | 5 g | plastic | 96,65 € |
| **HP51.3** | 10 g | plastic | 166,65 € |
| **HP51.4** | 25 g | plastic | 357,90 € |

**Instructions for use**
can be found on the Internet next to the product description.

**Tips for Application of Precipitation Salts**

| Precipitation Salts | Stock solution | Amount applied | Recommended for | Not recommended for |
|---|---|---|---|---|
| Ammonium acetate | 7.5 M | 1/2 volume | Removal of nucleotides or other contaminants | Kinase downstream experiments (phosphorylation) |
| Lithium chloride | 8.0 M | 1/10 volume | RNA precipitation | Very small RNA |
| Sodium acetate | 3.0 M (pH 5.2) | 1/10 volume | Routine DNA precipitation | Removal of nucleotides or other contaminants |
| Sodium chloride | 5.0 M | 1/20 volume | SDS containing solutions | Routine precipitations |

## Roti®-PinkDNA



**for molecular biology**

Synthetic co-precipitant with dye for efficient precipitation of nucleic acids.
Storage temp.: +4 °C

- **Visible pellet due to included pink dye**
- **Recovery rates of up to 99 %**
- Simply add to ethanolic nucleic acid precipitation
- Recovered DNA is immediately applicable to all standard applications
- Ready-to-use

Stained precipitation additive for recovery of DNA from all solutions by ethanolic precipitation. Recovery rates of up to 99 % can be attained even from solutions with very weak nucleic acid concentration. The incorporated dye stains the DNA (reversibly) pink and facilitates location and lossless washing of pellets. Roti®-PinkDNA is produced synthetically and is free from nucleic acids. DNA or dsRNA precipitated with Roti®-PinkDNA is highly pure and can be used directly in all standard applications such as transformation, restriction digestion, cloning, sequencing, *in vitro* transcription etc.

**Suitable for all nucleic acid fragments, cyclic, and genomic DNA.** Not compatible with photometric concentration measurement at 260-280 nm.

**Guarantee analysis:**

Linear Polyacrylamide. ..... 5 mg/ml
DNA/RNA. ..... free
Dye. ..... complies

## Roti®-Spin Centrifugal Devices

**For purification and concentration of biomolecules and for purification of solutions.**

- Applicable for nucleic acids, proteins/peptides, other biomolecules >6 kD and very small bioparticles
- Can be used to replace standard techniques like precipitation, dialysis, gel filtration, gel purification, column chromatography, gradient centrifugation etc.
- Gentle: No shearing of DNA of up to 100 kb, proteins remain native and enzymatically active
- Applicable for purification of all labelled probes (isotope-, fluorescent-, chromogenic labelling)
- Very high recovery rates of >90 % (when using devices of appropriate MWCO)

Centrifugal devices for ultrafiltration of biomolecules. The membranes made of highly chemical-resistant polyethersulfone have been tightly sealed to prevent leakage and loss of samples. Furthermore, the membranes underwent special treatment minimising the binding of biomolecules, in order to optimise sample recovery-rates.

Roti®-Spin Centrifugal Devices can be applied to a variety of applications and can be used to replace tedious and labour-intensive methods like gel filtration, gel purification or precipitation. Application is time-saving and very simple - only few centrifugal steps are necessary to concentrate and recover your sample. During this, the sample remains untouched in the upper reservoir, and cross-contamination is efficiently prevented even when large numbers of samples are handled. Centrifugation can easily be performed in the cold room or at specially designated benches like isotope laboratories or in laminar flow hoods.

**MWCO:**

For convenient and successful application, centrifugal devices with membranes in 4 colour-coded molecular weight cut-offs (MWCO) are available. In order to choose the appropriate MWCO please use the following thumb-rule:
Centrifugation of proteins/peptides: MWCO ≤1/3 of sample molecule size.
Centrifugation of nucleic acids: MWCO ≤ ½ sample molecule size.

**Overview for selection the right pore size**

| MWCO | Molec. size | DNA size |
|---|---|---|
| 3 kD | 10 - 20 kD | <50 bp |
| 10 kD | 30 - 90 kD | 50 - 200 bp |
| 30 kD | 90 - 180 kD | 200 bp - 1 kb |
| 100 kD | >300 kD | >1 kb |

**Sample volumes:**

Maximum sample volume: Roti®-Spin MINI 50-500 µl
Final concentrate volume: Roti®-Spin MINI 15-20 µl

**Applications (examples):**

Desalting or buffer exchange following restriction digest, PCR or such; separation of free nucleotides and polymerised DNA; removal of contaminating compounds (like DNA) from stock solutions (e.g. PCR-buffers); concentration of DNA or proteins; separation of proteins of different size; sample preparation prior to HPLC.

**Roti®-Spin MINI**

| Type | MWCO (kD) | Colour | Art. No. | Pack Qty | € |

# DNA-/RNA Analysis

## DNA Quantitation

ready-to-use

### DNA-quantifying marker

**DNA-fragments of precisely defined quantity for gel-quantitation**

Store at -20 °C • Transport temp.: room temp.

DNA-fragments of precisely defined concentration for easy quantifying of linear DNA of medium fragment length in agarose gels.
Also suitable for quantifying standard DNA via photometric measurement to establish light-cycler-controls.

#### DNA-quantifying marker QSK 1000

Fragment length: 1000 bp (see figure ①)
Concentration: 100 µg/ml in TE-buffer

| | | | |
|---|---|---|---|
| **L506.1** | 40 µg | plastic | 193,50 € |

#### DNA-quantifying marker QSK 500

Fragment length: 500 bp (see figure ②)
Concentration: 100 µg/ml in TE-buffer

| | | | |
|---|---|---|---|
| **L507.1** | 40 µg | plastic | 193,50 € |

#### DNA-quantifying marker QSK 200

Fragment length: 200 bp (see figure ③)
Concentration: 100 µg/ml in TE-buffer

| | | | |
|---|---|---|---|
| **L508.1** | 40 µg | plastic | 193,50 € |

### DAPI

**≥98 %, p.a.**

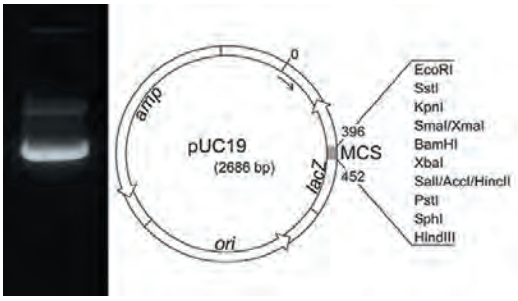
For DNA-staining.

M 350,3 g/mol

Storage temp.: -20 °C • Transport temp.: room temp.

Fluorescent dye with specific DNA-binding capacity. For detection of mycoplasms in cell culture, for quantitative DNA measurement, and for chromosome counter staining. Store in the dark! Stabile for one year when solubilised, stored at -20 °C, and protected from light
Stock solution: 1 to 10 mg/ml in sterile water

Excitation maximum: 359 nm
Emission maximum: 461 nm



| | | | |
|---|---|---|---|
| **6335.1** | 25 mg | glass | 90,20 € |
| **6335.2** | 100 mg | glass | 252,65 € |

▶ Transilluminators, UV-handheld lamps and UV-handheld magnifiers see chapter Labware - Optical Instruments & Lamps!

# Plasmid DNA

The following plasmid DNA was prepared in low nuclease host bacteria and isolated through ion exchange chromatography. It is available in super-coiled form (ccc-form >95%) and, as a high-purity DNA ($OD_{260/280}$ > 1,70), it is ideal for different applications:

- Controlling transformation efficiency
- Comparison with plasmid ccc-forms of unknown size
- Cloning DNA-fragments
- Restriction (Preparing DNA-length markers)
- Calibrating DNA-separating or DNA-preparing processes or equipment
- Blocking DNA-chips with plasmid DNA of a defined sequence

### Plasmid DNA pUC19

High-purity plasmid-DNA of pUC19 (pUC19c, Acc. No. L09137) with a overall length of 2686 base pairs. Lyophilised.

Storage temp.: -20 °C • Transport temp.: room temp.

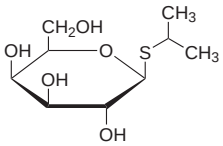
**$OD_{260/280}$: >1.70**
**genomic DNA: <2 %**
**oc-form: <3 %**
**ccc-form: >95 %**
**baise pairs: 2686**

pUC19 is a standard high-copy cloning vector for *E. coli* recombinants. The position of the Multi Cloning Site (MCS), which is inserted in frame into the LacZ-gene, enables a blue-white selection of insert containing plasmid DNA by α-complementation. The copy number of plasmids per cell depends on the temperature and is approx. 70-80 at 37 °C and over 200 at 42 °C.

| | | | |
|---|---|---|---|
| **X911.1** | 50 µg | plastic | 48,95 € |

### Plasmid DNA pBR322

High-purity plasmid-DNA of pBR322 (Acc. No. V01119) with a overall lenght of 4361 base pairs. Lyophilised.



Storage temp.: -20 °C • Transport temp.: room temp.

**$OD_{260/280}$: >1.70**
**genomic DNA: <2 %**
**oc-form: <3 %**
**ccc-form: >95 %**
**base pairs: 4361**

The circular sequence was numbered in such a way that 0 lies in the middle of the singular *EcoR* I restriction site. The copy number of pBR322 is limited by the gene product of *rop* to 20 copies per cell. However, by adding chloroamphenicol (final concentration 170 µg/ml) to log-phase cultures and then incubating for 8 hours, the copy number can be increased considerably.

| | | | |
|---|---|---|---|
| **X912.1** | 50 µg | plastic | 57,95 € |

# Blue-/White Selection

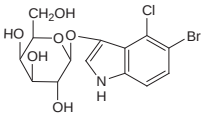
## IPTG

**≥99 %, BioScience-Grade, dioxane free, animal free**

For molecular biology.
Isopropyl-β-D-thiogalactopyranoside
$C_9H_{18}O_5S$
M 238,30 g/mol
Storage temp.: -20 °C • Transport temp.: room temp.
Lactose analogon. Glucose-galactose-disaccharide. *lac*-promotor is induced by IPTG via inhibition of *lac*-repressor. Recommended for induction of *lac*-regulated vectors in expression assays, for instance blue-/white selection of recombinant *E. coli*, in bench-top as well as in production scale.

**Application:**
Stock solution: 0,5 M (1 g / 8,4 ml) in water (sterilise through 0,2 µm filter).
Final concentration in agar plates: 0,2 mM (add after autoclaving and cooling medium).
Final concentration in induction medium: 2 mM.

| | | | |
|---|---|---|---|
| **2316.1** | 250 mg | glass | 20,35 € |
| **2316.2** | 1 g | glass | 43,55 € |
| **2316.3** | 5 g | glass | 123,65 € |
| **2316.4** | 25 g | plastic | 418,20 € |
| **2316.5** | 100 g | plastic | 951,40 € |



## IPTG

**≥99 %, for biochemistry**

Isopropyl-β-D-thiogalactopyranoside
$C_9H_{18}O_5S$
M 238,30 g/mol
Storage temp.: -20 °C • Transport temp.: room temp.
Standard reagent for biochemical assays. Main application as inducer of protein *in vitro* expression.

| | | | |

## X-β-Gal

**≥99 %, BioScience-Grade**

Colorimetric substrate of β-galactosidase.
For biochemistry and molecular biology.
5-Bromo-4-chloro-3-indoxyl-β-D-galactoside
$C_{14}H_{15}BrClNO_6$
M 408,6 g/mol
Storage temp.: -20 °C • Transport temp.: room temp.
Ideal for colorimetric detection of β-galactosidase activity, for instance during blue-/white selection.

**Application:**
Stock solution: 100 mg/ml (240 mM) in DMF, store at -20 °C in the dark.
Working solution: For blue/white selection of recombinant clones on agar plates use 0,3 µl stock solution per ml broth/agar.

| | | | |

| **2315.4** | 5 g | glass | 370,90 € |

▶ LB Media, LB Media with antibiotics
see page 1414

**α-Complementation (blue-white selection)**

Being a galacto pyranoside, IPTG inhibits the *lac* repressor, therefore leading to the induction the *lac* promotor. Subsequently, using the plasmid as matrix the C-terminal 146 amino acid fragment of the bacterial β-galactosidase is expressed, which functions as so called α-donor and complements the C-terminally deleted bacterial β-galactosidase. The then functional β-galactosidase restricts the galactoside X-Gal, resulting in a blue-coloured dye - therefore, these *lac*$^+$ clones are coloured dark blue. Since the C-terminal part of the α-donor is located **upstream** and the N-terminal part is located **downstream** of the multi cloning site of the plasmid, inserted DNA normally leads to frame shift or at least to major chain elongation, resulting in an unfunctional α-donor and no functional galactosidase - recombinant clones are white. The appearance of light blue clones either results form very short insertions or from the fact that in some plasmids the C-terminal fragment cloned upstream of the MCS is sufficient for α-complementation and restriction of a small amount of X-Gal.

**α-Complementation - protocol**

**Stock solution**

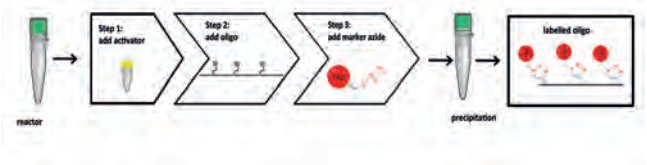
IPTG: 0.5 M (1 g /8.4 ml) in water, freeze sterile filtered and aliquoted
X-β-Gal: 100 mg/ml (240 mM) in DMF, store aliquoted and in the dark at -20 °C

**Approach**

Add 10 µl IPTG solution + 10 µl X-β-Gal solution per 25 ml autoclaved, cooled Agar and pour plates.
Alternatively, mix 10 µl IPTG and X-β-Gal solution with approx.100 µl sterile water and plate onto a hardened 9 cm agar petri dish.

# Hybridisation

## DNA Labelling



### Roti®kits for DNA labelling

For DNA labelling assays.
Transport temp.: cooled

**Warning** H226-H319-H335

- Highly reliable
- Easy to perform
- Fast detection procedure (only 30 min)
- Mild conditions (no DNA denaturation required)
- Modular system due to click chemistry
- Compatible with various dyes and readouts

The ROTI®kits for DNA labelling provide an easy-to-use tool for quick labelling of oligonucleotides. For this purpose, fluorescent dyes are coupled via click reaction with uracil derivatives (mostly ethynyldeoxyuridine, EdU) which are present in the DNA. This fast and elegant approach allows for direct labelling of DNA fragments with the desired fluorescent dye. Thus, the assay is perfectly adaptable to the present facilities and to the assay situation (e.g. for double or triple detection). The protocol includes only three steps and is quick and easy to perform:

**Oligonucleotides not included.**

The end of the product name specifies the included fluorescent marker.

**Components:**

Azide. ..... 1 mg
Activator. ..... 10 µl
Reactor S..... 7 x 2,5 mg
Solvent..... 1 ml
*Store at -20 °C (Azide, Activator); room temp. (Reactor S, Solvent)*

| Product | Marker | Art. No. | Pack Qty | € |
|---|---|---|---|---|
| Oligo Click S-488 | 6-FAM | **7766.1** | 1 kit | 134,30 |

For additional product data and safety information, see chapter Chemicals A-Z.

**Tip:**
The ending of the product name specifies the included marker:

- 488: 6-FAM-Azide
- 555: 5-TAMRA-Azide
- Biotin: Biotin Azide
- Reload: no marker included

# Ready-Made Buffers & Supplements

### Roti®-Hybri-Quick

**BioScience-Grade, ready-to-use, for molecular biology**

Ready-made buffer for DNA- and RNA hybridisation.

- Suitable for prehybridisation, hybridisation and washing
- For Southern- and Northern-hybridisations
- Suitable for all membrane types

Roti®-Hybri-Quick ready-to-use solution is an all-purpose solution for DNA-hybridisation experiments.
Optimised sodiumphosphate buffer with superior signal-to-noise ratio.
Compatible with all Southern- and Northern-hybridisations, all labelling and detection methods, and all types of membranes. Improved buffer formulation based on the hybridisation solution published by Church & Gilbert (*PNAS USA*, 81:1991-95).

| | | | |
|---|---|---|---|
| **A981.1** | 1 l | glass | 50,00 € |
| Original pack 6 x 1 l | | | 47,50/1 l |
| **A981.2** | 2,5 l | glass | 90,20 € |
| Original pack 4 x 2,5 l | | | 85,69/2,5 l |

### Roti®fair 20x SSC

**for 1000 ml/pouch, for molecular biology**

Concentrated buffer solution for Southern- and Northern transfer.

SSC buffer powder (pouch), Sodium sodium citrate

Exactly pre-weighed pouches for convenient and rapid preparation of SSC solution.
Prepared solution may be sterilized by filtration (0,22 µm) or autoclaving.
For long-term storage, buffer solution should be kept at +4 °C.
20x SSC solution is prepared by dissolution of 1 pouch in 1000 ml highly pure water.

**Formulation:**

Prepared 20x SSC solution contains: 3,0 M NaCl, 0,3 M Na-Citrat, pH-value 7,0 ±0,05, when prepared in deionized or distilled water.

| | | | |
|---|---|---|---|
| **1232.1** | 5 pouches | box | 153,20 € |

## Roti®-Stock 20x SSC

**BioScience-Grade, ready-to-use, steam sterilised**

For molecular biology.

SSC 20x ready-to-use solution

20fold stock solution sodium/sodiumcitrate. Undiluted or after dilution with sterile water to 10x, 6x, 1x or 0,1x SSC one receives a versatile buffer for blotting, hybridising or washing of Southern- or Dot/Slot-Blots of DNA as well as for *in situ* hybridisation. Undiluted buffer is also suitable for neutral transfer of RNA onto unloaded membranes (e.g. Roti®-Nylon 0.2, Art. No. AE50.1).
With original seal.

**Composition:**

3 M NaCl, 300 mM sodium citrate in deionised water, pH-value 7.0, steam sterilised

| | | | |
|---|---|---|---|
| **1054.1** | 1 l | glass | 66,55 € |
| Original pack 6 x 1 l | | | 63,22/1 l |

## Roti®fair SSPE

**for 200 ml/tablet, for molecular biology**

Buffer solution for DNA- and RNA hybridisation.

Sodium sodium phosphate EDTA, SSPE buffer (tablets)

Exactly pre-weighed tablets for convenient and rapid preparation of phosphate buffered salt solution (SSPE).
SSPE is frequently used for Southern- and Northern hybridisations, as well as for washing steps during Microarray techniques. Roti®fair SSPE may also be used very well in imunocytochemistry and for cell suspension prior to FACS analyses.
Prepared solution may be sterilized by filtration (0,22 µm). For long-term storage, buffer solution should be kept at +4 °C.
1x SSPE solution is prepared by dissolution of 1 tablet in 200 ml highly pure water.

**Formulation:**

Prepared 1x SSPE solution contains: 0,15 M NaCl, 1 mM EDTA, 10 mM Na-phosphate, pH-value 7,4 ±0,05, when prepared in deionized or distilled water.

| **1233.1** | 100 tablets | plastic | 99,90 € |

## Dextran sulphate 500 sodium salt

**for biochemistry and molecular biology**

Dextranhydrogensulphate 500 sodium salt

M ~500 000 g/mol

Dextran sulphate is a polyanion produced by esterification of dextran with chlorosulphonic acid. The standard product is based on dextran with a mean molecular weight of approx. 500.000 Dalton. Anionic dextrans such as dextran sulphate (10 % in hybridisation buffer) accelerate the hybridisation of nucleic acids by approx. 10fold.

## Salmon Sperm DNA sodium salt

**ex salmon testes**

Deoxyribonucleic acid sodium salt, DNA from salmon sperm

Storage temp.: +4 °C

DNA from salmon sperm is used in Southern- and Northern hybridisation, in order to block unspecific probe binding prior to and during hybridisation (Sambrook, J. *et al.* (1989) *Molecular Cloning:* A Laboratory Manual, 2nd Edition).
Stock solution: 10 mg/ml in $H_2O$
Storage of stock solution: -20 °C in aliquots
Working concentration: 100 µg/ml

| | | | |
|---|---|---|---|
| **5434.1** | 5 g | plastic | 27,45 € |
| **5434.2** | 10 g | plastic | 42,90 € |

## Spermidine

**≥98 %, for biochemistry**

N-(3-Aminopropyl)-1,4-butanediamine

$C_7H_{19}N_3$

M 145,25 g/mol

Storage temp.: +4 °C

**Danger** H314

Ingredient vital for $CaCl_2$-transfektion (70 µM), tissue homogenisation (500 µM), *in vitro* transcription (20 mM), and in hybridisation buffers (1-20 mM).

| | | | |
|---|---|---|---|

| **7161.3** | 5 g | glass | 137,10 € |

# Blocking Reagents

## Denhardt's solution, lyophilised powder (50x)

**BioScience-Grade, for molecular biology**

Blocking reagent for hybridisation and stripping.

Storage temp.: +4 °C

Denhardt's lyophilised powder contains a mixture of different blocking agents that is used for nuclear acid hybridisation (Northern and Southern Blot) as well as for stripping of hybridised membranes. By prehybridisation the filter membranes with Denhardt's solution unspecific binding of DNA to the membrane is avoided.

**Application:** The bottle contains powder mix for 50 ml 50x stock solution. Add 48,8 ml water to gain exactly 50 ml stock solution. Sterilise stock solution by filtration (0,2 µm) and store in aliquots of 10 ml at -20 °C .
For hybridisation use 10x Denhardt's solution with 6x SSC (Roti®-Stock 20x SSC, Art. No. 1054.1) supplemented with 100 µg/ml denatured salmon sperm DNA and 1 % SDS (Roti®-Stock 20 % SDS, Art. No. 1057.1).

| | | | |
|---|---|---|---|
| **HP33.1** | Powder mix for 50 ml | plastic | 96,65 € |

## Albumin Fraction V

**≥98 %, powdered,**
**for molecular biology**
Wide range of applications,
e.g. as protein standard or
blocking reagent.
BSA
M ~66 000 g/mol
Storage temp.: +4 °C
BSA made of fresh bovine plasma by fractionation (Cohn method) and subsequent crystallisation from alcohol solution at a low temperature.
Molar extinction coefficient: 44.020 · $M^{-1}$ · $cm^{-1}$
(acc. to 0,667 x $cm^{-1}$ for a 0,1 % solution).

| | | | |
|---|---|---|---|
| **8076.1** | 10 g | plastic | 26,80 € |

| Original pack 6 x 1 kg | | | 1040,68/1 kg |

## Albumin Fraction V, biotin-free

**≥98 %, biotin-free, for molecular biology**
Excellent as blocking and stabilising reagent in all biotin/streptavidin-mediated detection systems.
BSA
M ~66 000 g/mol
Storage temp.: +4 °C
Tried and tested albumin preparation, suitable for all immunoassays, for stabilising proteins, enzymes and antibodies and as a blocking-reagent in hybridisation. Tested for its absence of biotin. Manufactured from fresh beef plasma by fractionating in accordance with Cohn and subsequent crystallisation at low temperatures from the alcohol solution.

| **P040.1** | 250 ml | plastic | 45,05 € |

## Guanidine thiocyanate

**≥99 %, for biochemistry**
Reagent for denaturation of proteins and for isolation of DNA and RNA.
GTC, Guanidinium isothiocyanate
$C_2H_6N_4S$
M 118,16 g/mol
**Warning** H302+H312+H332-H412-EUH032
Highly chaotropic agent that potently destroys the three-dimensional structure of proteins, leading to denaturation. Guanidinium (iso)thiocyanate contains potent anionic as well as cationic groups, that form strong hydrogen bonds. It, therefore, can be used to break protein disulfide bonds as well as to disrupt hydrophobic interactions, and is added during RNA extraction in order to inhibit RNAse activity.

Stock solution: 4 M or 8 M in water
Storage of stock solution: +4 °C
Working concentration: 4 M in hydrous buffer system (e.g. 25 mM sodium citrate, 0,5 % SDS)
For a 4 M solution, solubilise 472,64 g in distilled water and fill to 1 l.

## Roti®fair reagents

**High-pure reagents and buffer mixes in pouches or as tablets.**

Roti®-fair - the new range of user-friendly reagent formulations.
For simplest application, optimal quality and reproducible results.

One tablet or the content of one pouch is simply dissolved in the respective amount of water - the desired solution is ready for use. Simply adapt the amount of water in order to vary the concentration, for instance for preparation of a higher concentrated stock solution.

- **Easy-to-use**
  Simply dissolve contents of one pouch or one tablet in water
- **Timesaving**
  No need for weighing of several reagents or adjustment of pH
- **Convenient**
  Dry reagents for direct use spare preparation of long-term stored stock solutions
- **Reliable**
  Stringent quality control ensures high lot-to-lot consistency

For additional product data and safety information, see chapter Chemicals A-Z.

## Good's Buffer Reagents for Application in Molecular Biology

In order to compensate for the low Tris buffering capacity at pH levels below 7,5, Good and colleagues 1966 developed a new reagent group as a buffer for this range: N-substituted amino sulphonic acids[1]. Amino sulphonic acids behave like strong hybrid ions at physiological pH levels (approx. 7,0) and facilitate a large spectrum of molecular biological processes by virtue of their high buffering capacity.

The group of 'Good's buffers' also includes sulphonic acids and reagents such as bicine, tricine and AMP with higher $pK_a$ values, thus providing buffer substances for the entire pH range between 5,5 and 11.

[1]Good *et al.* (1966) *Biochemistry* 5:467-477.

## Tris Buffers

Tris (hydroxymethyl) aminomethane (or 'Tris' for short) was first described[1] in 1897 and then proposed as a pH-stabilising reagent for biological systems[2] in 1946. On account of its high water solubility, its very large buffering capacity and the fact that it behaves inertly in a large number of enzymatic reactions, it has been used for many years as a base reagent for standard buffers in all fields of molecular biology.

[1]Piloty *et* Ruff (1897) *Proc. Soc. Exp. Biol. Med.* 6:233-234.

[2]Gomori (1946) *Ber. Dtsch. Chem. Ges.* 30:1656-1665.

In addition to the original, alkaline Tris, the pre-buffered Tris hydrochloride (Tris-HCl) is also available today. 1 M Tris buffer can be manufactured directly with a defined pH buffering range through skilful mixing of Tris (alkaline) and Tris-HCl. The following table specifies the mixing ratio for each Tris.

*Please note:* the pH buffered by the Tris mixture depends heavily on the temperature. The values found is the literature always refer to a temperature of 25 °C (unless specified otherwise).

| Product | Buffer Reagent | $pK_a$ (at 25 °C) | pH Range | Purity | Art. No. | Pack Qty | € |

**Biological Buffers**

### Roti®-Stock 100x TE

**BioScience-Grade, ready-to-use, steam sterilised**

For molecular biology.

TE 100x ready-to-use solution

**Warning** H315-H319

100fold stock solution Tris/EDTA. The most popular solution and storage buffer for DNA can be obtained by diluting 1:100 with sterile water. The accompanying EDTA inhibits traces of DNAses and therefore protects your valuable nucleic acids from degradation. However, many other enyzmes such as ligases will also be inhibited through the complexation of bivalent cations, therefore TE-buffer should not be used as a solution buffer for cloning.
With original seal.

**Composition:**

1 M Tris (pH 8,0), 100 mM EDTA (pH 8,0) in deionised water, steam sterilised

| | | | |
|---|---|---|---|
| **1052.1** | 1 l | glass | 81,60 € |
| Original pack 6 x 1 l | | | 77,52/1 l |

### Roti®fair 10x TE

**for 1000 ml/pouch, for molecular biology**

Concentrated buffer solution for solubilisation and dilution of nucleic acids.

TE buffer powder (pouch), Tris EDTA

**Warning** H315-H319-H335-H373

Exactly pre-weighed pouches for convenient and rapid preparation of TE solution.
Prepared solution may be sterilized by filtration (0,22 µm) or autoclaving.
For long-term storage, buffer solution should be kept at +4 °C.
1x TE solution is prepared by dissolution of 1 pouch in 1000 ml highly pure water.

**Formulation:**

Prepared 10x TE solution contains: 0,1 M Tris-HCl, 10 mM EDTA, pH-value 7,4 ±0,05, when prepared in deionized or distilled water.

## Roti®-Stock 20 % SDS

**BioScience-Grade, ready-to-use, 0,2 µm filtered**

For molecular biology and electrophoresis.

SDS 20 % ready-to-use solution

**Danger** H318-H315-H335

20 % stock solution sodium dodecyl sulphate. Store the solution away from light in a dry place. SDS-stock solution and other solutions containing SDS should not be cooled below 24 °C otherwise the SDS may precipitate. The crystals can be easily resolubilised by heating them between 30 to 50 °C.
With original seal.

**Composition:**

20 % SDS in deionised water, 0,2 µm filtered

| | | | |
|---|---|---|---|
| **1057.1** | 1 l | glass | 138,70 € |
| Original pack 6 x 1 l | | | 131,77/1 l |

## Water

DNAse-free RNAse-free · ready-to-use · S

**BioScience Grade, nuclease-free, steam sterilised, DEPC treated water**

For molecular biology.

$H_2O$

M 18,02 g/mol

Distilled water mixed with DEPC and steam sterilised. By DEPC Histidin residues in proteins are modified to N-carbethoxy histidin, resulting in inhibition of RNases and DNases. DEPC decomposes to $CO_2$ and ethanol during sterilisation.
Also available as 50 reaction tubes or as 50 glass ampoules with 1 ml each nuclease free water in a tube rack.
After autoclaving, each lot is photometrically tested for optimal purity in the wave length range relevant for nucleic acid research.

# Decontamination & Purification

## Roti® Nucleic Acid-free

**ready-to-use solution for removal of nucleic acid contaminations from surfaces**

**Warning** H315-H319

Roti®-Nucleic Acid-free was specifically designed for extensive removal of nucleic acid contaminations. Being a mild reagent, Roti®-Nucleic Acid-free may be used on tables, laboratory devices, as well as on glass and plastic wares. By incubation or by wiping, laboratory benches, heating blocks, thermocyclers, pipettor shafts, reaction tubes a.s.o. can easily be cleaned. Contamination with foreign DNA or RNA, which may heavily interfere with sensitive assays like PCR, reverse transcription or sequencing, is hence efficiently eliminated.

| | | | | |

## Roti® Nucleic Acid-free eXtra

**ready-to-use**

**Gentle solution for removal of nucleic acid contaminations from surfaces.**

Roti®-Nucleic Acid-free eXtra is a very gently and highly efficient solution that has been designed as nonhazardous alternative to our top-selling Roti®-Nucleic Acid-free.
The ready-to-use solution or spray may be used for fast elimination of all kinds of contaminating nucleic acids (e.g. gDNA, amplicons, plasmids, RNA) from surfaces without the need to handle dangerous liquids. By incubation or by wiping, laboratory benches, heating blocks, thermal cyclers, pipettor shafts, reaction tubes etc. can easily be cleaned.
Roti®-Nucleic Acid-free eXtra is suitable for use on a broad variety of materials for instance glass, ceramic, plastic, rubber, steel and precious metal, with the exception of light or non-ferrous metals. Contamination with foreign DNA or RNA, which may heavily interfere with sensitive assays like PCR, reverse transcription or sequencing, is hence efficiently eliminated.

## DNA AWAY®

**ready-to-use solution for removal of DNA-contaminations**

ready-to-use

**Warning** H315-H319

Suitable for PCR-applications. DNA AWAY® enables speedy and safe removal of DNA-contaminations, e.g. to prevent false-positive PCR results. For decontamination of surfaces as well as of lab ware like pipettors, thermocyclers, and reaction tubes.

**Figure A:** Full removal of DNA surface contaminations after 5 minutes (1 µg dried DNA each, a-d).

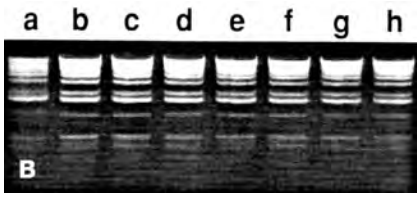

**Figure B:** No removal of solubilised DNA - for protection of your sample-DNA (1 µg DNA each, 5 minutes incubation).

| | | | |

| **X996.2** | 4 l | plastic | 214,90 € |

## DEPC

**≥97 %, for biochemistry and molecular biology**

Diethyl pyrocarbonate, Pyrocarbonic acid diethyl ester, Dicarbonic acid diethyl ester.
$C_6H_{10}O_5$
M 162,14 g/mol
Storage temp.: +4 °C

**Warning** H302+H332-H315-H319-H335

Histidin residues in proteins are modified to N-carbethoxy histidin, resulting in inhibition of RNases and DNases. DEPC decomposes to $CO_2$ and ethanol during steam sterilisation.
**Application:** 0,1 % DEPC over night under agitation. Autoclave.

| | | | |
|---|---|---|---|
| **K028.3** | 5 ml | glass | 25,70 € |
| **K028.1** | 25 ml | glass | 78,40 € |

**Instructions for use**
can be found on the Internet next to the product description.

ready-to-use

## RNase AWAY®

**ready-to-use solution for removal of RNAse-contaminations from surfaces**

**Warning** H315-H319

Quick and safe removal of RNases from labware made of plastic or glass, e.g. pipettes, gel chambers, glass discs, etc.
A safe alternative to DEPC. Reduces the use of carcinogenic DEPC in the laboratory considerably. RNase AWAY® does not corrode the surface and is not carcinogenic. Creates and preserves RNase-free surfaces. No mixing, baking or time-consuming waiting. RNase AWAY® is chemically stable and requires no special storing.

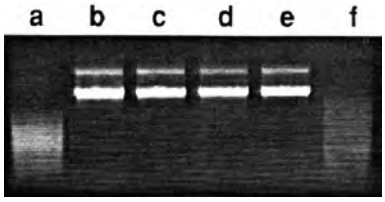

**Figure:** RNase-digestion of RNA (a, f), and removal of RNase by RNase AWAY® (d-e: undamaged RNA, 1µg poly(A)-RNA each).

Apply RNase AWAY® directly to surface, allow to work in, then rinse with water or dry with an RNase-free tissue cloth. For effective removing of RNases without influencing your DNA samples.

# Thermal Cyclers

licenced

## Thermal Cycler ³PRIME

**Compact, easy-to-handle thermal cyclers for each work bench. Made by TECHNE.**

- Licensed for PCR
- New, upgraded generation
- Fast heating and cooling rates
- High temperature homogeneity
- Simple, intuitive programming
- 3,5˝ colour touch screen
- USB port
- Cost-efficient
- 4 years warranty on cyclers and blocks

New generation of reliable, inexpensive thermal cyclers specially developed for use on the individual bench, for student's courses and schools.

In order to enable very rapid heating and cooling rates at extremely low temperature variations in the block, an advanced block algorithm has been implemented, regulating the modern Peltier technology. The mono-tube blocks were specially designed to provide optimal contact between the PCR-vials and the block bore hole and are cut, with the most modern of technologies, out of high-grade material. In most ³PRIME instruments, the heated lid can be adjusted to the height of the PCR-vials, thus optimising the temperature and volume constancy in the sample. Intuitive programming and the newly designed colour touch screen with very easy handling, enable both simple as well as complex cycle protocols to be entered very easily and quickly. All thermal cycler models have 1000 program slots available. With Gradient Thermal Cycler a temperature gradient may be added freely to every temperature step of the program. Further data may be found online in our detailed product instruction manual or by calling one of our staff on the service hotline.

Purchase of this instrument conveys a limited non-transferable immunity from suit for the purchaser's own internal research and development and applied fields other than human *in vitro* diagnostics under non-real-time thermal cycler patents of Applied Biosystems LLC.

## Thermal Cycler PRIME

**Versatile, easy-to-handle thermal cyclers for each laboratory. Made by TECHNE.**

- Licensed for PCR
- New, upgraded generation
- Fast heating and cooling rates
- High temperature homogeneity
- Simple, intuitive programming
- 5,7″ colour touch screen
- 8 Peltier elements per block
- USB port
- Cost-efficient
- 4 years warranty on cyclers and blocks

New generation of versatile, inexpensive thermal cyclers for use in the laboratory.

In order to enable very rapid heating and cooling rates at extremely low temperature variations in the block, an advanced block algorithm has been implemented, regulating the modern Peltier technology. The mono-tube blocks were specially designed to provide optimal contact between the PCR-vials and can be exchanged in a matter of seconds without the need of tools. The heated lid can be adjusted to the height of the PCR-vials, thus optimising the temperature and volume constancy in the sample. The modern, intuitive programming, and the newly designed colour touch screen with very easy handling, enable both simple as well as complex cycle protocols to be entered very easily and quickly. All thermal cycler models have 1000 program slots available. With Thermal Cycler Gradient a temperature gradient may be added freely to every temperature step of the program. Further data may be found online in our detailed product instruction manual or by calling one of our staff on the service hotline.

Purchase of this instrument conveys a limited non-transferable immunity from suit for the purchaser's own internal research and development and applied fields other than human *in vitro* diagnostics under non-real-time thermal cycler patents of Applied Biosystems LLC.

**Technical Data:**

| Type | Standard Cycler PRIME | Gradient Cycler PRIMEG |
|---|---|---|
| Sample capacity | 96 x 0,2 ml or 60 x 0,5 ml or 33 x 0,2 ml plus 33 x 0,5 ml | |
| Block temperature | 4 - 100 °C | |
| Block uniformity at 55 °C | below ±0,3 °C | |
| Temperature accuracy at 55 °C | below ±0,25 °C | |
| Max. heating rate | 3,4 °C/sec | |
| Max. cooling rate | 1,0 °C/sec | |
| Peltier elements per block | 8 | |
| Selectable lid temperature | 35 °C - 115 °C (disengeable) | |
| Heated lid pressure | yes | |
| Lid adjustable to tubes with | flat and domed lids | |
| Tubes | single tubes and strips | |
| PCR plates | 96well and 384well plates | |
| Max. number of programs | 1000 | |
| Max. number of steps per program | 10 stages with 10 steps each | |
| Max. repetition of cycles | 99 | |
| "Hold" time | 1 sec - 4 h/59 min/59 sec | |
| Increment/Decrement function | yes (temperature and time) | |
| Ramp resolution | 0,1 °C/sec | |
| Gradient temperature range | - | 30 - 80 °C |
| Max. gradient range | - | 29 °C (19 °C with 384wells) |
| Min. gradient range | - | 1 °C |
| Gradient calculator | - | yes |
| Oligonucleotide $T_m$ calculator | yes (Nearest Neighbour method) | |
| Display | 5,7″ color touch screen | |
| Auto-restart function | yes (disengeable) | |
| Data transfer | USB port | |
| Password protection | yes | |
| Warranty | 4 years or 80 000 cycles | |
| Dimensions in cm (L x W x H) | 42 x 24 x 24 | |
| Weight (kg) | 9,4 | |
| Voltage | 100-230 V, 50-60 Hz | |
| Power (W) | 425 | |

**Thermal Cycler PRIME (Standard)**

| With heating block | Art. No. | Pack Qty | € |
|---|---|---|---|
| For 96 x 0,2 ml tubes and 96well plates | **4852.1** | 1 | 4353,75 |

## Roti®-Pol DNA Polymerases

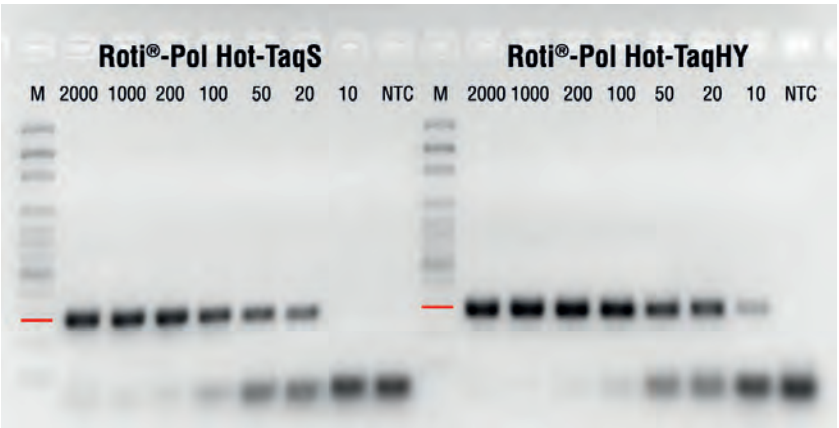
NEW

**For PCR. Recombinant, heat stable DNA polymerases from the thermophilic bacteria *Thermus aquaticus* or *Pyrococcus furiosus*.**

Roti®-Pol, the new series of DNA polymerases is the optimal choice for all PCR cycling protocols, as being performed in, for instance, analysis of cloning efficiency, for gene fishing, in routine screening processes, educational assays and much more. In combination with our specially designed buffers, the Roti®-Pol DNA polymerases deliver specific and reproducible PCR amplification with a wide range of PCR templates.

In addition to the **standard** Taq polymerase for PCR assays in general, the range also includes the antibody blocked **hot-start** version of the enzyme, which is recommended for particularly sequence specific approaches. This inhibited Taq polymerase is getting active only after the initial denaturation step, resulting in amplification of the target sequence without production of unwanted side products. Both Taq polymerases are available as **set of enzyme and buffer solutions** as well as premixed, 2x concentrated **master mixes**. The sets contain the DNA polymerase plus two 10x concentrated reaction buffers with $MgCl_2$, one of which has been specially designed for direct gel loading following the PCR reaction. Besides the DNA polymerase, the master mixes include dNTPs, $MgCl_2$, and all other components required for PCR except primers and template DNA, and are available in a colourless version for PCR only, plus a red ready-to-load version for subsequent direct gel electrophoresis.

With the **TaqHY** DNA polymerase we provide a modified Taq polymerase outstanding in robust performance, fast polymerisation rate and high yield of amplicons. Combining the benefits of both techniques, the **Hot-TaqHY** DNA polymerase has been designed by increasing the PCR sequence specificity of a quick and high yield modified Taq polymerase by antibody mediated inhibition.



In combination with the attached specially adjusted high fidelity buffer, the **ProofRead** polymerase delivers highly sequence-true PCR amplicons and is recommended for amplification of target sequences of high GC content, or with complex secondary structures.

All **TaqUltra** DNA polymerase are being tested on absence of DNA (bacterial genomic DNA) which makes them particularly suitable for amplification of bacterial DNA. This polymerase is also available in standard version as well as the hot-start type **Hot-TaqUltra**.

**Contents**

| Product | Polymerase | Master mix (2x) | Reaction buffer | Art.-No. |
|---|---|---|---|---|
| **Roti®-Pol TaqS** | Standard Taq polymerase | - | colourless + red (ready to load) | 9223 |
| **Roti®-Pol TaqS Mix (2x)** | Standard Taq polymerase | colourless | - | 9239 |
| **Roti®-Pol TaqS Red-Mix (2x)** | Standard Taq polymerase | red (ready to load) | - | 9241 |
| **Roti®-Pol Hot-TaqS** | Hot start Taq polymerase | - | colourless + red (ready to load) | 9245 |
| **Roti®-Pol Hot-TaqS Mix (2x)** | Hot start Taq polymerase | colourless | - | 9248 |
| **Roti®-Pol Hot-TaqS Red-Mix (2x)** | Hot start Taq polymerase | red (ready to load) | - | 9256 |
| **Roti®-Pol TaqHY** | High yield / high performance Taq polymerase | - | colourless + red (ready to load) | 9345 |
| **Roti®-Pol Hot-TaqHY** | High yield / high performance hot-start Taq polymerase | - | colourless + red (ready to load) | 9346 |
| **Roti®-Pol ProofRead** | Proof reading / high fidelity Pfu polymerase | - | ProofRead | 9344 |
| **Roti®-Pol TaqUltra** | DNA free, ultra pure Taq polymerase | - | - | 9347 |
| **Roti®-Pol Hot-TaqUltra** | DNA free, ultra pure hot start Taq polymerase | - | - | 9350 |

**Figure:**
Sensitivity assay using Roti®-Pol Hot-TaqS and Hot-TaqHY, 1 U/reaction each (20 µl). 300 bp β-Actin fragment, 40 cycles. Template: 10 to 2000 pg human gDNA. Gel loading 10 µl each. M: 100 bp-DNA Ladder extended. NTC: no template control.

Roti®-Pol DNA polymerases are able to amplify PCR products up to 5 kb with genomic, viral, cDNA and plasmid DNA as template. The Taq DNA polymerases possess a 5' → 3' polymerase- as well as a 5'-flap endonuclease activity, generating amplicons with a 3'dA (adenine)-overhang which may well be used for TA-cloning purposes. In addition to the 5' → 3' polymerase activity, the Pfu DNA polymerase possesses a 3' → 5' (proof reading) exonuclease activity, rapidly substituting misincorporated bases during polymerization. These DNA fragments are blunt-ended.

For easy handling, all solutions are filled in tubes with **colour coded lids**. The red dye for direct gel loading, included in buffers and master mixes, migrates approx. as fast as a 1 kb DNA fragment in 1 % agarose gels.

| Product | Purity | Application | Amplicon Ends | Art. No. | Pack Qty. | € |
|---|---|---|---|---|---|---|
| **Roti®-Pol TaqSRoti®-Pol TaqS** | 5 U/µl | Standard PCR | 3'dA | **9223.1** | 500 U | 60,10 |

| | | | | **9350.2** | 1000 U | 733,15 |

For research use only. Not approved for use in clinical or *in vitro* diagnostics.

Store at -20 °C • Transport temp.: cooled

**Instructions for use**
can be found on the Internet next to the product description.

# Nucleotides

- Available as ready-to-use set or mix, for contamination-free applications
- Purity ≥98 % (HPLC-tested)
- Tested for “long-run-PCR“ of up to 30 kb
- DNAse-, RNAse-, Protease- and Phosphatase-free
- Free of PCR inhibitors like modified bases and tetra-pyrophosphate
- Adjusted to pH 8,5 for superior stability even during larger numbers of freeze-and-thaw cycles
- Also available adjusted to pH 7,0 for special applications (see below)
- Highly efficient enzymatic fabrication*

**Applicable to**
PCR, light-cycling, cDNA synthesis, labelling and primer-extension, mutagenesis-assays, sequencing reactions and *in vitro* transcription.

*of dATP, dGTP, dCTP and dUTP. dTTP ist synthesized chemically.

All Roth nucleotides are manufactured from highest-quality reagents and are most thoroughly tested for quality. This testing procedure not only includes standard-PCR (fig. 1) but also ‘longrange-PCR’ of up to 30 kb, repeated quantitative light-cycling reactions (fig. 2), and tests for physical stability (fig. 3).

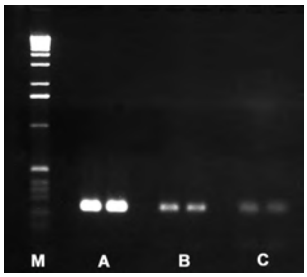

**Fig. 1**
Sensitivity assay I: Amplification of a 260 bp fragment of human genomic DNA with (left to right) 250 ng (A), 25 ng (B) and 2,5 ng (C) DNA as template (two replicates).

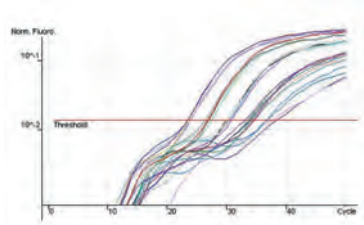

**Fig. 2**
Sensitivity assay II: Quantitative light-cycling-PCR on recombinant DNA with (left to right) 10 ng, 1 ng, 100 pg, 10 pg, 1 pg DNA as template (six replicates).

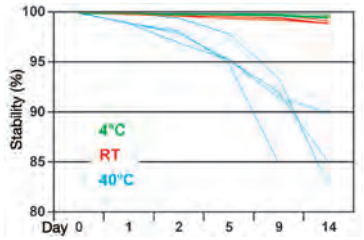

**Fig. 3**
Stability testing: HPLC analysis of all four dNTPs following incubation periodes of 1-14 days at different temperatures (4 °C - green; room temperature - red; 40 °C - blue). Stability of nucleotides is >99 % even after 14 days incubation at room temperature. Even after an incubation period of 9 days at 40 °C, 85 % of all nucleotide molecules are still intact.

# dNTP Sets

## dNTP-Set 1

**≥99 %, dATP, dTTP, dGTP, dCTP**

dNTP-Set 1, composed of the nucleotide-single solutions:
dATP, dTTP, dGTP, dCTP.
Concentration: 100 mM per dNTP.
Deoxynucleoside triphosphate set
Storage temp.: -20 °C • Transport temp.: cooled

| | | |
|---|---|---|
| **K039.1** | 4 x 25 µmol (250 µl), 100 mM | 98,40 € |
| **K039.2** | 5 x 4 x 25 µmol (250 µl), 100 mM | 407,45 € |

## dNTP-Set 1 (pH 7)

**≥99 %, dATP, dTTP, dGTP, dCTP**

dNTP-Set 1 (pH 7), composed of the nucleotide-single solutions:
dATP, dTTP, dGTP, dCTP.
Concentration: 100 mM per dNTP, **pH 7,0 ±0,1**
Deoxynucleoside triphosphate set
Storage temp.: -20 °C • Transport temp.: cooled

| | | |
|---|---|---|
| **0178.1** | 4 x 25 µmol (250 µl), 100 mM | 98,40 € |
| **0178.2** | 5 x 4 x 25 µmol (250 µl), 100 mM | 407,45 € |

## dNTP-Set 2

**≥99 %, dATP, dUTP, dGTP, dCTP**

dNTP-Set 2, composed of the nucleotide-single solutions:
dATP, dUTP, dGTP, dCTP.
Concentration: 100 mM per dNTP.
Deoxynucleoside triphosphate set
Storage temp.: -20 °C • Transport temp.: cooled

| | | |
|---|---|---|
| **L540.1** | 4 x 25 µmol (250 µl), 100 mM | 98,80 € |
| **L540.2** | 5 x 4 x 25 µmol (250 µl), 100 mM | 413,90 € |

## dNTP-Set 3

**≥99 %, dATP, dTTP, dITP, dCTP**

dNTP-Set 3, composed of the nucleotide-single solutions:
dATP, dTTP, dITP, dCTP.
Concentration: 100 mM per dNTP.
Deoxynucleoside triphosphate set
Storage temp.: -20 °C • Transport temp.: cooled

| | | |
|---|---|---|
| **P731.1** | 4 x 25 µmol (250 µl), 100 mM | 98,80 € |
| **P731.2** | 5 x 4 x 25 µmol (250 µl), 100 mM | 413,90 € |

**Valid for all nucleotides:**
Storage temp.: -20 °C
Transport temp.: cooled

## dNTP Mixes

### Roti®-Mix PCR 1

**2 mM (per dNTP) dATP, dTTP, dGTP, dCTP**

Roti®-Mix PCR 1, nucleotide-mixture containing dATP, dTTP, dGTP, dCTP.
Concentration: 2 mM per dNTP.
Storage temp.: -20 °C • Transport temp.: cooled

| | | | |
|---|---|---|---|
| **L541.1** | 1 ml | plastic | 24,20 € |
| **L541.2** | 5 x 1 ml | plastic | 94,50 € |

### Roti®-Mix PCR 2

**2 mM (per dNTP) dATP, dUTP, dGTP, dCTP**

Roti®-Mix PCR 2, nucleotide-mixture containing dATP, dUTP, dGTP, dCTP.
Concentration: 2 mM per dNTP.
Storage temp.: -20 °C • Transport temp.: cooled

| | | | |
|---|---|---|---|
| **L542.1** | 1 ml | plastic | 24,20 € |
| **L542.2** | 5 x 1 ml | plastic | 94,50 € |

### Roti®-Mix PCR 3

**10 mM (per dNTP) dATP, dTTP, dGTP, dCTP**

Roti®-Mix PCR 3, nucleotide-mixture containing dATP, dTTP, dGTP, dCTP.
Concentration: 10 mM per dNTP.
Storage temp.: -20 °C • Transport temp.: cooled

| | | | |
|---|---|---|---|
| **L785.1** | 0,2 ml | plastic | 24,20 € |
| **L785.2** | 5 x 0,2 ml | plastic | 94,50 € |
| **L785.3** | 5 x 1 ml | plastic | 392,40 € |

### Roti®-Mix PCR 3 (pH 7)

**10 mM (pro dNTP) dATP, dTTP, dGTP, dCTP**

Roti®-Mix PCR 3 (pH 7), nucleotide-mixture containing dATP, dTTP, dGTP, dCTP.
Concentration: 10 mM per dNTP, **pH 7,0 ±0,1**
Storage temp.: -20 °C • Transport temp.: cooled

| | | | |
|---|---|---|---|
| **0179.1** | 0,2 ml | plastic | 24,20 € |
| **0179.2** | 5 x 0,2 ml | plastic | 94,50 € |

### Roti®-Mix PCR 4

**10 mM (per dNTP) dATP, dUTP, dGTP, dCTP**

Roti®-Mix PCR 4, nucleotide-mixture containing dATP, dUTP,dGTP, dCTP.
Concentration: 10 mM per dNTP.
Storage temp.: -20 °C • Transport temp.: cooled

| | | | |
|---|---|---|---|
| **L786.1** | 0,2 ml | plastic | 24,20 € |
| **L786.2** | 5 x 0,2 ml | plastic | 94,50 € |

## dNTP Solutions

### dATP solution

**≥99 %, 100 mM solution**

2'-Deoxyadenosine-5'-triphosphate
$C_{10}H_{13}N_5O_{12}P_3$
M 488,16 g/mol
Storage temp.: -20 °C • Transport temp.: cooled
$\varepsilon_{259}$ = 15,4 E x mmol$^{-1}$ x cm$^{-1}$

| | | | |
|---|---|---|---|
| **K035.1** | 25 µmol (250 µl) | plastic | 33,25 € |

### dCTP solution

**≥99 %, 100 mM solution**

2'-Deoxycytidine-5'-triphosphate
$C_9H_{13}N_3O_{13}P_3$
M 464,13 g/mol
Storage temp.: -20 °C • Transport temp.: cooled
$\varepsilon_{272}$ = 9,1 E x mmol$^{-1}$ x cm$^{-1}$

| | | | |
|---|---|---|---|
| **K038.1** | 25 µmol (250 µl) | plastic | 33,25 € |

### dGTP solution

**≥99 %, 100 mM solution**

2'-Deoxyguanosine-5'-triphosphate
$C_{10}H_{13}N_5O_{13}P_3$
M 504,16 g/mol
Storage temp.: -20 °C • Transport temp.: cooled
$\varepsilon_{252}$ = 13,7 E x mmol$^{-1}$ x cm$^{-1}$

| | | | |
|---|---|---|---|
| **K037.1** | 25 µmol (250 µl) | plastic | 33,25 € |

### dTTP solution

**≥99 %, 100 mM solution**

2'-Deoxythymidine-5'-triphosphate
$C_{10}H_{14}N_2O_{14}P_3$
M 479,14 g/mol
Storage temp.: -20 °C • Transport temp.: cooled
$\varepsilon_{267}$ = 9,6 E x mmol$^{-1}$ x cm$^{-1}$

| | | | |
|---|---|---|---|
| **K036.1** | 25 µmol (250 µl) | plastic | 33,25 € |

### dUTP solution

**≥99 %, 100 mM solution**

2'-Deoxyuridine-5'-triphosphate
$C_9H_{12}N_2O_{14}P_3$
M 465,12 g/mol
Storage temp.: -20 °C • Transport temp.: cooled
$\varepsilon_{262}$ = 10,2 E x mmol$^{-1}$ x cm$^{-1}$

| | | | |
|---|---|---|---|
| **L539.1** | 25 µmol (250 µl) | plastic | 33,25 € |

### dITP solution

**≥99 %, 100 mM solution**

2'-Deoxyinosine-5'-triphosphate
$C_{10}H_{12}N_4O_{13}P_3$
M 489,14 g/mol
Storage temp.: -20 °C • Transport temp.: cooled
$\varepsilon_{249}$ = 12,2 E x mmol$^{-1}$ x cm$^{-1}$

| | | | |
|---|---|---|---|
| **P732.1** | 25 µmol (250 µl) | plastic | 33,25 € |

## Parameters of Nucleotide Solutions

| Nucleotides | Art. No. | pH value | Solvent |
|---|---|---|---|
| dNTP-Solution | K035-K038, L539, P732 | 8.5 ±0.1 | Water |
| dNTP-Set | K039, L540, P731 | 8.5 ±0.1 | Water |
| dNTP-Mix | L541, L542, L785, L786 | 8.5 ±0.1 | Water |
| dNTP-Set or -Mix | 0178, 0179 | 7.0 ±0.1 | Water |
| NTP-Solution | K045-K048 | 8.0 ±0.2 | 20 mM Tris-HCl* |
| NTP-Set | K049 | 8.0 ±0.2 | 20 mM Tris-HCl* |
| ddNTP-Solution | K040-K043 | 8.0 ±0.2 | Water |
| ddNTP-Set | K044 | 8.0 ±0.2 | Water |
| Labelled Nucleotides | 1047, 1048, 1049 | 7.5 ±0,2 | Water |

*For highly efficient Reverse Transcription

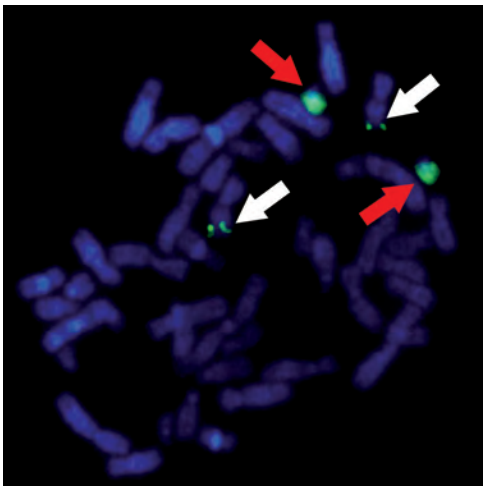

**Figure:**
Detection of chromosome wcp21q (whole chromosome paint, red arrows) and band 11q23 (BAC, bacterial artificial chromosome, white arrows) by FISH, labelling with fluorescein-12-dUTP.
With kind permission of PD Dr. Thomas Liehr, Institute of Human Genetics and Anthropology, Friedrich-Schiller University, Jena.

# Labelled dNTPs

- Ultra pure
- Stabile
- pH 7.5
- Tested for the lack of endo- and exonucleases, ribonucleases, and phosphatases

**Applications:**
Non-radioactive labelling of DNA via enzymatic reactions like e.g. PCR, reverse transcription, nick-end-translation, end-labelling, or random-priming. Can be incorporated by all standard DNA-polymerases (Taq-polymerase, T4 DNA-polymerase, Klenow fragment and so on).

## Biotin-11-dUTP

**≥95 %, 1 mM solution**

For non-radioactive, enzymatic labelling of DNA.

Biotin-aminocaproyl-[5-(3-aminoallyl)-2'-deoxyuridine-5'-triphosphate]

$C_{28}H_{42}N_6O_{17}P_3S$

M 859,65 g/mol

Storage temp.: -20 °C • Transport temp.: cooled

$\varepsilon_{240}$ = 10.7 E x mmol$^{-1}$ x cm$^{-1}$; $\varepsilon_{289}$ = 7.1 E x mmol$^{-1}$ x cm$^{-1}$; pH: 7.5 ±0.2

Biotin-11-dUTP is able to replace dTTP in growing DNA-strands and is used for efficient non-radioactive DNA-labelling. As a general rule, the labelled DNA is then detected using streptavidin-conjugates by colorimetric (e.g. streptavidin-AP) or fluorometric (e.g. fluorescein-streptavidin) assays. Biotin-11-dUTP can be used for double staining techniques in combination with rhodamine-12-dUTP or fluorescein-12-dUTP and corresponding antibodies.

| | | | |
|---|---|---|---|
| **1047.1** | 25 nmol (25 µl) | plastic | 117,20 € |
| **1047.2** | 50 nmol (50 µl) | plastic | 196,20 € |

## Fluorescein-12-dUTP

**≥95 %, 1 mM solution**

For non-radioactive, enzymatic labelling of DNA.

Fluorescein-6-carboxyaminocaproyl-[5-(3-aminoallyl)-2'-deoxyuridine-5'-triphosphate]

$C_{39}H_{38}N_4O_{21}P_3$

M 991,66 g/mol

Storage temp.: -20 °C • Transport temp.: cooled

$\varepsilon_{495}$ (pH 9) = 70.0 E x mmol$^{-1}$ x cm$^{-1}$; pH: 7.5 ±0.2

Fluorescein-12-dUTP is able to replace dTTP in growing DNA-strands and is used for efficient non-radioactive DNA-labelling. Detection of labelled nucleic acids can be done by direct analysis of fluorescent signals (e.g. by fluorescence microscopy) or by incubation with AP-coupled anti-fluorescein antibodies.
Fluorescein-12-dUTP can also be used for double staining techniques in combination with rhodamine-12-dUTP or biotin-11-dUTP and corresponding antibodies or streptavidin-complexes, respectively.
Excitation: 494 nm
Emission: 520 nm

| **1048.1** | 25 nmol (25 µl) | plastic | 178,35 € |
| **1048.2** | 50 nmol (50 µl) | plastic | 317,15 € |

## Rhodamine-12-dUTP

**≥95 %, 1 mM solution**

For non-radioactive, enzymatic labelling of DNA.

Rhodamine-6-carboxyaminocaproyl-[5-(3-aminoallyl)-2'-desoxyuridine-5'-triphosphate]

$C_{39}H_{41}N_6O_{19}P_3$

M 990,7 g/mol

Storage temp.: -20 °C • Transport temp.: cooled

$\varepsilon_{505}$ (pH 7) = 8.5 E x mmol$^{-1}$ x cm$^{-1}$; pH: 7.5 ±0.2

Rhodamine-12-dUTP is able to replace dTTP in growing DNA-strands and is used for efficient non-radioactive DNA-labelling. Detection of labelled nucleic acids can easily be done by direct analysis of fluorescent signals (e.g. by fluorescence microscopy).
Rhodamine-12-dUTP can also be used for double staining techniques in combination with fluorescein-12-dUTP or biotin-11-dUTP and corresponding antibodies or streptavidin-complexes, respectively.
Rhodamine Green, mixture of 5/6 isomeres
Excitation: 505 nm
Emission: 530 nm (red)

5'-Deoxythymidine-5'-triphosphate tri-sodium salt
$C_{10}H_{14}N_2O_{14}P_3Na_3 \cdot 3\ H_2O$
M 602,15 g/mol
Storage temp.: -20 °C • Transport temp.: cooled
$\varepsilon_{267}$ = 9.6 E x mmol$^{-1}$ x cm$^{-1}$

| | | | |
|---|---|---|---|
| **K051.1** | 10 mg | plastic | 23,15 € |
| **K051.2** | 100 mg | plastic | 145,15 € |

### Important information on refrigerated transports

All products identified as being particularly temperature-sensitive are shipped in **special ice boxes with freezer packs or in dry ice.**
**Additional costs** resulting from such, **will be invoiced** (further information on request).

**Please note:**
In order to guarantee optimum product quality, the dispatch of refrigerated transport products will be carried out **on Mon and Tue only outside Germany!**
Slight delays in delivery are therefore possible.

# NTP Set

## NTP-set

**≥99 %, ATP, CTP, GTP, UTP**

NTP-Set, consisting of the single nucleotide solutions: ATP, CTP, GTP, UTP.
Concentration: 100 mM per NTP.
Ribonucleoside triphosphate-set
Storage temp.: -20 °C • Transport temp.: cooled

| | | | |
|---|---|---|---|
| **K049.1** | 4 x 25 µmol (250 µl), 100 mM | plastic | 127,95 € |

# Reagents for PCR

## Mineral Oil

**for molecular biology**

For overlaying PCR and other enzymatic reactions.

H413

Light, colourless oil, particularly suitable for overlaying PCR and other enzymatic reactions such as restriction digestion, priming reactions or whole-mount *in situ* reactions incubated in warm temperatures. Prevents fluid loss and reduces any danger of cross-contamination.

Each batch is functionally tested for its suitability in PCR.

**Type analysis:**

Colour.....clear, colourless
Density (25 °C).....0,818-0,880
Viscosity (40 °C).....≤33,5 cSt
Readily carbonizable substances.....complies
Solid paraffin.....complies
Suitable for PCR.....complies

▶ RNAse-/DNAse free water for molecular biology see page 1251

# Ready-Made Primers

- Superior purity
- Standardised quality
- Immediately available

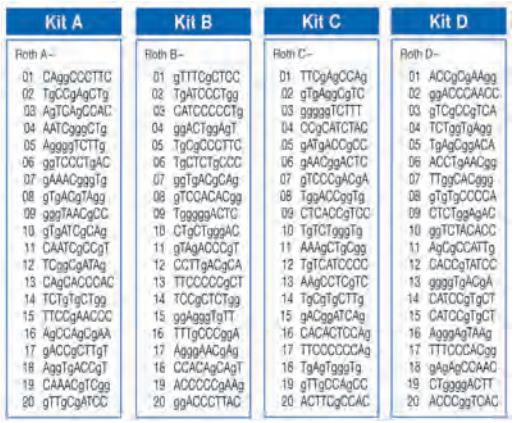
## Roth poly d(T)$_{12-18}$ Primer

**HPLC-purified, lyophilised**

For sequence unspecific priming during reverse transcription.
Mix of d(T) 12 to 18mers. 5 $OD_{260}$ units.
Storage temp.: -20 °C • Transport temp.: room temp.
Delivery includes 5 x 1 $OD_{260}$ units (31.2 µg or 7.3 nmol DNA each) poly d(T)$_{12-18}$ Primer in one vial each and 1 ml DEPC-treated water for molecular biology (DNAse-free, RNAse-free).

| | | | |
|---|---|---|---|
| **HP27.1** | 1 kit | | 51,10 € |

## Roth Hexanucleotide Random-Primer Mix



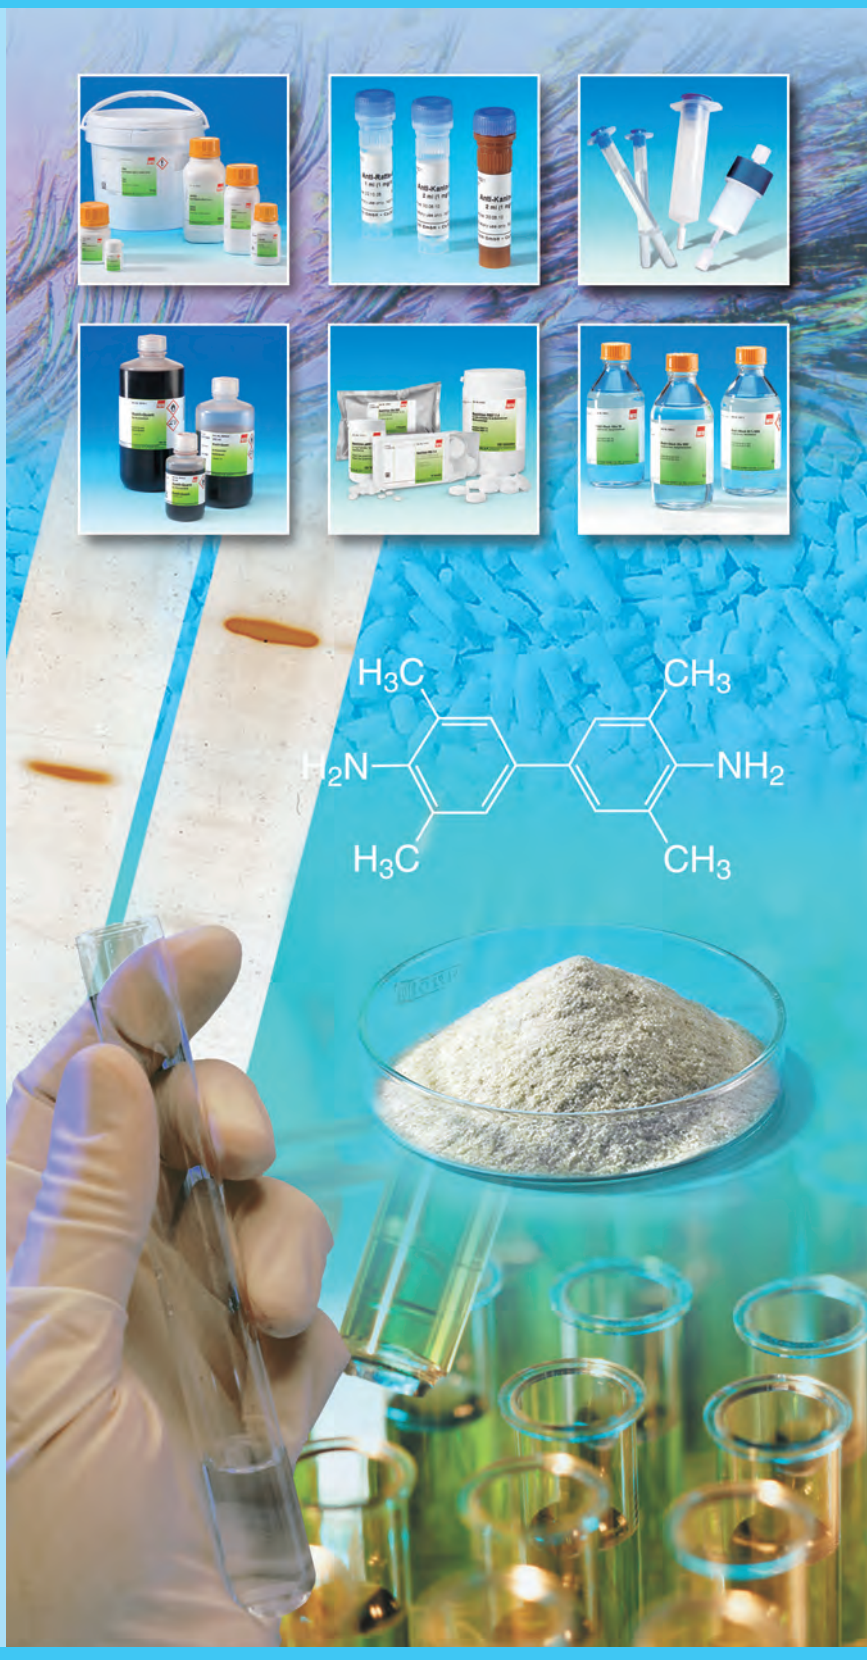
**HPLC-purified, lyophilised**

For random priming during probe generation or during total genome-amplification.
$N_6$ mix (N for A, G, C, T). 10 $OD_{260}$ units.
Storage temp.: -20 °C • Transport temp.: room temp.
Delivery includes 10 x 1 $OD_{260}$ units (27.4 µg or 15.3 nmol DNA each) of hexanucleotide mixture in one vial each and 1 ml DEPC-treated water for molecularbiology (DNAse-free, RNAse-free).

| | | | |
|---|---|---|---|
| **HP28.1** | 1 kit | | 67,65 € |

## Roth Random-Primer kits for RAPD-PCR

20 x 10mer/kit. 2.0 $OD_{260}$ units per primer, aliquoted in 2 vials each. Desalted and lyophilised.
Storage temp.: -20 °C • Transport temp.: room temp.
Primer set for rapid amplification of polymorphic DNA (RAPD)-PCR. For analysing DNA-polymorphisms or the change in genetic expression samples.
20 x 10mers with 60-80 % GC-assay.



| | | | |
|---|---|---|---|
| **HP22.1** | 1 kit | Kit A | 198,90 € |
| **HP23.1** | 1 kit | Kit B | 198,90 € |
| **HP24.1** | 1 kit | Kit C | 198,90 € |
| **HP25.1** | 1 kit | Kit D | 198,90 € |

1 OD DNA is defined as the amount of DNA recieved by lyophilisation of 1 ml solution containing DNA-concentrations of 1 OD.

# Roti®fair Reagents

## High-pure reagents and buffer mixes in pouches or as tablets.

Roti®fair - the new range of user-friendly reagent formulations.
For simplest application, optimal quality and reproducible results.

One tablet or the content of one pouch is simply dissolved in the respective amount of water - the desired solution is ready for use. Simply adapt the amount of water in order to vary the concentration, for instance for preparation of a higher concentrated stock solution.

- **Easy-to-use** - simply dissolve contents of one pouch or one tablet in water
- **Timesaving** - no need for weighing of several reagents or adjustment of pH
- **Convenient** - dry reagents for direct use spare preparation of long-term stored stock solutions
- **Reliable** - stringent quality control ensures high lot-to-lot consistency

| Product | Buffer/solution | Use | Final conc. | pH value | Preparation scale | Art. No. | Pack Qty | € |

| **Roti®fair 10% SDS** | Sodium dodecyl sulphate solution | Anionic detergent for preparation of bioanalytical solutions | 10 % | - | 1000 ml/pouch | **1157.1** | 5 pouches | 596,65 |
| **Roti®fair SDS-PAGE** | Tris-glycine-SDS buffer | Buffer for protein electrophoresis | 1x | 8,3 ±0,05 | 1000 ml/pouch | **1249.1** | 10 pouches | 89,15 |
| | | | | | 5000 ml/pouch | **1250.1** | 10 pouches | 188,15 |
| **Roti®fair 20x SSC** | Sodium sodium citrate buffer | Buffer solution for Southern- and Northern transfer | 20x | 7,0 ±0,05 | 1000 ml/pouch | **1232.1** | 5 pouches | 153,20 |
| **Roti®fair SSPE** | Sodium sodium phosphate EDTA buffer | Buffer solution for DNA- and RNA hybridisation | 1x | 7,4 ±0,05 | 200 ml/tablet | **1233.1** | 100 tablets | 99,90 |
| **Roti®fair 50x TAE** | Tris acetate EDTA buffer | Buffer solution for DNA electro-phoresis | 50x | 8,3 ±0,05 | 500 ml/pouch | **1234.1** | 5 pouches | 396,70 |
| | | | | | 1000 ml/pouch | **1240.1** | 5 pouches | 708,45 |
| **Roti®fair 1x TBE** | Tris borate EDTA buffer | Buffer solution for DNA electro-phoresis | 1x | 8,3 ±0,05 | 1000 ml/pouch | **1241.1** | 10 pouches | 77,95 |
| **Roti®fair 5x TBE** | Tris borate EDTA buffer | Buffer solution for DNA electro-phoresis | 5x | 8,3 ±0,05 | 1000 ml/pouch | **1242.1** | 10 pouches | 169,35 |
| **Roti®fair 10x TBE** | Tris borate EDTA buffer | Buffer solution for DNA electro-phoresis | 10x | 8,3 ±0,05 | 1000 ml/pouch | **1243.1** | 10 pouches | 278,45 |
| **Roti®fair TBS 7.6** | Tris Buffered Saline | General solution for assays in molecular biology and biochemistry | 1x | 7,6 ±0,05 | 500 ml/tablet | **1244.1** | 10 tablets | 54,75 |
| | | | | | | **1244.2** | 100 tablets | 263,40 |
| **Roti®fair TBS 8.0** | Tris Buffered Saline | General solution for assays in molecular biology and biochemistry | 1x | 8,0 ±0,05 | 1000 ml/pouch | **1245.1** | 10 pouches | 97,30 |
| **Roti®fair 10x TBS 8.0** | Tris Buffered Saline | General solution for assays in molecular biology and biochemistry | 10x | 8,0 ±0,05 | 1000 ml/pouch | **1247.1** | 10 pouches | 643,95 |
| **Roti®fair TBST 7.6** | Tris Buffered Saline/Tween | General solution for assays in molecular biology and biochemistry | 1x | 7,6 ±0,05 | 500 ml/tablet | **1248.1** | 10 tablets | 65,05 |
| | | | | | | **1248.2** | 100 tablets | 306,40 |
| **Roti®fair 10x TE** | Tris EDTA buffer | Buffer solution for solubilisation and dilution of nucleic acids | 10x | 7,4 ±0,05 | 1000 ml/pouch | **1268.1** | 10 pouches | 213,95 |
| **Roti®fair TG-Western** | Tris-glycine buffer | Buffer for protein electrophoresis and transfer | 1x | 8,3 ±0,05 | 1000 ml/pouch | **1269.1** | 10 pouches | 81,20 |
| | | | | | 5000 ml/pouch | **1276.1** | 10 pouches | 170,95 |
| **Roti®fair 1M Tris 7.4** | Tris solution | General solution for assays in molecular biology and biochemistry | 1 M | 7,4 ±0,05 | 1000 ml/pouch | **1251.1** | 10 pouches | 375,20 |
| **Roti®fair 1M Tris 8.0** | Tris solution | General solution for assays in molecular biology and biochemistry | 1 M | 8,0 ±0,05 | 1000 ml/pouch | **1260.1** | 10 pouches | 375,20 |
| **Roti®fair 1M Tris 8.3** | Tris solution | General solution for assays in molecular biology and biochemistry | 1 M | 8,3 ±0,05 | 1000 ml/pouch | **1261.1** | 10 pouches | 375,20 |

For additional product data and safety information, see chapter Chemicals A-Z.

# Biological Buffer Reagents

## PUFFERAN® - for biochemistry, bioinorganic chemistry and molecular genetics
## CELLPURE® - especially for cell culture

- Very high purity
- Dissolve easily in water and aqueous media
- No penetration or dissolution of membranes
- Low UV absorption
- No or only very weak complexing with cations
- Chemically stable
- No inhibition or activation of biological or biochemical reactions
- Minimal alteration of pH-value by temperature changes

## Application Range of Biological Buffer Reagents

| Buffer reagents (alphabetical) | pH range | $pK_a$ (25 °C) |
|---|---|---|
| ACES | 6.1-7.5 | 6.78 |
| ADA | 6.0-7.2 | 6.59 |
| AMP | 8.7-10.4 | 6.69 |
| AMPSO | 8.3-9.7 | 9.00 |
| BES | 6.4-7.8 | 7.09 |
| BICINE | 7.6-9.0 | 8.26 |
| BIS-TRIS | 5.8-7.2 | 6.46 |
| BIS-TRIS-Propane | 6.3-9.5 | 6.80 |
| Cacodylic acid | 5.0-7.4 | 6.27 |
| CAPS | 9.7-11.1 | 10.40 |
| CAPSO | 8.9-10.3 | 9.60 |
| Carbonate buffers | 6.0-8.0 | 6.35 |
| CHES | 8.6-10.0 | 9.50 |
| Citrate | 2.2-6.5 | 3.13 |
| DIPSO | 7.0-8.2 | 7.52 |
| Glycine | 2.2-3.6 | 2.35 |
| Glycyl-glycine | 2.5-3.8 | 3.14 |
| HEPES | 6.8-8.2 | 7.48 |
| HEPES, EPPS | 7.6-8.6 | 8.00 |
| HEPPSO | 7.1-8.5 | 7.85 |
| Imidazole | 6.2-7.8 | 6.95 |
| MES | 5.5-6.7 | 6.10 |
| MOPS | 6.5-7.9 | 7.14 |
| MOPSO | 6.2-7.6 | 6.87 |
| Phosphate buffers | 1.7-2.9 | 2.15 |
| PIPES | 6.1-7.5 | 6.76 |
| POPSO | 7.2-8.5 | 7.78 |
| Potassium acetate | 3.6-5.6 | 4.76 |
| Pyridine | 4.9-5.9 | 5.23 |
| Sodium acetate | 3.6-5.6 | 4.76 |
| Sodium formiate | 3.0-4.5 | 3.75 |
| Succinate | 3.2-5.2 | 4.21 |
| TAPS | 7.7-9.1 | 8.40 |
| TAPSO | 7.0-8.2 | 7.61 |
| Taurine | 8.4-9.6 | 9.06 |
| TES | 6.8-8.2 | 7.40 |
| TRICINE | 7.4-8.8 | 8.05 |
| Triethanolamine | 7.0-8.3 | 7.76 |
| TRIS | 7.5-9.0 | 8.06 |

| Buffer reagents (buffered pH range) | pH range | $pK_a$ (25 °C) |
|---|---|---|

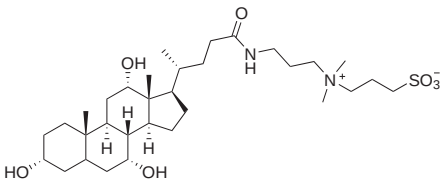
For additional product data and safety information, see chapter Chemicals A-Z.

Please note our **Technical Information Brochure** on the Internet next to the products:

**Biological Buffers**

# Detergents

The dissolving power of detergents is utilised to deal with a number of molecular-biological and biochemical problems.
For additional data see chapter Chemicals A-Z.



## Brij® 35

**for biochemisty**
Non-ionic detergent.
Polyoxyethylene lauryl ether, Polyethylene glycol lauryl ether
$C_{58}H_{118}O_{24}$
M 1198,57 g/mol
Copolymer and non-ionoic detergent with polyoxyethylen goup. Highly resistant against acids and bases. Particularly suited for emulgation of fats at high or low pH values. Also well suited for protein analysis, since Brij® 35 does neither denature nor dissociate proteins.
**Application:**
0.5 % solution: Solubilize 0.5 g Brij® 35 in 100 ml hot water.
Tip: In case some detergent precipitates during cooling, dilute to 150 ml (0.34 % solution) and use 1.5 vol. in the assay.

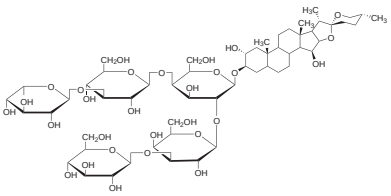
| **9161.2** | 1 kg | plastic | 118,15 € |
| Original pack 6 x 1 kg | | | 112,24/1 kg |

## Deoxycholic acid sodium salt (DOC)

**≥98 %, for biochemistry**

Anionic detergent

Sodium deoxycholate, DOC



$C_{24}H_{39}NaO_4$

M 414,64 g/mol

Storage temp.: +4 °C

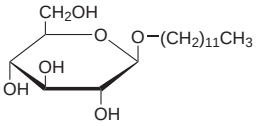
**Warning** H302-H335-H315-H319

| | | | |
|---|---|---|---|
| **3484.1** | 10 g | plastic | 18,20 € |
| **3484.2** | 50 g | plastic | 56,90 € |
| **3484.3** | 100 g | plastic | 99,90 € |

## Digitonin

**Ultra Quality**

Water soluble quality, for biochemistry. Non-ionic detergent.



$C_{56}H_{92}O_{29}$

M 1229,32 g/mol

**Danger** H301+H311+H331

Steroid glycoside and non-ionic detergent with high binding capacity for cholesterol. Digitonin is used for permeabilisation of plasma membranes as well as for mild solubilisation of membrane-bound proteins.
Application: Use 10 -100 µg/ml for selective permeabilisation of plasma membranes via binding of cholesterol (Mooney, R.A. (1988). *Methods Enzymol.* 159:193-2).

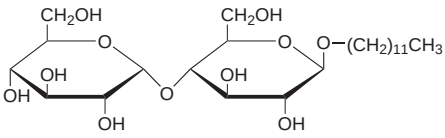
| | | | |
|---|---|---|---|
| **HN76.3** | 100 mg | glass | 70,85 € |
| **HN76.1** | 250 mg | glass | 160,20 € |
| **HN76.2** | 1 g | glass | 461,20 € |

## n-Dodecyl-β-D-glucopyranoside

**for biochemistry**

Non-ionic detergent.

n-Dodecyl-β-D-Glc



$C_{18}H_{36}O_6$

M 348,48 g/mol

Storage temp.: +4 °C

**Warning** H315-H319-H335

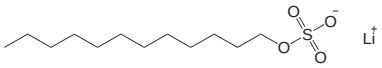
| | | | |
|---|---|---|---|
| **4129.1** | 500 mg | glass | 111,70 € |

## Dodecyl-β-D-maltoside (DDM)

**≥99 %, for biochemistry**

Non-ionic detergent.

DDM, Lauryl-β-D-maltoside



$C_{24}H_{46}O_{11}$

M 510,63 g/mol

Storage temp.: -20 °C • Transport temp.: room temp.

Mainly used for isolation and solubilisation of membrane proteins. Isolated proteins frequently remain folded in native complexes with stabile conformation and high activity.

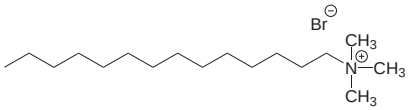
| | | | |
|---|---|---|---|
| **CN26.1** | 500 mg | glass | 41,40 € |
| **CN26.2** | 1 g | glass | 67,20 € |
| **CN26.3** | 2,5 g | glass | 145,15 € |
| **CN26.4** | 10 g | glass | 478,40 € |

## Lithiumdodecyl sulphate (LDS)

**≥99 %, for biochemistry**

Anionic detergent

LDS, Lithium lauryl sulphate



$C_{12}H_{25}LiO_4S$

M 272,33 g/mol

**Danger** H228-H318-H315-H335

For special applications in molecular biology, and for release of peptides from protein complexes. Compared with SDS, LDS has higher solubility and, under certain conditions, may be used to replace SDS in PAGE.

| | | | |
|---|---|---|---|
| **CN25.1** | 10 g | plastic | 27,45 € |

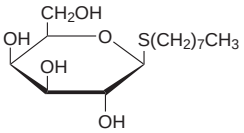
## n-Octyl-β-D-glucopyranoside (OGP)

**≥99 %, for biochemistry**

Non-ionic detergent.

OGP, Octylglucoside



$C_{14}H_{28}O_6$

M 292,38 g/mol

Storage temp.: +4 °C

Non-ionic, non-denaturing, water-soluble detergent, mainly used for isolation of membrane proteins. Easily removable by dialysis.
No photometric absorption at 280 nm.
Recommended working solution: 30 mM
Always prepare working solutions freshly.

| | | | |

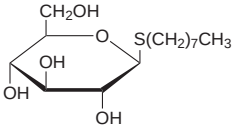
## n-Octyl-β-D-thiogalactopyranoside

**≥98 %, for biochemistry**

Non-ionic detergent.



Octyl-β-D-thiogalactoside, n-Octyl-1-thio-β-D-Gal

$C_{14}H_{28}O_5S$

M 308,44 g/mol

Storage temp.: -20 °C • Transport temp.: room temp.

| | | | |
|---|---|---|---|
| **4133.1** | 500 mg | glass | 52,15 € |
| **4133.2** | 1 g | glass | 89,15 € |

## n-Octyl-β-D-thioglucopyranoside

**≥95 %, for biochemistry**

Non-ionic detergent.

Octyl-β-D-thioglucoside, n-Octyl-1-thio-β-D-Glc

$C_{14}H_{28}O_5S$

M 308,44 g/mol

Storage temp.: -20 °C • Transport temp.: room temp.

Octyl-β-D-thioglucopyranoside excels by its stability in aqueous solutions. It is also easily removed by dialysis. Hence, it is highly useful for isolation of native membrane proteins.

| | | | |

## Roti®-Stock 20 % SDS

**BioScience-Grade, ready-to-use, 0,2 µm filtered**

For molecular biology and electrophoresis.

SDS 20 % ready-to-use solution

**Danger** H318-H315-H335

20 % stock solution sodium dodecyl sulphate. Store the solution away from light in a dry place. SDS-stock solution and other solutions containing SDS should not be cooled below 24 °C otherwise the SDS may precipitate. The crystals can be easily resolubilised by heating them between 30 to 50 °C.
With original seal.

| | | | |
|---|---|---|---|
| **1057.1** | 1 l | glass | 138,70 € |
| Original pack 6 x 1 l | | | 131,77/1 l |

## Roti®fair SDS 0.5g

**0,5 g/tablet, for biochemistry, molecular biology and electrophoresis**

Anionic detergent for preparation of bioanalytical solutions.

SDS (tablet), Sodium dodecyl sulphate, Sodium lauryl sulphate, Dodecyl sulphate sodium salt, Lauryl sulphate sodium salt, SLS

**Danger** H228-H302+H332-H315-H318-H335-H412

Exactly pre-weighed tablets for convenient and rapid preparation of SDS solution.
Roti®fair SDS 0.5g may also be used for preparation of SDS containing solutions, by adding the favoured number of SDS tablets directly during preparation of the solution.
Prepared solution may be sterilized by filtration (0,22 µm). The solution should be stored at room temperature. SDS-stock solution and solutions containing SDS should not be cooled below 24 °C otherwise the SDS may precipitate. The crystals can be easily resolubilised by heating them between 30 to 50 °C.

10 % SDS solution is prepared by dissolution of 1 tablet in 5 ml highly pure water. Concentrations of 0,05-20 % may be prepared.

| | | | |
|---|---|---|---|
| **1156.1** | 50 tablets | plastic | 46,80 € |

## Roti®fair 10% SDS

**for 1000 ml/pouch, for biochemistry, molecular biology and electrophoresis**

Anionic detergent for preparation of bioanalytical solutions.

SDS powder (pouch), Sodium dodecyl sulphate, Sodium lauryl sulphate, Dodecyl sulphate sodium salt, Lauryl sulphate sodium salt, SLS

**Danger** H228-H302+H332-H315-H318-H335-H412

Exactly pre-weighed pouches for convenient and rapid preparation of SDS solution.
Prepared solution may be sterilized by filtration (0,22 µm). The solution should be stored at room temperature. SDS-stock solution and solutions containing SDS should not be cooled below 24 °C otherwise the SDS may precipitate. The crystals can be easily resolubilised by heating them between 30 to 50 °C.

10 % SDS solution is prepared by dissolution of 1 pouch in 1000 ml highly pure water.

can be found on the Internet next to the product description.

# Enzymes

## Alkaline phosphatase

**≥2000 Glycine U/mg protein (approx. 6000 DEA U/mg protein)**

From bovine intestinal mucosa. Solution in 50 % glycerol, 5 mM Tris/HCl, 5 mM $MgCl_2$ and 0,1 mM $ZnCl_2$, pH approx. 7,0.

Phosphatase, alkaline; ALP; AP

M ~120 000 g/mol

Storage temp.: +4 °C

One glycine unit (U) is defined as the amount of enzyme that catalyzes the hydrolysis of one µmole of p-nitrophenyl phosphate per min at pH 9.6 and 25 °C (glycine buffer).

| | | | |
|---|---|---|---|
| **6024.1** | 10 KU | plastic | 364,45 € |

## β-Amylase

**16-24 U/mg, lyophil.**

Made from barley malt.

Storage temp.: +4 °C

**Danger** H334

1 Unit enzyme acc. to Zulkowsky releases 1 µmol maltose per minute at 25 °C (pH 4.8).

| | | | |
|---|---|---|---|
| **8717.1** | 100 mg | glass | 51,50 € |

## Bromelain

**~1200 GDU/g, for biochemistry**

Made from stems of young pineapple *(Bromeliaceae)*.

Bromelin

Storage temp.: +4 °C

**Danger** H334-H335-H315-H319

Highly active thiol proteinase (non-specific cystein protease), glycoprotein. Enzyme from *Bromeliaceae*, used in biochemistry and for meat tenderising. Preferable digestion at lysin, alanin, tyrosin and glycin. Degrades hemoglobin, gluten, collagen, globulin, casein and gelatin at pH 4-9. Cream-coloured, hygroscopic powder. Bromelain is activated by cystein, bisufite salts, NaCN, $Na_2S$, $H_2S$ and benzoate. The definite pH optimum depends on substrate and reaction parameters. pH stability of bromelain increases drastically after binding to the substrate.
One GDU (gelatin digestion unit) will hydrolyse 1.0 mg of amino nitrogen from gelatin in 20 minutes at pH 4.5 at 45 °C. One bromelain tyrosine unit (BTU) corresponds to 1.1 GDU. 1200 GDU/g correspond to approx. 2.4 FIP-units/mg.

**Applications:**
pH working range: 4.0-8.0
pH optimum: 5-6. Stabile at pH 3.0-6.5
Temperature optimum: 50-65 °C
Inhibitors: $Hg^{++}$, $Ag^{++}$, $Cu^{++}$, antitrypsin, estatin, iodacetate, TLCK, TPCK, and temperatures of over 70 °C
Stock solution: 10 mg/ml in $H_2O$
Unsoluble in organic solvents (acetone, ethanol, methanol etc.)
Working concentration: substrate dependent

| | | | |
|---|---|---|---|
| **5950.1** | 10 g | plastic | 21,00 € |
| **5950.2** | 100 g | plastic | 93,45 € |

## Catalase

**≥11 700 U/mg material (approx. 40 000 U/mg protein)**

From bovine liver, freeze-dried

Storage temp.: -20 °C • Transport temp.: room temp.

One unit (U) is defined as the amount of enzyme that catalyzes the decomposition of one µmole of hydrogen peroxide per min at pH 7.0 and 25 °C.

| | | | |
|---|---|---|---|
| **6025.1** | 5 MU | plastic | 149,45 € |

## Chymotrypsin

**≥1000 USP-U/mg, for biochemistry**

Made from bovine pancreas.

α-Chymotrypsin

Storage temp.: -20 °C • Transport temp.: room temp.

**Danger** H334-H335-H315-H319

Trypsin content <1 %.

| | | | |
|---|---|---|---|
| **0238.1** | 100 mg | glass | 25,70 € |
| **0238.2** | 500 mg | glass | 53,65 € |
| **0238.3** | 1 g | glass | 88,70 € |

## Glucose oxidase (GOD)

**~360 U/mg protein (approx. 280 U/mg material)**

From *Aspergillus niger*, freeze-dried.

GOx, GOD

Storage temp.: -20 °C • Transport temp.: room temp.

**Danger** H334

One unit (U) is defined as the amount of enzyme that catalyzes the oxidation of one µmole of glucose per min at pH 7.0 and 25 °C.

| | | | |
|---|---|---|---|
| **6028.1** | 0,5 MU | plastic | 184,40 € |

## β-Glucosidase

**≥1000 U/mg, from almonds**

ex amygdal

Storage temp.: -20 °C • Transport temp.: room temp.

**Danger** H334

Yellow lyophilised powder. 1 unit β-Glucosidase causes the liberation of 1 µg glucose per minute from salicin at 35 °C. 1000 U (µg) β-Glucosidase correspond to 5 U (µmol).

| | | | |
|---|---|---|---|
| **7512.1** | 100 mg | glass | 25,30 € |
| **7512.2** | 1 g | glass | 192,45 € |

## Glutamate dehydrogenase (GDH, GLDH)

**≥10 U/mg material (approx. 40 U/mg protein)**

From bovine liver, freeze-dried.

GDH, GLDH; L-Glutamic dehydrogenase

Storage temp.: -20 °C • Transport temp.: room temp.

One unit (U) is defined as the amount of enzyme that catalyzes the reduction of one µmole of 2-oxoglutarate per min at pH 7.3 and 25 °C.

| | | | |
|---|---|---|---|
| **6052.1** | 10 KU | plastic | 150,40 € |

## Hyaluronidase

**~500 U/mg, free from salt, lyophilised**

ex ovine testes

M ~70000 g/mol

Storage temp.: -20 °C • Transport temp.: room temp.

**Danger** H334

| | | | |
|---|---|---|---|
| **9978.2** | 250 mg | glass | 59,05 € |
| **9978.1** | 1 g | glass | 190,30 € |

## Hyaluronidase

**~300 U/mg, free from salt, lyophilised**

ex ovine testes

M ~70000 g/mol

Storage temp.: -20 °C • Transport temp.: room temp.

**Danger** H334

Testicular hyaluronidases with hydrolytic and transglycosidic activity. Ideal for decomposition of hyaluronic acid and chondroitin sulphate in extracellular matrix.

**Application:**
pH optimum 7.0-8.0
Stock solution: 1-300 mg/ml in phosphate buffer or water
Working concentration: 0.1-10 mg/ml

| | | | |
|---|---|---|---|
| **9980.1** | 250 mg | glass | 33,25 € |
| **9980.2** | 1 g | glass | 91,30 € |

## Lactate dehydrogenase (LDH)

**≥290 U/mg protein**

From porcine heart, freeze-dried

LDH, LD, Lactic dehydrogenase

Storage temp.: -20 °C • Transport temp.: room temp.

One unit (U) is defined as the amount of enzyme that oxidizes one µmole of NADH per min at pH 7.4 and 25 °C.

| | | | |
|---|---|---|---|
| **6060.1** | 0,05 MU | plastic | 123,55 € |

## Lipoxygenase

**≥100 000 U/mg, for biochemistry**

Made from soybeans. For oxidation of arachidonic acid.

Lipoxidase

M ~108 000 g/mol

Storage temp.: -20 °C • Transport temp.: room temp.

Lipoxygenase stereo-specifically catalyses the oxidation of arachidonic acid, initiating the formation of leukotrienes in eicosanoid metabolism. One unit will cause an increase in absorption (234 nm) of 0.001 per minute at 25 °C and pH 9 by oxidation of linoleic acid.

**Application:**
Well soluble in $H_2O$ or buffer.
Recommended storage of stock solution in aliquots at -20 °C.

| | | | |
|---|---|---|---|
| **CN73.1** | 100 mg | glass | 28,95 € |
| **CN73.2** | 500 mg | glass | 94,50 € |
| **CN73.3** | 1 g | glass | 142,90 € |

**Safety data sheets**
can be found on the Internet next to the product description.

## Lysozyme

**≥35000 FIP U/mg, BioScience-Grade, lyophilised**

From chicken egg white, free from albumin.

M ~14000 g/mol

Storage temp.: -20 °C • Transport temp.: room temp.

Salt and albumin free lyophilised powder. Quality product for molecular biology. Ideal for lysis of bacteria for preparing DNA.
1 FIP-Unit equals the amount of enzyme which reduces the absorbance by 0.001 per min. at 450 nm, 25 °C, pH 7.00 using a suspension of FIP *Micrococcus luteus* as substrate (acc. to *Pharmaceutical Enzymes* 1997). 1 FIP-Unit resembles approximately 1 Shugar-Unit.

**Application:**
pH optimum: 6.0-7.0
Inhibitors: imidazole, indole, N-acetyl glucosamine
Working solution: 5-10 mg/ml (bacteria), 1-2 mg/ml (euk. cells)
Buffer: salt solution without detegents (0.1 M potassium phosphate buffer, 50 mM Tris buffer, 1x PBS etc.)
Temperature optimum: 37 °C
Isoelectric point: approx. 11
Lysozyme solution should be frozen only once.

| | | | |
|---|---|---|---|
| **8259.1** | 1 g | glass | 26,80 € |
| **8259.3** | 25 g | glass | 310,70 € |
| **8259.2** | 10 g | glass | 165,05 € |

## Malate dehydrogenase (MDH)

**≥1250 U/mg protein**

From porcine heart, freeze-dried

MDH

Storage temp.: -20 °C • Transport temp.: room temp.

One unit (U) is defined as the amount of enzyme that oxidizes one µmole of NADH per min at pH 7.4 and 25 °C.

| | | | |
|---|---|---|---|
| **6062.1** | 0,05 MU | glass | 142,45 € |

## Papain

**>30 000 USP-U/mg, for biochemistry**

Made from *Carica papaya.*

Storage temp.: +4 °C

**Danger** H334-H335-H315-H319

A non-specific endopeptidase from Papaya latex. Has a very wide substrate range and cleaves proteins more efficiently than trypsin, for example. Is capable of not only hydrolysing peptide bonds, but also acts effectively as an esterase and thiol-esterase.
30.000 USP (Casein) Units is approx. 2 FIP-Units (BAEE-Units). One USP Unit of Papain activity releases the equivalent of 1 µg tyrosine form a specified casein substrate under assay conditions specified by the USP. DTT can be used to increase the activity.

| | | | |
|---|---|---|---|
| **8933.1** | 25 g | plastic | 50,00 € |
| **8933.2** | 100 g | plastic | 138,70 € |

## Pepsin

**≥2000 FIP-U/g, for biochemistry**

From porcine gastric mucosa. For detection of trichina in meat.
M 35000 g/mol • Storage temp.: +4 °C

**Danger** H334-H335-H315-H319

Acidic endopeptidase, the inactive precursor of which, pepsinogen, is produced in the stomach mucosa. Pepsin cleaves proteins preferentially at carboxylic groups of aromatic amino acids such as phenylalanine and tyrosine. Highly active pepsine is preferably used for detection of trichina in pre-digested muscle meat of animals.
1 FIP unit (≈Ph. Eur. unit) of Pepsin activity will, during incubation at 25±0.1 °C for one minute, cause decomposition of haemoglobin to an extent comparable with the colour caused by reaction of 1 micromole of tyrosine with the same dye. 2 000 FIP-Units correspond to 1: 10 000 NF-U and 1: 12 500 BP-U.

**Application:**
Well soluble in water, stable in aqueous solutions of pH up to 5.5, unstable above pH 6.0. Irreversible inactivated in alkaline medium. Solution is stable in temperatures of up to 60 °C, and also in higher concentrations of urea and guanidine.
pH optimum: 1-2
Isoelectric point: 1.0

## Pepsin

**≥0,5 Ph.Eur.-U/mg, for biochemistry**

Isolated from pigs stomach.
M 35000 g/mol • Storage temp.: +4 °C

**Danger** H334-H335-H315-H319

0.5 Ph.Eur.-U/mg correspond to approx. 500 FIP-U./g.

| | | | |
|---|---|---|---|
| **0230.1** | 25 g | glass | 25,30 € |
| **0230.2** | 50 g | glass | 40,75 € |

## Peroxidase

**≥250 U/mg material**

From horseradish, freeze-dried
HRP, Horseradish peroxidase
Storage temp.: -20 °C • Transport temp.: room temp.

**Danger** H317-H334

One unit (U) is defined as the amount of enzyme that catalyzes the production of 1 mg of purpurogallin from pyrogallol in 20 seconds at pH 6.0 and 20 °C.

| | | | |
|---|---|---|---|
| **6055.1** | 0,05 g | plastic | 117,20 € |

**Enzyme:** a neoclassical, Greek artificial word ενζυμου, *énzymon*, derived from εν-, *en-* (in-) and ζυμη, *zýmé* (yeast, sourdough, archaic)
**Ferments:** comes from the Latin *fermentum* (ferments, sourdough)

There are six **classes** in which all enzymes are classified according to the particular reaction they catalyse:

- *Oxidoreductases* (catalyse redox reactions)
- *Transferases* (transfer functional groups among substrates)
- *Hydrolases* (cleave bonds via addition of water)
- *Lyases/Synthases* (cleave or synthesise complex products out of basic substrates without cleavage of ATP)
- *Isomerases* (transform chemical isomers)
- *Ligases/Synthetases* (cleave or synthesise complex products out of basic substrates via cleavage of ATP)

## Proteinase K

DNAse-free RNAse-free

**lyophil., ≥30 mAnson U/mg**

Isolated from fungi (*Tritirachium album*).
Storage temp.: +4 °C

**Danger** H315-H319-H334-H317-H335

A non-specific protease with strong proteolytic activity for degrading proteins in biological samples. A quality product for molecular biology with a broad scope of application.

**Suitable for:**
- Preparing chromosomal DNA for PFGE
- Degrading nucleases during preparation of nucleic acids (includes preparation of native RNA)

**Activity:** (Haemoglobin, pH 7.5; 25 °C) 30 mAnson-U/mg
**Foreign activity:** RNase and DNase not detectable
**Optimum temperature:** +65 °C.
Activity at +65 °C is ca. 12 x higher than at +25 °C.
Over +65 °C, inactivation due to denaturation.
**Stability:** pH 4.0-12.5.
Also stable even when denaturing agents, e.g. SDS and urea are present.
**Activators:** Denaturating agents (SDS, urea).
**Inhibitors:** Inhibition with $Hg^{2+}$-ions, DFP, PMSF and phenol.
Not inhibited by EDTA, sulfhydryl reagents and trypsin or chymotryps ininhibitors.
**Stabilisers:** $Ca^{2+}$-ions (1-5 mM) prevent autolysis.

**Application:**
Reaction buffer: 50 mM Tris-HCl; pH 7.5; 5 mM $CaCl_2$; 0.5 % SDS
Stock solution: 20 mg/ml in water
Storage temperature (stock solution): -20 °C
Working solution: 50 µg/ml
**Art. No. 7528.3:** A stock solution with a concentration of 20 mg/ml can be prepared directly by adding 25 ml buffer or water.

| | | | |

## Rennin

**for biochemistry**

Chymosin, rennase, lab
M ~31000 g/mol
Storage temp.: +4 °C

**Danger** H334-H335-H315-H319

| | | | |
|---|---|---|---|
| **8178.1** | 50 g | plastic | 58,60 € |

**Safety data sheets**
can be found on the Internet next to the product description.

## Trypsin

**5000 USP-U/mg, free from salt**

TSE-/BSE-free

Isolated from porcine pancreas, lyophilised.

M ~24000 g/mol

Storage temp.: -20 °C • Transport temp.: room temp.

**Danger** H334-H335-H315-H319

A pancreatic serine protease with a specificity for peptide bonds between basic amino acids arginine or lysine and another non-specific amino acid. Trypsin is frequently used to suspend cells which grow as monolayers on surfaces. Longer exposure to trypsin can damage cells, so that an inhibitor (serum or trypsin inhibitor from soya beans) should be added upon completion.
One USP Unit will cause an increase in absorption (253 nm) per minute of 0,003 at 25 °C and pH 7,6 using BAEE as substrate.
One (international) Unit (U, 255 nm, BAEE, pH 8) is approx. 90 USP U.
One TAME Unit is approx. 20 USP Units. One NF Unit is one USP Unit.
Ten „BAEE Units" are approx. 3,3 USP Units.

**Application:** pH optimum 7,2-8,5.

| | | | |
|---|---|---|---|
| **2193.1** | 100 mg | glass | 28,95 € |
| **2193.2** | 500 mg | glass | 89,15 € |

## Trypsin

**≥2500 USP-U/mg, cryst.**

Isolated from porcine pancreas, lyophilised.

M ~24000 g/mol

Storage temp.: -20 °C • Transport temp.: room temp.

**Danger** H334-H335-H315-H319

One USP Unit will cause an increase in absorption (253 nm) per minute of 0,003 at 25 °C and pH 7,6 using BAEE as substrate.
One (international) Unit (U, 255 nm, BAEE, pH 8) is approx. 90 USP U.
One TAME Unit is approx. 20 USP Units. One NF Unit is one USP Unit.
Ten „BAEE Units" are approx. 3,3 USP Units.

## Urease

**≥220 Nessler U/mg material**

From jack bean, freeze-dried

M ~480000 g/mol

Storage temp.: -20 °C • Transport temp.: room temp.

One unit (U) is defined as the amount of enzyme that catalyzes the liberation of 1 µmole of $NH_3$ per min at pH 7.0 and 25 °C.

| | | | |
|---|---|---|---|
| **6065.1** | 0,25 MU | plastic | 161,25 € |

## Urease

**~1 U/mg, for biochemistry**

From jack beans *Canavalia ensiformis*.

M ~480000 • Storage temp.: -20 °C • Transport temp.: room temp.

Hydrolase belonging to the Amidases. Metallo-enzyme. Urease hydrolasis urea, resulting in ammonia and carbon dioxide, or in ammonia- and carbonate ions, respectively. The molecule isolated from Jack beans is composed of 6 subunits of approx. 91 kD each with an overall size of approx. 544 kD. Nickel is the cofactor. Using high amounts of urea as substrate (200 mM), urease is applied for visualisation of the connection between reaction rate and time. Detection is carried out via measurement of conductivity, or, photometrically, via colour change of bromothymol blue. Furthermore, model system for catalytic activation of carbon dioxide in metallo-organic chemistry.
1 Unit enzyme hydrolyses 1 µmol urea per minute at 25 °C (pH 8.0).

**Application:**
pH optimum: 7.4.
Recommended reaction buffer system is 40 mM potassium phosphate buffer, pH 7.4. Heavy metals (e.g. lead) are inhibitory.

| | | | |
|---|---|---|---|
| **7537.1** | 5 g | plastic | 127,95 € |

## Zymolyase® 100T

**≥100 U/mg, for biochemistry and molecular biology**

For lysis of yeast cells. Isolated from *Arthrobacter luteus*.

Lyticase, β-1,3-glucan laminaripentaohydrolase

Storage temp.: +4 °C • Transport temp.: cooled

Zymolyase® 100T, produced by a submerged culture of *Arthrobacter luteus*, has strong lytic activity against living cell walls of various strains of yeast cells. Hence, it is frequently used in order to produce protoplast or spheroplast.
The essential enzyme for the lytic activity of Zymolyase® 100T is β-1,3-glucan laminaripentaohydrolase. It hydrolyzes linear glucose polymers with β-1,3-linkages and releases specifically laminaripentaose as the main and minimum product unit. Zymolyase® 100T is prepared by ammonium sulphate precipitatation, and is further purified by affinity chromatography.
One unit of lytic activity is defined as the enzyme amount causing a decrease of 30 % in absorbance at 800 nm using 6 mg Brewer's yeast as substrate in Phosphate buffer (pH 7,5) at 25 °C. Lytic activity varies depending on the particular yeast strain, the growth stage of the yeast, and cultural conditions.

**Application:**
As stock solution, a 2 to 10 % (20 or 100 mg/ml) Zymolyase® solution may be prepared, solubilizing the enzyme in water, 10 mM sodiumphosphate buffer (pH 7,4) or 50 mM Tris-Cl (pH 7,5), respectively, according to the buffer system to be used downstream and containing 5 % glucose and 50 % glycerol each. The Zymolyase® tends to not dissolve completely. Do not heat for solubilization, but rather use the Zymolyase® as suspension. The suspension may be stored in aliquots at -20 °C. For use in the respective buffer system, dilute the stock solution to the working concentration of 2-5 mg/ml and optionally sterilize by filtration (0,2 µm).
In most cases, however, Zymolyase® is solubilized in freshly prepared working buffer (for instance rescue buffer 50 mM Tris-Cl, pH 7,5, 10 mM EDTA, 0,3 % β-Mercaptoethanol) in the required working concentration directly prior to use.
Avoid using nitrocellulose filters when sterilizing - Zymolyase® may be adsorbed to nitrocellulose membranes.

**Other enzymatic activities contained:** β-1,3-glucanase, protease, mannanase. Trace amounts of amylase, xylanase, phosphatase.
**Stability:** at 30 °C 70 % of the lytic activity is lost after 3 months.
**Optimum temperature and pH:** at pH 7,5 - 35 °C for lysis of viable yeast cells, at pH 6,5 - 45 °C for hydrolysis of yeast glucan
**Specificity (lytic spectrum):** *Ashbya, Candida, Debaryomyces, Eremothecium, Endomyces, Hansenula, Hanseniaspora, Kloeckera, Kluyveromyces, Lipomyces, Metschnikowia, Pichia, Pullularia, Torulopsis, Saccharomyces, Saccharomycopsis, Saccharomycodes, Schwanniomyces,* etc.

# Coenzymes

## Adenosin-5'-triphosphate disodium salt (ATP)

**≥98 %, for biochemistry**

Coenzyme of kinases.

ATP disodium salt

$C_{10}H_{14}N_5Na_2O_{13}P_3$ • M 551,10 g/mol

Storage temp.: -20 °C • Transport temp.: room temp.

Discovered in 1929 by Karl Lohmann. Main molecular currency of energy in all cells and highly important regulator of energy providing processes. During hydrolysis of phospho-anhydride bonds, energy of 30.5 kJ/mol (ADP) or 45.6 kJ/Mol (AMP), respectively, is released. Ligand of purinergic receptors and intercellular signalling molecule. Additionally, ATP is coenzyme of phosphate-transferring kinases like proteine kinases A, proteine kinases C, calmodulin-dependent kinases, and substrate of adenylate cyclases, which synthesize the second-messenger molecule cAMP.

## Coenzyme Q 10

**≥98 %, for biochemistry**

Ubiquinone 50

$C_{59}H_{90}O_4$ • M 863,37 g/mol

Storage temp.: -20 °C • Transport temp.: room temp.

Ubiquinones represent a vital component in electron transport of the mitochondrial respiratory chain (hydrogen/electron and oxygen carriers). They, therefore, are almost ubiquitously distributed through the species, with the only exclusion of gram positive bacteria and cyanobacteria. Coenzyme Q functions as electron carrier between flavoproteins and cytochrome molecules of the respiratory chain.
Well soluble in organic solvents (e. g. acetone, diethyl ether, chloroform) and fats. Virtually insoluble in water.

# Inhibitors

Enzyme inhibitors are molecules that bind to enzymes and decrease their activity. The classification of inhibitors, which can stem from various substance classes, results from the type of inhibition (reversible with subclasses, or irreversible) or the target molecule (e.g. serine protease inhibitors).
Generally, for inhibition of specific proteins in biochemical assays single specific inhibitors are used, while a suitable inhibitor cocktail is recommended for work on protein mixtures such as cellular or tissue extracts.
At Roth you will find both inhibitor cocktails for all common extracts, as well as the most important individual inhibitors.

## Inhibitor Cocktails

| Inhibitor Cocktail | Standard | BroadRange | Plus | Tissue | Bacteria | His-tag |
|---|---|---|---|---|---|---|
| Art. No. | 3743 | 3749 | 3751 | 3755 | 3758 | 3760 |
| Shipment | lyophilised (uncooled) | lyophilised (uncooled) | in 1 ml DMSO (uncooled) | lyophilised (uncooled) | lyophilised (uncooled) | in 1 ml DMSO (cooled) |

| Recommended for | Extracts without special proteases, basic sol. for own inhibitors | Broad band effects. Extracts from eukaryotic tissue | Broad band effects. Extracts from mammalian cells and tissue | Extracts from mammalian cells and tissue | Bacterial extracts | Extractions of His-tagged proteins |

Please note our **Technical Information Brochure** on the Internet next to the products:

**Protease Inhibitor Cocktails**
Overview and recommendations for application

### Inhibitor Cocktail Standard

**for biochemistry**

General cocktail of protease inhibitors.
Storage temp.: -20 °C • Transport temp.: room temp.

**Danger** H314-H332-H373

Inhibitor cocktail for inhibition of standard proteases. Inhibits serine proteases, metalloproteases, cysteine proteases, trypsin-like proteases, and aspartic proteases.
Recommended as cocktail for protease inhibition during standard extraction without presence of special proteases, or as basic solution for supplementation with own inhibitors.

Well water-soluble. The premixed powder may easily be reconstituted in 100 ml distilled water or extraction buffer to form a 1x inhibitor solution.
End concentrations in 1x solution are:
AEBSF: 1.67 mM
EDTA: 13.44 mM
Leupeptin: 2.1 µM
Pepstatin A: 1.46 µM
Storage of inhibitor solution: 4 °C max. 90 days
Do not freeze the solution!

| | | | |
|---|---|---|---|
| **3743.1** | 1 vial | plastic | 125,25 € |

### Inhibitor Cocktail BroadRange

**for biochemistry**

Broad range cocktail of protease inhibitors.
Storage temp.: -20 °C • Transport temp.: room temp.

**Danger** H314-H332-H373

Inhibitor cocktail for inhibition of a broad range of proteases. Inhibits serine proteases, esterases, metalloproteases, cysteine proteases, and trypsin-like proteases.
Recommended as cocktail for protease inhibition during tissue extraction.
1 vial is prepared for the inhibition of proteases from 1-2 g material.

Well water-soluble. The premixed powder may easily be reconstituted in 1 ml distilled water to form a approx. 100x inhibitor stock-solution.
Concentrations in stock-solution are:
AEBSF: 50 mM
Aprotinin: 15 µM
E-64: 100 µM
EDTA: 50 mM
Leupeptin: 100 µM
Storage of aliquoted inhibitor solution: -20 °C max. 1 month

| | | | |
|---|---|---|---|
| **3749.1** | 1 vial | plastic | 53,65 € |

## Inhibitor Cocktail Plus

**ready-to-use, for biochemistry**

Broad range cocktail of protease inhibitors for extracts of mammalian cells or tissue.

Storage temp.: -20 °C • Transport temp.: cooled

**Warning** H315-H319

Inhibitor cocktail for inhibition of a broad range of proteases. Inhibits serine proteases, esterases, aminopeptidase B, leucine-aminopeptidases, cysteine proteases, trypsin-like proteases, and aspartic proteases.
Recommended as cocktail for protease inhibition particularly in extracts from mammalian cells or tissue. 1 ml is prepared for the inhibition of proteases from 20 g cells or tissue.

Provided as stock-solution in DMSO.
Concentrations per vial are:
AEBSF: 100 mM
Aprotinin: 80 µM
Bestatin: 5 mM
E-64: 1.5 mM
Leupeptin: 2 mM
Pepstatin A: 1 mM
Storage of inhibitor solution: -20 °C max. 6 months

| | | | |
|---|---|---|---|
| **3751.1** | 1 ml | plastic | 85,90 € |

## Inhibitor Cocktail His-tag

**ready-to-use, for biochemistry**

Broad range cocktail of protease inhibitors for extraction of His-tagged proteins.

Storage temp.: -20 °C • Transport temp.: cooled

**Danger** H318-H315

Inhibitor cocktail for inhibition of a broad range of proteases. Inhibits serine proteases, aminopeptidase B, leucine-aminopeptidases, cysteine proteases, aspartic proteases, and metalloendopeptidases.
Recommended as cocktail for protease inhibition particularly for extraction of His-tagged proteins from bacterial extracts. 1 ml is prepared for the inhibition of proteases in extracts from 10 g bacterial cells. Recommended dilution approx. 1:100.

Provided as stock-solution in DMSO.
Concentrations per vial are:
AEBSF: 100 mM
Bestatin: 5 mM
E-64: 1.5 mM
Pepstatin A: 0.2 mM
Phosphoamidon: 2 mM
Storage of inhibitor solution: -20 °C max. 6 months

| | | | |
|---|---|---|---|
| **3760.1** | 1 ml | plastic | 94,50 € |

## Inhibitor Cocktail Tissue

**for biochemistry**

Cocktail of protease inhibitors for extracts of mammalian cells or tissue.

Storage temp.: -20 °C • Transport temp.: room temp.

**Danger** H314

Inhibitor cocktail. Inhibits serine proteases, esterases, cysteine proteases, and trypsin-like proteases.
Recommended as cocktail for protease inhibition particularly in extracts from mammalian cells or tissue.

Well water-soluble and hygroscopic. The premixed powder may easily be reconstituted in 1 ml distilled water to form an inhibitor stock-solution. 1 vial is prepared for the inhibition of proteases from approx. 2 g cells or tissue. Recommended dilution is 1:100. End concentration for the respective extract has to be optimized.
Concentrations in stock-solution are:
AEBSF: 50 mM
Aprotinin: 15 µM
E-64: 100 µM
Leupeptin: 100 µM
Storage of aliquoted inhibitor solution: -20 °C max. 6 months

| | | | |
|---|---|---|---|
| **3755.1** | 1 vial | plastic | 46,15 € |

## Inhibitor Cocktail Bacteria

**for biochemistry**

Broad range cocktail of protease inhibitors for extracts from bacteria.

Storage temp.: -20 °C • Transport temp.: room temp.

**Danger** H314

Inhibitor cocktail for inhibition of standard proteases. Inhibits serine proteases, aminopeptidase B, leucine-aminopeptidases, metalloproteases, cysteine proteases, and aspartic proteases.
Recommended as cocktail for protease inhibition in extracts from bacteria.

Well soluble in DMSO and hygroscopic. The premixed powder (Art. No. 3947) may easily be reconstituted in 1 ml DMSO and may then be diluted with 4 ml distilled water to form a slightly opaque inhibitor stock-solution. 1 vial is prepared for the inhibition of proteases from approx. 20 g *E. coli*. Recommended dilution approx. 1:40.
Concentrations in stock-solution are:
AEBSF: 20 mM
Bestatin: 1.7 mM
E-64: 200 µM
EDTA: 85 mM
Pepstatin A: 2 mM
DMSO (1 ml) for reconstitution of the lyophilized inhibitor mix is included (Art. No. 3949).
Storage of aliquoted inhibitor solution: -20 °C max. 6 months.
Contents of this Kit may not be bought separately.

# Individual Inhibitors

## AEBSF hydrochloride

**≥98 %, for biochemistry**

Inhibitor of serine proteases
4-(2-Aminoethyl)benzenesulfonyl fluoride hydrochloride
$C_8H_{10}FNO_2S \cdot HCl$
M 239,69 g/mol
Storage temp.: -20 °C • Transport temp.: room temp.

**Danger** H314

Serine protease inhibitor. Irreversible inhibition of trypsin, chymotrypsin, plasmin, kallikrein, thrombin by sulphurizing a functional group in the active centre of an enzyme. Due to its low toxicity, AEBSF is a good alternative to PMSF.

**Application:**
Easily water-soluble, resulting in an acidic pH-value. Optimal at pH 6.5, alkali-labile. Avoid pH-value 7 and do not exceed pH-value 9.
Stock solution: 5-50 mg/ml (20-200 mM) in $H_2O$
Storage of stock solution: at -20 °C max. 6 months
Working concentration: 0.1-5 mM

| | | | |
|---|---|---|---|
| **2931.1** | 25 mg | plastic | 19,25 € |
| **2931.2** | 100 mg | plastic | 38,20 € |
| **2931.3** | 500 mg | plastic | 141,40 € |

## 4-Aminobenzamidine dihydrochloride

**≥98 %, for biochemistry**

Potent inhibitor of serine proteases.

p-Aminobenzamidine dihydrochloride

$C_7H_9N_3 \cdot 2\ HCl$

M 208,09 g/mol

Storage temp.: +4 °C

**Warning** H315-H319-H335

Competitive inhibitor of trypsin and trypsin-like enzymes, thrombin and plasmin.

**Application:**
Stock solution: 100-200 mg/ml (0.5-1 M) in $H_2O$ and alcohol
Storage of stock solution at -20 °C
Working concentration: 100-400 µg/ml (0.5-2 mM)
Aminobenzamidine is sensitive to oxidation. It is recommended to prepare fresh solutions each time for use. Stock solutions should only be stored for a short time.

| | | | |
|---|---|---|---|
| **CN71.1** | 1 g | glass | 14,95 € |
| **CN71.2** | 5 g | plastic | 59,05 € |
| **CN71.3** | 10 g | plastic | 107,40 € |

## Antipain dihydrochloride

**≥30 U/mg, for biochemistry**

Inhibitor of serine/cysteine proteases and trypsin-like serine proteases.

N-(Nα-Carbonyl-Arg-Val-Arg-al)-Phe dihydrochloride

$C_{27}H_{44}N_{10}O_6 \cdot 2\ HCl$

M 677,6 g/mol

Storage temp.: -20 °C • Transport temp.: room temp.

Serine/cysteine protease inhibitor and in general of proteases similar to trypsin. Antipain was isolated from streptomycin (actinomycetes). Reversible inhibition of papain (derivation of the name: anti-papain), trypsin, cathepsin A, B, D, plasmin, chymotrypsin, pepsin and calpain I. Antipain has a similar spectrum of activity to leupeptin.

**Application:**
Stock solution: 50 mg/ml (75 mM in $H_2O$, DMSO or ethanol
Storage of stock solution: at -20 °C max. 1 month
Working concentration: 10-50 µg/ml (15-75 µM)

| | | | |
|---|---|---|---|
| **2933.1** | 5 mg | plastic | 53,25 € |
| **2933.2** | 25 mg | plastic | 193,00 € |

## Aprotinin

**≥3,0 PEU/mg, for biochemistry**

Inhibitor of serine proteases.

M 6500 g/mol

Storage temp.: +4 °C

Inhibitor for inhibition of serine proteases, lyophilized and made of beef lung. Aprotinin inhibits trypsin, chymotrypsin, plasmin and kallikrein with high activity.
Dissolves easily in water; pH-optimum: 7.0-8.0.
Specific Activity: ≥3.0 PEU/mg corresponding to ≥5400 KIU/mg
Activity: Kininogenase Inhibitor Units (KIU) = PEU x 1800
Kininogenase Inhibitor Units (KIU) correspond to Kallikrein Inhibitor Units.

**Application:**
Stock solution: 1.54 mM (10 mg/ml) in $H_2O$ or buffer
Storage of stock solution: in aliquots at -20 °C
Recommended end concentration: 1.54 µM (10 µg/ml)

| | | | |
|---|---|---|---|
| **A162.1** | 10 mg | glass | 36,45 € |
| **A162.2** | 50 mg | glass | 107,40 € |
| **A162.3** | 100 mg | glass | 195,15 € |
| **A162.4** | 500 mg | glass | 736,40 € |

## Bacitracin

**≥60 IU/mg, Ph.Eur., for biochemistry**

Peptide antibiotic and protease inhibitor.

$C_{66}H_{103}N_{17}O_{16}S$

M 1422,72 g/mol

Storage temp.: +4 °C

Inhibits cell wall biosynthesis in gram-positive bacteria and *Neisseria* by interaction with murein biosynthesis.
Also used as protease-inhibitor for inhibition of the gluthatione-insuline-transhydrogenase or some endopeptidases.

**Application:**
Stock solution: 100-1000 mg/ml in $H_2O$ or ethanol
Storage of stock solution at -20 °C
Working concentration: 0.1-1 mg/ml (0.07-0.7 mM)
Bacitracin is very stable in a pH range of 4-5, but is rapidly inactivated in pH of over 5 at room temperature.
Do not use at a pH of over 8.

| | | | |
|---|---|---|---|
| **5655.1** | 5 g | glass | 53,25 € |
| **5655.2** | 25 g | plastic | 220,40 € |

## Benzamidine hydrochloride monohydrate

**≥98 %, for biochemistry**

Inhibitor of serine proteases.

$C_7H_8N_2 \cdot HCl \cdot H_2O$

M 174,63 g/mol

Storage temp.: +4 °C

**Warning** H315-H319-H335

Competitive inhibitor of trypsin and trypsin-like enzymes, acrosin, thrombin and plasmin.

**Application:**
Stock solution: 100-150 mg/ml (0.65-1 M) in $H_2O$ and alcohol
Storage of stock solution at -20 °C
Working concentration: 150-750 µg/ml (1-5 mM)
Benzamidine is sensitive to oxidation. It is recommended to prepare fresh solutions each time for use. Stock solutions should only be stored for a short time.

| | | | |
|---|---|---|---|
| **CN38.1** | 5 g | plastic | 17,75 € |
| **CN38.2** | 10 g | plastic | 25,30 € |
| **CN38.3** | 25 g | plastic | 48,95 € |

## Bestatin hydrochloride

**≥98 %, for biochemistry**

Inhibitor of aminopeptidases

N-[(2S,3R)-3-Amino-2-hydroxy-4-phenyl-buturyl]-L-leucin hydrochloride

$C_{16}H_{24}N_2O_4 \cdot HCl$

M 344,84 g/mol

Storage temp.: -20 °C • Transport temp.: room temp.

Aminopeptidase inhibitor. Competitive and specific inhibition of aminopeptidase B, leucin-aminipeptidase and triaminopeptidase. Does not inhibit aminopeptidase A, trypsin, chymotripyin, elastase, papain, pepsin, thermolysin. Bestatin does not have an antibacterial effect and is non-fungicidal, its low toxicity making it easy to use.

**Application:**
Stock solution: 1-15 mM (0.35-5mg/ml) in methanol
Storage of stock solution: at -20 °C max. 1 month
Working concentration: 10-100 µM

| | | | |
|---|---|---|---|
| **2937.1** | 5 mg | plastic | 76,25 € |
| **2937.2** | 25 mg | plastic | 273,60 € |

**Safety data sheets**
can be found on the Internet next to the product description.

## E-64

**≥99 %, for biochemistry**

Inhibitor of cysteine proteases.

N-[N-(L-3-trans-Carboxyoxirane-2-carbonyl)-leucyl]-agmatine,

N-(trans-Epoxysuccinyl)-L-leucine-4-guanidinobutylamide

$C_{15}H_{27}N_5O_5 \cdot 0{,}5\ H_2O$

M 357,41 g/mol

Storage temp.: -20 °C • Transport temp.: room temp.

Irreversible, strong and highly selective inhibition of cysteine protease (e.g. papain, bromelain, ficin, cathepsin B, H and L, tumor-cathepsin, calpain etc.). Does not inhibit serine proteases except trypsin. Low toxicity, high cell permeability and stability against reducing reagents makes E-64 an excellent alternative to leupeptin or antipain.

**Application:**
Stock solution: 1 mM (360 µg/ml) in $H_2O$, DMSO or ethanol
Storage of stock solution: at -20 °C max. 3 months
Working concentration: 1-10 µM

| | | | |
|---|---|---|---|
| **2935.1** | 5 mg | plastic | 88,05 € |
| **2935.2** | 25 mg | plastic | 314,45 € |

## EDTA disodium salt dihydrate

**≥99 %, p.a., ACS**

For molecular biology and biochemistry.

Ethylenediamine tetraacetic acid disodium salt dihydrate,

Titration complex III

$C_{10}H_{14}N_2Na_2O_8 \cdot 2\ H_2O$

M 372,24 g/mol

**Warning** H332-H373

EDTA forms chelate complexes with $Mg^{2+}$-ions and other bivalent metal cations. It can therefore be applied as a general inhibitor for all enzymes which require such metal cations to function (e.g. DNases and metal proteases).

**Application:**
Stock solution: 0.5 M in water, pH 8.5.
Recommended final concentration for enzyme inhibition 1-10 mM.
The disodium salt of EDTA only dissolves when the pH-value is around 8.0.

| | | | |
|---|---|---|---|
| **8043.3** | 100 g | plastic | 21,40 € |
| **8043.1** | 250 g | plastic | 34,30 € |

| **8043.5** | 25 kg BIG PACK | plastic | 826,70 € |

## EGTA

**≥99 %, p.a.**

For molecular biology and biochemistry.

Ethylene glycol bis(β-aminoethyl)-ether) N,N,N',N' tetraacetic acid

$C_{14}H_{24}N_2O_{10}$

M 380,35 g/mol

Unspecific protease inhibitor highly similar to EDTA. Inhibition results from chelating of calcium- and magnesium ions leading to their removal from the surrounding medium. However, affinity to $calcium^{2+}$ is much higher than that to $magnesium^{2+}$. The inhibitory effect can be compensated by an excess of $calcium^{2+}$ or $magnesium^{2+}$.

$pK_a$ calcium (pH 7): approx. 6.9

| | | | |

▶ Geldanamycine see page 1261

## Genistein

**≥98 %, for biochemistry**

Inhibitor of tyrosine specific protein kinases.

Prunetol, Genisteol, 4',5,7-Trihydroxyisoflavone

$C_{15}H_{10}O_5$

M 270,24 g/mol

Storage temp.: +4 °C

Competitive inhibitor of ATP binding to the catalytic domain of tyrosin kinases. Exceptional are the insulin receptor tyrosin kinase and the serin-/threonin specific proteases, which will not be inhibited by genistein. An additional, tyrosin kinase independent, effect of genistein is the inhibition of topoisomerases I and II.

**Application:**
Stock solution: 100 mg/ml (370 mM) in DMSO
Storage of stock solution: +4 °C oder -20 °C
Working concentration: 10-100 µM

| | | | |
|---|---|---|---|
| **0716.1** | 25 mg | plastic | 64,40 € |
| **0716.2** | 50 mg | plastic | 90,20 € |
| **0716.3** | 100 mg | plastic | 154,70 € |

### The Mechanisms of Enzyme Inhibition

Depending on the binding of the inhibitor, you may find both *reversible* and *irreversible inhibition*.

In **reversible enzyme inhibition** the inhibitor doesn't bind closely to the enzyme and can be separated or displaced in succession. It lowers its activity and/or the speed constant of the reaction of the substrate to the product. It also establishes a balance between the enzyme-inhibitor complexes with or without substrate. Metabolic processes are typical examples of this, which, depending on the physiological state of the cells, either are enhanced or inhibited.

*Competitive inhibitors* are reagents which compete with substrate (A) for the binding site in the enzyme's active center and increase the Michaelis Menten constant of the enzyme. They are either extremely similar to the substrate (but are not converted and can be displaced again by the substrate) or even represent a second substrate and thereby competitively inhibit the conversion of substrate A.

In *non-competitive inhibition* the inhibitor does not bind in the active center but through binding, it changes the enzyme's tertiary structure to such an extent that a product can no longer be produced/set free.

*Uncompetitive inhibition* is a special case where the inhibitor can only interact with the enzyme-substrate complex and it changes both the MM-constant as well as the maximum reaction speed.

In *partial-competitive inhibition*, binding of the inhibitor lowers the affinity of the enzyme to the substrate without influencing the speed constants.

In **irreversible inhibition**, the inhibitor binds so closely that it can no longer be separated from the enzyme and thus the activity of the enzyme is permanently reduced or destroyed. Typical examples of this are protein-synthesis inhibitive antibiotics or "suicide substrates" which bind covalently to the active center.

## β-Glycerophosphate disodium salt pentahydrate

**≥97 %, for biochemistry**

Phosphatase inhibitor

$C_3H_7Na_2O_6P \cdot 5\ H_2O$

M 306,12 g/mol

Simple organic phosphate donor and substrate for phosphatase.
As additive for cell culture media and lysis buffer.

**Application:**
Stock solution: 1 M (306 mg/ml) in $H_2O$, aliquot in 1 ml reaction vials after 0.2 µm filtration
Storage of stock solution: at -20 °C
Working concentration: 10-50 mM

| | | | |
|---|---|---|---|
| **6847.1** | 50 g | glass | 48,30 € |
| **6847.2** | 100 g | glass | 88,70 € |

| **6847.4** | 500 g | glass | 385,95 € |
| Original pack 6 x 500 g | | | 366,65/500 g |

## Geldanamycin

**≥98 %, for biochemistry**

HSP90 inhibitor, tyrosine kinase inhibitor. Benzoquinone ansamycin antibiotic. Binds specifically to the heat shock protein HSP90.

$C_{29}H_{40}N_2O_9$
M 560,64 g/mol
Storage temp.: -20 °C • Transport temp.: room temp.

The specific binding of geldanamycin to heat shock protein 90 (HSP90) and its ER homologue GP96 leads to inhibition of the chaperone, results in degradation of Hsp90 substrates and, subsequently, to deregulation of central cell mechanisms - cell cycle, cell proliferation, apoptosis/cell vitality. Geldanamycin arrests cells in $G_2$ phase, thus interfering with angiogenesis and oncogenesis. Due to its antitumor potential it may be used as antibiotic against several eucaryotic carcinogenic cell lines. Additionally, geldanamycin is used as inhibitor of tyrosin-kinase and during analysis of several other physiological regulatory mechanisms.

**Application:**
Stock solution: 1000x in DMSO or methanol
Storage of stock solution at -20 °C, max. 2 weeks at 4 °C
Working concentration: 1-10 µg/ml
Photo sensitive! Store protected from light.

| | | | |
|---|---|---|---|
| **HN71.1** | 1 mg | glass | 67,20 € |
| **HN71.2** | 5 mg | glass | 166,10 € |
| **HN71.3** | 10 mg | glass | 238,15 € |

## Leupeptin hemisulphate

**≥96,5 %, for biochemistry**

Reversible inhibitor of serine- and cysteine proteases.

Acetyl-Leu-Leu-argininal
$C_{20}H_{38}N_6O_4 \cdot 0{,}5\ H_2SO_4$
M 475,99 g/mol
Storage temp.: -20 °C • Transport temp.: room temp.

Leupeptin competitively inhibits calpain, cathepsin B, kallikrein, papain, plasmin and trypsin. Inhibition of thrombin is controversely discussed. Little or non-inhibiting for pepsin, cathepsin A and D and chymotrypsin.

**Application:**
Stock solution: 5 mg/ml (10 mM) in $H_2O$, ethanol, acetic acid and DMF.
Stock solution is stabile at +4 °C for approx. 7 days.
Recommended storage of stock solution at -20 °C (6 months).
Working concentration: 0.5-50 µg/ml (1-100 µM)
Working solutions are stabile only for few hours. Due to its aldehyde groups, leupeptin may interfere with protein detection assays (e. g. Bradford).

| | | | |
|---|---|---|---|
| **CN33.1** | 10 mg | glass | 45,70 € |
| **CN33.2** | 25 mg | glass | 95,60 € |

| **CN33.4** | 100 mg | glass | 310,70 € |

▶ HSP90 Inhibitor Novobiocin see page 1431

Please note our **Technical Information Brochure** on the Internet next to the products:

**Protease Inhibitors**
Overview and recommendations for application

## Pefabloc® SC-Protease Inhibitor

**≥95 %, for biochemistry**

Irreversible inhibitor of serine proteases.
4-(2-Aminoethyl)-benzylsulphonyl fluoride hydrochloride
$C_8H_{10}NSO_2F \cdot HCl$
M 239,7 g/mol
Storage temp.: +4 °C

**Danger** H314

Broadband inhibitor for serine proteases. Reacts covalently with the serin of the active center. Alternative to PMSF and DFP with a great number of advantages to standard inhibitors:

- Extremely low toxicity ($LD_{50}$ >2.800 mg/kg)
- Stability in neutral range
- High solubility in aqueous buffers
- Wide spectrum of specifity for serin protease
- Minimal reaction to cell growth

**Application:**
Stock solution 5-50 mg/ml in water; stable with neutral pH.
Working concentration: 1-5 mM.
Pefabloc® reacts with thiols. DTT and β-mercaptoethanol reduce the inhibitory effect.

®Registered trademark of Pentapharm AG, Basel.

| | | | |
|---|---|---|---|
| **A154.1** | 100 mg | glass | 68,30 € |

| **A154.3** | 1 g | glass | 499,90 € |

### Proteinase Inhibitor Cocktail - General Recommendation

We recommend using the following mixture as a standard cocktail for inhibiting proteases in protein solutions. Please note, however, that it may be necessary to adapt the concentration of individual inhibitors in your experiments if the inhibitory efficiency is not adequate.

**Simple inhibitor cocktail for low-protease extracts**

| Inhibitor | Art. No. | Conc. | Amount | Inhibition of |
|---|---|---|---|---|
| Aprotinin | A162 | 1.54 µM | 10 µg/ml | Serine proteases, esterases |
| EDTA* | 8043 | 10 mM | 3.7 mg/ml | Metalloproteases |
| PMSF | 6367 | 1 mM | 147 µg/ml | Serine- and cysteine proteases |
| Trypsin-Inhibitor | 5279 | - | 10 µg/ml | Trypsin and trypsin-like proteases |

**Broadband inhibitor cocktail for tissue extracts**

| Inhibitor | Art. No. | Conc. | Amount | Inhibition of |
|---|---|---|---|---|
| AEBSF | 2931 | 1 mM | 0.25 mg/ml | Serine proteases |
| Aprotinin | A162 | 1.54 µM | 10 µg/ml | Serine proteases, esterases |
| Bestatin | 2937 | 50 µM | 17.5 µg/ml | Amino peptidases |
| E-64 | 2935 | 5 µM | 1.8 µg/ml | Cysteine proteases |
| EDTA* | 8043 | 10 mM | 3.7 mg/ml | Metalloproteases |
| Leupeptin | CN33 | 50 µM | 25 µg/ml | Serine- and cysteine proteases, trypsin-like proteases |
| Pepstatin A | 2936 | 1 µM | 0.7 µg/ml | Acidic proteases, aspartat proteases |

*EDTA-concentration can be reduced to 0.2 mM because of downstream assays.

The inhibitors may be prepared in each case as a 100x or 1000x stock solution (see individual products for further information). Aprotinin, DTT, EDTA and the trypsin inhibitor may be mixed to a ready-to-use cocktail and aliquoted frozen at -80 °C. PMSF is not water-soluble and should be added separately to the protein solution.

## Pepstatin A

**≥98 %, for biochemistry**

Inhibitor of acidic/aspartic proteases

Iva-Val-Val-Sta-Ala-Sta

$C_{34}H_{63}N_5O_9$

M 685,91 g/mol

Storage temp.: -20 °C • Transport temp.: room temp.

Inhibits acidic proteases (aspartat proteases). Isolated from streptomycin and other actinomycetes. Strong, highly selective inhibition of pepsin, renin, cathepsin D, chymosin, protease B and also of retroviral proteases. No inhibitive effect on thiolproteases, neutral proteases and serine proteases. Hardly toxic.

**Application:**
Stock solution: 1 mM (685 µg/ml) in DMSO or methanol
Storage of stock solution: at -20 °C max. 1 month, at +4 °C max. 1 week
Working concentration: 0.5-1 µM
It may be necessary to add 10-50 % acetic acid to completely dissolve pepstatin A.

| | | | |
|---|---|---|---|
| **2936.1** | 5 mg | plastic | 30,00 € |
| **2936.2** | 25 mg | plastic | 88,05 € |
| **2936.3** | 100 mg | plastic | 276,85 € |

## Phenylmethyl sulphonyl fluoride (PMSF)

**≥99 %, for biochemistry**

Irreversible inhibitor of serine- and cysteine proteases.

α-Toluene sulphonyl fluoride, PMSF

$C_7H_7FO_2S$

M 174,2 g/mol

**Danger** H301-H314

General, irreversible inhibitor of serin proteases (chymotrypsin, trypsin and thrombin) and for the dystin-protease papain. Inhibiton by sulphonation of the serine localised in the enzymatic active site.
Reversible inhibitor of cysteine-proteases. $K_i$ = 0.91 ±0.01 mM

**Application:**
Dissolves easily in isopropanol, ethanol and methanol. Not stable in aqueous solution.
Stock solution: 17.4 mg/ml (100 mM) in isopropanol, ethanol or methanol.
For stock solutions of 200-250 mM heat shortly (approx. 30 mins) to 30 °C.
Stock solutions should be stored at -20 °C. Short term storage of few weeks may be done at +4 °C in the dark.
Working concentration: 17-174 µg/ml (0.1-1 mM). Not stable in aqueous solutions (half-life value of 1 h at pH 7.5/RT).

At every stage of isolating or purifying the proteins, PMSF should be added fresh from the stock solution. PMSF is often not sufficient as the only protease inhibitor in the preparation to protect against decomposition processes, as for example high salt concentration (3.0 M) impairs the inhibitory effect of PMSF.
PMSF reacts with thiols. DTT and β-mercaptoethanol reduce the inhibitory effect.

For your convenience, Art. No. 6367.4 comes packed in a 30 ml brown glass bottle. Addition of 20 ml 2-propanol results in a 100 mM stock solution.

| | | | |
|---|---|---|---|
| **6367.1** | 5 g | plastic | 30,00 € |
| **6367.2** | 25 g | plastic | 99,90 € |
| **6367.3** | 100 g | plastic | 284,35 € |
| **6367.4** | 348 mg, in 30 ml glass bottle | TIP | 14,20 € |

**Safety data sheets**
can be found on the Internet next to the product description.

## Radicicol

**≥98 %, for biochemistry**

Strong HSP90 inhibitor, macrolactone antibiotic. Binds specifically to the heat shock protein HSP90.

$C_{18}H_{17}ClO_6$

M 364,79 g/mol

Storage temp.: -20 °C • Transport temp.: room temp.

**Danger** H301-H315-H319-H335

The strong specific binding of radicicol to heat shock protein 90 (HSP90) leads to deregulation of its target mechanisms: cell cycle, cell proliferation, apoptosis/cell vitality. Also binds to yeast HSP90, *E.coli* HtpG and TRAP-1. Antifungal effects are probably caused by inactivation of chitin synthase in fungal cells.

**Application:**
Stock solution: 10 mg/ml (27 mM) in ethanol or DMSO
Storage of stock solution at -20 °C, max. 2 weeks at 4 °C
Working concentration: 5-300 µM
Photo sensitive! Store protected from light.

| | | | |
|---|---|---|---|
| **HN72.1** | 1 mg | glass | 94,50 € |
| **HN72.2** | 5 mg | glass | 381,65 € |
| **HN72.3** | 10 mg | glass | 600,95 € |

## Trypsin inhibitor

**≥10000 BAEE U/mg**

Made from soybeans. High-activity inhibitor of trypsin, chymotrypsin, and other proteolytic enzymes.

Storage temp.: +4 °C

Trypsin inhibitor inhibits Trypsin with high effiency, and, to a lesser extent, chymotrypsin. Additionally, there is a light inhibiting effect on plasmin, kallikrein, thrombin and a few other proteolytic enzymes.
1 mg of lyophilisate inhibits at minimum 10.000 BAEE Units of trypsin.
Application in cell culture (stock solution 1 mg/ml): Following trypsination, add the same volume inhibitor solution as was used for trypsin. Zentrifuge cells (5 mins, 1000 rpm), and remove supernatant. Resuspend cells in medium and cultivate further.

**Application:**
Stock solution: 1-10 mg/ml in $H_2O$, PBS or other phosphate-buffers.
Solutions of higher concentration may be hazy and slightly yellow-coloured.
Storage of stock solution: in aliquots at -20 °C.
Recommended end concentration: 1-100 µg/ml.
pH optimum: pH 7.6 - 8.0.

| | | | |
|---|---|---|---|
| **2949.1** | 25 mg | plastic | 30,65 € |
| **2949.2** | 100 mg | plastic | 77,95 € |

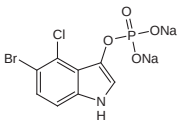
| **2949.4** | 500 mg | plastic | 274,15 € |
| **2949.5** | 1 g | plastic | 461,20 € |

## Trypsin inhibitor

**≥7000 BAEE U/mg, salt free**

Made from soybeans. Inhibition of trypsin, chymotrypsin, plasmin, kallikrein, thrombin and other proteolytic enzymes; free from salt.



Storage temp.: -20 °C • Transport temp.: room temp.

**Application:**
Stock solution: 10 mg/ml in $H_2O$ or PBS.
Storage of stock solution: in aliquots at -20 °C.
Recommended end concentration: 2-100 µg/ml.

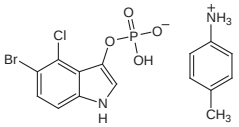
# Substrates



## BCIP-$Na_2$

**≥99 %**

Substrate for alkaline phosphatase, in particular in immunoblot procedures.
5-Bromo-4-chloro-3-indolyl phosphate disodium salt, X-phosphate disodium salt
$C_8H_4BrClNO_4PNa_2 \cdot 1,5\ H_2O$
M 397,46 g/mol
Storage temp.: -20 °C • Transport temp.: room temp.
In combination with NBT ideal for colorimetric detection of alkaline phosphatase activity, in particular in immunoblot procedures.
**Dissolves easily in water (20 mg/ml). Bad solubility in DMF.**
Protect from light and humidity.

| | | | |
|---|---|---|---|
| **A155.1** | 100 mg | glass | 27,45 € |
| **A155.2** | 500 mg | glass | 115,60 € |

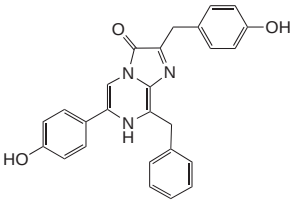
| **A155.4** | 5 g | glass | 665,45 € |

## BCIP-p-toluidine salt / X-Phos



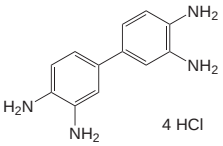
**≥99 %, BioScience-Grade**

Histochemical substrate for phosphatase.
5-Bromo-4-chloro-3-indolyl phosphate p-toluidine salt, X-Phos
$C_{15}H_{15}N_2O_4BrClP$
M 433,63 g/mol
Storage temp.: -20 °C • Transport temp.: room temp.

**Warning** H371

In combination with NBT ideal for colorimetric detection of alkaline phosphatase activity, in immunohistochemical procedures.
By enzymatic dephosphorylation BCIP is converted to indoxyl which subsequently tautomerizes to the ketone. In basic pH values, this ketone dimerizes and, in doing so, releases $H^+$ ions. The dye precipitates in the direct vicinity of the phosphatase, hence staining this site in a weak blue colour. Enhencement and darkening of this colour is achieved by adding NBT (Art. No. 4421).
**Dissolves easily in dimethylformamide (20 mg/ml), hardly soluble in water.**
Protect from light and humidity.

| | | | |
|---|---|---|---|
| **6368.1** | 500 mg | glass | 35,40 € |
| **6368.2** | 1 g | glass | 68,30 € |
| **6368.3** | 5 g | glass | 261,80 € |



## Coelenterazine

**≥95 %, for biochemistry**

Luciferase substrate
$C_{26}H_{21}N_3O_3$
M 423,48 g/mol
Storage temp.: -20 °C • Transport temp.: room temp.
Substrate of the Renilla luciferase used for monitoring of the mitochondrial Calcium flux and of reportergenes. Coelenterazine is applied in bioluminescence resonance energy transfer (BRET) assays, ELISAs, HTS and in chemiluminescent detection of superoxide anion and peroxynitrite in cells or tissues.

| | | | |
|---|---|---|---|
| **4094.3** | 1 mg | glass | 56,45 € |
| **4094.4** | 2,5 mg | glass | 107,40 € |

## DAB

**≥98 %, p.a.**

Substrate of horseradish peroxidase. For detection of endogenous peroxidase and for immunohistochemical stainings.
3,3',4,4'-Tetra-aminobiphenyl tetrahydrochloride,3,3'-Diaminobenzidine tetrahydrochloride
$C_{12}H_{14}N_4 \cdot 4\ HCl$
M 360,10 g/mol
Storage temp.: +4 °C

**Warning** H315-H319-H341-H351-H335

Popular substrate of peroxidases. DAB is used for biochemical and histological detection of endogenous peroxidases like catalase and cytochome oxidase. Additionally, it is the most common substrate for horseradish peroxidase (HRP) in histochemical and cytological assays. DAB is oxidised by HRP, forming a brown precipitate, which is unsoluble in aqueous and organic solvents. This precipitate can be detected in visible light and does not bleach during long-term storage.

**Application:**
Stock solution: 1-2 % (10-20 mg/ml) in 50 mM Tris buffer, pH 7.3
Storage of stock solution in aliquots at -20 °C
Working concentration: 0.05-0.1 % (0.5-1 mg/ml) DAB in buffer (PBS, TBS, pH 7.0-7.6) containing 0.01 % hydrogen peroxide
Always use freshly prepared working solution. For oxidation high concentrations of fresh hydrogen peroxide are needed.

| | | | |

## Roti®-DAB Kit

**for immunochemistry**

Substrate kit for detection of
HRP activity on blot membranes and slides.

DAB substrate kit, HRP substrate kit

Storage temp.: +4 °C • Transport temp.: cooled

**Danger** H302-H341-H351-H360D-H373

DAB substrate kit for detection of peroxidase (HRP) activity on immunoblots, immunohisto- and cytochemical slides and during *in situ* hybridization.
Roti®-DAB Kit contains substrate, buffer solution and activation reagent, therefore including all three solutions necessary for HRP detection reaction. Application is very simple - all three kit solutions are diluted equally in water, and the blotting filter membrane, or the slides, are then incubated in this substrate solution. Since the solutions are delivered in drop dispensers, dosing is most convenient.
DAB is oxidized by HRP, forming a brown precipitate, which is insoluble in aqueous and organic solvents. This precipitate can be detected in visible light and does not bleach during long-term storage. Addition of the DAB Metal Enhancer (Art. No. 9204) doubles the signal strength. Slides may be permanently mounted in hydrophilic, or, after dehydration, in hydrophobic mounting medium.

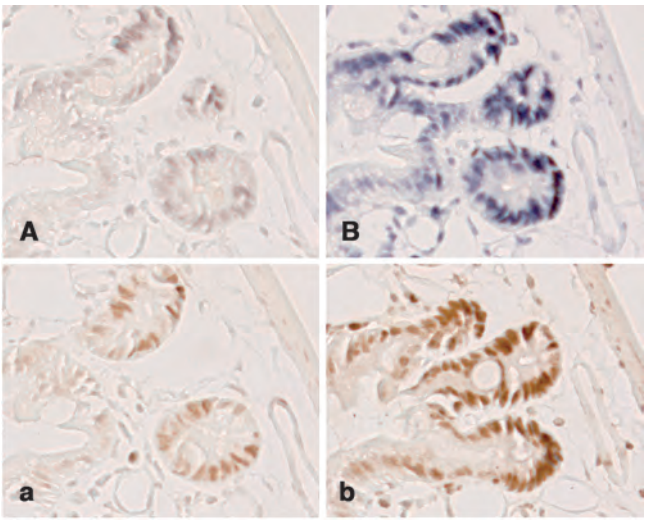

**Figure 1:**
Immunohistochemical staining of mouse small intestines with an anti-PCNA antibody. Minuscules: pure DAB substrate, capitals: detection supplemented by DAB enhancer (A: $NiCl_2$, B: DAB Metal Enhancer,Art. No. 9204).
A/a: Basic method using 0.6 mg/ml DAB in Tris-buffer
B/b: Detection performed with the Roti®-DAB Kit

**The kit contains:**
DAB solution (Art. No. 9869), DAB buffer (Art. No. 9870), and Activation reagent (Art. No. 9871) in dropper bottles. Contents of this Kit may not be bought separately.

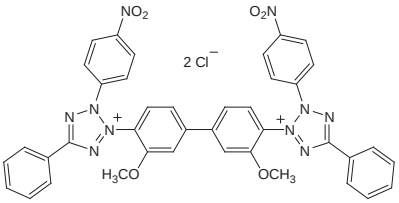
One kit is sufficient for staining of approx. 44 minigel blot membranes or 500 slides.

**Type analysis:**

| | |
|---|---|
| Application test (Blotting) | complies |
| RNAse | ≤1 ppb |
| DNAse | ≤1 ppm |

| | | | |
|---|---|---|---|
| **9202.1** | 1 kit | cardboard | 181,70 € |

▶ DAB metal enhancer see page 1318



▶ Streptavidin/HRP kit see page 1318

## MUG

**≥99 %, p.a.**

Substrate for β-glucuronidase. For detection of *E. coli*.
4-Methylumbelliferyl-β-D-glucuronide dihydrate
$C_{16}H_{16}O_9 \cdot 2\ H_2O$
M 388,33 g/mol
Storage temp.: -20 °C • Transport temp.: room temp.
Ideal for fluorometric detection of β-glucoronidase hydrolysed by MUG to 4-methylumbelliferone. Detection occurs via long wave UV light (366 nm).

| | | | |
|---|---|---|---|
| **6394.1** | 50 mg | glass | 23,15 € |
| **6394.2** | 250 mg | glass | 63,35 € |
| **6394.3** | 1 g | glass | 196,20 € |

## NBT

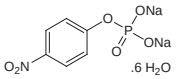
**≥98 %, p.a.**

Nitro-BT, Nitroblue tetrazolium chloride
$C_{40}H_{30}Cl_2N_{10}O_6$
M 817,65 g/mol
Storage temp.: +4 °C

Used in combination with BCIP-toluidine salt (X-phosphate) for detection of alkaline phosphatase activity by producing an indigo dye precipitate. Colour enhancer for staining with alkalic phosphatase. During dimerisation of ketonized X-Phos, $H^+$ ions are set free which reduce NBT to purple-coloured diformazan. Both dyes precipitate in the direct vicinity of the phosphatase, hence staining this site in a dark violet.
Store at +4 °C. Please also see assay protocol for use of BCIP/NBT in immunoblot procedures.

**Application:**
Stock solution: 0.5 g NBT in 10 ml 70 % dimethylformamide.
Protect from light and humidity.

| | | | |
|---|---|---|---|
| **4421.1** | 100 mg | glass | 17,10 € |
| **4421.2** | 500 mg | glass | 42,90 € |
| **4421.3** | 1 g | glass | 81,60 € |
| **4421.4** | 5 g | glass | 295,65 € |



**Assay protocol for use of BCIP/NBT in immunoblot procedures:**

**Stock solutions** (All solutions are stable for at least 1 year at 4 °C):
0.5 g NBT in 10 ml 70 % dimethylformamide;
0.5 g BCIP (p-toluidine salt) in 10 ml 100 % dimethylformamide.
Incubation buffer for alkaline phosphatase:
100 mM NaCl, 5 mM $MgCl_2$,100 mM Tris (pH 9.5).

**Fresh substrate solution:**
66 µl NBT stock solution + 10 ml incubation buffer, mix well, add 33 µl BCIP stock solution. Use within 1 hour.

**Blot development:**
Approx. 10 ml substrate solution per 15 x 15 $cm^2$ membrane surface. Develop at room temperature until bands become visible (approx. 30 mins).

**Reaction stop:** Rinse with PBS/20 mM EDTA.

## pNPP

**≥99 %, p.a.**

Substrate for alkaline phosphatase, particularly for ELISA.

p-Nitrophenyl phosphate, 4-Nitrophenyl phosphate disodium salt hexahydrate

$C_6H_4NNa_2O_6P \cdot 6\ H_2O$

M 371,12 g/mol

Storage temp.: +4 °C

Substrate of the alkaline phosphatase for use in ELISAs. Durin reaction of the substrate, a soluble, yellow product is formed that is detected photometrically at 405 nm wave length.

**Application:**
Working solution: 1 mg/ml in diethanolamine substrate buffer (10 mM diethanolamine, 0.5 mM $MgCl_2$, pH 9.5).
For endpoint analysis the reaction may be stopped via addition of 2-3 M NaOH.

| | | | |

| **4165.1** | 2,5 g | glass | 15,60 € |

## Roti®fair pNPP 5mg

**5 mg/tablet, for biochemistry**

For preparation of pNPP substrate solution for alkaline phosphatase.

pNPP (tablet), p-Nitrophenyl phosphate

Exactly pre-weighed tablets for convenient and rapid preparation of pNPP solution.
Prepared solution may be sterilized by filtration (0,22 µm).
The solution has to be stored at -20 °C in aliquots.
0,1 % pNPP solution (1 mg/ml) is prepared by dissolution of 1 tablet in 5 ml substrate buffer.

| | | | |
|---|---|---|---|
| **1117.1** | 24 tablets | blister | 90,85 € |
| **1117.2** | 100 tablets | plastic | 134,40 € |

## Roti®fair pNPP 20mg

**20 mg/tablet, for biochemistry**

For preparation of pNPP substrate solution for alkaline phosphatase.

pNPP (tablet), p-Nitrophenyl phosphate

Exactly pre-weighed tablets for convenient and rapid preparation of pNPP solution.
Prepared solution may be sterilized by filtration (0,22 µm).
The solution has to be stored at -20 °C in aliquots.
0,1 % pNPP solution (1 mg/ml) is prepared by dissolution of 1 tablet in 20 ml substrate buffer.

| | | | |

| **1128.1** | 24 tablets | blister | 97,30 € |
| **1128.2** | 100 tablets | plastic | 349,40 € |

ready-to-use

## Roti®-Lumin ultra

**ready-to-use, spray**

Superior chemoluminescence substrate for HRP-mediated Western-Blot detection systems.

Storage temp.: +4 °C • Transport temp.: cooled

- Very easy to use
- Spray-and-go or mix by pipetting
- Superior performance for detections in lower femtogram range
- Perfectly suited for all exposition times
- Suitable for NC membranes, optimised for PVDF membranes

Significantly enhanced Western-Blot substrate based on luminol, for chemoluminescent detection of horseradish peroxidase (HRP) on membranes. Through a special, optimised composition, a particularly high signal strength is achieved for over 30 mins. with a second increase at 10 to 15 mins. after application. Roti®-Lumin ultra is, therefore, one of the most sensitive HRP-Chemoluminescence substrate available.

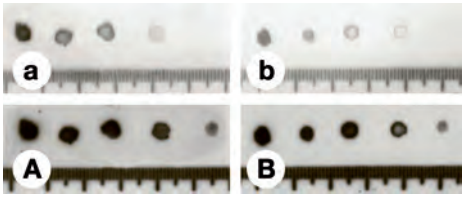

**Figure**:
Superior sensitivity of Roti®-Lumin ultra even with a very short exposition of 10 seconds. Detection of 2 µl each of a HRP complex in dilution series 1:1 to 1:10.
a/A: Roti®-Lumin ultra; b/B: Product of a competitor, recommended for femtogram range.
a/b: 10 sec. exposition, A/B: 5 mins. exposition.

By using pump spray bottles no time-consuming pre-mixing of solutions is required - substrate solution 1 and enhancer solution 2 are simply sprayed onto the membranes. Hereby, the spray technique guarantees a very smooth and regular distribution of the substrate on the membrane surface, hence avoiding artefacts caused by uneven distribution of pipetted substrate. The superior signal strength allows detection of proteins in single femtograms, as well as significant reduction of concentrations of expensive antibodies.

**Application notes:**
For a mini blot of 7 x 8 cm size 3-4 pump strokes are necessary.
- Spray the membrane with solution 1
- Afterwards spray membrane with solution 2
- Incubate approx. 1 min (wrap membrane in saran foil etc.)
- Exposition

In case passed down protocols are to be used the spray-bottles may easily be unscrewed, mixing and applying the solutions by pipetting.

**A kit consists of:**
20 ml (100 ml) solution 1 (Art. No. 3990) and 20 ml (100 ml) solution 2 (Art. No. 3991) in pump spray bottles. 2 x 100 ml is sufficient for approx. 10.000 $cm^2$ membrane (approx. 150 minigel blots).
Contents of this Kit may not be bought separately.

| | | |
|---|---|---|
| **3734.1** | 1 mini kit (spray) | 231,15 € |
| **3734.2** | 1 kit (spray) | 934,20 € |

## Roti®-Lumin plus

**ready-to-use, spray**

Highly efficient chemoluminescence substrate for HRP-mediated Western-Blot detection systems.

Storage temp.: +4 °C • Transport temp.: cooled

- Very easy to use
- Spray-and-go or mix by pipetting
- Optimised signal strength for detections in upper femtogram range
- Well suited for medium- and long-term exposition
- Suitable for NC membranes, optimised for PVDF membranes

Efficient Western-Blot substrate based on luminol, for chemoluminescent detection of horseradish peroxidase (HRP) on membranes. Through an optimised composition, high signal strength is achieved over a very stable plateau of over 30 mins.

By using pump spray bottles no time-consuming pre-mixing of solutions is required - substrate solution 1 and enhancer solution 2 are simply sprayed onto the membranes. Hereby, the spray technique guarantees a very smooth and regular distribution of the substrate on the membrane surface, hence avoiding artefacts caused by uneven distribution of pipetted substrate. Through the high signal strength, proteins in the upper femtogram range may be detected, while concentrations of the antibodies used may be reduced.

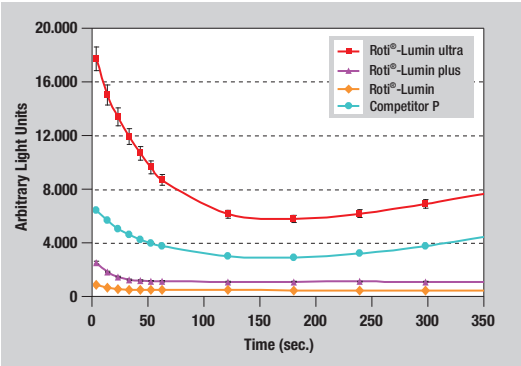

**Figure:**
Typical course of light emission of the Roti®-Lumins 0-5 mins. post mixing/spraying. Competitor P: Product of a competitor, recommended for femtogram range. For medium or long-term exposure we recommend use of Roti®-Lumin plus.

**Application notes:** see Roti®-Lumin ultra (Art. No. 3734.1).

**A kit consists of:**
20 ml (100 ml) solution 1 (Art. No. 3936) and 20 ml (100 ml) solution 2 (Art. No. 3937) in pump spray bottles, or of 250 ml solution 1 (Art. No. 3936) and 250 ml solution 2 (Art. No. 3937) in refill-bottles. 2 x 100 ml is sufficient for approx. 10.000 cm² membrane (approx. 150 minigel blots).
Contents of this Kit may not be bought separately.

| | | |
|---|---|---|
| **3692.1** | 1 mini kit (spray) | 130,65 € |
| **3692.2** | 1 kit (spray) | 267,70 € |
| **3692.3** | 1 kit (bottles) | 435,40 € |

## Roti®-Lumin

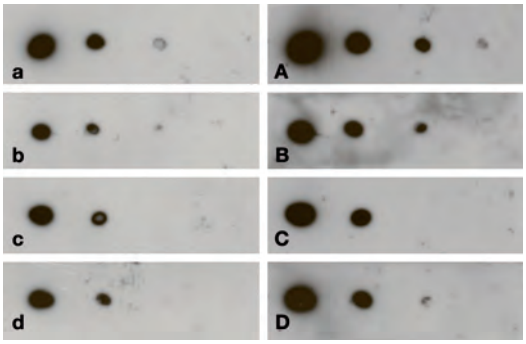
**ready-to-use**

Chemoluminescence substrate for peroxidase mediated detection systems.HRP substrate

Storage temp.: +4 °C

- Sensitive and reliable
- For all standard membrane types
- Low background
- No cumbersome preparation of peroxidase buffers
- Suitable for multiple stripping and reprobing

Roti®-Lumin is a kit for chemoluminescent detection of peroxidase-linked reporters (e.g. HRP-antibodies), as can be found in Western-Blot assays. In comparison to chromogen substrates, Roti®-Lumin displays increased sensitivity and reduced background reaction.



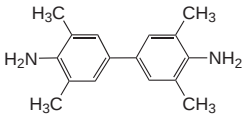


**Figure:**
Sensitivity of Roti®-Lumins. Detection of a polyclonal antibody (left to right 4 pg, 400 fg, 40 fg, 4 fg) on Roti®-PVDF (Art. No. T830.1). Staining in PBST via a HRP-conjugated anti-rabbit antibody (1:2000).
a/A: Roti®-Lumin ultra; b/B: Roti®-Lumin plus; c/C: Roti®-Lumin;
d/D: Product of a competitor, recommended for femtogram range.
a/b/c/d: 10 sec. exposition, A/B/C/D: 1 min. exposition.

**Mechanism:**
Roti®-Lumin is transformed by the HRP into an excited dianion in the presence of hydrogen peroxide. When the dianion is reversed back to its normal state, light is emitted. The light emission of Roti®-Lumin reaches its maximum within 5 minutes and remains at the maximum level for approx. 1-2 hours.

**Applications notes:**
Roti®-Lumin consists of two solutions, which should be mixed at a 1:1 ratio before use. It can be used with nitrocellulose, nylon and PVDF membranes. Optimal results can be achieved with Immobilon-P® or Roti®-PVDF. Can be used for Western-Blotting, ELISA, Southern- Blotting, Dot-Blotting and colony hybridisation. Membranes may be stripped from bound probes using Roti®-Free stripping buffer, and may thus undergo multiple reprobing.

**A kit consists of:**
120 ml (25 ml) Roti®-Lumin 1 (Art. No. P079) and 120 ml (25 ml) Roti®-Lumin 2 (Art. No. P080).
Sufficient for approx. 2400 cm² (500 cm²) membrane.
Contents of this Kit may not be bought separately.

| | | | |

| **P078.2** | 1 mini kit | plastic | 70,45 € |
| **P078.1** | 1 kit | plastic | 252,65 € |

## TMB

**≥98 %, p.a.**

3,3',5,5'-Tetramethylbenzidine

$C_{16}H_{20}N_2$

M 240,35 g/mol

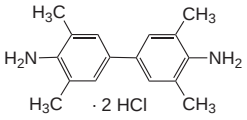
Storage temp.: +4 °C

Used as a highly sensitive substrate for peroxidases, particularly in ELISA procedures. Can replace carcinogenic benzidine.
**Dissolves easily in acetone, chloroform and ethanol.**

**Application:**
Working solution: 1 mg TMB in 0.1 ml dimethyl sulfoxide, add 9.9 ml 0.1 M sodium acetate (pH 6). Filter and add $H_2O_2$ ad 0.01 %. Always prepare freshly!
Application: approx. 50 µl per 96well, incubate for 10-30 mins. at room temperature. Add 50 µl 1 M $H_2SO_4$ and quantitate photometrically at 450 nm (acc. to: Bos *et. al.* (1981) *J. Immunoassay* 2:187).
Protect from light.

| | | | | |
|---|---|---|---|---|
| **6350.1** | 1 g | | glass | 52,60 € |
| **6350.2** | 5 g | | plastic | 160,20 € |
| **6350.3** | 25 g | BIG PACK | plastic | 736,40 € |

**Detection of peroxidase activity (Immunoassay):**



Dissolve 1 mg TMB in 0.1 ml dimethylsulfoxide (Art. No. 4720); add 9.9 ml of a 0.1 M sodium acetate solution (pH 6.0) (Powder: Art. No. 6779), filter and add $H_2O_2$ (Art. No. 8070) (final concentration 0.01 %).

**Always prepare freshly!**

Incubation 10-30 mins at room temperature (approx. 50 µl per microtitre well; finally add 50 µl 1 M $H_2SO_4$, Art. No. X873, per well).

Photometric quantitation at 450 nm.

Reference: Bos, E.S. *et al.*, (1981) *J. Immunoassay* 2, (3/4), 187.

## TMB dihydrochloride

**≥99 %, for biochemistry**

Water-soluble peroxidase substrate

3,3',5,5'-Tetramethylbenzidine dihydrochloride, TMB · 2 HCl

$C_{16}H_{20}N_2 \cdot 2\ HCl$

M 313,27 g/mol

Storage temp.: +4 °C

Tetramethylbenzidine dihydrochloride is used as highly sensitive substrate for detection of horseradish peroxidase labelled probes, particularly in solution-based assays like ELISA techniques. It produces a soluble, blue-coloured end product, which can be read spectrophotometrically.
**The dihydrochloride form is well water-soluble**, making it a versatile tool in laborartory science.

**Application:**
Stock solution: 0.1 mg/ml in 50 % acetic acid or phosphate citrate buffer (50 mM $NaH_2PO_4$, 25 mM citric acid, pH 5.0). For solubilisation, heat to 45 °C and sonicate. Colourless.
Storage of stock sol.: At +4 °C if tightly sealed. Oxidation can be seen by colour-shift to a faint blue.
Working solution: Immediately prior to use add 2 µl / 10 ml of 30 % hydrogen peroxide. (Liem *et al.* (1979) *Anal Biochem*, 98:388-93)

| | | | | |
|---|---|---|---|---|
| **4107.1** | 500 mg | | glass | 38,60 € |
| **4107.2** | 1 g | | glass | 62,90 € |

## X-α-Gal

**≥98 %, for biochemistry**

Colorimetric substrate of α-galactosidase.

5-Bromo-4-chloro-3-indolyl-α-D-galactopyranoside

$C_{14}H_{15}BrClNO_6$

M 405,63 g/mol

Storage temp.: -20 °C • Transport temp.: room temp.

Chromogenic substrate of α-galactosidase (melibiase, α-D-galactoside galactohydrolase), an enzyme that is necessary for metabolization of the disaccharide melibiose as a carbon source.
Used for selection of positive clones in yeast two-hybrid screens.

**Application:**
Stock solution: 2-20 mg/ml in DMF
Working concentration: 20-50 µg/ml in agar plates

| | | | | |
|---|---|---|---|---|
| **HN36.1** | 25 mg | | glass | 71,95 € |
| **HN36.2** | 100 mg | | glass | 217,70 € |
| **HN36.3** | 250 mg | | glass | 504,20 € |

## X-β-Gal

DNAse-free Protease-free RNAse-free

**≥99 %, BioScience-Grade**

Colorimetric substrate of β-galactosidase.
For biochemistry and molecular biology.

5-Bromo-4-chloro-3-indoxyl-β-D-galactoside

$C_{14}H_{15}BrClNO_6$

M 408,6 g/mol

Storage temp.: -20 °C • Transport temp.: room temp.

Ideal for colorimetric detection of β-galactosidase activity, for instance during blue-/white selection.

**Application:**
Stock solution: 100 mg/ml (240 mM) in DMF, store at -20 °C in the dark.
Working solution: For blue/white selection of recombinant clones on agar plates use 0,3 µl stock solution per ml broth/agar.

| | | | | |

| **2315.4** | 5 g | | glass | 370,90 € |

▶ IPTG see page 1244

## X-Gluc

**≥99 %, for microbiology**

Glucuronidase substrate

5-Bromo-4-chloro-3-indolyl-β-D-glucuronide cyclohexyl ammonium salt monohydrate, X-GlcA

$C_{20}H_{26}N_2O_7ClBr \cdot H_2O$

M 539,81 g/mol

Storage temp.: -20 °C • Transport temp.: room temp.

For colorimetric detection of glucuronidase activity. During hydrolysis of X-gluc two molecules are formed, glucuronic acid and 5-bromo-4-chloro-indoxyle, which is then being oxidized to a deep-blue indigo-dye.
X-Gluc is used for detection of contaminations by *E. coli* bacteria in food, waters and feeds. In molecular genetics, it is widely used as marker for expression analysis of target genes.

# Albumins / BSA (Bovine Serum Albumin)

BSA are proteins yielded from blood, which function as binding and transport proteins in blood circulation. Depending on the preparation process, the albumins contain different quality and quantities of metabolic products, enzymes, peptides, fatty acids, vitamines, etc. and are suitable for different applications.

TSE-/BSE-free

## Albumin Fraction V

**≥98 %, powdered, for molecular biology**

Wide range of applications, e.g. as protein standard or blocking reagent.

BSA

M ~66 000 g/mol

Storage temp.: +4 °C

BSA made of fresh bovine plasma by fractionation (Cohn method) and subsequent crystallisation from alcohol solution at a low temperature.

(acc. to 0.667 x $cm^{-1}$ for a 0.1 % solution).

▶ Detailed specifications see chapter Chemicals A-Z!

## Albumin Fraction V, US-Origin

**≥98 %, powdered, for molecular biology and biochemistry**

Suitable as blocking or stabilising reagent in all general assays. Recommended if BSA with US-Origin is required.

BSA

M ~66 000 g/mol

Storage temp.: +4 °C

Highly pure albumin of Cohn's Fraction, prepared from blood of cattle certified for US-origin. Albumin Fraction V, US-Origin may well be used for all standard assays where blocking with BSA is necessary, as well as for stabilisation of antibodies or enzymes. Many lots show exceedingly low content of protease and IgGs. BSA, US-Origin is particularly recommended if the use of albumin with certified US-Origin is dictated by process regulations. Available in large bulk format on request.
BSA made of fresh bovine plasma by fractionation (Cohn method) and subsequent crystallisation from alcohol solution at a low temperature.

## Albumin, nuclease-free

**>99 %, nuclease-free, for molecular biology**

DNAse-free
RNAse-free

Especially suitable for incubation methods with restriction-endonucleases and nucleic acid modifying enzymes.

BSALyophilised, acetylated

M ~66 000 g/mol

Storage temp.: +4 °C

Manufactured from heat-treated, unfractionised Albumin. Product has been acetylated to inactivate nucleases and proteases. In molecular biology, bovine serum albumin (BSA) is one of the most frequently used stabilisers in incubation and storage buffers.
Albumin, nuclease-free, has been acetylated and may thus hinder polymerases used in PCR.
Product has undergone extensive quality and performance controls.

| **8895.2** | 100 mg | glass | 169,75 € |

## Albumin Fraction V, protease-free

**≥98 %, protease-free, for molecular biology**

Protease-free

For all sensitive enzymatic assays.

BSA

M ~66 000 g/mol

Storage temp.: +4 °C

Excellent in sensitive immuno assays, as a stabilising reagent for proteins, enzymes and antibodies and also suitable as a blocking reagent in hybridisation techniques.
BSA produced from fresh beef plasma by fractionating in acc. with Cohn and subsequent crystallisation at low temperatures from the alcoholic solution.

**Protease (hemoglobine hydrolysis).** ..... **none detected**

## Albumin Fraction V, pH 5,2

**>97 %, powdered, for protein analysis**

Non-neutralized albumin. Suitable as protein standard or hapten carrier, recommmended for use in ELISA and Western-Blotting.

BSA

M ~66 000 g/mol

Storage temp.: +4 °C

Albumin Fraction V, pH 5.2 is basically suitable for all applications using albumin of Cohn-fraction V, e.g. for stabilisation of enzymes and antibodies, or as hapten carrier in immunoassays. The pH value of albumin pH 5.2 is close to its pI and the protein is only weakly charged. It is, therefore, particularly recommended for use in ELISA and Western blotting, since it may help in further reducing background signals.
Manufactured from fresh beef plasma by fractionating in accordance with Cohn and subsequent crystallisation at low temperatures from the alcoholic solution.

**pH value (10 % solution)** ..... **5,2 ±0,4**

## Albumin Fraction V, biotin-free

**≥98 %, biotin-free, for molecular biology**

Excellent as blocking and stabilising reagent in all biotin/streptavidin-mediated detection systems.

BSA

M ~66 000 g/mol

Storage temp.: +4 °C

Tried and tested albumin preparation, suitable for all immunoassays, for stabilising proteins, enzymes and antibodies and as a blocking-reagent in hybridisation. Tested for its absence of biotin. Manufactured from fresh beef plasma by fractionating in accordance with Cohn and subsequent crystallisation at low temperatures from the alcohol solution.

## Albumin Fraction V, fatty acid-free

**≥98 %, fatty acid-free, for molecular biology**

Excellent when working with membrane-associated proteins.

BSA

M ~66 000 g/mol

Storage temp.: +4 °C

Suitable for all immunoassays, for stabilising proteins, enzymes and antibodies and as a blocking-reagent during hybridisation. Manufactured from fresh beef plasma by fractionating in accordance with Cohn and subsequent crystallisation at low temperatures from the alcohol solution.

## Albumin, fatty acid-free, US-Origin

**≥98 %, fatty acid-free, for molecular biology**

Suitable as blocking or stabilising reagent in all fatty acid-sensitive assays. Recommended if BSA with US-Origin is required.

BSA

M ~66 000 g/mol

Storage temp.: +4 °C

Highly pure albumin, prepared from blood of cattle certified for US-origin. Albumin, fatty acid-free, US-Origin, may well be used for blocking of all assays regarding membrane proteins, or other approaches aiming for fatty acid-associated proteins. It is also well suited for stabilisation of antibodies, enzymes or fatty acids. Albumin, fatty acid-free, US-Origin, shows exceedingly low content of endotoxins and IgGs, making it a useful reagent for cell biology also.
BSA, fatty acid-free, US-Origin is particularly recommended if the use of albumin with certified US-Origin is dictated by process regulations. Available in large bulk format on request.

For purification of Albumin, fatty acid-free, US-Origin, an extensive heat-shock/diafiltration method is used, which has been shown to bring more highly purified products than the standard process acc. to Cohn. The process is taking place in a closed system.

## Albumin, IgG free

**>98 %, IgG-free, for biochemistry and molecular biology**

Recommended as blocking and stabilising reagent in all antibody-mediated detection systems.

BSA

M ~66 000 g/mol

Storage temp.: +4 °C

Albumin, highly purified and tested for presence of immunoglobulins (IgGs), proteases, RNAse, and DNAse. Albumin, IgG-free is particularly recommended for use as stabilising reagent in antibody solutions, and as blocking reagent in all assays using detection systems via antibodies. Also very well suited for stabilising of hot-start-PCRs mediated by antibodies, or as blocking reagent in antibody-detected hybridisations.

For purification of Albumin, IgG-free, an extensive heat-shock/diafiltration method is used, which has been shown to bring more highly purified products than the standard process acc. to Cohn. The process is taking place in a closed system.

## Albumin Fraction V, endotoxin-tested

**CELLPURE® >98 %, low endotoxin**

With low endotoxin content. Recommended for culturing of cell lines.

BSA

M ~66 000 g/mol

Storage temp.: +4 °C

Albumin Fraction V, low endotoxin is recommended for use during culturing of eukaryotic cells.
Bovine serum albumin is basically suitable for stabilisation of all enzymes and antibodies, as well as for blocking of hybridisations and immunoassays. Manufactured from fresh beef plasma by fractionating in accordance with Cohn and subsequent crystallisation at low temperatures from the alcohol solution.

**Endotoxin content..... <15 E.U./mg**

| Original pack 6 x 500 g | | | 795,58/500 g |

## Albumin Fraction V, very low endotoxin

**CELLPURE® >98 %, very low endotoxin**

With extremely low endotoxin content. Recommended for the culture of primary cells and cell lines, as well as for sensitive cell culture assays.

BSA

M ~66 000 g/mol

Storage temp.: +4 °C

Albumin Fraction V, very low endotoxin is particularly recommended for use during culturing of eukaryotic cells and in cell culture assays. This albumin of superior quality is thoroughly tested for its very low endotoxin content, therefore providing trouble-free cell culture assays and reliable results even when handling primary cells or stem cells.
Bovine serum albumin is basically suitable for stabilisation of all enzymes and antibodies, as well as for blocking of hybridisations and immunoassays. Manufactured from fresh beef plasma by fractionating in accordance with Cohn and subsequent crystallisation at low temperatures from the alcohol solution.

**Endotoxin content..... <2.0 E.U./mg**

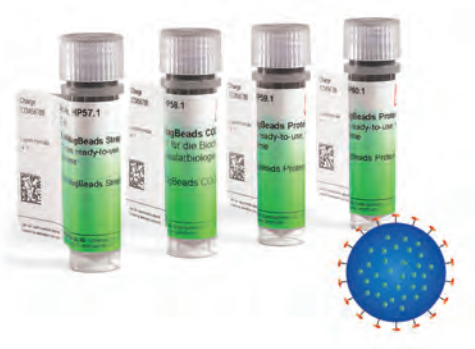
## Lactalbumin

**for microbiology**

Storage temp.: +20 °C

Lactalbumin is produced by enzymatic hydrolysis of milk whey. It consists of peptides, amino acids and carbohydrates, simple and complex.
It is used in media for culturing of bacterial cells (e.g. *lactobacilli*), for tissue culture, production of vaccines and in fermentation procedures.



| | | | |

| **7597.1** | 250 g | plastic | 72,60 € |
| **7597.2** | 500 g | plastic | 129,55 € |
| Original pack 6 x 500 g | | | 123,07/500 g |

**Recommended Application of Albumins**

| Albumin | Art. No. | Recommended Application |
|---|---|---|
| Fraction V | 8076 | Stabilisation of proteins and blocking reagent in protein biochemical detection systems. Basically suitable for all assays unless specific requirements apply (see below-listed albumins). |
| Fraction V, US-Origin | 3854 | Stabilisation of proteins and blocking reagent in all standard biochemical detection systems. Recommended if albumin with certified origin USA has to be used. |
| Fraction V, pH 5.2 | 2834 | Stabilisation of proteins and blocking reagent. Particularly recommended for Western-Blotting and ELISAs |
| Fraction V, protease-free | T844 | Stabilisation of proteins and blocking reagent in sensitive enzymatic detection systems, activity tests or protein/protein-interaction assays. Also recommended for stabilisation of antibodies. |
| Fraction V, biotin-free | 0163 | Stabilisation of proteins and blocking reagent in all biotin / streptavidin-mediated detection systems (membrane-bound- or coating-plate-assays, as well as soluble assays). |
| Fraction V, fatty acid-free | 0052 | Stabilisation of proteins and blocking reagent in detection systems. Particularly recommended for experiments on metabolism proteins, membrane-associated proteins and cell surface proteins. |
| Albumin, fatty acid-free, US-Origin | 9638 | Stabilisation of proteins and blocking reagent, particularly for experiments on metabolism proteins, membrane-associated proteins and cell surface proteins. Also well suited for cell biology and all antibody-mediated detection systems. Recommended if albumin with certified origin USA has to be used. |
| Albumin, nuclease-free | 8895 | Stabilisation of nucleic acids and proteins for nucleic acid modification or nucleic acid/protein-interaction, e.g. endonucleases, RNPs, transcription factors and so on. Also recommended as blocking reagent in nucleic acid/protein-interaction assays. |
| Albumin, IgG-free | 3737 | Stabilisation of antibodies. Blocking reagent in all antibody-mediated detection systems and Radio-Immuno Assays (RIAs). Reduces false-positive signals. |
| Fraction V, endotoxin-tested | CP84 | Cell culture, standard cell lineages, cell sorting, short-term assays. |
| Fraction V, very low endotoxin | CP77 | Cell culture. Superior quality and purity, suitable for sensitive cells like primary cells, stem cells, cloning and 3D-cultures. Also recommended for cell stressing assays like transfections, in vitro infections, or cell fusion. |
| Lactalbumin | 7597 | Cell culture, fermentation procedures, tissue culture. |

# Protein Isolation
## Magnetic Beads

ready-to-use

- Easy and standardized handling
- Handling is identical to standardized protocols for beads of other suppliers, own established protocols may be used
- Applicable for a wide variety of buffers and media
- Well suited for manual and automated applications

Matrix for simple and efficient binding and isolation of biotinylated compounds (proteins, peptides, nucleic acids, antibodies etc) and for cell sorting.

The magnetic properties enable easy and quick washing steps, allowing one preparation to take place in approx. 10 mins. Handling is easy and identical to standardized protocols for beads of other suppliers, providing easy establishment of the assays. Results are well reproducible with high recovery rates.

The Matrix of Roti®-MagBeads Streptavidin consists of uniform, superpara-magnetic silica beads. The small bead size of 1 µm in average provides a large surface with excellent binding capacities.

In those beads, nano-meter-sized particles of magnetic iron(II/III)oxide are embedded in silicium oxide, resulting in high magnetic mobility. The surface is made from pure streptavidin-silicium oxide, coated with streptavidin, COOH groups, protein A or protein G.

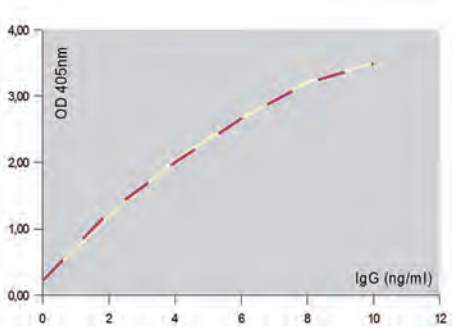
**Type analysis:**
Concentration. ..... 10 ±0,5 mg/ml
Size distribution. ..... 0,7-1,4 µm
Mean particle sizing (CI90 %). ..... 1,0 ±0,05 µm
Bead number. ..... 6-12 x $10^9$ Beads/ml
Magnetic iron content. ..... ≥50 %

## Roti®-MagBeads Streptavidin
**10 mg/ml, ready-to-use, for biochemistry**
Magnetic silica gel beads for isolation of biotin-coupled biomolecules.
Storage temp.: +4 °C

- Easy and standardized handling
- Superior binding capacity of up to 3-7 nMol/mg
- Applicable for a wide variety of buffers and media
- For cell sorting, purification of proteins/nucleic acids and immunoassays

Roti®-MagBeads Streptavidin is a matrix for simple and efficient binding followed by subsequent isolation of biotinylated compounds such as proteins and peptides, nucleic acids, antibodies and other biomolecules. Also useful for positive or negative cell sorting. The magnetic properties enable easy and quick washing steps, allowing one preparation to take place in approx. 10 mins.

The small bead size of 1 µm in average provides a large surface with excellent binding capacities. Handling is easy and identical to standardized protocols for beads of other suppliers, providing easy establishment of the assays. The absence of excess streptavidin ensures specific binding to the beads and low loss of samples. Results are well reproducible with high recovery rates. Beads are compatible with down-stream applications like sequencing and *in vitro* transcription.



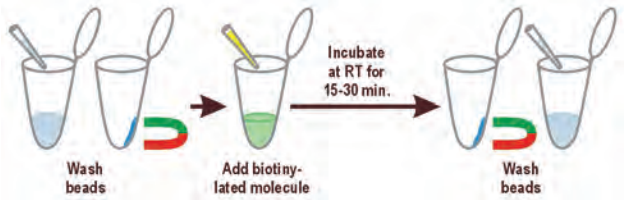


**Figure:** ELISA in micro plates. Assays were performed with Roti®-MagBeads Streptavidin (striped red line) and reference beads (yellow line). Binding of a biotinylated primary antibody to target protein and immobilisation by Roti®-MagBeads Streptavidin. Detection of target protein by binding of a secondary, protein specific antibody (peroxidase-labelled) measured in a micro plate-reader.

The Matrix of Roti®-MagBeads Streptavidin consists of uniform, superpara-magnetic silica beads coated with covalently coupled streptavidin. In those beads, nanometer-sized particles of magnetic iron(II/III)oxide are embedded in silicium oxide, resulting in high magnetic mobility. The surface is made from pure streptavidin-silicium oxide.

Well suited for automated and manual applications.
Biotin binding capacity. ..... 3-7 nMol/mg.
Suspension in PBS (pH 7,4); 0,05 % Tween® 20; 0,05 % sodium azide.

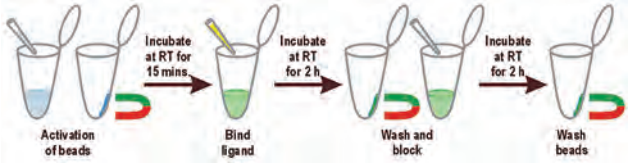
## Roti®-MagBeads COOH

**10 mg/ml, for biochemistry and molecular biology**



Activated magnetic silica gel beads for covalent coupling of chosen ligands.
Storage temp.: +4 °C

- Easy and standardized handling
- Fast and easy batch format without columns
- Allows harsh pH values and high ionic strength
- For ligand coupling prior to purification of biomolecules, immunoassays, and cell sorting

Roti®-MagBeads COOH is a matrix for simple and efficient coupling of any chosen ligand that can be coupled to carboxylic groups, such as antibo-dies, proteins and oligonucleotides. Subsequently, the coated beads can be used for isolation of proteins and peptides, nucleic acids and other bio-molecules, and for positive or negative cell sorting. In case antibodies are coupled to the beads, immunoassays can be carried out.

The high ligand coupling capacity combined with low non-specific binding minimizes the signal-to-noise ratio. Subsequent assays are well reproducible with high recovery rates.

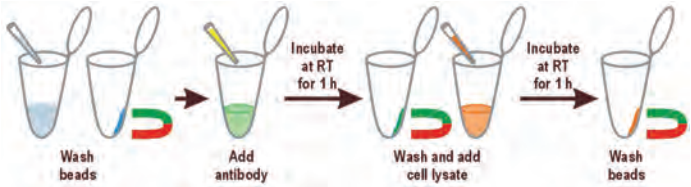
The Matrix of Roti®-MagBeads COOH consists of uniform, superpara-magnetic silica beads coated with activated surface (-COOH).
The surface is made from pure activated silicium oxide and allows application of harsh pH values as well as of media with high ionic strength.

Well suited for automated and manual applications.
Suspension in PBS (pH 7,4); 0,05 % sodium azide

| | | | |
|---|---|---|---|
| **HP58.2** | 50 µl | plastic | 12,80 € |
| **HP58.1** | 2 ml | plastic | 89,15 € |

## Roti®-MagBeads Protein A

**10 mg/ml, ready-to-use, for biochemistry**



Magnetic silica gel beads for binding and isolation of immunoglobulins.
Storage temp.: +4 °C

- Easy and standardized handling
- High affinity for Fc domains of a variety of species
- Well suited for isolation from small samples
- For purification of immunoglobulins and for immunoassays

Roti®-MagBeads Protein A is a matrix for simple and efficient isolation of immunoglobulins as well as a carrier for all sorts of immunoassays like immunoprecipitation, ELISA, protein-protein interaction assays. Protein A forms reversible complexes with several immunoglobulin subclasses from the following species: human (except IgG1), mouse (except IgG1), guinea pig, rabbit, hamster, pig.

The absence of excess protein A ensures specific binding to the beads and low loss of probes. Results are well reproducible with high recovery rates.

The Matrix of Roti®-MagBeads Protein A consists of uniform, super-para-magnetic silica beads coated with covalently coupled protein A (42 kDa) isolated from *Staphylococcus aureus*. The surface is made from pure protein A coated silicium oxide.

Well suited for automated and manual applications.
Suspension in PBS (pH 7,4); 0,05 % sodium azide

| | | | |
|---|---|---|---|
| **HP59.2** | 50 µl | plastic | 17,75 € |
| **HP59.1** | 1 ml | plastic | 181,70 € |

## Roti®-MagBeads Protein G

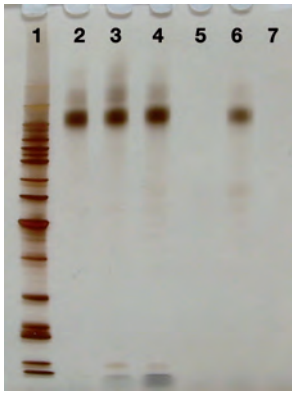
**10 mg/ml, ready-to-use, for biochemistry**

Magnetic silica gel beads for binding and isolation of immunoglobulins.
Storage temp.: +4 °C

- Easy and standardized handling
- Recombinant protein G with enhanced binding specificity for Fc domains
- Well suited for isolation from small samples
- For purification of immunoglobulins and for immunoassays

Roti®-MagBeads Protein G is a matrix for simple and efficient isolation of immunoglobulins as well as a carrier for all sorts of immunoassays like immunoprecipitation, ELISA, protein-protein interaction assays. Protein G forms reversible complexes with several immunoglobulin subclasses from the following species: human, mouse, rat (except IgG 1+2 B), goat, rabbit, hamster, cow, horse.

The absence of excess protein G ensures specific binding to the beads and low loss of probes. Results are well reproducible with high recovery rates.



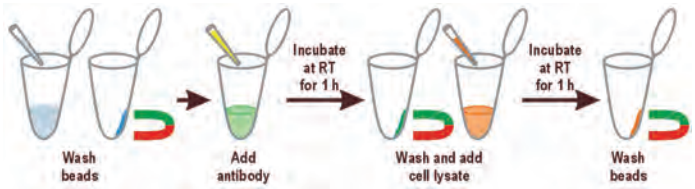


**Figure:** Specific absortion of bovine IgG by Roti®-MagBeads Protein G. Roti®-MagBeads Protein G, Roti®-MagBeads Protein A, and Roti®-MagBeads Stretavidin were incubated with a solution containing bovine IgG and BSA, Fraction V. Protein bound to Roti®-MagBeads was detected by SDS PAGE and identified as IgG. No unspecific binding of BSA could be detected.
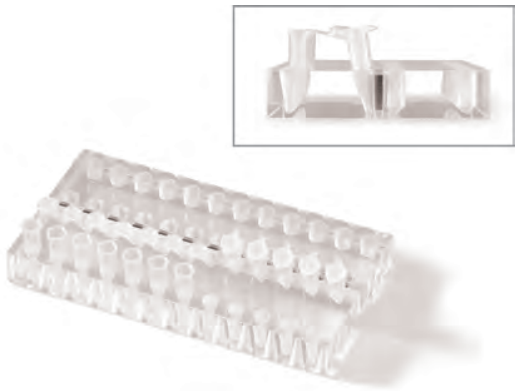
Lane 1: Marker
Lanes 2, 3, 4, 6: **Roti®-MagBeads Protein G** (different incubation conditions)
Lane 5: **Roti®-MagBeads Protein A** (Protein A has very low affinity for bovine IgG)
Lane 7: **Roti®-MagBeads Streptavidin**



The Matrix of Roti®-MagBeads Protein G consists of uniform, superpara-magnetic silica beads coated with covalently coupled protein G (26 kDa). In those beads, nanometer-sized particles of magnetic iron (II/III)oxide are embedded in silicium oxide, resulting in high magnetic mobility. The surface is made from pure protein G coated silicium oxide. In order to enhance the binding specificity in the recombinant protein G used here, the albumin, cell wall and cell membrane binding domains present on the wild type form have been removed.

Well suited for automated and manual applications.
Suspension in PBS (pH 7,4); 0,05 % sodium azide

| **HP60.1** | 1 ml | plastic | 181,70 € |

# Separators

## Roti®-Mag Tube-Separator

For collection of magnetic beads in reaction tubes.

The Roti®-Mag Tube Separator has been designed for fast and efficient collection of Roti®-Mag Beads magnetic particles during elution of biological molecules in reaction tubes. The separator has been equipped with 12 particularly strong permanent magnets, providing magnetic force for separation in 1 to 24 tubes in parallel. It, therefore, enables for single tube preparation as well as high-throughput applications.

Short separation times (under 2 mins.) are allowed by the close proximity of magnets and tubes. The use of transparent acrylic glass ensures permanent visual control of the separation process without the need to remove the tubes from the block. 24 non-magnetic sockets for reaction tubes have been included to provide a whole working station for both, magnetic separation and resuspension.

Usable with 2 x 12 tubes of 1,5 and 2,0 ml volumes.

| Usable for | Art. No. | Pack Qty. | € |
|---|---|---|---|
| 2 x 12 tubes á 1.5 and 2 ml | **2807.1** | 1 | 394,55 |

## Roti®-Mag 96well-Separator

For collection of magnetic beads in 96well plates.

The Roti®-Mag Tube Separator has been designed for fast and efficient high-throughput collection of Roti®-Mag Beads magnetic particles during elution of biological molecules in 96well plates. Each separator is made from acrylic glass and is equipped with 24 particularly strong permanent magnets of 7,5 mm diameter.

The close proximity of the magnets strongly pulls the beads of four adjacent wells, collecting the beads very efficiently and in short time (under 2 mins.) and, hence, enabling high speed and quantitative buffer exchange. For resuspension of the beads, plates are removed from the magnet stand.

Usable with 96well plates of 300 µl up to 2 ml well volume.

| Usable for | Art. No. | Pack Qty. | € |
|---|---|---|---|
| 96well plates (300 µl - 2 ml) | **2808.1** | 1 | 394,55 |

# Ultra filtration

## Roti®-Spin Centrifugal Devices

For purification and concentration of biomolecules and for purification of solutions.

- Applicable for nucleic acids, proteins/peptides, other biomolecules >6 kD and very small bioparticles
- Can be used to replace standard techniques like precipitation, dialysis, gel filtration, gel purification, column chromatography, gradient centrifugation etc.
- Gentle: No shearing of DNA of up to 100 kb, proteins remain native and enzymatically active
- Applicable for purification of all labelled probes (isotope-, fluorescent-, chromogenic labelling)
- Very high recovery rates of >90 % (when using devices of appropriate MWCO)

Centrifugal devices for ultrafiltration of biomolecules. The membranes made of highly chemical-resistant polyethersulfone have been tightly sealed to prevent leakage and loss of samples. Furthermore, the membranes underwent special treatment minimising the binding of biomolecules, in order to optimise sample recovery rates.

Roti®-Spin Centrifugal Devices can be applied to a variety of applications and can be used to replace tedious and labour-intensive methods like gel filtration, gel purification or precipitation. Application is time-saving and very simple - only few centrifugal steps are necessary to concentrate and recover your sample. During this, the sample remains untouched in the upper reservoir, and cross-contamination is efficiently prevented even when large numbers of samples are handled. Centrifugation can easily be performed in the cold room or at specially designated benches like isotope laboratories or in laminar flow hoods.

**MWCO:**
For convenient and successful application, centrifugal devices with membranes in 4 colour-coded molecular weight cut-offs (MWCO) are available. In order to choose the appropriate MWCO please use the following thumb-rule:
Centrifugation of proteins/peptides:
MWCO ≤1/3 of sample molecule size.
Centrifugation of nucleic acids:
MWCO ≤ ½ sample molecule size.

**Overview for selecting the right pore size**

| MWCO | Molec. size | DNA size |
|---|---|---|
| 3 kD | 10 - 20 kD | <50 bp |
| 10 kD | 30 - 90 kD | 50 - 200 bp |
| 30 kD | 90 - 180 kD | 200 bp - 1 kb |
| 100 kD | >300 kD | >1 kb |

**Sample volumes:**
Maximum sample volume: Roti®-Spin MINI 50-500 µl
Final concentrate volume: Roti®-Spin MINI 15-20 µl

**Applications (examples):**
Desalting or buffer exchange following restriction digest, PCR or such; separation of free nucleotides and polymerised DNA; removal of contaminating compounds (like DNA) from stock solutions (e.g. PCR-buffers); concentration of DNA or proteins; separation of proteins of different size; sample preparation prior to HPLC.

**Roti®-Spin MINI**

| Type | MWCO (kD) | Colour | Art. No. | Pack Qty. | € |
|---|---|---|---|---|---|
| Roti®-Spin MINI-3 | 3 | grey | **CL12.1** | 25 | 110,75 |
| Roti®-Spin MINI-10 | 10 | blue | **CL13.1** | 25 | 110,75 |
| Roti®-Spin MINI-30 | 30 | red | **CL14.1** | 25 | 110,75 |
| Roti®-Spin MINI-100 | 100 | clear | **CL15.1** | 25 | 110,75 |

# Affinity Chromatography

## Roti®garose Beads and Columns for Isolation of His-tag Proteins

Ion charged IDA-agarose beads for low pressure affinity chromatography. IMAC matrix.

Immobilized metal ion affinity chromatography (IMAC) still is the most widely used method to obtain high yield of very pure proteins with reasonable effort. Roti®garose His Beads offer the perfect solution for your specific application of low flow column chromatography or protein isolation in batch mode.
The matrix of Roti®garose His Beads consists of crosslinked and beaded 6 % agarose, IDA-conjugated and charged with divalent ions. Roti®garose His beads result in eluates with considerably low metal contamination.
The tridentate IDA cross-linker provides easy elution with low amounts of imidazole.
Additionally, Roti®garose Beads may repeatedly be regenerated, making them very cost-effective.
The matrix is stable in all commonly used reagents including denaturing and reducing reagents (like 8 M urea, 6 M guanidinium hydrochloride, 5 mM DTT).

- Simple and rapid one-step purification of His-tagged proteins from total lysates
- High recovery rate of very pure proteins
- Superior binding capacity
- Easy elution and regeneration
- Very low ion leaching
- Compatible with denaturing and reducing reagents

## Nickel Charged IMAC Beads and Columns

### Roti®garose-His/Ni Cartridges

**for biochemistry**

For isolation of His-tagged proteins by high pressure affinity chromatography.
Affinity chromatography colums/nickel charged, IMAC columns
Storage temp.: +4 °C

**Danger** H225

Prepacked cartridges with Nickel charged IDA-agarose bead matrix for medium pressure affinity chromatography (MPLC).
Optimal for automated liquid chromatography, or if proteins shall be isolated under pressure.
**Suitable for ÄKTA™FPLC™** and for sample application via peristaltic pump or syringe.

- Very fast and simple purification of His-tagged proteins from total lysates
- Superior recovery rate of pure His-tagged proteins
- Binding capacity (purified 6xHis protein) of 110 mg per ml matrix
- Recommended flow rate 5 ml/min.
- Recommended pressure 5 bar [0,5 MPa] (70 psi)
- Standard ports (10-32)
- Very versatile. Applicable with ÄKTA™FPLC™, pump and syringe.
- Easy elution and regeneration
- Very low Nickel leaching
- Compatible with denaturing and reducing reagents
- For medium pressure flow chromatography

Roti®garose His/Ni Cartridges are prepacked and may be used directly. The Matrix is stable in all commonly used reagents including denaturing and reducing reagents (like 8 M urea, 6 M guanidinium hydrochloride, 5 mM DTT). Slurry in 20 % ethanol.

Column material made from polypropylene and polyethylene (frit).
Matrix volume 5 ml, whole volume 10 ml.
For approx. 500 mg His labelled protein.

| | | |
|---|---|---|
| **1318.1** | 1x5 ml | 155,90 € |
| **1318.2** | 5x5 ml | 762,20 € |

**Instructions for use**
can be found on the Internet next to the product description.

**Nickel chelates** recognize two exposed histidine tags with good specificity and very high affinity, making the $Ni^{2+}$ charged matrix the first choice for all **standard applications**. Roti®garose His/Ni beads give **very high yields of pure proteins** with considerably low metal contamination.

**Type analysis:**

| | |
|---|---|
| Particle size (beads, columns) | 50-150 µm |
| Particle size (cartridges) | 20-50 µm |
| Beads (cross-linked agarose) | 6 % |
| Ligand | IDA |
| Metal ion | nickel |
| Binding capacity (DHAK-6xHis) (beads, columns) | 117 mg/ml |
| Binding capacity (DHAK-6xHis) (cartridges) | 110 mg/ml |
| Activating agent | Epichlorohydrin |
| Stabilizer | 20 % ethanol |

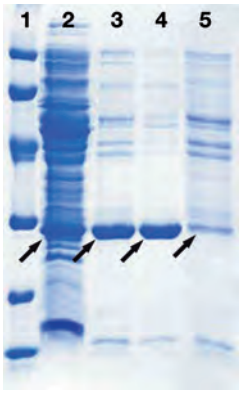

**Figure:** SDS-PAGE of 6xHis-fuculose aldolase, 28 kDa (arrows).
Very high yield of well purified proteins.
1: Marker, 2: Protein raw extract, 3,4: 6xHis target protein purified with Roti®garose His/Ni Beads or Column, respectively, 5: 6xHis target protein purified by competitor product.

## Roti®garose-His/Ni Beads

**for biochemistry**

For isolation of His-tagged proteins by affinity chromatography.
Agarose beads for affinity chromatography, IMAC matrix/nickel charged
Storage temp.: +4 °C

**Danger** H225

Nickel charged IDA-agarose beads for low pressure affinity chromatography. Slurry in 20 % ethanol.
Suitable for all general applications, or if proteins of very small amount shall be isolated without loss.

- One-Step purification of His-tagged proteins from total lysates
- Superior recovery rate of pure His-tagged proteins
- Binding capacity (purified 6xHis protein) of 117 mg per ml matrix
- Easy elution and regeneration
- Very low Nickel leaching
- Compatible with denaturing and reducing reagents
- For batch mode and gravity flow column chromatography

The Matrix is stable in all commonly used reagents including denaturing and reducing reagents (like 8 M urea, 6 M guanidinium hydrochloride, 5 mM DTT).
May be autoclaved at 121 °C for 30 mins.

| | | | |
|---|---|---|---|
| **1308.1** | 25 ml | plastic | 274,15 € |
| **1308.2** | 100 ml | plastic | 736,40 € |

## Roti®garose-His/Ni Columns

**for biochemistry**

For isolation of His-tagged proteins by affinity chromatography.
Affinity chromatography colums/nickel charged, IMAC columns
Storage temp.: +4 °C

**Danger** H225

Prepacked columns with Nickel charged IDA-agarose bead matrix for low pressure affinity chromatography.
Suitable for all general applications, or if proteins of very small amount shall be isolated without loss.

Matrix volume 1 or 5 ml, whole volume 12 or 35 ml, respectively. For approx. 100 and 500 mg His labelled protein.

- Fast and simple purification of His-tagged proteins from total lysates
- Superior recovery rate of pure His-tagged proteins
- Binding capacity (purified 6xHis protein) of 117 mg per ml matrix
- Easy elution and regeneration
- Very low Nickel leaching
- Compatible with denaturing and reducing reagents
- For gravity flow chromatography

Roti®garose His/Ni Columns are prepacked and may be used directly.
The Matrix is stable in all commonly used reagents including denaturing and reducing reagents (like 8 M urea, 6 M guanidinium hydrochloride, 5 mM DTT). Slurry in 20 % ethanol.
Column material made from polypropylene and polyethylene (frit).
May be autoclaved at 121 °C for 30 mins.

| | | |
|---|---|---|
| **1314.1** | 8x1 ml | 235,45 € |
| **1314.2** | 5x5 ml | 611,70 € |

## Cobalt Charged IMAC Beads and Columns

**Cobalt chelates** recognize two exposed, vicinal histidins with superior specificity and good affinity, resulting in acceptable to **good recovery rates, yielding proteins of superior purity**. This matrix is, therefore, the perfect choice if extremely pure proteins are required, or if hard-to-separate proteins shall be isolated.

**Type analysis:**

| | |
|---|---|
| Particle size | 50-150 µm |
| Beads (cross-linked agarose) | 6 % |
| Ligand | IDA |
| Metal ion | Cobalt |
| Binding capacity (DHAK-6xHis) | 135 mg/ml |
| Activating agent | Epichlorohydrin |
| Stabilizer | 20 % ethanol |

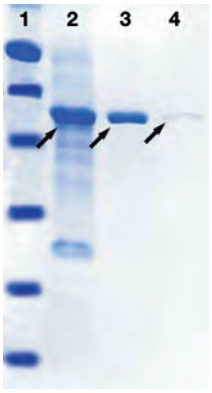

**Figure:** SDS-PAGE of highly expressed 6xHis-glutaryl acylase, 58 kDa (arrows). Good yield of extremely pure proteins.
1: Marker, 2: Protein raw extract, 3: 6xHis target protein purified with Roti®garose His/Co Beads, 4: 6xHis target protein purified by competitor product.

### Roti®garose-His/Co Beads

**for biochemistry**

For isolation of His-tagged proteins by affinity chromatography.
Agarose beads for affinity chromatography, IMAC matrix/cobalt charged
Storage temp.: +4 °C

**Danger** H225

Cobalt charged IDA-agarose beads for low pressure affinity chromatography. Slurry in 20 % ethanol.
Perfect choice if extremely pure proteins are required, or if hard-to-separate proteins shall be isolated.

- One-Step purification of His-tagged proteins from total lysates
- Good recovery rate of extremely pure His-tagged proteins
- Binding capacity (purified 6xHis protein) of 135 mg per ml matrix
- Easy elution and regeneration
- Very low Cobalt leaching
- Compatible with denaturing and reducing reagents
- For batch mode and gravity flow column chromatogrphy

The Matrix is stable in all commonly used reagents including denaturing and reducing reagents (like 8 M urea, 6 M guanidinium hydrochloride, 5 mM DTT).
May be autoclaved at 121 °C for 30 mins.

| | | | |
|---|---|---|---|
| **1235.1** | 25 ml | plastic | 274,15 € |
| **1235.2** | 100 ml | plastic | 736,40 € |

### Roti®garose-His/Co Columns

**for biochemistry**

For isolation of His-tagged proteins by affinity chromatography.
Affinity chromatography colums/cobalt charged, IMAC columns
Storage temp.: +4 °C

**Danger** H225

Prepacked columns with Cobalt charged IDA-agarose bead matrix for low pressure affinity chromatography.
Perfect choice if extremely pure proteins are required, or if hard-to-separate proteins shall be isolated.

Matrix volume 1 or 5 ml, whole volume 12 or 35 ml, respectively.
For approx. 120 and 600 mg His labelled protein.

- Fast and simple purification of His-tagged proteins from total lysates
- Good recovery rate of extremely pure His-tagged proteins
- Binding capacity (purified 6xHis protein) of 135 mg per ml matrix
- Easy elution and regeneration
- Very low Cobalt leaching
- Compatible with denaturing and reducing reagents
- For gravity flow chromatography

Roti®garose His/Co Columns are prepacked and may be used directly.
The Matrix is stable in all commonly used reagents including denaturing and reducing reagents (like 8 M urea, 6 M guanidinium hydrochloride, 5 mM DTT). Column material made from polypropylene and polyethylene (frit). Slurry in 20 % ethanol.
May be autoclaved at 121 °C for 30 mins.

| | | | |
|---|---|---|---|
| **1267.1** | 8x1 ml | | 235,45 € |
| **1267.2** | 5x5 ml | | 611,70 € |

# Protein A Coated Agarose Beads for Antibody Purification via Low Pressure Affinity Chromatography

For rapid and simple purification of antibodies with reasonable effort, affinity chromatography still is the first choice in most cases. Roti®garose Protein A Beads offer the perfect solution for isolation of your specific antibodies, either in low flow column chromatography or in batch mode.
The matrix of Roti®garose Protein A Beads consists of cross-linked and beaded 4 % agarose, coated and covalently coupled with protein A from *Staphylococcus aureus*. The recombinant protein A has high affinity for IgG from a variety of different mammalian species, also binding some populations of IgA and IgM. *rec*Protein A shares IgG binding properties with natural protein A of *S. aureus* Cowan strain I. Most immunoglobulins may be eluted in 100 mM glycin or citric acid buffer (pH 3,0).

- One-Step purification of immunoglobulins from cell lysates and biological solutions
- Binding capacity (human IgG) of approx. 25 mg per ml matrix
- Superior affinity for IgG from various mammalian species
- High yield of very pure immunoglobulins
- Covalent binding of protein A in high ligand density
- For batch mode and gravity flow

**Type analysis:**

| | |
|---|---|
| Particle size | 50-150 µm |
| Beads (cross-linked agarose) | 4 % |
| Ligand | recombinant protein A |
| Chemical bonding | covalent |
| Ligand density (Protein A) | ca. 3 mg/ml |
| Binding capacity (humane IgG) | ca. 25 mg/ml |
| Stabilizer. | 20 % ethanol |

## Roti®garose-Protein A Beads

**for biochemistry**

For purification of immunoglobulins by affinity chromatography.
Agarose beads for affinity chromatography, IMAC matrix/Protein A conjugated
Storage temp.: +4 °C

**Danger** H225

Protein A coated agarose beads for low pressure affinity chromatography. High-performance affinity resin for antibody purification.
Slurry in 20 % ethanol.

| | | | |
|---|---|---|---|
| **1278.1** | 5 ml | plastic | 557,95 € |
| **1278.2** | 25 ml | plastic | 1890,95 € |

ready-to-use

## Roti®garose-Protein A MIDI columns

**for biochemistry**

For purification of immunoglobulins by affinity chromatography.
Affinity chromatography columns/protein A conjugated
Storage temp.: +4 °C

**Danger** H225

Prepacked columns with Protein A coated agarose beads for low pressure affinity chromatography. High-performance affinity resin for antibody purification.
Matrix volume 1 ml, whole volume 12 ml. For approx. 25 mg IgG.
Slurry in 20 % ethanol.

## Columns and Accessories

## Empty columns for protein isolation

Empty columns for protein isolation by chromatography.
Chemically stabile and versatile.
Column material: Polypropylene, Material column frit: Polyethylene.
Delivery includes end caps for Columns Grav S, M and L.
Delivery includes top caps with Luer lock and screw lock plus end caps for columns Luer.
Delivery includes plugs and end caps for columns Inject. Luer-connection w/o screw thread.

**Technical specifications:**

| Type | Figure | Matrix volume | Total volume | Frit pore size | Chromatography by |
|---|---|---|---|---|---|
| Spin | ① | 100-250 µl | 1,5 ml | 20 µm | Centrifugation |
| Grav S | ② | 100-200 µl | 1 ml | 20 µm | Gravity |
| Grav M | ③ | 0,5-2 ml | 12 ml | 20 µm | Gravity |
| Grav L | ③ | 2-6 ml | 35 ml | 20 µm | Gravity |
| Luer | ④ | 50-100 µl | 0,8 ml | 35 µm | Pressure |
| Inject | ⑤ | 0,8 ml | 0,8 ml | 10 µm | Pressure |

| Type | Art. No. | Pack Qty. | € |
|---|---|---|---|
| Spin | **1541.1** | 25 | 60,00 |
| Spin | **1541.2** | 100 | 194,60 |
| Grav S | **1515.1** | 20 | 102,90 |
| Grav M | **1516.1** | 50 | 189,20 |
| Grav L | **1518.1** | 50 | 231,15 |

| Inject | **1532.1** | 5 | 67,55 |

# Reagents

## Empty cartridges for protein isolation

Empty columns for protein isolation by pressure chromatography.

Chemically stabile and versatile. In case longer column beds are needed, 2 or 3 cartridges may be interconnected using the Luer adapter (0198.1, 10-32, male/female luer connector), resulting in a matrix of up to 10 cm. Compatible with common chromatography instruments like ÄKTA™FPLC™.

Column material: Polypropylene, Material column frit: Polyethylene.

Delivery includes empty cartridges plus end plugs. For storage of packed cartridges, column plugs (0197.1) have to be used. Please order separately.

**Technical specifications:**

| Product | Figure | Volume* | Inner ∅ | Frit pore size | Chromatography by |
|---|---|---|---|---|---|
| Empty cartridges | ① | 1 ml | 6,2 mm | 12 µm | Pressure |

* The actual filling volume depends on the respective resin used, varying between approx. 1 and 1.3 ml.

| Product | Image | Art. No. | Pack Qty. | € |
|---|---|---|---|---|
| Empty cartridges | ① | **1345.1** | 5 | 145,15 |
| Column plugs | ② | **0197.1** | 10 | 74,75 |
| Luer adapter | ③ | **0198.1** | 1 | 24,20 |

**Instructions for use**
can be found on the Internet next to the product description.

## Spectra/Gel™ Absorbent

For concentration of dialysed proteins and microparticles.

**Warning** H319

- Most easy to handle
- Compatible with all types of dialysis membranes and -systems (MWCO: 100 up to 300 000 D)
- Suitable for concentration of very small molecules
- Contamination of samples excluded
- Cost efficient

Easy and cost efficient concentration of proteins, microparticles and other macromolecules.

**Application:**
After dialysis, the dialysis tubing containing the sample is simply coated with Spectra/Gel™ Absorbent. Made of polyacrylate-polyalcohol, Spectra/Gel™ removes water and small molecules like salt ions from the sample by absorption through the membrane without affecting or contaminating the biomolecules. Grain size 100-850 µm.
The duration of the process depends on the desired final concentration, the MWCO of the dialysis membrane, and the surface to volume ratio of the tubing. E.g. concentration of 5 ml sample through a MWCO of 15 kD results in a final volume of 0.5 ml in approx. 60 min. The wet granulate may be easily wiped off and the concentrated sample be removed from the opened dialysis tubing.
One package (500 g) suffices for up to 50 applications.

For additional product data and safety information, see chapter Chemicals A-Z.

▶ Many reagents in tablets or pouches, see first pages of this chapter Biochemistry!

# Scintillation Cocktail

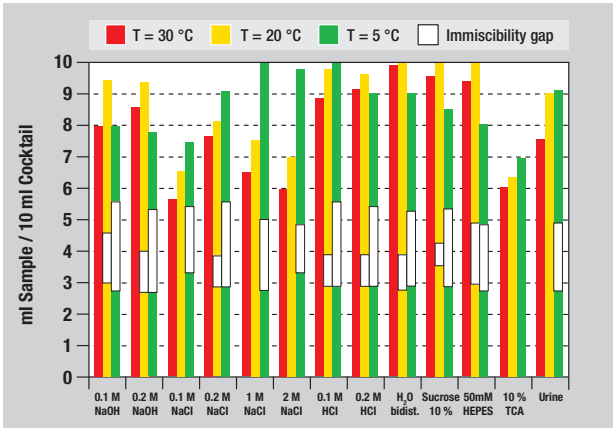

**Fig.: Typical sample acceptance capacity**
The immiscibility gap is characterized by two phases and may not be used for measurement. By increasing or reducing sample amount in relation to scintillation cocktail, the immiscibility gap may be avoided. Sample acceptance capacities of PBS, TBS etc. equal this of 0.1 M NaCl. Sample acceptance capacities of BSA solutions, cell culture supernatants etc. equal this of HEPES.

## Rotiszint® eco plus

**LSC-universal cocktail**

For hydrophilic and lipophilic samples.

**Danger** H318-H315-H412-H302

- Very high sample acceptance capacity
- High counting efficiency
- Low photo- and chemoluminescence
- Very good colour- and chemical quench resistance
- Environmentally safe and non-carcinogenic
- Virtually odor- and colourless
- High flash point
- No permeation through plastic vials

Multi-purpose, ready-to-use scintillation cocktail for Liquid Scintillation Counting (LSC) of β radiators (e.g. $^{3}H$, $^{14}C$, $^{32}P$). Excellent sample acceptance capacity for all aqueous and organic samples, optimally suited for solutions with high ionic strength. Rotiszint®-eco plus may be used in general in all biological, biochemical and chemical areas, contemporary typical applications are e.g. measurement of cell culture supernatants, routine analyses, and enzymatic assays. Also well suitable for filter plates.

In Rotiszint®-eco plus, di-isopropyl naphthalene is the base reagent of primary scintillators. The cocktail is free of carcinogenic or environmentally dangerous reagents.

Rotiszint®-eco plus is perfectly suited for measurement of solutions, showing a counting efficiency of 47 % ($^{3}H$). Through its emulsifying character, Rotiszint®-eco plus elutes samples from filter plates, thus making it also suitable for counting of filter samples. For reliable quantitative elution we recommend addition of a sample specific elution buffer. Note: Use of alkylating elution buffers may cause chemoluminescence.

We recommend the use of Rotilabo®-dispensers (Art. No. HAC6.1-HAC9.1, HAE0.1 or HAE1.1) and telescopic suction pipe (Art. No. AA92.1).

| | | | |
|---|---|---|---|

▶ Dispensers see page 393

### Application and quench of Rotiszint® eco plus

Rotiszint® eco plus: Efficiency in solution ($^{3}H$) 47 %, ($^{14}C$) 90 %

Ideal for measuring **solutions**.

Please note when measuring **filter discs**:
Rotiszint® eco plus contains emulsifying components and elutes the samples from the discs. This increases measuring efficiency, however involves the risk of nonquantitative elution, so that the measurements may not be reproduced as reliably in some cases. The rate of yield when eluting from filter discs can be increased by adding tissue solutizers, whereby the chemical and color quench are also increased. It must be determined for each individual experiment which mixture is suitable.

### Advantages of Rotiszint® eco plus

Rotiszint® eco plus is based on the solvent di-isopropyl naphthaline (DIN), which due to its environmental friendliness is easy to handle, store and ship. It also fulfills all the measuring demands required of efficient scintillation cocktails.

Rotiszint® eco plus is produced without benzene, toluene, xylene and pseudocumene. The solvent has low vapour pressure, therefore there is no irritation caused by a bad odour. The solution is hardly flammable and economical in use. It is also biodegradable. Rotiszint® eco plus has high counting efficiency, excellent quench resistance, good sample stability, no chemoluminescence and no diffusion through plastic vials.

Rotiszint® eco plus comes in black 5 l plastic bottles, which can be used as storage containers. They enable easy, safe and place-saving storage.

A practical dispenser helps to remove the required amount of cocktail easily and safely. We recommend the Rotilabo®-dispenser (Art. No. Y837.1 - Y842.1). In order to completely remove all the liquid, the inner withdrawal tube may be replaced with a longer Teflon® or polyethylene tube (6 mm inner Ø), or by the telescope suction tube (Art. No. AA92.1).

# Protein Quantitation

## Roti®-Quant

**5x conc.**

For protein quantitation acc. to Bradford.
Storage temp.: +4 °C

**Danger** H226-H290-H314

- Reproducible
- Fast
- Low price

**Further characteristics:**
- 1 measurement per sample ($OD_{595}$)
- Linearity of measuring results to a great extent
- Sensitivity to 2 µg
- Functional range: 2-100 µg

50 ml Roti®-Quant is sufficient for more than 200 macroassays (1 ml-cuvette) or more than 900 assays when using microtiter plates.

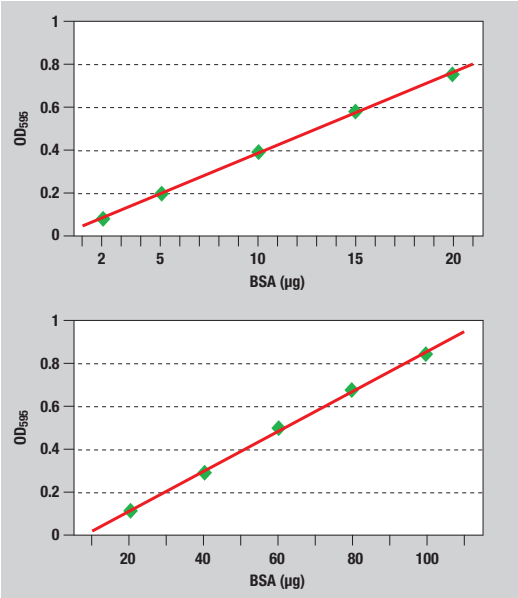

**Fig.:** Typical standard curve with Roti®-Quant and BSA (Art. No. 8076.1) as calibrating protein.

| | | | |
|---|---|---|---|
| **K015.2** | 50 ml | plastic | 14,55 € |
| **K015.3** | 200 ml | plastic | 46,80 € |
| **K015.1** | 500 ml | plastic | 93,00 € |

## Roti®-Nanoquant

**5x conc.**

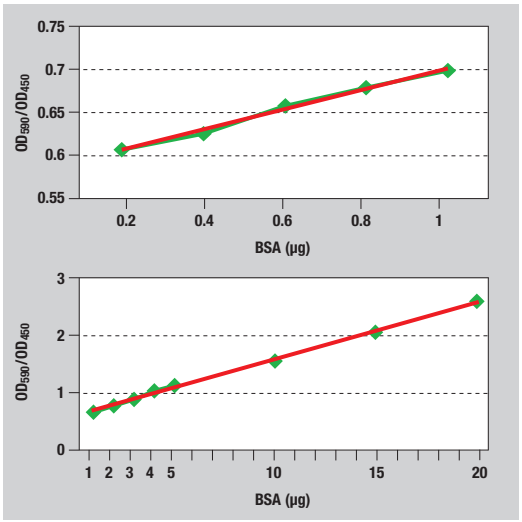
For protein quantitation acc. to Bradford, for extremely small protein amounts.
Storage temp.: +4 °C

**Danger** H226-H290-H314

- Reproducible
- Low-priced
- For very low protein amounts

**Further characteristics:**
- Double measurement per sample ($OD_{450}/OD_{590}$)
- Perfect linearity of measuring results
- Sensitivity: up to 200 ng
- Broad functional range of 200 ng to 25 µg

50 ml Roti®-Nanoquant is sufficient for more than 200 macroassays (1 ml-cuvette) or more than 900 assays when using micro-titer plates.



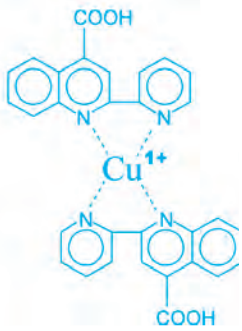


**Fig.:** Typical calibration line with Roti®-Nanoquant and BSA (Art. No. 8076.1) as calibrating protein.

|---|---|---|---|
| **K880.2** | 50 ml | plastic | 14,95 € |
| **K880.3** | 200 ml | plastic | 45,05 € |
| **K880.1** | 500 ml | plastic | 89,80 € |

▶ Further details and figures on these products at www.carlroth.com / Life Science / Biochemistry/ protein quantitation

## Roti®-Quant universal

For protein quantitation (PCA enhanced Biuret reaction). High tolerance against detergents, salts and alcohols.

Storage temp.: +20 °C

**Danger** H315-H318-H411

- **Equals the well-known BCA assay**
- Very easy to handle
- Highly sensitive measurement up to 0.5 µg protein
- Linear measuring range from 0.5 to 200 µg protein
- Can be used in 1-ml-scales and in microtiter plates (can be automated)
- Measurement with standard filters (492 nm wave length) or at 503 nm wave length
- Accelerated reaction and increased sensitivity in mild heat

Colorimetric test for detecting and quantifying soluble proteins. The special reagent formula effects a high tolerance against interfering factors such as detergents, alcohol and buffer salts, thus making the kit a universal tool for measuring proteins in almost every solution.
The basic mechanism, a PCA enhanced Biuret reaction, is identical with the one used for the well known BCA protein assay. Its result, however, is a bright blue colour which may be measured with standard filters of approx. 500 nm wave length.

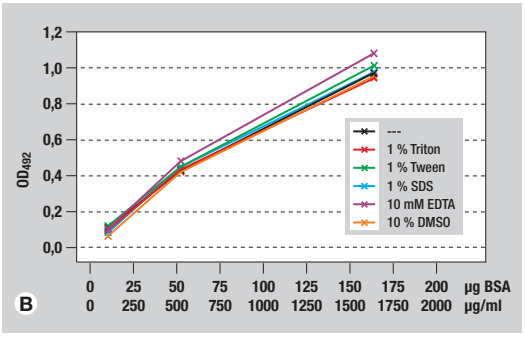

**Fig. B:** Independence of Roti®-Quant-universal-assay of detergents and other additives, examples. Blank-value corrected. Measurement of 100 µl each protein solution.

(With kind permission of Dr. Angelika Böttger, Zoological Institute, Ludwig-Maximilians-University Munich)

**The kit contains:**
500/200 ml Roti®-Quant universal reagent 1 (Art. No. 0118) and 40/16 ml Roti®-Quant universal reagent 2 (Art. No. 0119), adequate for 500/200 preparations in photometer cuvettes or 5000/2000 preparations in microtiter plates.

Contents of this Kit may not be bought separately.

| | | |
|---|---|---|
| **0120.2** | 1 kit (200 assays) | 86,55 € |
| **0120.1** | 1 kit (500 assays) | 181,70 € |

**Instructions for use**
can be found on the Internet next to the product description.

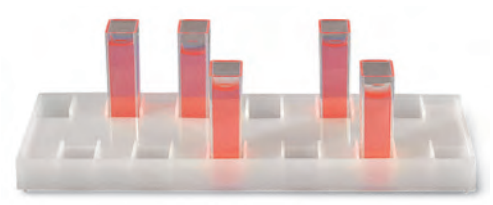
## Rotilabo®-single-use cuvettes

Made of **PS**, **PPMA** or special plastic.
- Two optical windows
- Extremely low deviation in absorbance values
- Outstanding optical transmission values
- Cavity-sorted production

Layer thickness 10 mm. Dimensions: L 12.5 x W 12.5 x H 45 mm.

**Polystyrene (PS)**
Range of application: 340 to 900 nm.

| Type | Volume (ml) | Packaging | Art. No. | Pack Qty. | € |
|---|---|---|---|---|---|
| ① Semi-micro | 1,6 | 10 x 100 | **XK20.1** | 1000 | 73,05 |
| ② Macro | 4,0 | 10 x 100 | **XK21.1** | 1000 | 74,15 |



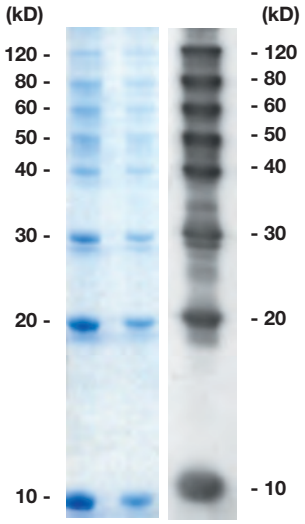
## Disposable cuvettes

By Brand. Made of **PS** or **PMMA**.
- Two optical windows
- Optically perfect transparency
- Sorted according to nest numbers to minimize extinction deviation
- Recessed windows to protect against scratching
- Arrow marks direction of irradiation

Standard-layer thickness 10 mm. Dimensions: 12.5 x 12.5 x 45 mm.
**Passband: PS: 340-900 nm.**
Standard deviation:
- PS at 360 nm ≤0.005 extinction units.

**Polystyrol (PS)**

| Type | Volume (ml) | Art. No. | Pack Qty. | € |
|---|---|---|---|---|
| Macro | 2,5-4,5 | **Y194.1** | 100 | 11,80 |
| Semi-micro | 1,5-3,0 | **Y195.1** | 100 | 12,40 |



## Rotilabo®-cuvette stand

Made of **PE**. For 12 cuvettes 10 mm thick. With staggered arrangement of holders. Low stand-depth for better observation of cuvette contents. Dimensions: L 170 x W 50 x H 15 mm.

| Art. No. | Pack Qty. | € |
|---|---|---|
| **9663.2** | 5 | 24,55 |

# Western-Blot & ELISA

## Western-Blot Marker

### Roti®-Mark WESTERN Set

**Set of protein marker and antibody for gel and Western-Blot**

**Size range: 10-120 kD**
**Number of protein bands: 8**
**Number of lanes: approx. 100 or 10 (mini gels)**
Storage temp.: -20 °C • Transport temp.: room temp.

**Warning** H319

Finely graded protein marker for medium size range and for detection in gel and on the Western-Blot membrane. The marker itself consists of unstained proteins and therefore enables correct size evaluation in gel (left figure). The marker-specific antibody Roti®-Mark WESTERN HRP- conjugate (rabbit) enables the marker to be detected directly in Western- Blot and stained through chemoluminescence or colour reaction. Antibody incubation is performed in parallel with the incubation of your protein-specific antibodies and therefore saves any additional work and expense. The marker bands are also automatically stained (right figure) during subsequent detection by horseradish-peroxidase.

Consequently you will obtain the correct ladder size directly on your printout, X-ray film or membrane, ruling out the possibility of any errors through inaccurate transfer of the bands.
Marker proteins are solubilised in a non-reducing buffer acc. to Laemmli.
Roti®-Mark WESTERN Marker can be bought seperately under Art. No. 0948.1 and Roti®-Mark WESTERN HRP conjugate under Art. No. 0949.1.

**Left hand fig.:** 12 % minigel, 10 µl and 5 µl marker solution, respectively.
**Right hand fig.:** Chemoluminescence detection via Roti-Lumin, Art. No. P078.1. Proteins were run in a 12 % minigel and transferred onto a Roti®-PVDF-Membran. 5 µl Roti®-Mark WESTERN Marker and Roti®-Mark WESTERN HRP conjugate diluted by 1:2.500.

### Roti®-Mark WESTERN HRP Conjugate

**0,2 mg/ml**

For HRP mediated detection of Roti®-Mark WESTERN Marker.
Storage temp.: -20 °C • Transport temp.: room temp.

Anti-Roti®-Mark WESTERN marker protein/HRP conjugate made from rabbit serum. The antibody is aimed specifically at the marker proteins of the Roti®-Mark WESTERN marker (Art. No. 0948.1) and is used mixed together with your protein-specific antibody. The marker bands are then also automatically stained during subsequent detection by horseradish-peroxidase.
The figure shows chemoluminescence detection of the Roti®-Mark WESTERN marker (5 µl) with Roti®-Mark WESTERN HRP-conjugate (diluted 1:2.500) using Roti®-Lumin (Art. No. P078.1) after separation on a 12 % minigel and transfer onto a Roti®-PVDF-membrane. The solution has been stabilised with PBS and BSA. The antibody can be used in dilutions of 1:500 to 1:5.000 and is adequate at a volume of 5 ml buffer for up to 250 assays. Short-term storage for a few weeks is possible at +4 °C. We recommend you aliquot and preserve the antibody at -20 °C or -80 °C for longer-term storage.

# Blocking Reagents

### Sodium-Casein

**≥89 % lactoprotein**

Casein-sodium

Blocking reagent from milk protein, suitable for Western and ELISA. High blocking efficiency based on the amount of small protein and peptide species (<10 kD). Can be used with PBS/PBST and TBS/TBST as well as all standard colorimetric and fluorescent detection systems. Not suitable for PVDF-membranes, biotin/streptavidin mediated labelling (milk contains biotin), and detection of phospho-proteins.
**Tip:** Prepare stock solution in 0.3 M NaOH (37 °C), titrate to pH 7.4 (HCl).

| | | | |

| **8569.3** | 2,5 kg | plastic | 92,35 € |

### Powdered milk

**blotting grade, powdered, low fat**

BLOTTO reagent

Lowfat powdered milk, especially suited for use as blocking reagent in immunological assays like Western-Blot analyses or ELISA. Fine powdered for easy application.
**Not suitable for biotin/streptavidine mediated detection systems. Milk contains biotin.**

## Roti®-Block

**ready-to-use, 10x conc.**

Protein free blocking solution. Contains Tween® 20.

Storage temp.: +20 °C

**Suitable for**

- Western- and Far Western Analysis
- Southern- and Northern-Blots
- Dot-Blots
- ELISA- and Sandwich-Assays
- Precoating of ELISA-plates (incl. drying)
- *in situ* hybridisation
- Microarray hybridisation

In order to obtain high signal intensity, nonspecific antibody binding sites must be blocked. Whilst detergents are not effective as blocking agents, the addition of proteins such as BSA may mask specific binding sites. Roti®-Block is an innovative, polymer-based blocking reagent which solves such problems. With Roti®-Block, the specific binding sites remain accessible while nonspecific reactions are suppressed, thus leading to an increase in signal intensity.

Included you will find a detailed instruction manual with protocols, e.g. for stripping PVDF-membranes from bound probes without destabilising the blocking, which enables fast rescreening of the filter.
Roti®-Block also enables the blot to be Ponceau stained even after blocking.
For detection systems using antibodies specifically directed against protein-phosphorylations we recommend to test and optimise the blocking efficiency prior to assaying your samples.

**Instructions for use**
can be found on the Internet next to the product description.

## Roti®-ImmunoBlock

**ready-to-use, 10x conc.**

Protein free blocking reagent for immunocytological assays.
Without detergent.

Storage temp.: +20 °C

**Suitable for**

- Immunocytological assays
- Immunohistological assays
- Paraffin- and cryosections
- *in situ* hybridisation
- Cell culture samples
- Whole mount samples

Roti®-ImmunoBlock is an innovative blocking reagent on a polymer base without detergents and proteins.

No contamination of your detection system through foreign proteins, reducing background and false-positive signals. Specific binding signals are preserved whilst non-specific interaction is impeded, increasing the signal-to-noise ratio. Ready-to-use solution for fast and easy applications.

## Roti®fair BBS

**for 500 ml/tablet, for biochemistry and molecular biology**

Coating of ELISA plates and blocking supplement.

Borate Buffered Saline (tablets)

**Danger** H360FD

Exactly pre-weighed tablets for convenient and rapid preparation of Borate Buffered Saline solution (BBS).
BBS is commonly used for coating of ELISA plates and for blocking-enhancement of Western- or Southern blot membranes.
The buffer can also be used as a sample diluent in biological studies and for various applications within biology and biochemistry in order to stabilize the pH value.
Prepared solution may be sterilized by filtration (0,22 µm) or autoclaving.
Buffer solution has to be stored at +4 °C.

1x BBS solution is prepared by solubilization of 1 tablet in 500 ml highly pure water.

**Composition:**

Prepared 1x BBS solution contains: 0,15 M NaCl, 10 mM borate buffer, pH-value 8,2 ±0,05, when prepared in deionized or distilled water.

# Antibodies

## Primary Antibodies

ready-to-use

Polyclonal sera and pABs for detection and isolation of labelled proteins

**Raised in:** Rabbit
**Conjugation:** None or Horse Radish Peroxidase (HRP)
**Application:** Immuno blotting (Western-, dot blotting), ELISA, protein isolation and -purification

**Purification and specificity sera:** None.
Tested for Western Blot and ELISA.
**Purification and specificity pAB and Anti His-HRP:** Purified from monospecific antiserum by affinity chromatography on immobilised tag/anchor sequence. Tested for Western Blot and ELISA.

Storage temperature: -20 °C
Transport temperature: cooled (freezer packs)

| Primary antibody | Concentration and purification | Target | Storage buffer | Recommended dilution | Art. No. | Pack Qty. | € |
|---|---|---|---|---|---|---|---|
| **Anti DYKDDDDK pAB** | 1 mg/ml, polyclonal, affinity purified | DYKDDDDK**-anchor sequence | 1x PBS, pH 7,4 | 1:1000 | **4665.1** | 100 µl | 244,60 |
| **Anti DYKDDDDK Serum** | polyclonal | DYKDDDDK**-anchor sequence | x | 1:1000 | **4664.1** | 100 µl | 200,50 |
| **Anti GST pAB** | 1 mg/ml, polyclonal, affinity purified | GST-fusion-tag | 1x PBS, pH 7,4 | 1:1000 | **3998.1** | 100 µl | 244,60 |
| **Anti GST Serum** | polyclonal | GST-fusion-tag | x | 1:2000 | **3994.1** | 100 µl | 200,50 |
| **Anti His-HRP*** | 1 mg/ml, polyclonal, affinity purified | His-tag*** | 0,15 M NaCl, 0,1 M Na/ K-phosphate buffer, pH 6,5 | 1:1000 - 1:10000 | **3894.1** | 100 µl | 295,65 |
| **Anti His pAB** | 1 mg/ml, polyclonal, affinity purified | His-tag*** | 1x PBS, pH 7,4 | 1:1000 - 1:10000 | **3742.1** | 100 µl | 244,60 |
| **Anti His Serum** | polyclonal | His-tag*** | x | 1:1000 | **3735.1** | 100 µl | 200,50 |
| **Anti Myc pAB** | 1 mg/ml, polyclonal, affinity purified | Myc-anchor sequence | 1x PBS, pH 7,4 | 1:1000 | **4667.1** | 100 µl | 244,60 |
| **Anti Myc Serum** | polyclonal | Myc-anchor sequence | x | 1:1000 | **4666.1** | 100 µl | 200,50 |

For additional product data and safety information, see chapter Chemicals A-Z.

* HRP-labelled and stabilised with 27 % glycerol, 4,5 % BSA, 0,09 % thimerosal
** Sequence identical with FLAG® sequence by Sigma-Aldrich
*** C-terminal or N-terminal

▶ Antibody Diluents see page 1318

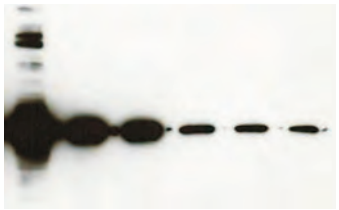

**Figure:** Western blotting of decreasing amounts (50 ng - 17 pg) of a bacterial extract including a 40 kDa protein. Probed by Anti His Serum (1:1.000) and Roth Anti Rabbit-HRP. Detection via chemoluminescence.

**Instructions for use**
can be found on the Internet next to the product description.

### MultiTag-Protein

ready-to-use

**0,1 mg/ml, affinity purified**
Recombinant protein with His-tag, GST-tag, Myc- and DYKDDDDK anchor sequence.
M 31,6 g/mol
Storage temp.: -20 °C • Transport temp.: cooled
**Labelling:** His-tag, GST-tag, DYKDDDDK anchor sequence*, Myc anchor sequence
**Application:** Immuno blotting (Western-, dot blotting), ELISA, protein isolation
**Purification and specificity:** Affinity purified, recombinant protein. Tested for affinity chromatography, Western blot and ELISA.
**Storage Buffer:** 1x PBS, pH 7.4
**Stabiliser:** 0.1 % SDS
**Recommended application:** 100 ng / lane (Western blotting), dilution 1:100 (ELISA)

| | | | |
|---|---|---|---|
| **3999.1** | 100 µl | plastic | 241,90 € |

# Secondary Antibodies

ready-to-use

Polyclonal antibodies for detection of primary IgG in immuno assays

**Concentration:** 1 mg / ml
**Raised in:** Goat
**Conjugation:** Horse Radish Peroxidase (HRP), Alkaline Phosphatase (AP) or Fluorescein isothiocyanate, Isomer I (FITC)
**Application:** Immuno blotting (Western-, dot blotting), ELISA, immunohistochemistry and -cytology, immonofluorescence, FACS analysis

**Purification and specificity:** Purified from monospecific antiserum by affinity chromatography on immobilised, species specific IgG. Tested for Western Blot and ELISA.

Storage temperature: -20 °C
Transport temperature: cooled (freezer packs)

| Secondary antibody | Labelling | Target | Art. No. | Pack Qty. | € |
|---|---|---|---|---|---|
| **Anti Human-AP** | Alkaline Phosphatase (AP) | Human IgG | **4754.1** | 1 ml | 189,75 |
| **Anti Human-HRP** | Horse Raddish Peroxidase (HRP) | Human IgG | **4753.1** | 2 ml | 155,90 |
| **Anti Human-FITC** | Fluorescein isothiocyanate (FITC) | Human IgG | **4755.1** | 2 ml | 139,25 |
| **Anti Mouse-AP** | Alkaline Phosphatase (AP) | Mouse-IgG | **4760.1** | 1 ml | 189,75 |
| **Anti Mouse-HRP** | Horse Raddish Peroxidase (HRP) | Mouse-IgG | **4759.1** | 2 ml | 155,90 |
| **Anti Mouse-FITC** | Fluorescein isothiocyanate (FITC) | Mouse-IgG | **4761.1** | 2 ml | 139,25 |
| **Anti Rabbit-AP** | Alkaline Phosphatase (AP) | Rabbit-IgG | **4751.1** | 1 ml | 189,75 |
| **Anti Rabbit-HRP** | Horse Raddish Peroxidase (HRP) | Rabbit-IgG | **4750.1** | 2 ml | 155,90 |
| **Anti Rabbit-FITC** | Fluorescein isothiocyanate (FITC) | Rabbit-IgG | **4752.1** | 2 ml | 139,25 |
| **Anti Rat-AP** | Alkaline Phosphatase (AP) | Rat-IgG | **4763.1** | 1 ml | 189,75 |
| **Anti Rat-HRP** | Horse Raddish Peroxidase (HRP) | Rat-IgG | **4762.1** | 2 ml | 155,90 |
| **Anti Rat-FITC** | Fluorescein isothiocyanate (FITC) | Rat-IgG | **4764.1** | 2 ml | 139,25 |

For additional product data and safety information, see chapter Chemicals A-Z.

**Storage buffer:**
*AP-conjugated* antibodies: 1x PBS, pH 7,4 (stabilisation: 40 % glycerol, 0,8 mM $MgCl_2$, 0,8 mM $ZnCl_2$)
*HRP-conjugated* antibodies: 150 mM NaCl, 100 mM sodium-/potassium phosphate buffer, pH 6,5 (stabilisation: 27 % glycerol, 4,5 % BSA, 0,09 % thimerosal)
*FITC-conjugated* antibodies: 1x PBS, pH 7,4 (stabilisation: none)

**Recommended Dilution:**
*AP-conjugated* antibodies: 1:1000 - 1:10000 (Western), 1:1000 - 1:20000 (ELISA)
*HRP-conjugated* antibodies: 1:1000 - 1:10000 (Western), 1:1000 - 1:20000 (ELISA)
*FITC-conjugated* antibodies: 1:1000 - 1:20000 (immuno fluorescence and FACS)

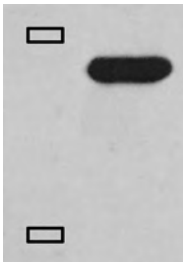

**Figure:** Western blotting of a HEK293 cell extrakt. Probing of Actin (42 kDa) by protein-specific primary antibody (mouse) and Anti Mouse-HRP (1:5.000). Detection via chemoluminescence.
Blank box: Protein marker in the gel.

## Important information on refrigerated transports

All products identified as being particularly temperature-sensitive are shipped in **special ice boxes with freezer packs or in dry ice.**
**Additional costs** resulting from such, **will be invoiced** (further information on request).

**Please note:**
In order to guarantee optimum product quality, the dispatch of refrigerated transport products will be carried out **on Mon and Tue only outside Germany!**
Slight delays in delivery are therefore possible.

# Ready-Made Solutions, Pre-Mixes, Tablets and Pouches

## Roti®-PreMix PBS

NEW

**for biochemistry and molecular biology**

General solution for assays in molecular biology and biochemistry.

PBS powder, Phosphate buffered saline

1x PBS solution is prepared by dissolution of 9.55 g/l in highly pure water.

**Formulation:**

Prepared 1x PBS solution contains: 0,14 M NaCl, 2,7 mM KCl, 10 mM phosphate, pH-value 7,4 ±0,2, when prepared in deionized or distilled water.

| | | | |
|---|---|---|---|
| **0890.1** | 250 g | plastic | 74,20 € |
| **0890.2** | 1,25 kg | plastic | 204,25 € |

## Roti®-PreMix PBST

NEW

**for biochemistry and molecular biology**

General solution for assays in molecular biology and biochemistry.

1x PBS solution is prepared by dissolution of 10.05 g/l in highly pure water.

**Formulation:**

Prepared 1x PBST solution contains: 0,14 M NaCl, 2,7 mM KCl, 10 mM phosphate, 0,05 % Tween® 20, pH-value 7,4 ±0,2, when prepared in deionized or distilled water.

| | | | |
|---|---|---|---|

| **0987.2** | 1,25 kg | plastic | 204,25 € |

## Roti®-Stock 10x PBS

**BioScience-Grade, ready-to-use, filtered and steam sterilised**

For protein biochemistry, cytology, and molecular biology.

PBS 10x ready-to-use solution

10fold stock solution phosphate buffered saline. Very versatile standard solution for detection systems in protein biochemistry, cytological stainings and molecular biological assays. Thus, 1 x PBS is used as basic solution for Western-Blot analyses, ELISAs and other enzymatic assays, for solving and dilution of proteins, for immunocytological and immunohistological assays, as well as for *in situ* hybridisations, apoptosis detection systems and staining of nuclei.
**Recommended for HRP-mediated detection systems.**
With original seal.

**Composition:**

1.37 M NaCl, 27 mM KCl, 100 mM $Na_2HPO_4$, 20 mM $KH_2PO_4$ in deionised water, pH-value 7.4, 0.2 µm filtered and steam sterilised

| | | | |
|---|---|---|---|
| **1058.1** | 1 l | glass | 115,60 € |
| Original pack 6 x 1 l | | | 109,82/1 l |

▶ Complete range of Roti®-Stock solutions see Chapter Chemicals A-Z!

## Roti®-Stock 10x PBST

**BioScience-Grade, ready-to-use, filtered and steam sterilised**

For protein biochemistry, cytology, and molecular biology.

PBST 10x ready-to-use solution

10fold stock solution phosphate buffered saline with Tween 20. Extremely versatile standard solution for protein biochemical detection systems, cytological staining and molecular-biological assays with similar fields of application as Roti®-Stock PBS. Roti®-Stock PBST can be used directly instead of PBS when the presence of Tween 20 is required in the detection system.
**Recommended for HRP-mediated detection systems.**
With original seal.

**Composition:**

1,37 M NaCl, 27 mM KCl, 100 mM $Na_2HPO_4$, 20 mM $KH_2PO_4$, 0,5 % Tween® 20 in deionised water, pH value 7,4, 0,2 µm filtered and steam sterilised

| | | | |
|---|---|---|---|
| **1059.1** | 1 l | glass | 120,95 € |
| Original pack 6 x 1 l | | | 114,90/1 l |

## Roti®-Stock 10x TBS

**BioScience-Grade, ready-to-use, filtered and steam sterilised**

For protein biochemistry, cytology, and molecular biology.

TBS 10x ready-to-use solution

10fold stock solution tris buffered saline. Very versatile standard solution for detection systems in protein biochemistry, cytological stainings and molecular biological assays. Thus, 1 x TBS is used as basic solution for protein detection systems like Western-Blot analyses and Far-Western assays, for immunocytological and immunohistological assays, as well as for whole mount *in situ* hybridisations, apoptosis detection systems and staining of nuclei.
**Recommended for AP-mediated detection systems.**
With original seal.

**Composition:**

1.5 M NaCl, 30 mM KCl, 250 mM Tris in deionised water, pH value 7.4, 0.2 µm filtered and steam sterilised

| | | | |
|---|---|---|---|
| **1060.1** | 1 l | glass | 120,95 € |
| Original pack 6 x 1 l | | | 114,90/1 l |

## Roti®-Stock 10x TBST

**BioScience-Grade, ready-to-use, filtered and steam sterilised**

For protein biochemistry, cytology, and molecular biology.

TBST 10x ready-to-use solution

10fold stock solution tris buffered saline with Tween 20. Extremely versatile standard solution for protein biochemical detection systems, cytological staining and molecular-biological assays with similar fields of application as Roti®-Stock TBS. Roti®-Stock TBST can be used directly instead of TBS when the presence of Tween 20 is required in the detection system.
**Recommended for AP-mediated detection systems.**
With original seal.

**Composition:**

1.5 M NaCl, 30 mM KCl, 250 mM Tris, 0.5 % Tween® 20 in deionised water, pH value 7.4, 0.2 µm filtered and steam sterilised

| | | | |
|---|---|---|---|
| **1061.1** | 1 l | glass | 120,95 € |
| Original pack 6 x 1 l | | | 114,90/1 l |

## Roti®fair-PBS/PBST and -TBS/TBST

**High-pure reagents and buffer mixes in pouches or as tablets.**

One tablet or the content of one pouch is simply dissolved in the respective amount of water - the desired solution is ready for use. Simply adapt the amount of water in order to vary the concentration, for instance for preparation of a higher concentrated stock solution.

- **Easy-to-use** - simply dissolve contents of one pouch or one tablet in water
- **Timesaving** - no need for weighing of several reagents or adjustment of pH
- **Convenient** - dry reagents for direct use spare preparation of long-term stored stock solutions
- **Reliable** - stringent quality control ensures high lot-to-lot consistency

## Roti®fair CBB

**for 100 ml/tablet, for biochemistry and molecular biology**

Coating of microtiter plates and tubes for immunoassays.

Carbonate bicarbonate buffer (tablets)

**Warning** H319

Exactly pre-weighed tablets for convenient and rapid preparation of a Carbonate bicarbonate buffer (CCB).
Due to its high efficiency to mediate protein binding to surfaces, carbonate bicarbonate buffer (CBB) is used as coating buffer on plates and tubes. CBB, therfore, is the optimum base solution to prepare microtiter plates or reaction tube prior to ELISA, RIA or EIA.
Prepared solution may be sterilized by filtration (0,22 µm). For long-term storage, buffer solution should be kept at +4 °C.

**Formulation:**

Prepared 1x CBB solution contains: 50 mM sodium carbonate bicarbonate buffer, pH-value 9,6 ±0,05, when prepared in deionized or distilled water.

## Roti®-Free Stripping Buffer

ready-to-use

**ready-to-use**

Premixed buffer for stripping of Western-Blot membranes.

Storage temp.: +20 °C

**Warning** H317-H319-H412

- Efficient
- Well-tried formulation
- With β-mercaptoethanol
- For stripping under heating
- Low-priced

The buffer offers a simple tool for removing antibodies and chemo-luminescence staining from Western blot membranes, allowing the valuable membranes to be analysed several times. Excellent when several proteins are to be detected in the same extract, or e.g. when in addition to a specific analysis, proteins in the respective lanes have to be semi-quantified (Kaufmann *et. al.* (1987) *Anal. Biochem.* 161:89-95).
Suitable for nitrocellulose and PVDF-membranes.

| | | | |

ready-to-use

## Roti®-Free Stripping Buffer 2.2 plus

**ready-to-use**

Premixed buffer for efficient stripping of Western-Blot membranes after Chemoluminescence detection, even with hard-to-remove antibodies.

Storage temp.: +20 °C

- Very effective
- Gentle
- Odour-free
- Simple application
- Also suitable for high-affinity antibodies

Stripping buffer for removal of high-affinity antibodies, as well as chemo-luminescence staining, from Western blot membranes. Due to the low pH of the buffer, the antibody conformation is altered, therefore gently removing all molecules bound to the epitopes (Legocki *et. al.* (1981) *Analyt. Biochem.* 111:385-92). Specially designed additives enhance the efficiency in removing those antibodies requiring long stripping times or high incubation temperatures with standard stripping buffer systems. Advanced formulation without β-mercapto ethanol or DTT for use at room temperature or heated. Suitable for nitrocellulose and PVDF membranes.

**Applications:** Following rinsing steps in PBST- or TBST buffer, the membrane is incubated in Roti®-Free Stripping-Puffer 2.2 plus for 30-60 mins. at room temperature. In case of very persistent antibodies incubation in heated buffer is allowed. After washing it again, the membrane may be blocked and probed anew. The particular time needed for complete stripping depends on the respective antibody/epitope pairing.

| | | | |

## Roti®-Free Stripping Buffer 2.0

ready-to-use

**ready-to-use**

Premixed buffer for gentle stripping of Western-Blot membranes after Chemoluminescence detection.

Storage temp.: +20 °C

**Warning** H319

- Effective
- Gentle
- Odour-free
- Simple application w/o heating
- Cost-efficient

Stripping buffer for efficient removal of primary and secondary antibodies, as well as chemoluminescence staining, from Western blot membranes. Due to the low pH of the buffer, the antibody conformation is altered, therefore gently removing all molecules bound to the epitopes (Legocki *et. al.* (1981) *Analyt. Biochem.* 111:385-92). Robust formulation without β-mercapto ethanol or DTT for use at room temperature. Suitable for nitrocellulose and PVDF membranes.

**Applications:** Following rinsing steps in PBST- or TBST buffer, the membrane is incubated in Roti®-Free Stripping-Puffer 2.0 for 15-60 mins. at room temperature. After washing it again, the membrane may be blocked and probed anew. The particular time needed for complete stripping depends on the respective antibody/epitope pairing.

# Substrates

Carl Roth offers you a wide range of substrates for biochemistry, cellular biology and microbiology. The key substrates for Western Blot and ELISA are summarised here.

For detailed information regarding usage, chemical details, safety instructions and further package sizes for these and many other substrates, refer to **"Substrates"** earlier in this chapter on biochemistry or to Chemicals A-Z.

## Roti®-DAB Kit

**for immunochemistry**

DNAse-free RNAse-free

Substrate kit for detection of HRP activity on blot membranes and slides.
DAB substrate kit, HRP substrate kit
Storage temp.: +4 °C • Transport temp.: cooled

**Danger** H302-H341-H351-H360D-H373

DAB substrate kit for detection of peroxidase (HRP) activity on immunoblots, immunohisto- and cytochemical slides and during *in situ* hybridization.
Roti®-DAB Kit contains substrate, buffer solution and activation reagent, therefore including all three solutions necessary for HRP detection reaction. Application is very simple - all three kit solutions are diluted equally in water, and the blotting filter membrane, or the slides, are then incubated in this substrate solution. Since the solutions are delivered in drop dispensers, dosing is most convenient.

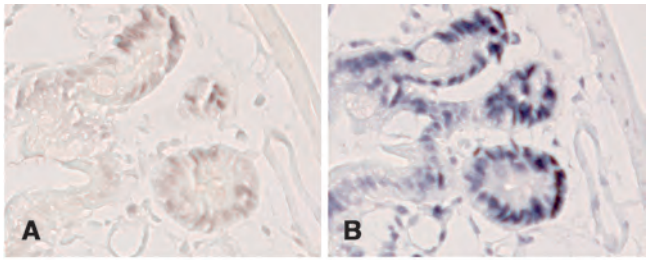

**Figure 1:**
Immunohistochemical staining of mouse small intestines with an anti-PCNA antibody. Minuscules: pure DAB substrate, capitals: detection supplemented by DAB enhancer (A: $NiCl_2$, B: DAB Metal Enhancer, Art. No. 9204).
A: Basic method using 0.6 mg/ml DAB in Tris-buffer
B: Detection performed with the Roti®-DAB Kit

**The kit contains:**
DAB solution (Art. No. 9869), DAB buffer (Art. No. 9870), and Activation reagent (Art. No. 9871) in dropper bottles. Contents of this Kit may not be bought separately.

One kit is sufficient for staining of approx. 44 minigel blot membranes or 500 slides.

| | | | |
|---|---|---|---|
| **9202.1** | 1 kit | cardboard | 181,70 € |

## Roti®fair pNPP

**for biochemistry**

For preparation of pNPP substrate solution for alkaline phosphatase.
pNPP (tablet), p-Nitrophenyl phosphate
Storage temp.: -20 °C • Transport temp.: room temp.
Exactly pre-weighed tablets for convenient and rapid preparation of pNPP solution.
Prepared solution may be sterilized by filtration.
The solution has to be stored at -20 °C in aliquots.

## Roti®fair pNPP 5mg

**5 mg/tablet**

**Formulation:**
Prepared solution contains 1 mg/ml pNPP, when 1 tablet is dissolved in 5 ml substrate buffer or deionized, or distilled, water.

| | | | |
|---|---|---|---|
| **1117.1** | 24 tablets | blister | 90,85 € |
| **1117.2** | 100 tablets | plastic | 134,40 € |

## Roti®fair pNPP 20mg

**20 mg/tablet**

**Formulation:**
Prepared solution contains 1 mg/ml pNPP, when 1 tablet is dissolved in 20 ml substrate buffer or deionized, or distilled, water.

| | | | |
|---|---|---|---|
| **1128.1** | 24 tablets | blister | 97,30 € |
| **1128.2** | 100 tablets | plastic | 349,40 € |

# Enhancers

NEW

ready-to-use

## Antibody Diluents

**ready-to-use, for immunohistochemistry**

For optimisation of immunohistochemical detection signals.

Enhancer solution

Storage temp.: +4 °C • Transport temp.: cooled

- Enhances signal strength
- Reduces background
- Very easy application
- Compatible with paraffin- and cryo sections

Due to the particularly designed formulation, antigen/antibody binding is enhanced, while reducing background signals in parallel (Grube (2004) *Arch Histol Cytol.* 67:115-34 and Buchwalow *et al.* (2011) *Sci Rep.* 1:28). Stability of the antibodies is significantly enhanced. The buffer solution is suitable for dilution of all primary and secondary antibodies, all mono- and polyclonals, as well as for all labelled as well as non-labelled antibodies.

Application is most simple: The antibodies are just diluted in the ready-to-use diluent and applied to the slides after blocking. For reduction of the amount needed and for optimised use of high-priced antibodies we recommend to use the Roti®-Liquid Barrier Marker (red, Art. No. AN92, or colourless, Art. No. AN91), in order to prepare tiny incubation chambers on top of the slides.
One bottle for 125 ml is sufficient for enhancement of approx. 125 slides.

## Antibody Diluent green

Buffer solution for preparation of antibody incubation solutions.
With green dye for easy handling.

| | | | |
|---|---|---|---|
| **0070.1** | 125 ml | plastic | 65,60 € |
| **0070.2** | 4 x 125 ml | plastic | 189,20 € |

## Antibody Diluent clear

Buffer solution for preparation of antibody incubation solutions and stabile antibody dilutions for storage.

| | | | |
|---|---|---|---|
| **0509.1** | 125 ml | plastic | 65,60 € |
| **0509.2** | 4 x 125 ml | plastic | 189,20 € |

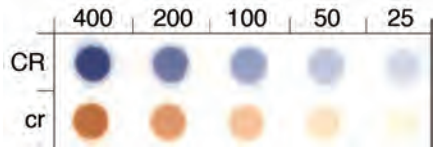
**Instructions for use**
can be found on the Internet next to the product description.

## DAB Metal Enhancer

**for immunochemistry**

ready-to-use

DNAse-free RNAse-free



For enhancement of HRP signals on blot membranes and slides.

Enhancer solution

Storage temp.: +20 °C

**Danger** H317-H334-H341-H350i-H360D-H372-H412

DAB metal enhancer is used to enhance the signal strength in peroxidase (HRP) detections and to modify the signal colour from brown to purplish gray. Applications include all immunochemical assays like immunohisto-chemistry and -cytochemistry as well as Western blotting, but DAB metal enhancer may also well be used during *in situ* hybridization.
When the DAB metal enhancer is applied, the sensitivity of DAB staining is about two times higher than with DAB alone. For application, the DAB substrate components and buffer reagents (for instance Roti®-DAB-Kit, Art. No. 9202) are simply diluted in DAB metal enhancer instead of water. The purplish gray precipitate resulting from the staining reaction can be detected in visible light and does not bleach during long-term storage. Since it is insoluble in aqueous and organic solvents, slides may be permanently mounted in hydrophilic, or, after dehydration, in hydrophobic mounting medium.

One bottle for 100 ml is sufficient for enhancement of approx. 10 minigel blots or 100 slides.

| | | | |
|---|---|---|---|
| **9204.1** | 100 ml | plastic | 94,50 € |

## Roti®-Strept/HRP-Kit

**for immunochemistry**

HRP-kit for highly sensitive detection of biotinylated molecules on slides.

HRP detection kit with biotin and streptavidine

Storage temp.: +4 °C • Transport temp.: cooled

EUH208

Roti®- Strept/HRP kit is a peroxidase kit for very sensitive detection of biotinylated molecules on slides, for instance in immunohistochemical or -cytochemical assays. Sensitivity of colour staining is hence increased to the level known from chemoluminescence.
Roti®- Strept/HRP kit contains streptavidine and a biotin-coupled peroxidase, which are combined in order to increase the sensitivity of the detection method significantly. Application is very simple - both kit solutions are diluted equally in PBS, and the slides are incubated in this substrate solution after second antibody. Since the solutions are delivered in drop dispensers, dosing is most convenient. The HRP is then stained by common substrates like DAB (Roti®-DAB kit Art. No. 9202).
Following staining, the slides may be permanently mounted in hydrophilic, or, after dehydration, in hydrophobic mounting medium.

**This Kit contains:**
Streptavidin solution (Art. No. 0941), biotin peroxidase solution (Art. No. 0946) and an empty bottle for mixture. Contents of this Kit may not be bought separately.

One kit is sufficient for incubation of approx. 200 slides.

| | | | |
|---|---|---|---|
| **9206.1** | 1 kit | cardboard | 321,45 € |

▶ DAB substrate kit see page 1288

## Signal Enhancer Western/ELISA Set

**for immunochemistry**

For enhancement of immunochemical detection signals on blot membranes and in ELISA.

Enhancer solution

Storage temp.: +4 °C • Transport temp.: cooled

- Strong enhancement of signal strength
- Most easy application
- Compatible with
  Western and ELISA
  HRP and AP
  all common membranes
  all common substrates

The Signal Enhancer Western/ELISA enhances antigen-antibody reactions in a variety of immunoassays such as Western blotting, dot blotting and ELISA. It can significantly enhance detection of weak immunoreactive and low abundance target proteins and is well compatible with all common assay versions, membranes and ELISA plates.
Signal enhancement is dependent on several parameters such as the particular antigen/antibody pair, the particular detection enzyme, the substrate chosen and so on. In most cases, however, the signal strength is about 5 to 10fold higher than with the substrate alone. For application, the two solutions Signal Enhancer Western/ELISA-1 and -2 are simply used as buffer solutions for preparation of the primary- and secondary antibody incubation solutions. Following incubation and washing, all common detection procedures may be applied, for instance colour staining with Roti®-DAB-Kit (Art. No. 9202) or chemoluminescent staining with Roti®-Lumin plus (Art. No. 3692).

**This Kit contains:**
Signal Enhancer Western/ELISA-1 (Art. No. 9213) and Signal Enhancer Western/ELISA-2 (Art. No. 9214). 1 Mini-Set: 2 x 50 ml, 1 Set: 2 x 250 ml.

One set with 250 ml each is sufficient for optimization of approx. 25 minigel blots.

| | | | |
|---|---|---|---|
| **9211.2** | 1 Mini-Set | plastic | 137,10 € |
| **9211.1** | 1 Set | plastic | 403,15 € |

## Signal Enhancer Western/ELISA-1

**for immunochemistry**

For optimisation of primary antibody binding in immunochemical assays.

Storage temp.: +4 °C • Transport temp.: cooled

The solution Signal Enhancer Western/ELISA-1 enhances reaction between antigens and their corresponding **primary** antibodies in a variety of immunoassays such as Western blotting, dot blotting and ELISA.

One bottle with 250 ml is sufficient for approx. 25 assays.

| | | | |
|---|---|---|---|
| **9213.1** | 250 ml | plastic | 231,15 € |

## Signal Enhancer Western/ELISA-2

**for immunochemistry**

For optimisation of binding of primary and labelled antibodies in immunochemical assays.

Storage temp.: +4 °C • Transport temp.: cooled

The solution Signal Enhancer Western/ELISA-2 enhances binding of **secondary** antibodies in a variety of immunoassays such as Western blotting, dot blotting and ELISA. The solution is well compatible with all common assay versions, membranes and ELISA plates.

Recommended for performance of assays using one antibody only, which is labelled.

One bottle with 250 ml is sufficient for approx. 25 assays.

| | | | |
|---|---|---|---|
| **9214.1** | 250 ml | plastic | 231,15 € |

## Roti®-Free Slide Enhancer

DNAse-free
RNAse-free

**10x conc., BioScience-Grade**

Concentrated buffer for enhancement of detection signals in immunohistochemistry and *in situ* hybridization.

Storage temp.: +20 °C

- Very effective
- Gentle
- Odour-free
- Simple application
- Suitable for formaline- and paraffin fixed samples and cryo sections

Efficient stripping buffer for removal of antibodies, probes, and corresponding stains from immunohisto- and -cytochemical samples, as well as from *in situ* hybridizations.
Due to the particularly adjusted formulation of the Roti®-Free Slide Stripping Buffer, antigens and hybridization partners are retrieved very gently, but quantitatively, enabling the samples to be assayed repeatedly. Suitable for all common samples like formaline- and paraffin fixed tissue and cells, or cryo sections.

**Applications:** The slides are incubated in Roti®-Free Slide Stripping Buffer for 20-40 min at 70-95 °C. After repeated washing steps, the samples may be assayed again with antibodies or probes. The particular parameters necessary for complete stripping depend on the respective samples, fixing-, and detection systems.

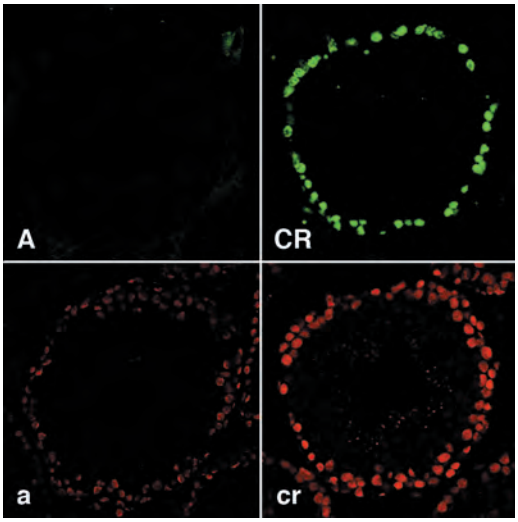


**Figure 2:**
Detection of proliferation by fluorescent immunohistochemical assay on tissue cryo-sections.
Capitals: Detection of integrated BrdU, minuscules: Immunohistochemical PCNA detection with red flourescence dye.

## Western Incubation Trays

**Compatible with all standard Western-staining methods.**

Western incubation trays have been specially developed for staining Western-blots. The sizes adapted to suit typical Western-blots, reduce the required quantity of antibodies and staining reagents. The trays are compatible with all standard staining methods and can easily be stacked. The airtight lids effectively prevent the solution from evaporating even during longer incubation periods.

| Type | Dimensions L x W (mm) | Typical incubation vol. (ml) | Material | Max. Temp. (°C) |
|---|---|---|---|---|
| MINI | 91 x 66 | 5 - 10 | PS | 80 |
| MIDI | 117 x 89 | 10 - 20 | PS | 80 |
| MIDI-XL | 120 x 120 | 20 - 30 | Acrylic glass | 60 |
| MAXI | 200 x 165 | 30 - 60 | Acrylic glass | 60 |

Four different sizes for perfect fit to your respective blot membrane. Stabile and frequently reusable.

| Type | Dimensions L x W (mm) | Art. No. | Pack Qty. | € |

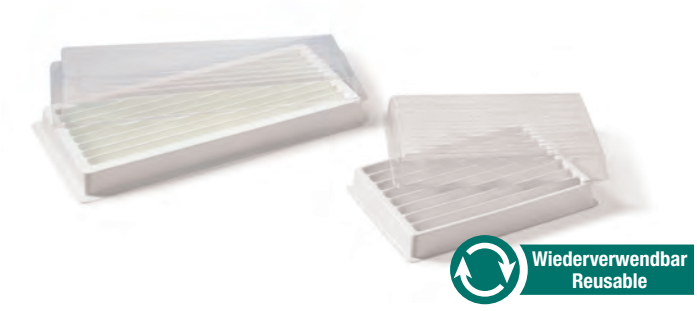
## Blot incubation trays



**Compatible with Western- and Southern blotting methods**

Developed for incubation of filter membranes during signal detection after Western- and Southern blotting. The incubation trays can safely be stacked, and, due to the tightly sealing lids, evaporation of solution is prevented even during long incubation periods. The size, adapted to typical membrane sheets, reduces the amount of buffer needed during incubation. In case of version MINI, the 5 trays may be used separately as well as in uniform. Stabile, autoclavable, and reusable.

Made from polypropylene.

| Model | Material | Dimensions W x L (mm) | Art. No. | Pack Qty. | € |

## Radtape®

Phosphorescent labels for permanent labelling of autorads through exposure.

Radtape® are rectangular adhesive sheets made from phosphorescent material. The sheets may be cut easily to labels of needed size and shape and may be marked with an ordinary pen. The custom label may be peeled from its backing and affixed to membrane or gel, or directly to the cassette foil. Before exposure of an x-ray film, the label has to be activated with bright light for 10 seconds. The markings on the label appear as negative image on the autorad. Suitable for use with enhancer foils.

- No overexposure, even after long exposure times
- Sharp and clear images, cannot be smeared

| Type | Dimensions L x W (cm) | Art. No. | Pack Qty. | € |
|---|---|---|---|---|
| Radtape® | 10 x 15 | **3900.1** | 10 | 75,05 |

## Luminous stencil

Orienting and measuring aid for detection of blot membranes.

Stencil with phosphorescent ordinate system and a pattern of different sized electrophoresis comb wells. When activated, stencils fluoresce for approx. 15 minutes. Are ideal for controlling and measuring during chemoluminescence detection of blots. Stencil can be activated by exposure to daylight or to artificial light.

| Art. No. | Pack Qty. | € |
|---|---|---|
| **X981.1** | 1 | 26,55 |

## Autoradiography Pen

For marking of chemoluminescent or isotope labelled sheets prior to autoradiographic detection.

**Danger** H225-H304-H372-EUH031

Pen with phosphorous ink for easy marking of those membranes ready for exposure. The fine tip of the pen also allows individual bands and gel tracks to be marked simply and easily. The marking is activated by the light in the room prior to exposure. The ink illuminates the X-ray film during exposure and the letters are visible in black ink. The letters are easy to read even after short exposure time. In the event of long exposure, the short half-life value of 2-3 minutes effectively prevents overexposure. The writing is therefore easy to make out after virtually all exposure times. Through the replacement nibs the pen can be reused even after a number of months or after drying out.

Suitable for chemoluminescence and isotope-radiography.
Ideal for marking paper, plastic foil and dried polyacrylamide gels.

**Delivery incl.** 1 pen + 4 replacement nibs

# Roti®-CELL - Media and Solutions for Cell Culture

**The new product line for your cell culture.
Media and solutions of highest purity, the perfect base line for all standard cell culture applications.**

- Sterile
- Ready-to-use
- CELLPURE® - with particularly low endotoxin content
- Storage at 2-8 °C
- Shipped at ambient temperature
- Expiry 12-24 months

# DMEM

## Roti®-CELL DMEM High Glucose

**CELLPURE® ready-to-use, sterile**

Medium for a wide range of mammalian cell culture applications.

Dulbecco's Modified Eagle Medium

Storage temp.: +4 °C

Dulbecco's Modified Eagle Medium is the most commonly used modification of the Basal Medium acc. to Eagle. DMEM contains higher concentration of amino acids and vitamins, and additionally iron (ferric nitrate). The formulation with high glucose content is well suited for culturing of a wide range of mammalian cell lines and primary cells.

**with glutamine, with pyruvate**

## Roti®-CELL DMEM Low Glucose

**CELLPURE® ready-to-use, sterilee**

Medium for culturing of adherent mammalian cell lines.

Dulbecco's Modified Eagle Medium

Storage temp.: +4 °C

Dulbecco's Modified Eagle Medium is the most commonly used modification of the Basal Medium acc. to Eagle. DMEM contains higher concentration of amino acids and vitamins, and additionally iron (ferric nitrate). The formulation with low glucose content is well suited for culturing of a variety of mammalian adherent cell lines.

**w/o glutamine, with pyruvate**

| | | | |

## Roti®-CELL DMEM : F12

**CELLPURE® ready-to-use, sterile**

Medium for analysis of hormones and growth factors in cell culture.

Dulbecco's Modified Eagle Medium + Ham's F12 medium (1:1)

Storage temp.: +4 °C

Dulbecco's Modified Eagle Medium is the most commonly used modification of the Basal Medium acc. to Eagle. This mixture of DMEM High Glucose with Ham's F12 medium combines the high nutritional value of Ham's F12 medium with the high concentration of amino acids, vitamins, and glucose of DMEM.

**with glutamine, with pyruvate, with HEPES**

| | | | |
|---|---|---|---|
| **9031.1** | 500 ml | plastic | 15,60 € |

## Roti®-CELL Iscove's MDM

**CELLPURE® ready-to-use, sterile**

Medium for a wide range of mammalian cell culture applications.

Iscove's Modified Dulbecco's Medium

Storage temp.: +4 °C

Iscove's Modified Dulbecco's Medium is based on DMEM High Glucose, containing selenium, HEPES, and, instead of iron, potassium (as potassium nitrate) besides additional amino acids and vitamins. It is well suited for culturing of a wide range of mammalian cell lines and primary cells, including B- and T lymphocytes as well as hybridoma cells.

**with glutamine, with pyruvate, with HEPES**

| | | | |
|---|---|---|---|
| **9033.1** | 500 ml | plastic | 16,70 € |

**w/o glutamine, with pyruvate, with HEPES**

| **9035.1** | 500 ml | plastic | 16,70 € |

# EMEM

## Roti®-CELL Eagle's MEM / Earle's

**CELLPURE® ready-to-use, sterile**

Medium for a wide range of mammalian cell culture applications.

Minimum Essential Medium acc. to Eagle with Earle's salts

Storage temp.: +4 °C

Minimum Essential Medium is a commonly used modification of the Basal Medium acc. to Eagle, having been developed in 1959 for culturing of HeLa cells. EMEM contains high concentration of amino acids, which conform closely to the protein composition of human cells. Concentration of vitamins, and other essential nutrients, is enhanced, allowing longer cultivation periods between feedings. EMEM is well suited for culturing of a wide range of mammalian cell lines and primary cells, also including transfected cells.

**with glutamine**

| | | | |
|---|---|---|---|
| **9044.1** | 500 ml | plastic | 13,90 € |

**w/o glutamine**

## Roti®-CELL Eagle's MEM / Hanks'

**CELLPURE® ready-to-use, sterile**

Medium for a wide range of mammalian cell culture applications.

Minimum Essential Medium acc. to Eagle with Hanks' salts

Storage temp.: +4 °C

EMEM is well suited for culturing of a wide range of mammalian cell lines and primary cells, also including transfected cells. Due to supplementation with Hanks' salts, cell cultivation in EMEM-Hanks' does not require $CO_2$ enriched atmosphere.

**w/o glutamine**

| | | | |
|---|---|---|---|
| **9056.1** | 500 ml | plastic | 16,05 € |

## Roti®-CELL Eagle's MEM-Alpha

**CELLPURE® ready-to-use, sterile**

Medium for culturing of bone marrow and amniotic cells.

Minimum Essential Medium acc. to Eagle, Alpha modification

Storage temp.: +4 °C

Alpha-Eagle's Minimum Essential Medium is based on EMEM, containing the following unique components: Vitamin $B_{12}$, ascorbic acid, non-essential amino acids, sodium pyruvate, lipoic acid, and D-biotin. It has been optimised for culturing of bone marrow cells and amniotic cells for chromosome analysis.

**w/o glutamine, w/o nucleosides**

| | | | |

|---|---|---|---|
| **9082.1** | 500 ml | plastic | 27,85 € |

# RPMI

## Roti®-CELL RPMI-1640

**CELLPURE® ready-to-use, sterile, with glutamine**

Medium for a wide range of mammalian cell culture applications, mainly of leucocytes

RPMI cell culture medium

Storage temp.: +4 °C

RPMI-1640 has been developed for culturing of normal and neoplastic human leucocytes. It is based on a bicarbonate buffering system with modified amounts of amino acids and vitamins. RPMI-1640 Medium is very well suited for culturing of a wide range of mammalian suspension cell lines and primary lymphocytes, all leucocytes, B- and T-lymphocytes, as well as myeloma- and hybridoma cells.

**with glutamine**

| | | | |
|---|---|---|---|
| **9085.1** | 500 ml | plastic | 12,80 € |

**with glutamine, with HEPES**

| **9094.1** | 500 ml | plastic | 52,60 € |

**w/o glutamine**

| | | | |
|---|---|---|---|
| **9099.1** | 500 ml | plastic | 12,40 € |

**w/o glutamine, w/o phenol red**

| | | | |
|---|---|---|---|
| **9104.1** | 500 ml | plastic | 16,05 € |

# Special Media

## Roti®-CELL Ham's F12

**CELLPURE® ready-to-use, sterile**

Medium for culturing of a variety of mammalian- and hybridoma cells, especially CHO cells.

Ham's F12 cell culture medium

Storage temp.: +4 °C

Ham's F12 Medium was originally optimized for serum-free, clonal culturing of CHO cells (Chinese Hamster Ovary). Ham's F12 Medium is the medium of choice for culturing cells of rodent orgin, particularly from rabbit and rat. Additionally, it is increasingly used as general purpose medium for culturing mammalian and hybridoma cells, particularly when supplemented with sera, hormones, and transferrin.

**with glutamine, with pyruvate**

| | | | |
|---|---|---|---|
| **9108.1** | 500 ml | plastic | 14,55 € |

## Roti®-CELL Leibovitz's L15

**CELLPURE® ready-to-use, sterile**

Medium for culture of mammalian cells without $CO_2$ atmosphere.

Leibovitz's cell culture medium

Storage temp.: +4 °C

Leibovitz's L15 Medium was developed for culturing of eukaryotic cells without $CO_2$ enriched atmosphere. Its unique components include the use of galactose instead of glucose, omittance of bicarbonate, addition of free base forms of arginine, cysteine, and histidine, as well as elevated levels of tyrosine. Leibovitz's L15 Medium is still used to grow cell lines in the absence of $CO_2$.

**w/o glutamine, with galactose**

| | | | |
|---|---|---|---|
| **9109.1** | 500 ml | plastic | 23,15 € |

## Roti®-CELL McCoy's 5A

**CELLPURE® ready-to-use, sterile**

Medium for culturing of a variety of mammalian cell lines and primary cells.

McCoys 5A cell culture medium

Storage temp.: +4 °C

McCoy's 5A Medium was optimized for culturing of Walker 256 carcinoma cells. Its unique components include asparagine, amino acids (all L-isomers), and elevated levels of glucose and folic acid. Due to its richness, McCoy's 5A Medium is increasingly used as general purpose medium for primary cells and established cell lines.

**with glutamine**

| | | | |
|---|---|---|---|
| **9111.1** | 500 ml | plastic | 21,40 € |

## Roti®-CELL Medium 199 / Earle's

**CELLPURE® ready-to-use, sterile**

Medium for cell culture in virology and vaccine production.

Medium 199 with Earle's salts

Storage temp.: +4 °C

Medium 199 was developed for nutritional studies on cultured chick embryo muscle fibroblasts. Its unique components include purines, pyrimidines, and fat soluble components. Medium 199 requires a $CO_2$ enriched atmosphere and is mainly used for virological studies and vaccine production.

**with glutamine, with HEPES**

| | | | |
|---|---|---|---|
| **9112.1** | 500 ml | plastic | 18,85 € |

## Roti®-CELL TC100

**CELLPURE® ready-to-use, sterile**

Medium for culture of Sf9 cells.

TC100 cell culture medium; BML-TC/100

Storage temp.: +4 °C

TC100 is based on the Grace's Insect Medium, optimizing the expression of baculovirus grown in cultured cells derived from ovaries of the fall army worm, *Spodoptera frugiperda*.

**with glutamine**

| | | | |
|---|---|---|---|
| **9114.1** | 500 ml | plastic | 26,35 € |

## Roti®-CELL William's E

**CELLPURE® ready-to-use, sterile**

Medium for long-term culturing of adult, primary liver epithelial cells.

William's E cell culture medium

Storage temp.: +4 °C

William's E Medium is based on the Minimal Essential Medium (MEM), containing besides pyruvate higher concentrations of glucose, amino acids and sodium bicarbonate. William's E Medium has been optimized for long-term culturing of polygonal, epithelia cells from adult liver of mammals.

**w/o glutamine, with pyruvate**

| | | | |
|---|---|---|---|
| **9116.1** | 500 ml | plastic | 21,40 € |

# Cell Culture Media Additives

## Roti®-CELL Bicarbonate solution

**CELLPURE® sterile, 7,5 %**

For cell culture

Sodium bicarbonate solution in water

Due to it being the main physiological buffer system, sodium bicarbonate still is the most commonly used buffer in cell culture media. For media with Hanks' Salts (HBSS) add a low concentration of Roti®-CELL Bicarbonate solution (350 mg/l = 0,035 % end concentration) and incubate in closed culture vessels. For media with Earle's Salts (EBSS) add a higher concentration of Roti®-CELL Bicarbonate solution (2.200 mg/l = 0,22 % end concentration) and incubate in an open vessel, in an atmosphere supplied with 5 % $CO_2$ in air.

| | | | |
|---|---|---|---|
| **9165.1** | 100 ml | plastic | 12,80 € |

## Roti®-CELL Glucose solution

**CELLPURE® sterile, 100 mg/ml**

For cell culture

Glucose solution in water

In cell culture, glucose is used in order to provide an optimised amount of nutritional energy for the cells. Only in exceptional cases glucose is replaced by galactose, or is provided by dosing pumps. Generally, content of glucose in cell culture media is 1 to 6 mg/l.

| | | | |
|---|---|---|---|
| **9155.1** | 100 ml | plastic | 28,50 € |

## Roti®-CELL Glutamine solution

**CELLPURE® sterile, 200 mM**

Temperature-stable. For cell culture

Alanyl-L-glutamine solution in 145 mM NaCl

L-glutamine is an essential amino acid required for cell culture growth and is normally present in media in a concentration of 29 mg/l or 2 mM. While standard L-glutamine is temperature-sensitive and thus not stable for longer periods, the L-Glutamine form used for this Roti®-CELL Glutamine solution extends by temperature stability and may be stored at room temperature for years, making it a highly valuable tool for cell culture media. Stable L-glutamine is used in the same concentration as standard, temperature-sensitive L-glutamine.

| | | | |
|---|---|---|---|
| **9183.1** | 100 ml | plastic | 16,70 € |

▶ Antibiotics for Cell Culture
see some pages below

## Roti®-CELL HEPES solution

**CELLPURE® sterile, 1 M**

For cell culture

HEPES solution in 145 mM NaCl

Roti®-CELL HEPES solution has been designed for use in open vessels incubated under atmospheric conditions. The sodium chloride concentration of Roti®-CELL HEPES solution has been adapted to the Osmolality found in standard cell culture media formulations, in order to maintain physiological Osmolality in culture.

| | | | |
|---|---|---|---|
| **9157.1** | 100 ml | plastic | 22,50 € |

## Roti®-CELL MEM-NEAA solution

**CELLPURE® sterile, 100x conc., 10 mM each**

For cell culture

Non essential amino acids, solution in water

Storage temp.: +4 °C

Roti®-CELL MEM-NEAA solution consists of a mixture of 7 non-essential amino acids in water. Enrichment of Roti®-CELL Eagle's MEM Medium (with Earle's or Hanks' salts) with non-essential amino acids enables culturing of fastidious cells and cell lines, hereby broadening the utility of this medium. Dilution by 1:100 of Roti®-CELL MEM-NEAA solution yields a final concentration 0.1 mM of each component.

**Type analysis:**

L-Alanine. ..... 0,89 g/l
L-Asparagine. ..... 1,321 g/l

| | | | |
|---|---|---|---|
| **9185.1** | 100 ml | plastic | 16,70 € |

## Roti®-CELL Pyruvate solution

**CELLPURE® sterile, 100 mM**

For cell culture

Sodium pyruvate solution in water

Storage temp.: +4 °C

Sodium Pyruvate is a key intermediate in the ATP production within the cell and is sometimes added to cell culture media as an additional source of energy. Additional pyruvate may help cells deficient in one of the enzymes involved in glucose metabolism, and may kick-start cells in the citric acid cycle, thus supporting growth of low density cells.
Concentration in standard media is 1 mM; special media like Leibovitz's medium are supplemented with up to 5 mM pyruvate.

| | | | |

# Balanced Salt Solutions

## Roti®-CELL Hanks' BSS

ready-to-use S

**CELLPURE® ready-to-use, sterile**

Balanced salt solution for cell culture

Hanks' salt solution, HBSS

Roti®-CELL Hanks' BSS is a balanced salt solution to be used in a wide variety of cell- and tissue culture applications; for instance stabilizing of a physiological pH for cell maintenance in $CO_2$-free atmosphere, diluting cell suspensions prior to counting, washing cells prior to dissociation or passaging, and transporting cells or tissues.

For research use only. Not approved for human or veterinary use, for application to humans or animals, or for use in clinical or *in vitro* diagnostics.

**w/o Ca/Mg, w/o phenol red**

## Roti®-CELL DPBS

ready-to-use S

**CELLPURE® ready-to-use, sterile**

Balanced salt solution for cell culture

Phosphate buffered saline acc. to Dulbecco, DPBS

Roti®-CELL Dulbecco's PBS is a balanced salt solution based on PBS to be used in a wide variety of cell- and tissue culture applications; for instance stabilizing of a physiological pH in cell culture media, washing cells prior to dissociation, transfection or passaging, and maintaining cell tonicity and viability during transport of cells or tissues.

For research use only. Not approved for human or veterinary use, for application to humans or animals, or for use in clinical or *in vitro* diagnostics.

# Reagents for Cell Culture

## General Reagents

### Albumin Fraction V, endotoxin-tested

**>98 %, low endotoxin, CELLPURE®**

With low endotoxin content. Recommended for culturing of cell lines.

BSA

M ~66 000 g/mol

Storage temp.: +4 °C

Albumin Fraction V, low endotoxin is recommended for use during culturing of eukaryotic cells.
Bovine serum albumin is basically suitable for stabilisation of all enzymes and antibodies, as well as for blocking of hybridisations and immunoassays.
Manufactured from fresh beef plasma by fractionating in accordance with Cohn and subsequent crystallisation at low temperatures from the alcohol solution.
Molar extinction coefficient: 44.020 · $M^{-1}$ · $cm^{-1}$
(acc. to 0.667 x $cm^{-1}$ for a 0.1 % solution).

**Endotoxin content: <15 E.U./mg**

| | | | |
|---|---|---|---|
| **CP84.1** | 10 g | plastic | 34,30 € |
| **CP84.2** | 50 g | plastic | 105,90 € |
| **CP84.3** | 500 g | plastic | 837,45 € |
| Original pack 6 x 500 g | | | 795,58/500 g |

### Albumin Fraction V, very low endotoxin

**>98 %, very low endotoxin, CELLPURE®**

With extremely low endotoxin content. Recommended for the culture of primary cells and cell lines, as well as for sensitive cell culture assays.

BSA

M ~66 000 g/mol

Storage temp.: +4 °C

Albumin Fraction V, very low endotoxin is particularly recommended for use during culturing of eukaryotic cells and in cell culture assays. This albumin of superior quality is thoroughly tested for its very low endotoxin content, therefore providing trouble-free cell culture assays and reliable results even when handling primary cells or stem cells.
Bovine serum albumin is basically suitable for stabilisation of all enzymes and antibodies, as well as for blocking of hybridisations and immunoassays.
Manufactured from fresh beef plasma by fractionating in accordance with Cohn and subsequent crystallisation at low temperatures from the alcohol solution.

**Endotoxin content: < 2,0 E.U./mg**

|---|---|---|---|
| **6833.1** | 10 mg | glass | 25,30 € |
| **6833.2** | 50 mg | glass | 37,55 € |
| **6833.3** | 100 mg | glass | 50,45 € |

### HEPES

DNAse-free Protease-free RNAse-free

**PUFFERAN® CELLPURE® ≥99,5 %**

For cell culture, tissue culture and biotechnology.

N-2-Hydroxyethyl piperazine-N'-2-ethane sulphonic acid, Good's buffer

$C_8H_{18}N_2O_4S$ • M 238,31 g/mol

Extremely versatile buffer. Excellent for cell and tissue cultures and for analysis of biological systems.

**Endotoxins: approx. 0.025 E.U./mg**

**Applications:**

- Combined with bicarbonate, HEPES is an excellent medium for human lymphocytoidal cell lines
- HEPES is more effective than $NaHCO_3$ when controlling the pH value in tissue and organ culture
- HEPES-buffered media for chicken and human lung fibroblasts
- Can be used to replace a bicarbonate buffered medium containing serum with a serum-free HEPES-buffered medium for mouse fibroblasts

| | | | |
|---|---|---|---|
| **HN77.1** | 50 g | plastic | 28,95 € |
| **HN77.2** | 100 g | plastic | 41,85 € |
| **HN77.3** | 250 g | plastic | 80,10 € |
| **HN77.4** | 500 g | plastic | 141,80 € |

| Original pack 6 x 1 kg | | | 232,37/1 kg |

### Lactalbumin

**for microbiology**

Storage temp.: +20 °C

Lactalbumin is produced by enzymatic hydrolysis of milk whey. It consists of peptides, amino acids and carbohydrates, simple and complex.
It is used in media for culturing of bacterial cells (e.g. *lactobacilli*), for tissue culture, production of vaccines and in fermentation procedures.

| | | | |
|---|---|---|---|
| **7597.1** | 250 g | plastic | 72,60 € |
| **7597.2** | 500 g | plastic | 129,55 € |
| Original pack 6 x 500 g | | | 123,07/500 g |

**Recommended Application of Albumins**

| Albumin | Art. No. | Recommended Application |
|---|---|---|
| **Fraction V, endotoxin-tested** | CP84 | Cell culture, standard cell lineages, cell sorting, short-term assays. |
| **Fraction V, very low endotoxin** | CP77 | Cell culture. Superior quality and purity, suitable for sensitive cells like primary cells, stem cells, cloning and 3D-cultures. Also recommended for cell stressing assays like transfections, *in vitro* infections, or cell fusion. |
| **Lactalbumin** | 7597 | Cell culture, fermentation procedures, tissue culture. |

## Roti®-CELL 10x PBS

**CELLPURE® sterile**

Balanced salt solution for cell culture

Phosphate buffered saline, PBS w/o Ca/Mg

Roti®-CELL PBS is a balanced salt solution to be used in a wide variety of cell- and tissue culture applications; for instance diluting cell suspensions prior to counting, washing cells prior to dissociation, transfection or passaging, and transporting cells or tissues.

10x ready-made solution

For research use only. Not approved for human or veterinary use, for application to humans or animals, or for use in clinical or *in vitro* diagnostics.

| | | | |
|---|---|---|---|
| **9150.1** | 1 l | plastic | 18,85 € |
| Original pack 6 x 1 l | | | 17,91/1 l |

## Roti®-CELL PBS

ready-to-use

**CELLPURE® ready-to-use, sterile**

Balanced salt solution for cell culture

Phosphate buffered saline, PBS w/o Ca/Mg

Roti®-CELL PBS is a balanced salt solution to be used in a wide variety of cell- and tissue culture applications; for instance diluting cell suspensions prior to counting, washing cells prior to dissociation, transfection or passaging, and transporting cells or tissues.

For research use only. Not approved for human or veterinary use, for application to humans or animals, or for use in clinical or *in vitro* diagnostics.

## TRIS

DNAse-free Protease-free RNAse-free

**CELLPURE® ≥99,9 %**

For cell culture, tissue culture and biotechnology.

Tris(hydroxymethyl)-aminomethane

$C_4H_{11}NO_3$

M 121,14 g/mol

**Warning** H315-H319-H335

Buffer with low endotoxin content and especially designed for life science applications.

**Endotoxins: ≤0.03 E.U./mg**

| | | | |
|---|---|---|---|
| **3170.1** | 100 g | plastic | 25,30 € |
| **3170.2** | 500 g | plastic | 77,30 € |
| Original pack 6 x 500 g | | | 73,44/500 g |

## Roti®fair 0.9 % NaCl

**for biochemistry and molecular biology**

For preparation of salt solutions and buffer concoctions.

Sodium chloride (tablet)

Exactly pre-weighed tablets for convenient and rapid preparation of sodium chloride solution.

Sodium chloride solution is generally used in many routine processes in Life Science laboratories, for instance preparation of salt solutions or composing of special buffer concoctions. In order to alleviate the effort involved, preparation of salt solutions using the Roti®fair salt tablets is most convenient.

Prepared solution may be sterilized by filtration (0,22 µm) or autoclaving.

For long-term storage, salt solution should be kept at +4 °C.

0,9 % NaCl solution is prepared by dissolution of 1 tablet in 1000 ml or 100 ml highly pure water, respectively.

For research use only. Not approved for human or veterinary use, for application to humans or animals, or for use in clinical or *in vitro* diagnostics.

**for 1000 ml/tablet**

| | | | |
|---|---|---|---|
| **1067.1** | 10 tablets | blister | 49,35 € |
| **1067.2** | 100 tablets | plastic | 114,50 € |

# Antibiotics for Cell Culture

Contamination of a cell culture by bacteria or yeasts almost always results in loss of the cell lines and assays, which means that the use of antibiotics has an important role to play in addition to working in sterile conditions. Antibiotics which are predominantly used for prophylactic purposes are ampicillin, streptomycin and penicillin, while ciprofloxacin and nystatin are used for the eradication of mycoplasma and mould/yeasts.
In molecular biology, antibiotics – particularly G418, hygromycin and neomycin – were established in combination with appropriate resistance genes as selection markers for successfully transfected cells.
Reaction mechanisms of antibiotics used in cell culture mainly involve interference with membrane biosynthesis, membrane integrity or the ribosomal processes in protein biosynthesis.

| Antibiotic | Purity | Endotoxin content | Art. No. | Pack Qty | € |
|---|---|---|---|---|---|
| **Ampicillin sodium salt** | ≥91 %, CELLPURE® | ≤0.15 I.E./mg | **HP62.1** | 10 g | 45,70 |

For additional product data and safety information, see chapter Chemicals A-Z.

ready-to-use

## Roti®-CELL Myco-Free

**CELLPURE® 50x conc., ready-to-use, sterile**

For elimination of mycoplasm contamination in cell culture.
Mycoplasm eradication solution
Storage temp.: -20 °C • Transport temp.: cooled

**Application:** Culture media are supplemented by the Roti®-CELL Myco-Free stock solution diluted by 1:50. Mycoplasms and bacteria are reliably and efficiently eliminated.

- Simple Application
- Reliable eradication
- Effective against all mycoplasms and bacteria
- Not cytotoxic

Roti®-CELL Myco-Free is a reliable, rapidly effective reagent for eradication of contaminations by mycoplasms and other bacteria in cell culture.
The sterile solution Roti®-CELL Myco-Free is composed of a mixture of specially selected antibiotics in PBS, which are known to be highly potent, even in very low concentrations. The effect is due to a specific interaction with prokaryotic protein biosynthesis by inhibition of translation and of the transcription complex located gyrase. Eukaryotic cells are not affected.

One bottle of 100 ml is sufficient for approx. 300 applications.

| | | | |
|---|---|---|---|
| **9830.1** | 100 ml | plastic | 220,40 € |

▶ Detailed information on these antibiotics and their application, see page 1426

## Amino Acids for Cell Culture

In addition to containing a defined amount of L-glutamine and other essential amino acids, cells in culture media require a series of other amino acids, such as additives to Iscove's Modified Dulbecco Media or nonessential amino acid mixtures to Minimum Essential Media (MEM). Only highly pure reagents tested for the absence of pyrogens/endotoxins can be used for the cell culture.
ROTH offers CELLPURE® grade amino acids with high purity and a guaranteed low endotoxin content.

For additional product data and safety information, see chapter Chemicals A-Z.

**Endotoxins** (greek ἐndo [endo]=inner, within; τοξίνη [toxin]=poison, toxic substance).
Largest subgroup of **pyrogens** (greek πψροσ [pyros]=fire; γενναν [gennan]=to produce).

The terms **endotoxin** and **pyrogen** are often used synonymously.

Lipopoly saccharides from the outer cell membrane of gram-negative bacteria or blue-green algae. The pathological effects of **endotoxins** are microbial poisoning, septicaemia and lung disease. The lipid A contained in endotoxins is toxic to eukaryotic cells since it interacts with the cell membrane and affects the transcription of many proteins (e.g. tumour necrosis factor). It is, therefore, important to use reagents that are to a large degree free of endotoxins / pyrogens in the **cell culture.**

This can be verified by older test methods such as induction of fever in rabbits, the LAL test (the haemolymph of the horseshoe crab *limulus polyphemus* coagulates in the presence of endotoxins) or by using modern and animal-friendly methods such as monocyte activation or ELISA.

1 E.U. (Endotoxin Unit) = 1 I.U. (International Unit) = 1 USP.U. (United States Pharmocopeia Unit)

**1 E.U. = approx. 0,1 ng endotoxin**

## Carbohydrates for Cell Culture

| Product | Purity | Endotoxin content | Art. No. | Pack Qty | € |
|---|---|---|---|---|---|
| **D(+)-Galactose** | ≥99 %, CELLPURE® | ≤10 E.U./g | **8878.1** | 10 g | 28,95 |

# Cell Passage

## Roti®-CELL DPBS/EDTA

**CELLPURE® sterile, 0,02 % EDTA (Versene®), w/o Ca/Mg**

Balanced salt solution with EDTA for cell culture.

EDTA solution in DPBS

EDTA, a chelator of divalent cations, is used combined with trypsin prior to passaging in order to solubilize adherent cells from the culture vessel surface into suspension. EDTA binds calcium and magnesium which aid in cell-cell adhesion, additionally allowing trypsin to more efficiently hydrolyze specific peptide bonds.
Roti®-CELL DPBS/EDTA may also be used directly without addition of trypsine for very gentle cell dissociation. Versene® is a trade-marked name of EDTA.

For research use only. Not approved for human or veterinary use, for application to humans or animals, or for use in clinical or *in vitro* diagnostics.

| | | | |
|---|---|---|---|
| **9135.1** | 100 ml | plastic | 15,60 € |

## Roti®-CELL PBS/EDTA

**CELLPURE® sterile, 0,046 % EDTA**

Balanced salt solution with EDTA for cell culture.

EDTA solution in PBS

EDTA, a chelator of divalent cations, is used combined with trypsin prior to passaging in order to solubilize adherent cells from the culture vessel surface into suspension. EDTA binds calcium and magnesium which aid in cell-cell adhesion, additionally allowing trypsin to more efficiently hydrolyze specific peptide bonds.
Roti®-CELL PBS/EDTA may also be used directly without addition of trypsine for very gentle cell dissociation.

For research use only. Not approved for human or veterinary use, for application to humans or animals, or for use in clinical or *in vitro* diagnostics.

|---|---|---|---|
| **9152.1** | 500 ml | plastic | 11,75 € |

## Trypsin

**5000 USP-U/mg, free from salt**

TSE-/BSE-free

Isolated from porcine pancreas, lyophilised.

M ~24,000 g/mol

Storage temp.: -20 °C • Transport temp.: room temp.

**Danger** H334-H335-H315-H319

A pancreatic serine protease with a specificity for peptide bonds between basic amino acids arginine or lysine and another non-specific amino acid. Trypsin is frequently used to suspend cells which grow as monolayers on surfaces. Longer exposure to trypsin can damage cells, so that an inhibitor (serum or trypsin inhibitor from soya beans) should be added upon completion.
One USP Unit will cause an increase in absorption (253 nm) per minute of 0,003 at 25 °C and pH 7,6 using BAEE as substrate.
One (international) Unit (U, 255 nm, BAEE, pH 8) is approx. 90 USP U.
One TAME Unit is approx. 20 USP Units. One NF Unit is one USP Unit.
Ten „BAEE Units“ are approx. 3,3 USP Units.

**Application:** pH optimum 7,2-8,5.

| | | | |
|---|---|---|---|
| **2193.1** | 100 mg | glass | 28,95 € |
| **2193.2** | 500 mg | glass | 89,15 € |

Please note our **Technical Information Brochure** on the Internet next to the products:

**Cell Passage and Use of Trypsin**
Background and recommendations for cell passages plus protocol for trypsination

## Trypsin

**≥2500 USP-U/mg, cryst.**

Isolated from porcine pancreas, lyophilised.

M ~24,000 g/mol

Storage temp.: -20 °C

**Danger** H334-H335-H315-H319

One USP Unit will cause an increase in absorption (253 nm) per minute of 0,003 at 25 °C and pH 7,6 using BAEE as substrate.
One (international) Unit (U, 255 nm, BAEE, pH 8) is approx. 90 USP U.
One TAME Unit is approx. 20 USP Units. One NF Unit is one USP Unit.
Ten „BAEE Units“ are approx. 3,3 USP Units.

| **5455.2** | 1 g | glass | 103,10 € |

## Trypsin inhibitor

**≥10000 BAEE U/mg**

Made from soybeans. High-activity inhibitor of trypsin, chymotrypsin, and other proteolytic enzymes.

Storage temp.: +4 °C

Trypsin inhibitor inhibits Trypsin with high effiency, and, to a lesser extent, chymotrypsin. Additionally, there is a light inhibiting effect on plasmin, kallikrein, thrombin and a few other proteolytic enzymes.
1 mg of lyophilisate inhibits at minimum 10.000 BAEE Units of trypsin.
Application in cell culture (stock solution 1 mg/ml): Following trypsination, add the same volume inhibitor solution as was used for trypsin. Zentrifuge cells (5 mins, 1000 rpm), and remove supernatant. Resuspend cells in medium and cultivate further.

**Application:**
Stock solution: 1-10 mg/ml in $H_2O$, PBS or other phosphate-buffers.
Solutions of higher concentration may be hazy and slightly yellow-coloured.
Storage of stock solution: in aliquots at -20 °C.
Recommended end concentration: 1-100 µg/ml.
pH optimum: pH 7.6 - 8.0.

| | | | |

## Trypsin inhibitor

**salt free ≥7000 BAEE U/mg**

Made from soybeans. Inhibition of trypsin, chymotrypsin, plasmin, kallikrein, thrombin and other proteolytic enzymes; free from salt.

Storage temp.: -20 °C • Transport temp.: room temp.

**Application:**
Stock solution: 10 mg/ml in $H_2O$ or PBS.
Storage of stock solution: in aliquots at -20 °C.
Recommended end concentration: 2-100 µg/ml.

| | | | |

# Cell Isolation

## Ficoll® 400

**for molecular biology and biochemistry**

For density gradient centrifugation; ingredient of gel loading buffers.
Non-ionic polymer of saccharose.

M ~400 000 g/mol

Ficoll® 400 is a hydrophilic copolymer of saccharose and epichlorohydrin, that readily solubilises in water and aqueous solutions. It may be solubilised at concentrations of up to 50 %, and is mainly used in the following applications:
A) In hybridisation buffer acc. to Denhardt, Ficoll® 400 reduces non specific binding of labelled DNA to the filter membrane.
B) In gel loading buffer it supports DNA application to agarose gels by increasing the density of the sample.
C) In continuous or discontinuous density gradients, Ficoll® 400 is used as matrix for fractioning of cells (e.g. lymphocytes) or sub-cellular particles, also taking advantage of its ability to stabilise membrane-coupled components and the functional as well as the morphological integrity of cells.
Autoclavable at neutral pH.

| | | | |
|---|---|---|---|
| **CN90.1** | 10 g | plastic | 39,70 € |
| **CN90.2** | 25 g | plastic | 83,75 € |
| **CN90.3** | 100 g | plastic | 267,70 € |

## Polysucrose 400

**BioScience-Grade, for molecular biology and biochemistry**

For density gradient centrifugation during cell separation and isolation of cell organelles.

Sucrose polymer, Sucrose-epichlorhydrin copolymer

$(C_{12}H_{22}O_{11})_n$ x $(C_3H_5ClO)_n$

M 450000 ±100000 g/mol

Storage temp.: +20 °C

Nonionic, synthetic copolymer from sucrose and epichlorohydrin. Ficoll® derivative. Solution of polysucrose 400 is used for separation of blood cells (mono nuclear cells, granulocytes, erythrocytes) via density gradient centrifugation, and for isolation of mononuclear cells from whole blood. Also well applicable for isolation of islets of Langerhans from pancreatic issue.
May be used as direct replacement for Ficoll® in common protocols.

| | | | |
|---|---|---|---|
| **4668.1** | 10 g | plastic | 27,85 € |
| **4668.2** | 25 g | plastic | 64,40 € |
| **4668.3** | 100 g | plastic | 213,95 € |

## Roti®fair BSC

**for cell biology**

Buffer solution for isolation of blood cells.

BSC buffer powder (pouch), Buffered Sodium Citrate

Exactly pre-weighed pouches for convenient and rapid preparation of BSC solution.
Prepared solution may be sterilized by filtration (0,22 µm).
For long-term storage, buffer solution should be kept at +4 °C.
0,109 M BSC solution is prepared by dissolution of 1 pouch in 100 ml or 1000 ml highly pure water, respectively.

**Formulation:**

Prepared BSC solution contains: 0,109 M (3,2 %) buffered Na-citrate, when prepared in deionized or distilled water.

For research use only. Not approved for human or veterinary use, for application to humans or animals, or for use in clinical or *in vitro* diagnostics.

**for 100 ml pouch**

| | | | |
|---|---|---|---|
| **1011.1** | 10 pouches | box | 88,70 € |

**for 1000 ml pouch**

| | | | |
|---|---|---|---|
| **1026.1** | 5 pouches | box | 136,00 € |

## Roti®fair 0.5 M EDTA

**for 500 ml/pouch, for applications in Life Science in general**

For preparation of bioanalytical solutions, anticoagulant.

EDTA powder (pouch), Ethylenediamine tetraacetic acid

**Warning** H332-H373

Exactly pre-weighed pouches for convenient and rapid preparation of EDTA solution.
Prepared solution may be sterilized by filtration (0,22 µm). For long-term storage, solution may be kept at +4 °C or room temperature.
0,5 M EDTA solution is prepared by dissolution of 1 pouch in 500 ml highly pure water.

**Formulation:**

Prepared solution contains: 0,5 M EDTA, pH value 8,0 ±0,05, when prepared in deionized or distilled water.

For research use only. Not approved for human or veterinary use, for application to humans or animals, or for use in clinical or *in vitro* diagnostics.

| | | | |

| **1031.1** | 5 pouches | box | 252,65 € |

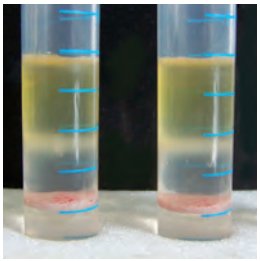
## Roti®-Sep 1077

**CELLPURE® for density gradient centrifugation**

Polysucrose based medium for separation of lymphocytes from whole blood.

Polysucrose solution, lymphocyte separation medium

M ~400000 g/mol



Storage temp.: +4 °C

**Danger** H317-H334

Ready-to-use and sterile. Separation medium based on polysucrose 400, for efficient isolation of lymphocytes by density gradient centrifugation. Density 1.077 g/ml. Best alternative to Ficoll®.

- Produces distinct, compact layers
- Results in high recovery rates of viable cells
- Maintains the representative ratio of B- to T lymphocytes
- May be directly applied to all protocols using Ficoll®

Roti®-Sep 1077 excels due to the superior separation power, forming very distinct, easy to pipet, lymphocyte layers during centrifugation. The ready to use solution is very easy in handling, resulting in high cell recovery rates, while cell viability and the representative ration of B- to T lymphocytes are maintained. Osmolality as well as pH value are strictly kept in the physiological range.
Suitable for application with human peripheral blood. In all respective protocols originally using Ficoll® this reagent may be replaced by Roti®-Sep 1077 without any adjustment.

The **figure** depicts two specimens prepared with heparinic blood obtained from venous puncture. Density gradient centrifugation of 6 ml diluted whole blood (dilution in PBS 1:1.5), with 3 ml of Roti®-Sep 1077, 10 mins., 1000 g, no break. Recommended long-term storage at approx. 4 °C. Short-term storage at ambient temperature possible. Store protected from light.

| | | | |

| **0642.1** | 100 ml | plastic | 42,50 € |
| **0642.2** | 500 ml | plastic | 115,60 € |

**Instructions for use**
can be found on the Internet next to the product description.

# Transfection

ready-to-use

## DOTAP

**for transfection, CELLPURE®**

$C_{43}H_{83}NO_8S$

M 774,21 g/mol

Storage temp.: +4 °C

**Puritiy, QC:** Controlled by TLC, NMR, standard transfection test with HeLa-, CV-1-cells. At least 99 %.
**Stability:** Minimum shelf-life 6 month at +4 °C.
**Culture media:** Suitable for whole and serum-free media.
**Formulation:** Transfection reagent DOTAP is an aqueous liposome formulation of N-[1-(2,3-**Dio**leoyloxy)]-N,N,N-**t**rimethyl**a**mmonium **p**ropane methyl sulphate with a concentration of 1 mg/ml.

**Successfully tested with the following cell types:**
A375-C6, A549, B6.NOS, Balb/3T3, BalbSV, BHK, BNL CL.2, C2, C6, CaShi, CCRF-CEM/VLB, CHO, COS-1, COS-7, CV-1, D-17, DTM, EL-4, Fibroblasts, GSM06, H225, HEL, HeLa, Hepa 1-6, HepG2, HMEC-1, Hippocampal neurons, Huh7, I-3, I10, JEG-3, Jurkat, LH, Ltk, Lymphocytes, PBL, M17, MC57, MCF-7, MDA-MB-435, MEC-J, MH1C1, mhAT3F, mhAT3F, NG 108-15, NIH/3T3, PXF 1118, RASM, REF-1, Ret-1, ROS 17/2.8, SCC-13, SK-BR-3, Smooth muscle cells, ST33c, T2-Kb, U87, Vero, WI-38, Y1, *et al.*

Approx. 200 assays per ml in 24wells.

| | | | |
|---|---|---|---|
| **L787.1** | 0,5 ml | plastic | 78,40 € |

| **L787.3** | 5 x 1 ml | plastic | 460,10 € |

## DEAE Dextran

**for biochemistry**

Transfection reagent

Diethylaminoethyldextran

M ~500000 g/mol

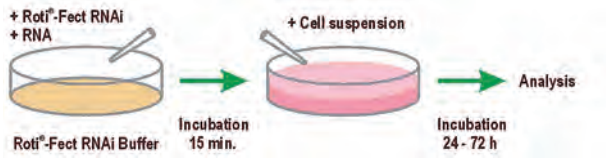
DEAE is the oldest transfection reagent known. The method of complexation of plasmid DNA with diethylaminoethyldextran has been published in 1968 by McCutchan. Positively charged DEAE binds negatively charged DNA to aggregates, which then bind to negtively charged surface structures of cell membranes. Uptake is done via endocytosis. This DEAE method needs only little amounts of DNA, while resulting in high transfection efficiency of up to 30 %. However, the cytotoxic effects caused by DEAE allow only transient transfections. The following cell lines are well transfectable: CV-1, BSC-1 and COS cells, and other stabile, insensitive cell lines.
Stock solution: 50 mg/ml in $H_2O$. Autoclave.
End concentration: 1 mg/ml (transfection for 30-90 min.) or 250 µg/ml (transfection for up to 8 h)

| | | | |
|---|---|---|---|
| **4198.1** | 25 g | plastic | 55,80 € |
| **4198.2** | 100 g | plastic | 177,40 € |

ready-to-use

## Roti®-Fect RNAi Kit

**for transfection, CELLPURE®**



Reagent for transfection of mammalian cells with siRNA and miRNA, for efficient gene silencing.

Storage temp.: -20 °C • Transport temp.: room temp.

- Optimised RNA release into the cytosol
- High levels of gene silencing with low RNA concentration
- Efficient knockdown after 48 hours already
- No elaborate optimisation necessary
- Very low cell toxicity
- Suitable for cell lines and primary cells
- Straightforward, efficient protocol for whole medium included

New, powerful transfection reagent for liposoma mediated siRNA and miRNA transfection of all mammalian cells in culture. Liposoma formulation and enclosed buffer were specially established and designed for core parameters of RNAi: Most efficient quantitative endocytosis plus release of nucleic acids into the cytosol, without subsequent transport to the nucleus. Roti®-Fect RNAi provides you with superior knockdown results, even using low amounts of RNA.
Hereby, the Roti®-Fect technology guarantees minimisation of toxic effects during transfection, thus making these reagents suitable for very sensitive cell lines of primary cells. The detailed instruction-for-use contains a standardised transfection protocol working via a definite RNA/liposoma ratio and providing good results starting with the very first assay - making elaborate optimisations of transfection obsolete. Evaluation of results is often possible after 48 hours, enabling two sequential assays per week.

**Successfully tested with the following cell types:**
**Primary cells:** MCS, M1
**Cell lines:** A549, 3T3-L1, B16F10, CHO-K1, H441, HT1080, HeLa, HeLa-KB, HepG2

**The set contains:**
0.2 and 1 ml, respectively, Roti®-Fect RNAi liposoma formulation (Art. No. 2911, may not be bought separately), and 0.4 and 2 ml, respectively, Roti®-Fect RNAi buffer (Art. No. 2913). Roti®-Fect RNAi buffer may be bought separately.

Approx. 250 assays per ml in 24wells. Dependend on the cell line used.

| | | | |

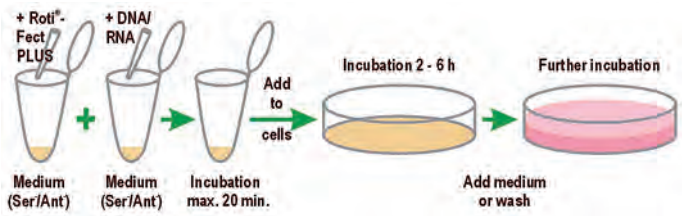
ready-to-use

## Roti®-Fect Plus

**for transfection, CELLPURE®**



Reagent for transfection of all eukaryotic cells in culture, particularly suited for hard-to-transfect cell lines.

Storage temp.: +4 °C

- Particularly low cell toxicity
- Superior transfection efficiency with all cell lines
- Especially recommended for hard-to-transfect cell lines
- Particularly suited for use with primary cells
- Excellent reproducibility
- No serum inhibition

Highly sophisticated transfection reagent for liposoma mediated transfection of eukaryotic cell lines and primary cells in culture. Roti®-Fect PLUS further reduces the toxic effects of transfection, making it a versatile tool for transfection of sensitive cell lines or primary cells.
Based on this, Roti®-Fect PLUS is also especially recommended for transfection prior to *in vivo* analyses (siRNA-Assays, *in vivo* life microscopy, etc.), since the transfection stress is minimized, reducing stress-dependent effects like the rate of apoptosis-induced cells. Additionally, the stability of nucleic acid/lipid complexes is diminished in comparison with Roti®-Fect, therefore improving the release of nucleic acids in the cell.
Thus, the newly established liposoma formulation of Roti®-Fect PLUS guarantees gentle and highly efficient transfections, even when hard-to-transfect or particularly sensitive cell lines are handled.

**Successfully tested with the following cell types:**
**siRNA:** 1BR3, HEK293, HeLa, LN-308, T98G. U87MG, UACC-257
**Primary cells:** 1BR3, 8VM, CGN, HMEC, HUVEC, PBMC, S15VM
**Cell lines:** 1BRneo, 143B, 293T, NSCLC, alphaTC1, B16-F10, BHK-21, C2C12, C6, CHO, CHO-K1, Colo205, COS-7, EVLC2, HaCaT, HAEC, HCT116, HEK293, HeLa, HepG2, Hep 3B, IMR32, Jurkat, Kelly, KG1, La1-5S, LN-308, M2-10B4, MDCK, MEF, MG-63, MIN6, MLEC32, mPAC, mpkCCD, N18TG2, N2a, N-Tera2, NG NIH-3T3, Panc-1, PC 12, Phi-NX, Raji, RAW264.7, RD, RF24, RGE, S2, S91, SMA-560, SK-N-BE, SW480, T98G, U-2 OS, Vero, *et al.*

Approx. 500 assays per ml in 24wells. Dependent on the cell line used.

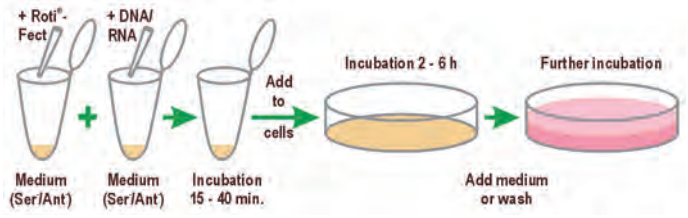
## Roti®-Fect

**for transfection, CELLPURE®**



Reagent for liposoma-mediated transfection of eukaryotic cells.

Storage temp.: +4 °C

- Highly efficient reproduction of DNA in mammal cells
- Excellent reproducibility
- High and wide operating plateau
- No inhibition through serum
- Low cell toxicity
- Successful with different cell lines
- Excellent transfection results

**Roti®-Fect** is a liposome formulation of a polycationic lipid in combination with a neutral colipid. Compared to monocationic lipid formulations, Roti®-Fect has a higher efficiency with lower levels being required.
Its excellent reproducibility in combination with its high level of efficiency reduced optimisation work to a minimum. Because of its low toxicity, a wide range of cell lines can be transfected efficiently. An efficient triple-cotransfection using Roti®-Fect is described in Ufartes, Schlüter, Kaulfuss and Seipp (2005) *Biospektrum* 4: 464-5.

**Successfully tested with the following cell types:**
**siRNA:** CEM, COS-7, ES-D3,HeLa, HL60, LNCaP, OVCAR3, PC3, SW620
**Primary cells:** pAML, pHDF, pMEF, pRHC, pSMC
**Cell lines:** 143B, 293-T, A-293, A-431, AM-C6SC8, BHK, BV-2, C2C12, C6, CHO, CHO-DHFR, COS-1, COS-7, CRFK, Colo-205, DU-145, ECV-304, EMC, F98 (glioma), GD25-ß1, HBL 100, HCT-116, HCT-15, HEK293, HeLa, HeLa-S3, Hep-3B, Hep-G2, HOSE, HSG, HT-22, HT-29, HUVEC, JURKAT, LLC-PK1, LS174T, LoVo, MCF-7, MDCK, MeWo, MV3, NIH-3T3, NS20Y, OK, P815, PC3, PT-11, Rcho-1, SAOS, SH-SY5Y, SK-MEL-28, SKOV-3, SM10, SW-480, THP-1, tsA201, U87 (glioma), Vero 76, *et al.*

Approx. 400 assays per ml in 24wells. Dependent on the cell line used.

| | | | |
|---|---|---|---|
| P001.1 | 0,2 ml | plastic | 69,80 € |
| P001.2 | 0,5 ml | plastic | 155,90 € |

| P001.4 | 5 x 1 ml | plastic | 1063,20 € |

**Instructions for use**
can be found on the Internet next to the product description.

ready-to-use

## Roti®-Insectofect

**for transfection, CELLPURE®**

For transfection of insect cells in culture.

Storage temp.: +4 °C

- No serum inhibition
- Superior transfection efficiency
- High and wide operating plateau
- Excellent reproducibility
- Very low cell toxicity
- Quick and easy handling

Recombinant proteins at a large scale can be manufactured under simple conditions in insect cell cultures with the non-human pathogenic baculovirus system and a simple scale-up procedure. Roti®-Insectofect enables best transfection results with a wide spectrum of activity and very low toxicity.
Roti®-Insectofect consists of an aqueous solution of polycationic lipids and was specially developed for liposome-mediated transfection of insect cells. Because of its special formulation, it has a much higher efficiency than standard transfectants, such as calcium-phosphate or DEAE.

**Successfully tested with the following cell types:**
Ag55, Anso, As43, Bm5, Cpp512, IPLB-SF21, LD652, Mos-20, S2, SF9, SL2.

Approx. 1000 assays per ml in 24wells.

| | | | |
|---|---|---|---|
| **AE29.1** | 0,5 ml | plastic | 134,40 € |
| **AE29.2** | 1 ml | plastic | 203,20 € |

## Roti®fair HBS

**for 500 ml/tablet, for biochemistry and cell biology**

General buffer base and for calcium phosphate mediated transfection.

HEPES Buffered Saline (tablets)

Exactly pre-weighed tablets for convenient and rapid preparation of HEPES Buffered Saline solution (HBS).
Prepared solution may be sterilized by filtration (0,22 µm).
For storage, buffer solution has to be kept at -20 °C.
1x HBS solution is prepared by dissolution of 1 tablet in 500 ml highly pure water.

**Composition:**
Prepared 1x HBS solution contains: 10 mM HEPES, 0,15 M NaCl, pH-value 7,4 ±0,05, when prepared in deionized or distilled water.

| | | | |
|---|---|---|---|

| **1033.2** | 100 tablets | plastic | 260,70 € |

# Cell Analysis

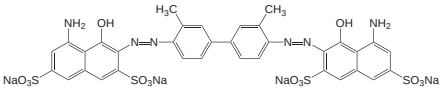
## Vitality Assay & Cell Counting

### Neutral red (C.I. 50040)

**p.a.**
Indicator pH 6,8-8,0
Toluylene red
$C_{15}H_{17}ClN_4$
M 288,78 g/mol
Water-soluble vital staining dye.

| | | | |
|---|---|---|---|
| **T122.2** | 1 g | glass | 21,40 € |
| **T122.1** | 10 g | glass | 54,75 € |
| **T122.3** | 25 g | glass | 107,40 € |

### LOEFFLER's methylene blue solution



**for microscopy and cell counting**

Methylene blue solution 0,5 %

**Warning** H371

LÖFFLER'S methylene blue solution is used for staining bacteria, fungi and blood parasites in blood smears, e.g. together with carbolic fuchsine solution (Art. No. A130) for Ziehl-Neelsen staining (detection of TB bacteria). Furthermore, it is used as a vital staining agent for selective staining of nuclei during counting of eukaryotic cells.

| | | | |
|---|---|---|---|
| **AE64.1** | 500 ml | glass | 24,65 € |
| **AE64.2** | 1 l | glass | 30,65 € |
| Original pack 6 x 1 l | | | 29,12/1 l |
| **AE64.3** | 2,5 l | plastic | 64,00 € |
| Original pack 4 x 2,5 l | | | 60,80/2,5 l |

### Trypan blue (C.I. 23850)

**for microscopy and cell staining**

For vital and histological staining.

Benzamine blue, Tolidin-diazo-bis-8-amino-1-naphthol-3,6-disulphonic acid tetrasodium salt
$C_{34}H_{24}N_6Na_4O_{14}S_4$
M 960,82 g/mol

**Danger** H350

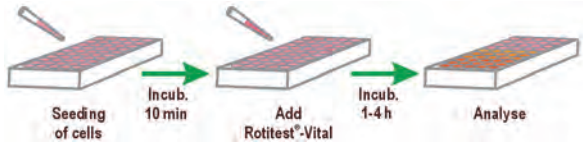
Trypan blue is a protein staining azo dye used for vital staining (vitality test of cells), based on its selective ability to pass membranes of damaged cells. Used for polychromatic staining, e.g. to visualise collagen fibres in connective tissue.

**Application:**
Stock solution: 0.5 % in PBS or in NaCl solution (0.9 %).
Stabile for several months when sterile filtrated and stored at room temperature.
Working concentration: 0.1-0.2 % in PBS
**Note:**
Always keep bottles tightly closed.

| | | | |
|---|---|---|---|
| **CN76.1** | 10 g | glass | 23,15 € |
| **CN76.2** | 25 g | glass | 41,85 € |
| **CN76.3** | 50 g | glass | 75,15 € |

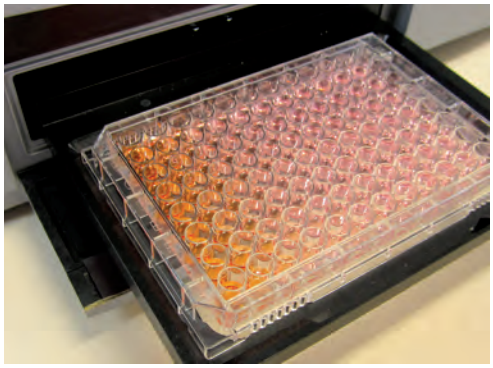
ready-to-use

S



## Rotitest® Vital

**Rotitest® Bio Analysis**



Colorimetric test solution for evaluation of cell proliferation and -viability.
Non-cytotoxic cell proliferation test solution.
Storage temp.: +4 °C

- **Perfectly supersedes MTT**
- Cells keep on being vital
- Most simple handling
- One-component-system without radioactivity
- For adherent and suspension cells
- Photometric result in 1 to 4 hours
- Strong correlation between absorbance and cell number
- Suitable for every culture media

Rapid and simple test system for non-radioactive quantitation of proliferating cells. Also well suitable for cytotoxicity assays.
In all living cells, NADH and NADPH are formed by the respiratory chain. Roti®-Test vital is based on the (colourless) WST-8, which functions as acceptor for the NADH/NADPH dehydrogenase while being reduced to (coloured) formazane during the process.
The test solution is added directly to the cultivated cells in 96wells. During incubation for few hours, a water-soluble formazan dye is produced by viable cells, and is released into the surrounding medium. The resulting orange colour is measured photometrically (approx. 450 nm). Also suitable for culture media containing phenol red.

Sensitivity of the tetrazolium salt used is higher than that known for standard reagents such as MTT, XTT, MTS, or WST-1. Results were shown to be of highly stringent correlation with [$^3$H]-thymidine incorporation assays, therefore representing viability as well as proliferation status of the cells (Tominaga *et al.*, *Anal. Commun.* 1999 (36) 47-50).

Example of use.

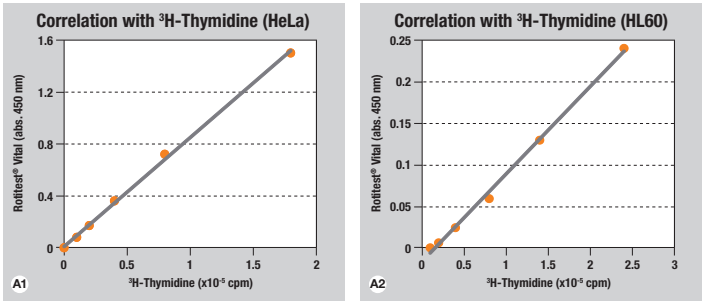


**Fig. A:** Correlation of cell counting results achieved with Rotitest® Vital (10 µl/well) and $^3$H-Thymidine (37 KBq/well). HeLa (1, in DMEM) and HL60 cells (2, in MEM).

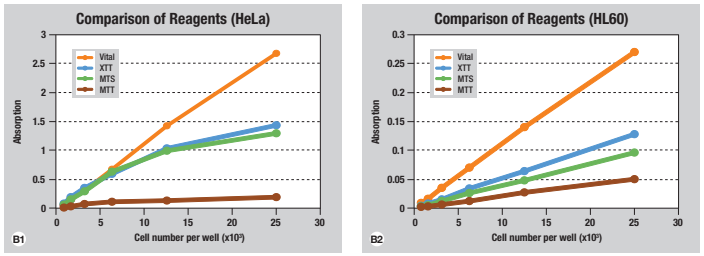

**Fig. B:** Comparison of cell counting results using Rotitest® Vital (10 µl/well) and other cell counting reagents. Photometrical measurement at 450 nm (Rotitest® Vital, XTT), 490 nm (MTS), and 570 nm (MTT).
HeLa (1, in DMEM) and HL60 cells (2, in MEM).

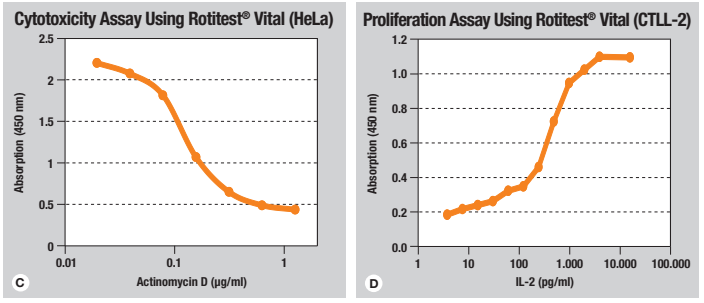

**Fig. C:** Measurement of cytotoxic effects of actinomycin D (exposition 24 h) on HeLa cells (in DMEM), assayed with Rotitest® Vital (10 µl/well).

**Fig. D:** Proliferation assay on CTLL-2 cells (in RPMI) under influence of humane IL-2 (exposition 72 h), using Rotitest® Vital (10 µl/well).

Each package contains simple-to-follow instructions-for-use.
Stabile at ambient temperature. Very stabile when being cooled.
Store at +4 °C protected from light. Do not freeze.

1 ml is sufficient for enumeration of 100 cell samples.

# Proliferation Assays

Our ROTI®Kits for EdU mediated detection of cell proliferation provide a superior alternative to time-consuming and less sensitive bromodeoxyuridine (BrdU) assays. Similar to BrdU assays, our assays utilise a uracil derivative (in this case ethynyldeoxyuridine, EdU) which is incorporated into the replicating DNA. EdU is not detected via antibodies; instead fluorescent dyes are coupled directly via click reaction. This fast and elegant approach allows for direct labelling of replicating DNA with the desired fluorescent dye. Thus, the assay is perfectly adaptable to the present facilities and to the assay situation (e.g. for double or triple detection). Furthermore, the click reaction is highly selective and therefore prevents any unspecific labelling. The protocol includes only few steps and decreases the total amount of time.

- Highly reliable
- Easy to perform
- Fast detection procedure (only 30 min)
- Mild conditions (no DNA denaturation required)
- Modular system due to click chemistry
- Compatible with various dyes and readouts
- Compatible with multiplexing
- No cytotoxicity up to 1 mM EdU

## ROTI®kits for Imaging

ready-to-use

For fast and simple detection of cell proliferation through fluorescence microscopy.

Storage temp.: see below, -20 °C/+4 °C • Transport temp.: cooled

**Warning** H315-H319-H400-H410

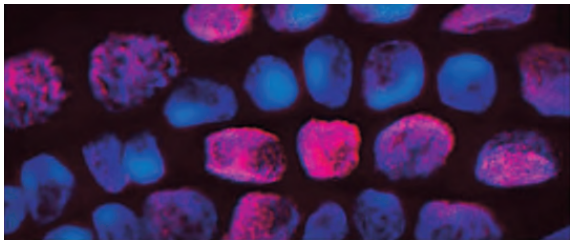

**Figure:** Proliferating tissue of barley meristem labelled via EdU Click-555 kit (Art. No. 7775.1). Dividing cells incorporated EdU and were labelled via click reaction with TAMRA (pink stained cells). Nuclei were counterstained with DAPI (blue). Magnification: 100x; Filterset: Sp. Aqua HC mFISH; Sp. Green HC mFISH.

The number at the end of the product name specifies the wavelength at which the included fluorescent marker is optimally excited.

For 100 Assays.

**Components:**

EdU. ..... 5 mg
Azide (10 mM in DMSO). ..... 130 µl
Buffer Additive. ..... 4 x 200 mg
DMSO. ..... 2 x 2 ml
Catalyst Solution. ..... 2 x 2 ml
Reaction Buffer. ..... 4 x 2 ml

*Store at -20 °C (EdU, Azide, Buffer Additive); +4 °C (DMSO, Catalyst Solution, Reaction Buffer)*

## Roti®fair PBS 7.4

**for biochemistry and molecular biology**

General solution for assays in molecular biology and biochemistry.
PBS (tablet), Phosphate buffered saline
Exactly pre-weighed tablets for convenient and rapid preparation of PBS solution.
Among biological buffers, PBS is the one most commonly used. Due to its isotonic and non-toxic nature, PBS is suitable for applications in cell culture as well as in biochemistry and molecular biology. PBS is frequently used for sample dilution and as base solution in immunochemical processes.
Prepared solution may be sterilized by filtration (0,22 µm) or autoclaving.
For long-term storage, buffer solution should be kept at +4 °C.
1x PBS solution is prepared by dissolution of 1 tablet in highly pure water.

**Formulation:**
Prepared 1x PBS solution contains: 0,14 M NaCl, 2,7 mM KCl, 10 mM phosphate, pH-value 7,4 ±0,05, when prepared in deionized or distilled water.

**For 100 ml/tablet**

| | | | |
|---|---|---|---|
| **1107.1** | 100 tablets | plastic | 56,90 € |

## Roti®fair PBS 7.2

**for 1000 ml/tablet, for biochemistry and molecular biology**

General solution for assays in molecular biology and biochemistry.
PBS (tablet), Phosphate buffered saline
Exactly pre-weighed tablets for convenient and rapid preparation of PBS solution.
1x PBS solution is prepared by dissolution of 1 tablet in 1000 ml highly pure water.

**Formulation:**
Prepared 1x PBS solution contains: 0,14 M NaCl, 2,7 mM KCl, 10 mM phosphate, pH-value 7,2 ±0,05, when prepared in deionized or distilled water.

| | | | |
|---|---|---|---|
| **1106.1** | 10 tablets | blister | 74,10 € |

## Roti®-Mount FluorCare DAPI

**for fluorescence microscopy**

Aqueous mounting medium with antifading effect.
Contains DAPI for counterstaining.

Storage temp.: +4 °C

Roti®-Mount FluorCare DAPI is an aqueous mounting medium with anti-fading effect. Additional it contains ready-to-use DAPI allowing counter-staining of nuclei and mounting at the same time. DAPI has an excitation maximum at 359 nm and an emission maximum at 461 nm.
Roti®-Mount FluorCare is also available with the dye propidiumiodide (HP21.1) and without dye (HP19.1).

**Storage:**
The solution should be stored at +4 °C in the dark.
Shelf life: minimum 1 year.

| | | | |
|---|---|---|---|
| **HP20.1** | 15 ml | dropp. bottle | 67,65 € |

## Roti®fair PBST 7.4

**for biochemistry and molecular biology**

General solution for assays in molecular biology and biochemistry.

PBST (tablet), Phosphate buffered saline with Tween

Exactly pre-weighed tablets for convenient and rapid preparation of PBST solution.
Buffer solution composed of PBS with the addition of the non-ionic detergent Tween® 20. Since detergents are known to reduce non-specific protein-protein interactions, PBST is preferably used as basic solution during Western blotting, ELISA or other immunochemical assays.
Prepared solution may be sterilized by filtration (0,22 µm). For long-term storage, buffer solution should be kept at +4 °C.
1x PBST solution is prepared by dissolution of 1 tablet in 500 ml or 1000 ml highly pure water respectively.

**Formulation:**

Prepared 1x PBST solution contains: 0,14 M NaCl, 2,7 mM KCl, 10 mM phosphate, 0,05 % Tween® 20, pH-value 7,4 ±0,05, when prepared in deionized or distilled water.

| **1116.2** | 100 tablets | plastic | 396,70 € |

## Roti®-Stock 10x PBST

**BioScience-Grade, ready-to-use, filtered and steam sterilised**

For protein biochemistry, cytology, and molecular biology.

PBST 10x ready-to-use solution

10fold stock solution phosphate buffered saline with Tween 20.
Extremely versatile standard solution for protein biochemical detection systems, cytological staining and molecular-biological assays with similar fields of application as Roti®-Stock PBS. Roti®-Stock PBST can be used directly instead of PBS when the presence of Tween 20 is required in the detection system.
With original seal.

**Composition:**

1,37 M NaCl, 27 mM KCl, 100 mM $Na_2HPO_4$, 20 mM $KH_2PO_4$, 0,5 % Tween® 20 in deionised water, pH value 7,4, 0,2 µm filtered and steam sterilised

| Original pack 6 x 1 l | | | 114,90/1 l |

# Apoptosis Assay

ready-to-use

## Rotitest®-Annexin V

**Rotitest® Bio Analysis**

For detection and enumeration of apoptotic cells and simultaneous differentiation from necrosis.

Annexin-FITC conjugate, Apoptosis detection Kit

Storage temp.: +4 °C

- Simple, rapid application
- For cultured and primary cells (also for yeast cells)
- Discriminating between apoptotic and necrotic cells
- Result in approx. 30 minutes

Rapid and simple detection system of apoptotic cells, with simultaneous differentiation of necrotic cells.
During the first stages of apoptosis, phosphatidylserine (PS) is translocated from the inner membran layer to the outer surface of the cell.
The Rotitest®-Annexin V Kit uses the $Ca^{2+}$ dependent binding efficiency of Annexin V to PS in order to label cells with damaged cell membranes.
Additionally, propidium iodide is used to counter stain nuclei of cells with opened membranes, hence those which undergo necrotic degradation.
Thus, cells with yellow-green membrane staining only can be identified as apoptotic, while double stained cells (with yellow-green membranes plus orange-red nuclei) are classified as necrotic.
Analysis is performed via flow cytometry or fluorescence microscopy.
Each package contains simple-to-follow instructions-for-use.

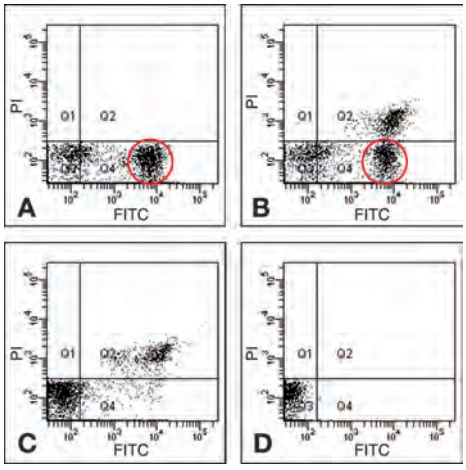

**Figure 1:**
Flow cytometry analysis of Jurkat cells. Assayed using 5x$10^5$ cells in 500 µl Annexin binding buffer, 25 µl Annexin V-FITC conjugate and 25 µl propidium iodide solution, 15 min. RT.
FITC-A: FITC staining (binding of Annexin-FITC conjugate),
PE-A: Propidium iodide staining
A,B) Cells after induction of apoptosis by Staurosporin, under pure annexin-FITC staining (A) or under annexin-FITC / PI staining (B), respectively. C,D) Uninduced control cells under annexin-FITC / PI staining (C) and without staining (D), respectively.
Due to the binding of Annexin V to PS on the outer membrane surface, apoptotic cells are Annexin-FITC positive, but PI negative (Q4, circle).
Q3 displays healthy cells (neg/neg), Q2 necrotic cells (Annexin-FITC pos and PI pos). Cells in Q1 (PI pos/ Annexin-FITC neg) are dead, non-apoptotic cells.

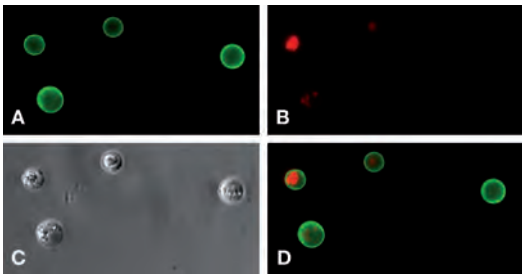

**Figure 2:**
Fluorescence microscopic analysis of Jurkat cells following induction of apoptosis by staurosporine. Assayed using $10^5$ cells in 100 µl Annexin binding buffer, 5 µl Annexin V-FITC conjugate and 5 µl propidium iodide solution, 15 min. RT.
A) FITC fluorescence (green), B) propidium iodide fluorescence (red), C) bright field image, D) composite image. Apoptotic cells are FITC positive, PI negative. FITC pos/PI pos cells may be classified as being necrotic. Healthy cells are FITC/PI neg.

**The kit contains:**
Annexin V-FITC conjugate, propidium iodide solution, Annexin V binding buffer, detailed instructions-for-use.
Excluding the columns, contents of this Kit may not be bought separately.
Store at +4 °C protected from light. Do not freeze.

1 set is sufficient for analysis of 50 samples of $10^5$ cells each

**Type analysis:**

## Roti®-Stock 10x PBS

ready-to-use S

**BioScience-Grade, ready-to-use, filtered and steam sterilised**

For protein biochemistry, cytology, and molecular biology.

PBS 10x ready-to-use solution

10fold stock solution phosphate buffered saline. Very versatile standard solution for detection systems in protein biochemistry, cytological stainings and molecular biological assays. Thus, 1 x PBS is used as basic solution for Western-Blot analyses, ELISAs and other enzymatic assays, for solving and dilution of proteins, for immunocytological and immunohistological assays, as well as for *in situ* hybridisations, apoptosis detection systems and staining of nuclei.
Recommended for HRP-mediated detection systems.
With original seal.

**Composition:**
1.37 M NaCl, 27 mM KCl, 100 mM $Na_2HPO_4$, 20 mM $KH_2PO_4$ in deionised water, pH-value 7.4, 0.2 µm filtered and steam sterilised

**Instructions for use**
can be found on the Internet next to the product description.

# Fixation

Fixation is used to stabilise cell shape and intracellular structures. The existing state at a defined time is thus preserved and can be proven in later analysis assays.

In cell biology, a buffered formaldehyde solution with a 4% or 4.5% concentration is mainly used for this purpose.Formaldehyde as an aqueous solution usually occurs as a diol (OH-HCH-OH), but polymerises readily ($OH-(H_2CO)_nH$) resulting in the formation of solids, which in turn are called 'paraformaldehyde'. For the **fixation** of tissue and cells, however, the formalin must be a monomer; in order to prevent polymerisation, the solution is therefore stabilised with methanol. To further prevent oxidation into formic acid, as occurs under atmospheric oxygen, formaldehyde solution is buffered with calcium carbonate or phosphate. On our high-quality **Roti®-Histofix solutions,** you will therefore find the entry **'acid-free, phosphate-buffered, stabilised with methanol'.**

According to GHS, concentrated formaldehyde solution is rated highly as poisonous, corrosive and hazardous to health, with the result that many users search for non-hazardous alternatives. This can be remedied by the use of bottled formalin solutions such as our **Roti®-Histofix in sample containers** or the new generation of **formalin-free fixation solutions,** such as our **Roti®-Histofix ECO plus.**

| Product | Purity | Application | Art. No. | Pack Qty | € |

For additional product data and safety information, see chapter Chemicals A-Z.

## Roti®-Histofix ECO Plus

**Fixing agent without formalin**

For fixing of histological and immunochemical specimens.
Formalin substitute.

Storage temp.: +20 °C

- Formaldehyde-free, non-toxic fixative
- Good fixation properties
- pH 4,5 -5,0
- No denaturing effect, e.g. shrinkage or crosslinking
- Adequate substitute for formaldehyde

Roti®-Histofix ECO Plus is a ready-to-use, aqueous solution on base of hexamethylene tetramine. The solution has as similar good fixation properties as formaldehyde, but is, unlike formaldehyde, classified as non-toxic. The original morphology of the tissue is preserved during the fixation process. The protein molecules are cross-linked in a reversible way, their structures are preserved. That is especially important for antigen-antibody reactions. Samples are - in contrary to other fixative media - free of artefacts such as shrinkage of tissue or irreversible protein crosslinking. The solution is therefore ideal for immunohistochemistry. All conventional staining processes can be carried out following fixation.
Roti®-Histofix ECO Plus has an indicator dye and is scented for better identification (< 1ppm).

▶ Drain cocks see chapter Labware - Pumps, Pipettors and Sampling.

Formaldehyde, chem. methanal (methane-aldehyde).
Derived from the Latin **formica** = ant, as formic acid occurs during oxidation of the methanal.
Formaldehyde in itself is gaseous at room temperature and is called formalin when it occurs as an aqueous solution.

According to current knowledge, **fixation** occurs through the formation of methylene bridges and bridges through Schiff bases and, since it is non-denaturing, is at least partly reversible through heating and/or alkalisation. The penetration velocity of formalin into tissue is approximately 1 mm/h.

## Roti®-Free Slide Enhancer

**10x conc., BioScience-Grade**

Concentrated buffer for enhancement
of detection signals in immunohistochemistry and *in situ* hybridization.

Storage temp.: +20 °C

- Very effective
- Gentle
- Odour-free
- Simple application
- Suitable for formaline- and paraffin fixed samples and cryo sections

Efficient stripping buffer for removal of antibodies, probes, and corresponding stains from immunohisto- and -cytochemical samples, as well as from *in situ* hybridizations. Due to the particularly adjusted formulation of the Roti®-Free Slide Stripping Buffer, antigens and hybridization partners are retrieved very gently, but quantitatively, enabling the samples to be assayed repeatedly. Suitable for all common samples like formaline- and paraffin fixed tissue and cells, or cryo sections.

**Applications:** The slides are incubated in Roti®-Free Slide Stripping Buffer for 20-40 min at 70-95 °C. After repeated washing steps, the samples may be assayed again with antibodies or probes. The particular parameters necessary for complete stripping depend on the respective samples, fixing-, and detection systems.

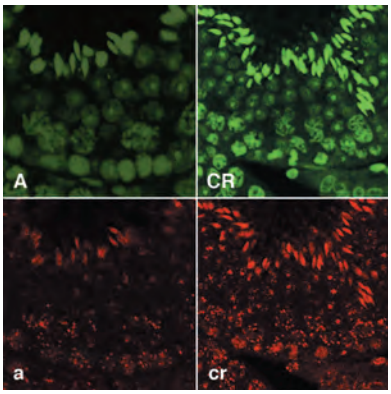

**Figure 1:**
Fluorescence *in situ* hybridisation (FISH) on sections of formaline fixated, paraffin embedded tissue.
Capitals: Nuclear counter staining (Cytogreen), minuscules: Telomere-DNA FISH with red flourescence dye.
CR/cr: Detection after pretreatment with Roti®-Free Slide Enhancer.
A/a: Standard detection in 1 % triton-PBS buffer, w/o pretreatment.

With kind permission of the RIKEN Brain Science Institute (BSI), Development Research Group, Hirosawa Wako City, Saitama, Japan

One bottle of 500 ml is sufficient for approx. 500 sample slides.

**Type analysis:**

pH value (1x sol.).....6,9-7,1
RNAse.....≤2 ppb
DNAse.....≤0,2 ppm

# Blocking

ready-to-use

## Roti®-ImmunoBlock

**ready-to-use, 10x conc.**

Protein free blocking reagent for immunocytological assays.
Without detergent.
Storage temp.: +20 °C

**Suitable for**

- Immunocytological assays
- Immunohistological assays
- Paraffin- and cryosections
- *in situ* hybridisation
- Cell culture samples
- Whole mount samples

Roti®-ImmunoBlock is an innovative blocking reagent on a polymer base without detergents and proteins.

No contamination of your detection system through foreign proteins, reducing background and false-positive signals. Specific binding signals are preserved whilst non-specific interaction is impeded, increasing the signal-to-noise ratio. Ready-to-use solution for fast and easy applications.

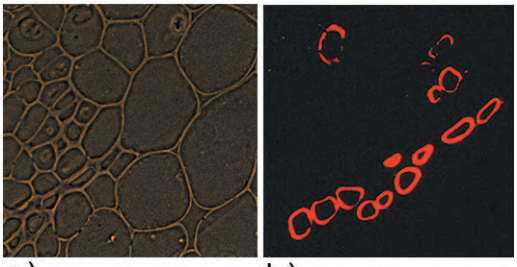

**Figure:**
*Scilla siberica:* Cross section of a conducting bundle from the leaf. Immunofluorescent detection of a protein in sieve cells:
a) Phase contrast
b) Immunofluorescence, blocking with Roti®-ImmunoBlock

**Immunostaining by HRP and AP**
Protocols

## Albumin, IgG free

**>98 %, IgG-free, for biochemistry and molecular biology**

Recommended as blocking and stabilisingreagent in all antibody-mediated detection systems.
BSA
M ~66 000 g/mol
Storage temp.: +4 °C

DNAse-free RNAse-free

Protease-free

Albumin, highly purified and tested for presence of immunoglobulins (IgGs), proteases, RNAse, and DNAse. Albumin, IgG-free is particularly recommended for use as stabilising reagent in antibody solutions, and as blocking reagent in all assays using detection systems via antibodies. Also very well suited for stabilising of hot-start-PCRs mediated by antibodies, or as blocking reagent in antibody-detected hybridisations.

# Substrates for Immunodetection

Carl Roth offers you a wide range of substrates for biochemistry, cellular biology and microbiology. The key substrates for cytochemical applications are summarised here.

For detailed information regarding usage, chemical details, safety instructions and further package sizes for these and many other substrates, refer to **"Substrates"** in the chapter **Biochemistry** or to Chemicals A-Z.

## For Alkaline Phosphatase (AP)

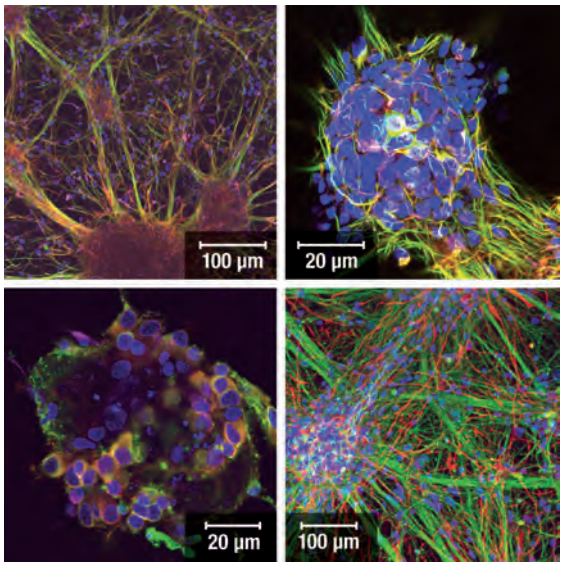
# Reference Sample for Fluorescent Microscopy

Ideal for testing or calibration of confocal laser scanning microscopes and other fluorescent microscopes. Excellent signal output and good photo stability. Ready to use for microscopy.

- Stained with 4 fluorochromes
- Planar and 3D cell structures
- Excellent signal output
- Good photo stability



ready-to-use

## Demoslides Fluoro-4C

**Reference sample for fluorescent microscopy**

Glass slide with ready-to-use cell specimen.
For fine tuning of fluorescent microscopes.
Fluorescent preparation Fluoro-4C
Storage temp.: +4 °C

Durable test preparation of neuronal cells of a murine cell culture. Contains the markers Tubulin-Cy2, Nestin-Cy3 and DCX-Cy5 and in addition DAPI-stained nuclei. The specimens show 3D-structuresin form of cell aggregates (spherules) and a network of planar cells. There is an intracellular co-localization between Tubulin-Cy2 and DCX-Cy5.

Demoslide Fluoro-4C scanned by a 20x objective lens (100 µm) and a 63x objective lens (20 µm) of a laser scanning microscope (marker: Tubulin-Cy2-green; Nestin-Cy3-red; DCX-Cy5-magenta; DAPI-blue).

**3 fluorescent channels and DAPI**

The specimen contains stained cell structures in three different spectra: green (Cy2), red (Cy3) and infrared (Cy5). All three channels can be illustrated isolated or superposed. DAPI staining of nuclei allows identification of single cells as well as apoptotic or mitotic nuclei (fig. C). If Cy5-signals of DCX are displayed in red co-localization with Tubulin (Cy2-green) becomes visible as yellow signal (fig. A).

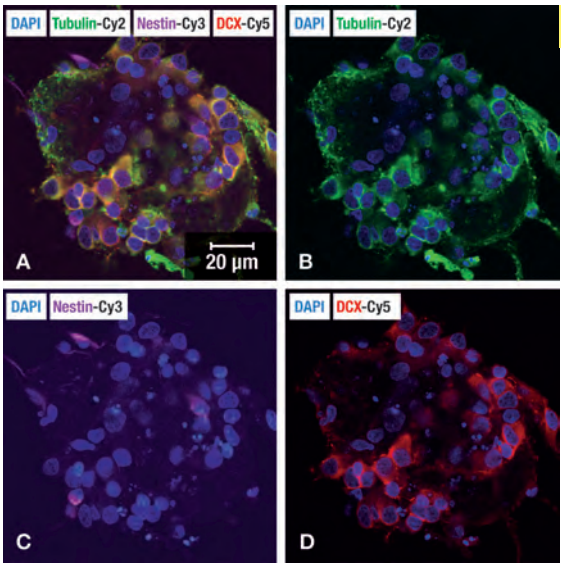


Illustration of the 3 fluorescent channels of Tubulin-Cy2 (B), Nestin-Cy3 (C) and DCX-Cy5 (D), each in combination with DAPI. Figure A shows the combination of all 3 channels. Objective lens: 63x; bar: 20µm

**Packaging and Storage**

Every Fluoro-4C preparation is mounted on a slide and covered with a cover slip for long-term storing. It is delivered in a preparation board. Please store the slides in the dark. Storage at room temperature is sufficient. However, for longer periods without usage we recommend usual slide boxes stored in the refrigerator. Allow the boxes to achieve room temperature before opening and removing the slides and avoid frequent temperature changes.

**Avoid too long and too intensive exposure to UV light!**

# Hygiene Monitoring

In recent years, the prevention of infection, environmental-, residential- and communal hygiene have become very important even in day-to-day life. Today, hygiene monitoring equipment is installed, required and, in some cases, already prescribed by law in institutions, facilities and a variety of other areas. These include hospitals, rehabilitation clinics, ambulance services, blood donor services, drinking water supply systems, public swimming baths, sports facilities, schools, public offices, companies, hotels, gastronomy and canteens, food retailing, food-producing companies and ports.

The main emphasis of hygiene monitoring is on checking the results of cleaning and decontamination processes, e.g. in-house monitoring of food production and processing, determining the hygiene status of kitchens, sports facilities and sanitary facilities, checking the contamination status of air conditioning systems for the protection of employees and customers, and raising awareness of hygiene problems during training.

Roth offers a wide range of hygiene monitoring products which are quick and easy to use even for novices.

- Easy and safe handling - also for laymen
- Simple interpretation
- Storage and transport at room temperature
- Suitable for hygiene monitoring and contamination survey wherever needed, for schooling and student's courses

## Rotitest® Protein

**Rotitest® Bio Analysis**

Protein detection system for rapid control of surfaces after the cleaning process.
Protein quick test
Storage temp.: +20 °C

**Warning** H226

- Most simple handling
- Result in 2 mins. maximum
- Definite interpretation through colour shift
- Well suitable for laymen

Rapid and simple test system for detection of protein contamination on surfaces. Optimal for hygiene control and testing of cleaning efficiency of table tops, sales counters, handles etc.
This Rotitest® Protein is very easy to apply: Using the integrated swab the respective surface is probed; pressing of the lid automatically drips the detection solution onto the swab head. Interpretation is simple due to the distinct colour shift from yellow-orange to dark green-blue. Results are available in 2 mins. maximum.

Each package contains simple-to-follow instructions-for-use.

Store at 15-25 °C protected from light. Do not freeze.
Suitable for testing of any surface.

**Figure:**
Colour shift to dark green-blue caused by presence of proteins.

| | | |
|---|---|---|
| **4803.1** | 20 swabs | 90,20 € |

# Swab Tests

**Please note:**
The Rotitest® systems provide **non-quantitative data only**, and aren't equipped to measure any contamination magnitude.

ready-to-use S

## Rotitest® Listeria

**Rotitest® Bio Analysis**

Detection system for exclusion, or affirmation, of contamination by listeriae.

Storage temp.: +20 °C

- Most simple handling
- Definite interpretation through colour shift
- Well suitable for laymen

Simple test system for detection, or exclusion, of listeriae contamination on surfaces. Optimal for control and minimisation of the contamination risk caused by *Listeria ssp.*, particularly *L. monocytogenes*.
This Rotitest® Listeria is very easy to apply: Using the integrated swab the respective surface is probed and the swab is firmly pressed into the sterile nutrient medium. After incubation for 24-48 hours (37 °C) a distinct blackening of the medium indicates the presence of listeriae, hence the contamination of the respective surface.
Each package contains simple-to-follow instructions-for-use.
Note: This test system only allows exclusion, or affirmation, of a listeriae contamination per se. Quantitation is not possible.

**Figure:**
Colour shift to black caused by presence of listeria.
Store at 5-25 °C. Do not freeze.
Suitable for testing of any surface.

**Type analysis:**

| | |
|---|---|
| Appearance (nutrient medium) | brown |
| Sterility test | complies |
| Growth of bacterial test strains | complies |

**4805.1** 25 swabs 126,35 €

ready-to-use S

## Rotitest® Coliform

**Rotitest® Bio Analysis**

Detection system for exclusion, or affirmation, of contamination by coliforms.

Storage temp.: +20 °C

- Most simple handling
- Definite interpretation through colour shift
- Well suitable for laymen

Simple test system for detection, or exclusion, of coliform contamination on surfaces. Optimal for hygiene monitoring and for minimisation of the contamination risk caused by coliforms in general., particularly *E. coli*.
This Rotitest® Coliform is very easy to apply: Using the integrated swab the respective surface is probed and the swab is firmly pressed into the sterile nutrient medium. After incubation for 18-24 hours (37 °C) a distinct colour shift of the medium from purple to yellow indicates the presence of coliforms, hence the contamination of the respective surface.
Each package contains simple-to-follow instructions-for-use.
Note: This test system only allows exclusion, or affirmation, of a coliform contamination per se. Quantitation is not possible.

**Figure:**
Colour shift to yellow-orange caused by presence of coliforms.
Gas formation hints to presence of *E. coli*.
Store at 16-26 °C. Do not freeze.
Suitable for testing of any surface.

**Type analysis:**

| | |
|---|---|
| Appearance (nutrient medium) | red-brown |
| Sterility test | complies |
| Growth of bacterial test strains | complies |

**4806.1** 25 swabs 126,35 €

# ATP Measurement with a System: Lumitester plus LuciPac®

## Lumitester PD30

Made by Kikkoman
Easy-to-use, lightweight luminometer for ATP measurement. For reliable monitoring of liquids, dry and wet surfaces as part of hygiene control in the manufacturing sector, in the foodstuffs and animal feed sector, in patients- and health care, in gastronomy and trade, in training and in many other areas.

- Lightweight and easy-to-use
- Fast and easy handling
- Highly sensitive, precise measurement of ATP and AMP
- Ready for use after 8 seconds
- Auto-calibration
- Definition of own limit values is possible
- Data transfer via USB to computer
- Documentation and analysis software (Excel-based) included

NEW with Lumitester PD30:
- 8 language display options
- Data analysis software allows to match the testing mode to the particular measurement situation
- Stand-up soft case included as accessory

**Technical specifications:**

| | |
|---|---|
| Measurement duration | 10 seconds |
| Display | LCD |
| Calibration | Auto-calibration |
| Port | USB |
| Temperature range | 5 to 40 °C |
| Measurement date | Internal date and time |
| Data output | RLU (Relative Light Units) |
| Data memory | 2000 analyses |
| Power supply | 2 x AA alkaline cells or 2 x nickel-metal hybrid batteries |
| Outer dimensions (W x H x L) | 65 x 32 x 175 mm |
| Weight | 235 g (excluding batteries) |

**Mechanism:** Both ATP (adenosine triphosphate) and the more stable form AMP (adenosine monophosphate) are found in all living cells and, therefore, provide an exact and quantitative marker for the presence of bacteria, fungi or food residue. An enzyme/substrate complex in the LuciPac® Pen sampling tube reacts with both ATP *and* AMP to release bioluminescence whose intensity correlates directly with the quantity of ATP/AMP present. The Lumitester PD30 fully converts this bioluminescence into a measurement result and is, therefore, the most sensitive measuring system available today.

Thus, liquids and surfaces can be quickly and easily tested for contamination by foodstuffs and microorganisms using the Lumitester PD30 and the LuciPac® Pen sampling pen. Within approximately 30 seconds, the Lumitester PD30 can provide information on hygiene status or the efficiency of cleaning and disinfection procedures. The system is easy and safe to operate, even by non-professionals. Simply insert the sampling tube and close the unit. Then press the *Enter* button, and the measurement result will be displayed within 10 seconds.

Suitable for use with LuciPac® Pen Aqua (Art. No. NC58) for monitoring liquids and with LuciPac® Pen (Art. No. NC59) for the analysis of surfaces.

| **NC57.1** | 1 | 1601,75 |

Suitable for monitoring of circulating water in **evaporative cooling systems** by measuring ATP (**VDI 2047**).

**Hygiene** (greek ύγιεινή τέχνη [hygieiné téchne] = conducive to health [art])
The word "hygiene" is a collective term applied to all measures for the prevention of infectious diseases and the spread thereof as well as for the preservation of health.
Hygiene is often used incorrectly as a synonym for cleanliness, which, however, represents only a small part of hygiene. On the contrary, hygiene is the science of applying measures for the protection of health.

**Instructions for use**
can be found on the Internet next to the product description.

## LuciPac® Pen

**Kikkoman for hygiene control**

For testing for the contamination of surfaces by ATP/AMP measurement using Lumitester PD20 and PD30.

Storage temp.: +4 °C

For reliable monitoring of dry and wet surfaces in the manufacturing sector, in the foodstuffs and animal feed sector, in patients- and health care, in gastronomy and trade, in training and in many other areas.

- Quick and easy sampling
- Easy and quick measurement within seconds
- Sensitive and reproducible measurement

Using the LuciPac® Pen sampling pen, surfaces can be tested easily and quickly for contamination by bacteria, fungi and food residue. Organic contamination is indicated by the presence of ATP or AMP on these surfaces. An enzyme/substrate complex in the LuciPac® Pen sampling tube reacts with ATP and AMP to produce bioluminescence whose intensity correlates directly with the amount of ATP/AMP present. The Lumitester PD20 or PD30 then determines the bioluminescence as a direct measure of original contamination.
The unit is easy to operate, even by non-professionals. Just moisten the swab and swipe it across the surface. Then put the swab back into the tube and push it down into the reaction chamber. Shake the tube until the reagents are released and measure the bioluminescence in the Lumitester PD20 or PD30.

20 LuciPac® Pens each are packed in a resealable aluminium bag.
Store in a dark place.

| | | | |
|---|---|---|---|
| **NC59.1** | 20 pieces | Aluminium bag | 96,65 € |
| **NC59.2** | 100 pieces | Aluminium bag | 413,90 € |

## LuciPac® Pen Aqua

**Kikkoman for hygiene control**

For testing for the contamination of liquids by ATP/AMP measurement using Lumitester PD20 and PD30.

Storage temp.: +4 °C

For reliable monitoring of liquids, e.g. contamination control of water and wastewater.

- Quick and easy sampling
- Exact sample volumes of 150 µl
- Easy and quick measurement within seconds
- Sensitive and reproducible measurement

Using the LuciPac® Pen Aqua sampling pen, liquids can be tested quickly and easily for organic contamination. The organic contamination of liquids, e.g. by bacteria, is indicated by the presence of ATP or AMP in these samples. An enzyme/substrate complex in the LuciPac® Pen Aqua sampling tube reacts with ATP and AMP to produce bioluminescence whose intensity correlates directly with the amount of ATP/AMP present. The Lumitester PD20 or PD30 then determines the bioluminescence as a direct measure of original contamination. The sampling comb ensures precise sampling of 150 µl with a deviation of ≤2 %. Test results are, therefore, highly reproducible and comparable.
The unit is easy to operate, even by non-professionals. Just immerse the sampling comb into the liquid. Then put the comb back into the tube and push it down into the reaction chamber. Shake the tube until the reagents are released and measure the bioluminescence in the Lumitester PD20 or PD30.
20 LuciPac® Pens Aqua each are packed in a resealable aluminium bag.
Store in a dark place.

| | | | |
|---|---|---|---|
| **NC58.1** | 20 pieces | Aluminium bag | 96,65 € |
| **NC58.2** | 100 pieces | Aluminium bag | 413,90 € |

Please note our **Technical Information Brochure** on the Internet next to the products:

**Lumitester PD30**
Function and use (EN)

## Lumitester LED Control Swab

Made by Kikkoman
The Lumitester LED control swab, once charged, produces a stable, exactly defined and calibrate light signal that can be used check the functioning of the Lumitester PD20 or PD30. The product illustration shows the LED control swab (back) in comparison with a LuciPac® Pen sampling tube.

Immediately before checking the Lumitester, connect the LED control swab to the power supply using the supplied charging cable and charge for 30 to 60 seconds. Then disconnect the LED control swab from the power supply and insert the LuciPac® Pen sampling tube into the cleaned measuring chamber of the Lumitester. The luminous energy emission is measured by pressing the *Enter* button.

Comparing the measurement result with the printed information indicates the condition of the unit. If the nominal value of 80 to 120 % is achieved, the Lumitester is in perfect working order. If not, please contact us to have the Lumitester and control swab recalibrated.

# Monitoring of Pasteurised Milk

## Rotitest® Phosphatase paper

ready-to-use

**Rotitest® Bio Analysis**

For detection of phosphatase in Milk.

Storage temp.: +4 °C

Test paper for efficiency monitoring of milk pasteurisation.
The test paper, impregnated with detection reagent, is cut at one end and allowed to soak by dipping it into a sample of the milk to be analysed. During incubation at 37 °C for 2 hours in maximum, a yellow colouring shows presence of Alkalic Phosphatase, hence the non-efficient pasteurisation of the milk.

Sensitivity of the phosphatase test system is 0.5 % raw milk in pasteurised milk. This test system does not provide quantitative data.
One package contains 10 single welded test papers, impregnated with detection reagent.

**Type analysis:**

Paper colour. ..... white
Colour shift to yellow. ..... complies
Sensitivity. ..... complies

# EC Blue System

## For qualitative and quantitative detection of Coliforms, and *E. coli* in particular, in water.

- Fast - results in just 24 hours
- Simple - easy to handle, even by non-professionals
- Safe - easy-to-interpret colour reaction
- Sensitive - 1 cfu/100 ml detection limit
- Efficient - simultaneous analysis of coliforms and *E. coli*
- Also suitable for chlorinated and turbid water

Quick and safe process for the analysis of coliform bacteria in general, and *E. coli* specifically in water. The test is also suitable for analysis of turbid water samples and water samples containing suspended matter. Bacteria stressed by chlorinated water can generally also be verified.
The formation of a blue to blue-green colour after incubation at 35 °C indicates the presence of coliform bacteria in the water. This colour change is due to an enzymatic colour reaction of the coliform-specific galactosidase with the chromogenic substrate X-Gal.

The presence of *E. coli* can easily be detected by the occurrence of fluorescence under UV light (see EC-Blue Mini UV lamp Art. No. KK49.1). Approximately 95 % of all *E. coli* strains produce the enzyme ß-glucuronidase, which reacts with an enzyme substrate contained in EC Blue to release a fluorescent dye.

Quantification is possible using EC Blue Quant/MPN (Art. No. 0199.1).

### EC Blue 100P

**NISSUI for water analysis**
Pour 100 ml of the test water into a sterile container and dissolve the contents of a single-dose sachet of EC Blue 100P powder in it.
The EC Blue Comparator for 100 ml (Art. No. 0349.1) is available for the comparison of own samples with a slightly positive control.
EC Blue 100P saves space and cost thanks to its practical packaging in a blister pack. Store protected from light.
Dissolve a single-dose sachet of analysis reagent in 100 ml of test water.

| | | | |
|---|---|---|---|
| **0202.1** | 100 pieces | plastic | 428,95 € |

### EC Blue 100

**NISSUI for water analysis**
Add 100 ml of the test water to one bottle of EC Blue 100 and dissolve the powdered contents in the test water.
The EC Blue Comparator for 100 ml (Art. No. 0349.1) is available for the comparison of own samples with a slightly positive control.
EC Blue 100 saves time and preliminary work because the reagent mixture is provided in sterile test bottles for direct use. Store protected from light.
Add 100 ml sample water.

| | | | |
|---|---|---|---|
| **0209.1** | 80 pieces | plastic | 618,15 € |

### EC Blue 10

**NISSUI for water analysis**
Add 10 ml of the test water to one bottle of EC Blue 10 and dissolve the powdered contents in the test water.
The EC Blue Comparator for 10 ml (Art. No. 0349.2) is available for the comparison of own samples with a slightly positive control.
EC Blue 10 saves time and preliminary work because the reagent mixture is provided in sterile test bottles for direct use. Store protected from light.
Add 10 ml sample water.

| | | | |
|---|---|---|---|
| **7754.1** | 150 pieces | plastic | 536,45 € |

## EC Blue Comparator

**NISSUI for water analysis**

1 bottle of *E. coli* positive control for EC Blue system, colour intensity "1 cfu".

Storage temp.: +4 °C

Positive control for the EC Blue System, colouration of 1 cfu (colony forming unit). The product illustration shows the comparator for 100 ml in comparison with 5 negative samples.
The presence of *E. coli* can easily be detected by the occurrence of fluorescence under UV light (see EC-Blue Mini UV lamp Art. No. KK49.1). Approximately 95 % of all *E. coli* strains produce the enzyme ß-glucuronidase. This enzyme hydrolyses the enzyme substrate MUG and thus releases a fluorescent dye that can be detected with UV light.

Store protected from light.

| | | | |
|---|---|---|---|
| **0349.2** | 10 ml | plastic | 138,70 € |
| **0349.1** | 100 ml | plastic | 160,20 € |

## EC Blue Mini UV lamp

By Fujitsu
Small, handy UV lamp for quick and simple detection of *E. coli* bacteria in EC Blue assays.

**Technical specifications:**

| | |
|---|---|
| Wave length | 365 nm |
| Temperature range | 0 to 40 °C |
| Outer dimensions (W x H x L) | 52 x 21 x 160 mm |
| Demand | 4 watt |
| Power supply | 4 x AA alkaline cells |
| Weight | 100 g (excluding batteries) |

The presence of *E. coli* can easily be detected by the occurrence of fluorescence under UV light. Approximately 95 % of all *E. coli* strains produce the enzyme ß-glucuronidase, which reacts with an enzyme substrate contained in EC Blue to release a fluorescent dye.

| Art. No. | Pack Qty | € |
|---|---|---|
| **KK49.1** | 1 | 128,90 |

## EC Blue Quant/MPN

By NISSUI
For fast and easy quantification of coliform bacteria according to MPN (Most Probable Number Method), e.g. according to DIN EN ISO 9308-2:2014-06. Optimised for use with EC Blue 100 and 100P.

- Reproducible, precise results
- Detection limit 1 cfu/100 ml
- No pre-dilution required
- Test result after 24 hours
- Simultaneous quantitation of coliforms and *E. coli*
- Also suitable for chlorinated and turbid water

The unique, innovative design of the EC BlueQuant/MPN allows rapid and reliable processing of MPN tests – simple to operate and without any additional equipment, except an incubator. The method is based on the standardised MPN method that uses at least three different dilution levels in increments of 10 and 5 compartments per dilution. Testing with the EC BlueQuant/MPN does not require a series of dilutions. When pouring the mixture, due to the special layout, the compartments are filled in such a way as to ensure correct serial dilution. After incubating the sample for 24 hours at about 35 °C, the result can be read off the device and converted to cfu/ml using ISO standard tables (e.g. DIN EN ISO 9308-2:2014-06).

Presence of *E. coli* can easily be detected by the occurrence of fluorescence under UV light (see EC-Blue Mini UV lamp Art. No. KK49.1). Approximately 95 % of all *E. coli* strains produce the enzyme ß-glucuronidase, which reacts with an enzyme substrate contained in EC Blue to release a fluorescent dye.

Detection limit: 1 cfu/100 ml for coliforms and *E. coli*.
The set consists of 18 EC Blue Quant/MPN chambers including lids.

# Roti®-DipSlides

## Sterile dip slides with solid, ready-made culture medium for easy microbiological analysis of solutions and surfaces.

- **2 in 1:** DipSlide and contact agar
- Very easy application
- Reliable assay and easy interpretation
- Suitable for determination of the microbiological status and for hygiene control in a variety of domains
- Detailed Instructions-for-use included

### Examples of use:

Dipping into liquid

Probing of surface

Roti®-DipSlides are made of a flexible plastic tongue which is coated with solid culture medium on both sides. Following dipping into the solution to be tested or inoculation by pressing to a surface, the slide is placed back into the sterile tube and incubated. Total area for analysis is 8 $cm^2$ per side. Ø tube 2,5 cm.
Please note: Larger quantities are produced freshly. Hence, longer delivery times may occur.

S

### Roti®-DipSlide D/Eneutral

**ready-to-use, sterile, for microbiology**

For total germ count on surface after disinfection.
Contains 5 neutralizers.

Storage temp.: +4-15 °C • Transport temp.: cooled

Sterile dip slides with solid culture medium for easy microbiological analysis of solutions and surfaces.
Sodium bisulfite, Sodium thioglycolate, Sodium thiosulphate, Lecithin and Polysorbate 80 (Tween® 80) neutralise the growth-inhibiting impact of disinfectants and preservatives.
**Both sides (D/Eneutral):** D/E Neutralizing Agar (Art. No. 8850) for total germ count after disinfection. For hygiene monitoring.

Expiration time on request.
Do NOT freeze!

**Formulation:**
Agar both sides (D/Eneutral):

| | |
|---|---|
| Dextrose | 10 g/l |
| Lecithin | 7 g/l |
| Sodium thiosulphate | 6 g/l |
| Casein peptone | 5 g/l |
| Polysorbate 80 | 5 g/l |
| Yeast extract | 2,5 g/l |
| Sodium bisulfite | 2,5 g/l |
| Sodium thioglycolate | 1 g/l |
| Bromocresol purple | 0,02 g/l |
| Agar | 15 g/l |
| pH value | 7,6 ±0,2 |
| Colour | purple |
| Growth of test strains | complies |

| | | | |
|---|---|---|---|
| **8023.1** | 20 slides | box | 61,85 € |

- ▶ DipSlide Incubator EM4 see page 1366
- ▶ Other incubators see page 95269
- ▶ Convenient for Disposal: Benchtop autoclave see page 905

## Roti®-DipSlide PCA/TSA-Letheen

**ready-to-use, sterile, for microbiology**

For total germ count in liquids or on surfaces. Suitable for analysis of cosmetics and of preservative containing products or after disinfection. Contains two neutralizers.

Storage temp.: +4-15 °C • Transport temp.: cooled

**Warning** H319

Sterile dip slides with solid culture medium for easy microbiological analysis of solutions and surfaces.
Lecithin and Polysorbate 80 (Tween® 80) neutralise the growth-inhibiting impact of disinfectants and preservatives.
**Side 1 (PCA):** Plate Count Agar (acc. to APHA, ISO 4833:2003) (Art. No. X930) for total germ count.
**Side 2 (TSA-Letheen):** CASO Agar with Lecithin/Polysorbate 80 (Art. No. 8848) for detection of microorganisms from cosmetics and disinfected surfaces.

Expiration time on request.
Do NOT freeze!

**Formulation:**

Agar side 1 (PCA):

| | |
|---|---|
| Casein peptone | 5,0 g/l |
| Glucose | 1,0 g/l |
| Yeast extract | 2,5 g/l |
| Agar | 15,0 g/l |
| pH value | 7,0 ± 0,2 |
| Colour | amber, slightly opalescent |
| Growth of test strains | complies |

Agar side 2 (TSA-Letheen):

| | |
|---|---|
| Pancreatic digest of casein | 15,0 g/l |
| Soy peptone (papain hydrolysate) | 5,0 g/l |
| Sodium chloride (NaCl) | 5,0 g/l |
| Triton® X-100 | 1,0 g/l |
| Lecithin | 1,0 g/l |
| Polysorbate 80 | 5 g/l |
| Agar | 15,0 |
| pH-value | 7,2 ±0,2 |
| Colour | amber, slightly opalescent |
| Growth of test strains | complies |

| | | | |
|---|---|---|---|
| **8715.1** | 20 slides | box | 61,85 € |

Roti®-DipSlide PCA/TSA-Letheen is suitable for 14-day controls of **evaporative cooling systems**, **cooling towers** and **wet separators** (**42. Federal Emission Control Act (BImschV), VDI guideline 2047**).

| Neutraliser | Active substance |
|---|---|
| Polysorbate 80 + Lecithin | Amphotensides, benzamidine, chlorhexidine (guanidine), quaternary ammonium compounds, substituted phenols |
| Sodium bisulphite | Aldehydes, glutaraldehyde |
| Natrium thioglycolate | Isothiazoline (Kathon CG), mercury compounds |
| Sodium thiosulfate | Iodine and iodophore, chlorine |

Sources: Walhäuser (1988), APHA (2001), AAMI (1984)

## Roti®-DipSlide PCA/Legionella

**ready-to-use, sterile, for microbiology**

For total germ count and for detection of legionells in solution or on surface.

Storage temp.: +4-15 °C • Transport temp.: cooled

Sterile dip slides with solid culture medium for easy microbiological analysis of solutions and surfaces.
Roti®-DipSlide PCA/Legionella is suitable for supervision of units for heating of drinking water (Drinking Water Regulations), for surveillance of ventilation and air conditioning, as well as for monitoring of the micro-biological status of evaporative cooling systems.
**Side 1 (PCA):** Plate Count Agar (acc. to APHA, ISO 4833:2003) (Art. No. X930) for total germ count.
**Side 2 (Legionella):** Legionella Agar (acc. to ISO 11731-2) (Art. No. CL48) for selective detection of legionells.

Expiration time on request.
Do NOT freeze!

**Formulation:**

Agar side 1 (PCA):

| | |
|---|---|
| Casein peptone | 5 g/l |
| Yeast extract | 2,5 g/l |
| Glucose | 1 g/l |
| Agar | 15 g/l |
| pH value | 7,0 |
| Colour | amber, slightly opalescent |
| Growth of test strains | complies |

Agar side 2 (Legionella):

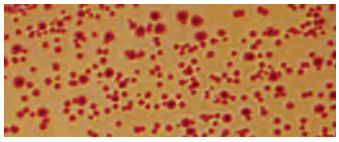
| | |
|---|---|
| Yeast extract | 10 g/l |
| Charcoal activated | 2 g/l |
| GVPC selective additive | complies |
| Growth additive | complies |
| Agar | 13 g/l |
| pH-value | 6,9 |
| Colour | black |
| Growth of test strains | complies |

| | | | |
|---|---|---|---|
| **2493.1** | 20 pieces | box | 61,85 € |

Roti®-DipSlide PCA/Legionella is suitable for supervision of units for **heating of drinking water** (**Drinking Water Regulations**), for surveillance of **ventilation and air conditioning**, as well as for monitoring of the microbiological status of **evaporative cooling systems**.

**Inactivation of anti-microbiological products:**

Disinfectants and preservatives have the task of preventing the growth of, or killing bacteria. However, there are particularly resistant bacteria that can survive anti-microbe agents, or even survive in the active substance.
To determine the bacterial count, the bactericide or fungicide effect is neutralized by so-called uninhibitors. Thus, media containing uninhibitors can be used to check the effectiveness of the disinfectants and preservatives.



## Roti®-DipSlide CASO-TTC/RBCenr

**ready-to-use, sterile, for microbiology**

For total germ count and for detection of yeasts and moulds in solution or on surface. Suitable for analysis of water-mixable cooling lubricants, air conditions, water-soluble paint, and cosmetics.

Storage temp.: +4-15 °C • Transport temp.: cooled

Sterile dip slides with solid culture medium for easy microbiological analysis of solutions and surfaces.
**Side 1 (CASO-TTC):** Tryptic Soy Agar (CASO) (Ph. Eur.) (Art. No. X937) for reliable total germ count.
**Side 2 (RBCenr):** enriched Bengal Red Agar (with antibiotics) for detection of yeasts and moulds.

*E. coli* (wild type) on agar supplemented with TTC (example).

Expiration time on request.
Do NOT freeze!

**Formulation:**

Agar side 1 (CASO-TTC):

| | |
|---|---|
| Caseine peptone | 15 g/l |
| Soja peptone | 5 g/l |
| Sodium chloride (NaCl) | 5 g/l |
| TTC | 0,02 g/l |
| Agar | 15 g/l |
| pH value | 7,3 |
| Colour | amber, slightly opalescent |
| Growth of test strains | complies |

Agar side 2 (RBCenr):

| | |
|---|---|
| Meat peptone | 5 g/l |
| Casein peptone | 5 g/l |
| Glucose | 40 g/l |
| Bengal red | 0,05 g/l |
| Trimethoprim | 0,03 g/l |
| Gentamycin | 0,03 g/l |
| Agar | 15 g/l |
| pH-value | 7,2 |
| Colour | intense pink |
| Growth of test strains | complies |

| | | | |
|---|---|---|---|
| **3934.1** | 20 pieces | box | 61,85 € |

Roti®-DipSlide CASO-TTC/RBCenr is suitable for analysis of **water-mixable cooling lubricants**, **air conditions**, **water-soluble paint**, and **cosmetics**.

## Roti®-DipSlide PCA/RBCplus

**ready-to-use, sterile, for microbiology**

For total germ count and for detection of yeasts and moulds in liquids or on surfaces.

Storage temp.: +4-15 °C • Transport temp.: cooled

Sterile dip slides with solid culture medium for easy microbiological analysis of solutions and surfaces.
**Side 1 (PCA):** Plate Count Agar (acc. to APHA, ISO 4833:2003) (Art. No. X930) for total germ count.
**Side 2 (RBCplus):** Bengal Red Agar (with chloroamphenicol) (Art. No. AE24) for detection of yeasts and moulds.

Expiration time on request.
Do NOT freeze!

**Formulation:**

Agar side 1 (PCA):

| | |
|---|---|
| Casein peptone | 5 g/l |
| Yeast extract | 2,5 g/l |
| Glucose | 1 g/l |
| Agar | 15 g/l |
| pH value | 7,0 |
| Colour | amber, slightly opalescent |
| Growth of test strains | complies |

Agar side 2 (RBCplus):

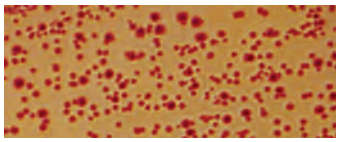
| | |
|---|---|
| Peptone | 5 g/l |
| Glucose | 10 g/l |
| Potassium phosphate | 1 g/l |
| Magnesium sulphate ($MgSO_4$) | 0,5 g/l |
| Chloroamphenicol | 0,1 g/l |
| Bengal red | 0,05 g/l |
| Agar | 15 g/l |
| pH-value | 7,2 |
| Colour | intense pink |
| Growth of test strains | complies |

| | | | |
|---|---|---|---|
| **2926.1** | 20 slides | box | 61,85 € |

**Application:**

- Remove carrier from sterile vial. Screw-cap serves automatically as holder.
- Press agar gently onto surface or immerse in liquid
- Replace carrier into vial and close cap
- Incubate vial with carrier at a temperature suitable for the bacteria

**Instructions for use**
can be found on the Internet next to the product description.



## Roti®-DipSlide Nutrient-TTC

**ready-to-use, sterile, for microbiology**

For total germ count in liquids or on surfaces.

Storage temp.: +4-15 °C • Transport temp.: cooled

Sterile dip slides with solid culture medium for easy microbiological analysis of solutions and surfaces.
**Side 1 (Nutrient):** Nutrient agar for total germ count
**Side 2 (Nutrient-TTC):** Nutrient agar with TTC for reliable detection of all living micro-organisms by formazan caused staining (red) of all colonies.

*E. coli* (wild type) on agar supplemented with TTC (example).

Expiration time on request.
Do NOT freeze!

**Formulation:**

Agar side 1 (Nutrient):

| | |
|---|---|
| Meat peptone | 5 g/l |
| Meat extract | 3 g/l |
| Agar | 12 g/l |
| pH value | 7,0 |
| Colour | amber, slightly opalescent |
| Growth of test strains | complies |

Agar side 2 (Nutrient-TTC):

| | |
|---|---|
| Meat peptone | 5 g/l |
| Meat extract | 3 g/l |
| TTC | 0,05 g/l |
| Agar | 12 g/l |
| pH-value | 7,0 |
| Colour | amber, slightly opalescent |
| Growth of test strains | complies |

| | | | |
|---|---|---|---|
| **2837.1** | 20 pieces | box | 61,85 € |

## Roti®-DipSlide PCA

**ready-to-use, sterile, for microbiology**

For total germ count in liquids or on surfaces.

Storage temp.: +4-15 °C • Transport temp.: cooled

Sterile dip slides with solid culture medium for easy microbiological analysis of solutions and surfaces.
**Both sides (PCA):** Plate Count Agar (acc. to APHA, ISO 4833:2003) (Art. No. X930) for total germ count.

Expiration time on request.
Do NOT freeze!

**Formulation:**

Agar both sides (PCA):

| | |
|---|---|
| Casein peptone | 5 g/l |
| Yeast extract | 2,5 g/l |
| Glucose | 1 g/l |
| Agar | 15 g/l |
| pH value | 7,0 |
| Colour | amber, slightly opalescent |
| Growth of test strains | complies |

| | | | |
|---|---|---|---|
| **2927.1** | 20 slides | box | 61,85 € |

## Roti®-DipSlide Sab4plus

**ready-to-use, sterile, for microbiology**

For detection of yeasts and moulds in liquids or on surfaces.

Storage temp.: +4-15 °C • Transport temp.: cooled

Sterile dip slides with solid culture medium for easy microbiological analysis of solutions and surfaces.
**Both sides (Sab4plus):** Sabouraud 4 % Glucose Agar (with chloro-amphenicol) (Art. No. X933) for detection of yeasts and moulds.
Expiration time on request.
Do NOT freeze!

**Formulation:**

Agar both sides (Sab4plus):

| | |
|---|---|
| Meat and casein peptone | 10 g/l |
| Glucose | 40 g/l |
| Chloroamphenicol | 0,5 g/l |
| Agar | 15 g/l |
| pH value | 5,6 |
| Colour | amber, slightly opalescent |
| Growth of test strains | complies |

| | | | |
|---|---|---|---|
| **2956.1** | 20 slides | box | 61,85 € |

## Important information on refrigerated transports

All products identified as being particularly temperature-sensitive are shipped in **special ice boxes with freezer packs or in dry ice.**
**Additional costs** resulting from such, **will be invoiced** (further information on request).

**Please note:**
In order to guarantee optimum product quality, the dispatch of refrigerated transport products will be carried out **on Mon and Tue only outside Germany!**
Slight delays in delivery are therefore possible.

## Roti®-DipSlide MacCon/Cetr

**ready-to-use, sterile, for microbiology**

For detection of enterobacteria like salmonellae or shigellae and pseudomonads in liquids or on surfaces.

Storage temp.: +4-15 °C • Transport temp.: cooled

Sterile dip slides with solid culture medium for easy microbiological analysis of solutions and surfaces.
Roti®-DipSlide MacCon/Cetr is suitable for the supervision of cooling and process water as well as of pool water (DIN EN ISO 16266) and for monitoring of the microbiological status of evaporative cooling systems and cooling towers (VDI guideline 2047, Federal Environment Ministry (BImSchG)).
**Side 1 (MacCon):** MacConkey Agar (Art. No. X922) for detection of enterobacteria/coliforms like salmonellae or shigellae.
**Side 2 (Cetr):** Cetrimide Agar (Art. No. X918) for detection of pseudomonads.

Expiration time on request.
Do NOT freeze!

**Formulation:**

Agar side 1 (MacCon):

| | |
|---|---|
| Gelatine peptone. | 17,0 g/l |
| Meat and casein peptone. | 3,0 g/l |
| Lactose monohydrate. | 10,0 g/l |
| Sodium chloride (NaCl). | 5,0 g/l |
| Bile salt (Cholate). | 1,5 g/l |
| Neutral red. | 0,03 g/l |
| Crystal Violet. | 0,001 g/l |
| Agar. | 13,5 g/l |
| pH value. | 7,1 ± 0,2 |
| Colour. | violet-red |
| Growth of test strains. | complies |

Agar side 2 (Cetr):

| | |
|---|---|
| Pancreas hydrolysate made from gelatin. | 20,0 g/l |
| Magnesium chloride. | 1,4 g/l |
| Potassium sulphate. | 10,0 g/l |
| Cetrimide. | 0,3 g/l |
| Agar. | 13,6 g/l |
| pH-value. | 7,2 ±0,2 |
| Colour. | opaque white |
| Growth of test strains. | complies |

| | | | |
|---|---|---|---|
| **8045.1** | 20 slides | box | 61,85 € |

## Roti®-DipSlide CLED/MacCon

**ready-to-use, sterile, for microbiology**

For detection of bacteria of the urinary tract and of enterobacteria/Coliforms in liquids or on surfaces.

Storage temp.: +4-15 °C • Transport temp.: cooled

Sterile dip slides with solid culture medium for easy microbiological analysis of solutions and surfaces.
**Side 1 (CLED):** CLED Agar (Art. No. 2835) for detection of bacteria of the urinary tract.
**Side 2 (MacCon):** MacConkey-Agar (Ph. Eur.) (Art. No. X922) for detection of enterobacteria/Coliforms.

Expiration time on request.
Do NOT freeze!

**Formulation:**

Agar side 1 (CLED):

| | |
|---|---|
| Casein peptone. | 4 g/l |
| Gelatine peptone. | 4 g/l |
| Beef extract. | 3 g/l |
| Lactose. | 10 g/l |
| L-Cystine. | 0,128 g/l |
| Bromothymol blue. | 0,02 g/l |
| Agar. | 15 g/l |
| pH value. | 7,3 |
| Colour. | green |
| Growth of test strains. | complies |

Agar side 2 (MacCon):

| | |
|---|---|
| Gelatin peptone (Pancreas hydrolysate). | 17 g/l |
| Meat and casein peptone. | 3 g/l |
| Lactose monohydrate. | 10 g/l |
| Bile salt (Cholate). | 1,5 g/l |
| Sodium chloride (NaCl). | 5 g/l |
| Neutral red. | 0,03 g/l |
| Crystal Violet. | 0,001 g/l |
| Agar. | 13,5 g/l |
| pH-value. | 7,1 |
| Colour. | violet-red |
| Growth of test strains. | complies |

| | | | |
|---|---|---|---|
| **2957.1** | 20 slides | box | 61,85 € |

▶ DipSlide incubator EM4 see page 1366

**For easy interpretation of results, use the following table:**

| No. of colonies | Result | Interpretation |
|---|---|---|
| 0 | Negative | No contamination |
| 1-10 | Weakly positive | Weak contamination |
| 11-20 | Positive | Low contamination |
| 21-100 | Strongly positive | High contamination |
| >100 | Highly positive | Very high contamination |

**Detection limit is $10^2$ cfu/ml solution assayed.**
For detailed instructions on interpretation see instruction-for-use.

## Roti®-DipSlide PCA/VRB

**ready-to-use, sterile, for microbiology**

For total germ count and for detection of Coliforms in liquids or on surfaces.

Storage temp.: +4-15 °C • Transport temp.: cooled

Sterile dip slides with solid culture medium for easy microbiological analysis of solutions and surfaces.
**Side 1 (PCA):** Plate Count Agar (acc. to APHA, ISO 4833:2003) (Art. No. X930) for total germ count.
**Side 2 (VRB):** Violet Red Bile Agar with Lactose (Art. No. X940) for detection of Coliforms.

Expiration time on request.
Do NOT freeze!

**Formulation:**

Agar side 1 (PCA):

| | |
|---|---|
| Casein peptone | 5 g/l |
| Yeast extract | 2,5 g/l |
| Glucose | 1 g/l |
| Agar | 15 g/l |
| pH value | 7,0 |
| Colour | amber, slightly opalescent |
| Growth of test strains | complies |

Agar side 2 (VRB):

| | |
|---|---|
| Yeast extract | 3 g/l |
| Pancreas hydrolysate made from gelatin | 7 g/l |
| Sodium chloride (NaCl) | 5 g/l |
| Bile salts | 1,5 g/l |
| Lactose | 10 g/l |
| Neutral red | 0,03 g/l |
| Crystal Violet | 0,002 g/l |
| Agar | 15 g/l |
| pH-value | 7,4 |
| Colour | purple-red |
| Growth of test strains | complies |

| | | | |
|---|---|---|---|
| **2925.1** | 20 slides | box | 61,85 € |

## Roti®-DipSlide PCA/VRBD

**ready-to-use, sterile, for microbiology**

For total germ count and for detection of enterobacteria in liquids or on surfaces.

Storage temp.: +4-15 °C • Transport temp.: cooled

Sterile dip slides with solid culture medium for easy microbiological analysis of solutions and surfaces.
**Side 1 (PCA):** Plate Count Agar (acc. to APHA, ISO 4833:2003) (Art. No. X930) for total germ count.
**Side 2 (VRBD):** Violet Red Bile Agar with Glucose (Ph. Eur.) (Art. No. X939) for detection of enterobacteria.

Expiration time on request.
Do NOT freeze!

**Formulation:**

Agar side 1 (PCA):

| | |
|---|---|
| Casein peptone | 5 g/l |
| Yeast extract | 2,5 g/l |
| Glucose | 1 g/l |
| Agar | 15 g/l |
| pH value | 7,0 |
| Colour | amber, slightly opalescent |
| Growth of test strains | complies |

Agar side 2 (VRBD):

| | |
|---|---|
| Yeast extract | 3 g/l |
| Pancreas hydrolysate made from gelatin | 7 g/l |
| Sodium chloride (NaCl) | 5 g/l |
| Bile salts | 1,5 g/l |
| Glucose monohydrate | 10 g/l |
| Neutral red | 0,03 g/l |
| Crystal Violet | 0,002 g/l |
| Agar | 15 g/l |
| pH-value | 7,4 |
| Colour | purple-red |
| Growth of test strains | complies |

| | | | |
|---|---|---|---|
| **2924.1** | 20 slides | box | 61,85 € |

## DipSlide incubator EM4

Lightweight, small incubator specially designed for DipSlides. With transparent, easily removable cover for quick insertion and removal of DipSlides. Easy to operate, even for inexperienced users. A stand insert and a thermometer are also supplied. Also usable without a stand for incubation of Petri dishes and contact plates.

**Technical specifications:**

| | |
|---|---|
| Capacity | 23 DipSlides |
| Temperature range | Room temperature to 44 °C |
| Capacity | 4 l |
| Inner dimensions (W x H x D) | 180 x 125 x 180 mm |
| Outer dimensions (W x H x D) | 230 x 180 x 230 mm |
| Weight | 1.5 kg |
| Power supply | 220 V, 25 W |

| Art. No. | Pack Qty. | € |
|---|---|---|
| **KK43.1** | 1 | 461,20 |

## Roti®-DipSlide VRBD

**ready-to-use, sterile, for microbiology**

For detection of enterobacteria in liquids or on surfaces.

Storage temp.: +4-15 °C • Transport temp.: cooled

Sterile dip slides with solid culture medium for easy microbiological analysis of solutions and surfaces.
**Both sides (VRBD):** Violet Red Bile Agar with Glucose (Ph. Eur.) (Art. No. X939) for detection of enterobacteria.

Expiration time on request.
Do NOT freeze!

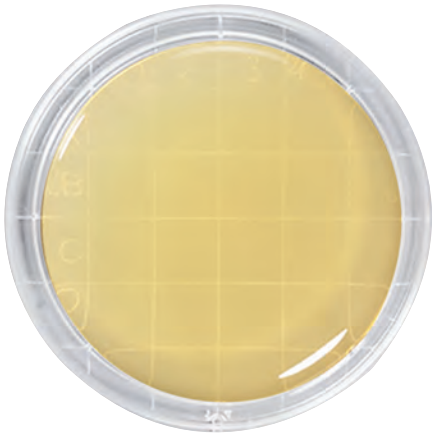
**Formulation:**

Agar both sides (VRBD):

| | |
|---|---|
| Yeast extract | 3 g/l |
| Pancreas hydrolysate made from gelatin | 7 g/l |
| Sodium chloride (NaCl) | 5 g/l |
| Bile salts | 1,5 g/l |
| Glucose monohydrate | 10 g/l |
| Neutral red | 0,03 g/l |
| Crystal Violet | 0,002 g/l |
| Agar | 15 g/l |
| pH value | 7,4 |
| Colour | purple-red |
| Growth of test strains | complies |

| | | | |
|---|---|---|---|
| **2954.1** | 20 slides | box | 61,85 € |

# Roti®-ContiPlates



## Sterile culture medium contact plates for the microbiological analysis of surfaces.

### Example of use:

The plate is gently pressed onto the surface for some seconds. Afterwards the plate is closed with the lid and incubated.
Please note: Larger quantities are produced freshly. Hence, longer delivery times may occur.

- Diameter 60 mm
- Very easy application
- Domed agar surface especially suitable for testing specimen surfaces
- Prepared with our tried and tested dehydrated media mixtures
- Grid on the bottom of the plate for easy interpretation
- Each plate can be obtained individually without contaminating the other plates
- Detailed Instructions-for-use included

### Summary Roti®-ContiPlates

| Art. No. | Abbreviation | Agar | Application |
|---|---|---|---|
| 9630 | PCA | Plate-Count-Agar | Whole germs |
| 9631 | VRBD | Violet Red Bile Agar with Glucose | Enterobacteria |
| 9632 | RBC | Bengal Red Agar (with chloroamphenicol) | Yeasts and moulds |
| 9633 | Sab4plus | Sabouraud 4 % Glucose Agar (with chloroamphenicol) | Yeasts and fungi |
| 9634 | TSA-Letheen | CASO Agar with Lecithin/Polysorbate 80 | Whole germs after disinfection |

### Roti®-ContiPlate VRBD

**ready-to-use, sterile, for microbiology**

For detection of enterobacteria on surfaces.

Storage temp.: +4-15 °C • Transport temp.: cooled

Sterile culture medium contact plates for the microbiological analysis of surfaces.
The Violet Red Bile Agar with Glucose (Art. No. X939) is recommended by Pharm. Eur. and ISO 21528 for enumeration of enterobacteria.
Expiration time on request. Do NOT freeze!

**Formulation:**

| | |
|---|---|
| Glucose monohydrate. | 10 g/l |
| Gelatine peptone. | 7 g/l |
| Sodium chloride (NaCl). | 5 g/l |
| Yeast extract. | 3 g/l |
| Bile salts. | 1,5 g/l |
| Neutral red. | 0,03 g/l |
| Crystal Violet. | 0,002 g/l |
| Agar. | 13 g/l |
| pH value. | 7,4 ±0,2 |
| Colour. | purple-red |
| Growth of test strains. | complies |
| Diameter. | 60 mm |

| | | | |
|---|---|---|---|
| **9631.1** | 30 pieces | box | 61,30 € |

## Roti®-ContiPlate RBC

**ready-to-use, sterile, for microbiology**

For counting yeasts and moulds on surfaces.

Storage temp.: +4-15 °C • Transport temp.: cooled

**Danger** H318

The Bengal Red Agar (with chloroamphenicol) (Art. No. AE24) is recommended for enumeration of yeasts and moulds.
Expiration time on request. Do NOT freeze!

**Formulation:**

| | |
|---|---|
| Glucose. | 10 g/l |
| Peptone. | 5 g/l |
| Potassium phosphate. | 1 g/l |
| Magnesium sulphate ($MgSO_4$) | 0,5 g/l |
| Chloroamphenicol. | 0,1 g/l |
| Bengal red. | 0,05 g/l |
| Agar. | 15 g/l |
| pH value. | 7,2 ±0,2 |
| Colour. | intense pink |
| Growth of test strains. | complies |
| Diameter. | 60 mm |

| | | | |
|---|---|---|---|
| **9632.1** | 30 pieces | box | 61,30 € |

## Roti®-ContiPlate PCA

**ready-to-use, sterile, for microbiology**

For total germ count on surfaces.

Storage temp.: +4-15 °C • Transport temp.: cooled

The Plate Count Agar (Art. No. X930) is recommended by APHA and ISO 4833 for total germ count.
Expiration time on request. Do NOT freeze!

**Formulation:**

| | |
|---|---|
| Casein peptone | 5 g/l |
| Yeast extract. | 2,5 g/l |
| Glucose. | 1 g/l |
| Agar. | 15 g/l |
| pH value. | 7,0 ±0,2 |
| Colour. | amber, slightly opalescent |
| Growth of test strains. | complies |
| Diameter. | 60 mm |

| | | | |
|---|---|---|---|
| **9630.1** | 30 pieces | box | 61,30 € |

## Roti®-ContiPlate Sab4plus

**ready-to-use, sterile, for microbiology**

For selective detection of yeasts and pathogenic fungi on surfaces.

Storage temp.: +4-15 °C • Transport temp.: cooled

The Sabouraud 4 % Glucose Agar (with chloroamphenicol) (Art. No. X933) is recommended for selective isolation of yeasts and pathogenic fungi.
Expiration time on request. Do NOT freeze!

**Formulation:**

| | |
|---|---|
| Glucose. | 40 g/l |
| Meat and casein peptone. | 10 g/l |
| Chloroamphenicol. | 0,5 g/l |
| Agar. | 15 g/l |
| pH value. | 5,6 ±0,2 |
| Colour. | amber, slightly opalescent |
| Growth of test strains. | complies |
| Diameter. | 60 mm |

| | | | |
|---|---|---|---|
| **9633.1** | 30 pieces | box | 61,30 € |

## Roti®-ContiPlate TSA-Letheen

**ready-to-use, sterile, for microbiology**

For detection of microorganisms on disinfected surfaces.

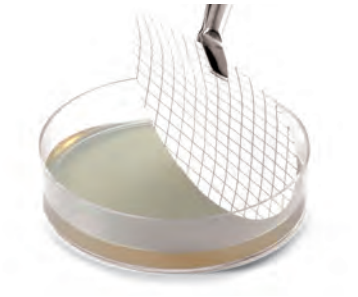
Storage temp.: +4-15 °C • Transport temp.: cooled

**Warning** H319

The TSA-Letheen Agar (Art. No. 8848) is recommended for detection of microorganisms in presence of preservatives or after disinfection.
Expiration time on request. Do NOT freeze!

**Formulation:**

| | |
|---|---|
| Pancreatic digest of casein. | 15 g/l |
| Soy peptone (papain hydrolysate). | 5 g/l |
| Sodium chloride (NaCl). | 5 g/l |
| Lecithin. | 1,0 g/l |
| Polysorbate 80. | 5 g/l |
| Triton® X-100. | 1,0 g/l |
| Agar. | 15 g/l |
| pH value. | 7,2 ±0,2 |
| Colour. | amber, slightly opalescent |
| Growth of test strains. | complies |
| Diameter. | 60 mm |



| | | | |
|---|---|---|---|
| **9634.1** | 30 pieces | box | 61,30 € |

# Roti®-Aquatest Plates

## Sterile culture medium plates for the microbiological analysis of liquid samples.

- Diameter 55 mm
- Easy application
- Optimal for membrane filtration method
- Also applicable for the microbiological analysis of samples in general
- Prepared with our tried and tested dehydrated media mixtures
- Detailed instructions-for-use included

The germs of expected low-germ liquid samples are concentrated by membrane filtration. Afterwards, the membrane is placed on top of the medium and incubated.
Using a membrane with a grid helps counting the resulting colonies.

Samples which are expected to have a higher microbiological burden are prepared in a serial dilution. Afterwards, every dilution step is plated and incubated. The number of grown colonies is noted as result.
Please note: Larger quantities are produced freshly. Hence, longer delivery times may occur.

### Summary Roti®-Aquatest Plates

| Art. No. | Abbreviation | Agar | Application |
|---|---|---|---|
| 9640 | PCA | Plate-Count-Agar | Whole germs |
| 9641 | Colichrom | *E. coli* and Coliforms chromogenic Agar | *E. coli* and Coliforms |
| 9642 | YE | Yeast extract Agar | Bacteria, Yeast, Moulds and moulds |
| 9643 | Sab4 | Sabouraud 4 % Glucose-Agar | Yeast and fungi |
| 9644 | R2A | Reasoner's 2A Agar | Heterotrophic bacteria |
| 9646 | Cetr | Cetrimide Agar | *Pseudomonas aeruginosa* |
| 9648 | Strep | Slanetz-Bartley Agar | Faecal streptococci |
| 9649 | mCP | m-CP Agar | *Clostridium perfringens* |
| 9650 | Staph | Mannitol Salt Agar/ Chapman Agar | Pathogenic staphylococci |

### Roti®-Aquatest Plate PCA

**APHA, ISO 4833, ready-to-use, sterile, for microbiology**

For enumeration of the aerobic microbial flora.

Storage temp.: +4-15 °C • Transport temp.: cooled

The Plate Count Agar (Art. No. X930) is recommended by APHA and ISO 4833 for total germ count.
Expiration time on request. Do NOT freeze!

**Formulation:**

| | |
|---|---|
| Casein peptone | 5 g/l |
| Yeast extract | 2,5 g/l |
| Glucose | 1 g/l |
| Agar | 14 g/l |
| pH value | 7,0 ±0,2 |
| Colour | amber, slightly opalescent |
| Growth of test strains | complies |
| Diameter | 55 mm |

| | | | |
|---|---|---|---|
| **9640.1** | 30 pieces | box | 47,85 € |

### Roti®-Aquatest Plate Colichrom

**ready-to-use, sterile, for microbiology**

For detection and enumeration of *E. coli* and other coliforms.

Storage temp.: +4-15 °C • Transport temp.: cooled

The Coliforms chromogenic Agar (Art. No. CL45) is recommended for detection of *E. coli* and other Coliforms.
Expiration time on request. Do NOT freeze!

**Formulation:**

| | |
|---|---|
| Sodium chloride (NaCl) | 5 g/l |
| Casein, enzymatically digested | 3 g/l |
| di-Sodium hydrogen phosphate | 2,7 g/l |
| Sodium dihydrogen phosphate | 2,2 g/l |
| Sodium pyruvate | 1 g/l |
| Tryptophane | 1 g/l |
| Sorbitol | 1 g/l |
| Chromogene Mixture | 0,4 g/l |
| Sodium heptadecyl sulphate (Tergitol-7) | 0,15 g/l |
| Vancomycin | 0,005 g/l |
| Cefsulodin | 0,005 g/l |
| Agar | 13 g/l |
| pH value | 6,8 ±0,2 |
| Colour | amber |
| Growth of test strains | complies |
| Diameter | 55 mm |

| | | | |
|---|---|---|---|
| **9641.1** | 30 pieces | box | 115,60 € |

## Roti®-Aquatest Plate YE

**DEV, ISO 6222, ready-to-use, sterile, for microbiology**

For enumeration of microorganisms in general, e.g. bacteria, moulds or yeast.

Storage temp.: +4-15 °C • Transport temp.: cooled

The Yeast Extract Agar (Art. No. CP63) is recommended for enumeration of microorganisms in general.
Expiration time on request. Do NOT freeze!

**Formulation:**

| | |
|---|---|
| Tryptone | 6 g/l |
| Yeast extract | 3 g/l |
| Agar | 15 g/l |
| pH value | 7,2 ±0,2 |
| Colour | amber, slightly opalescent |
| Growth of test strains | complies |
| Diameter | 55 mm |

| | | | |
|---|---|---|---|
| **9642.1** | 30 pieces | box | 47,85 € |

## Roti®-Aquatest Plate R2A

**Ph.Eur., ready-to-use, sterile, for microbiology**

For enumeration of heterotrophic bacteria.

Storage temp.: +4-15 °C • Transport temp.: cooled

The R2A Agar (Art. No. CL01) is recommended by the Ph. Eur. for enumeration of heterotrophic bacteria.
Expiration time on request. Do NOT freeze!

**Formulation:**

| | |
|---|---|
| Yeast extract | 0,5 g/l |
| Peptone | 0,5 g/l |
| Casein hydrolysed | 0,5 g/l |
| Glucose | 0,5 g/l |
| Starch | 0,5 g/l |
| di-Potassium hydrogen phosphate | 0,3 g/l |
| Magnesium sulphate ($MgSO_4$) | 0,024 g/l |
| Sodium pyruvate | 0,3 g/l |
| Agar | 15 g/l |
| pH value | 7,2 ±0,2 |
| Colour | amber |
| Growth of test strains | complies |
| Diameter | 55 mm |

| | | | |
|---|---|---|---|
| **9644.1** | 30 pieces | box | 47,85 € |

## Roti®-Aquatest Plate Cetr

**Ph.Eur., ready-to-use, sterile, for microbiology**

For isolation of *Pseudomonas aeruginosa*.

Storage temp.: +4-15 °C • Transport temp.: cooled

**Warning** H400

The Cetrimide Agar (Art. No. X918) is recommended by the Ph. Eur. for isolation of *Pseudomonas aeruginosa*.
Expiration time on request. Do NOT freeze!

**Formulation:**

| | |
|---|---|
| Gelatin peptone (Pancreas hydrolysate) | 20 g/l |
| Magnesium chloride | 1,4 g/l |
| Potassium sulphate | 10 g/l |
| Cetrimide | 0,3 g/l |
| Glycerol | 10 ml/l |
| Agar | 13,6 g/l |
| pH value | 7,2 ±0,2 |
| Colour | opaque white |
| Growth of test strains | complies |
| Diameter | 55 mm |

| | | | |
|---|---|---|---|
| **9646.1** | 30 pieces | box | 47,85 € |

## Roti®-Aquatest Plate Sab4

**Ph.Eur., ready-to-use, sterile, for microbiology**

For cultivation of yeasts and fungi.

Storage temp.: +4-15 °C • Transport temp.: cooled

The Sabouraud 4% Glucose Agar (Art. No. X932) is recommended by the Ph. Eur. for cultivation of yeasts like *Candida albicans* and moulds.
Expiration time on request. Do NOT freeze!

**Formulation:**

| | |
|---|---|
| Glucose | 40 g/l |
| Meat and casein peptone | 10 g/l |
| Agar | 15 g/l |
| pH value | 5,6 ±0,2 |
| Colour | amber, slightly opalescent |
| Growth of test strains | complies |
| Diameter | 55 mm |

| | | | |
|---|---|---|---|
| **9643.1** | 30 pieces | box | 47,85 € |

## Roti®-Aquatest Plate m-CP

**TWVO 2001, ready-to-use, sterile, for microbiology**

For enumeration of *Clostridium perfringens.*

Storage temp.: +4-15 °C • Transport temp.: cooled

The m-CP Agar (Art. No. CL55) is recommended by the TWVO 2001 for enumeration of *Clostridium perfringens*.
Expiration time on request. Do NOT freeze!

**Formulation:**

| | |
|---|---|
| Saccharose | 5 g/l |
| L-Cysteine hydrochloride | 1 g/l |
| Magnesium sulphate heptahydrate | 0,1 g/l |
| Iron(III)-chloride solution 4,5 % | 2 ml |
| Bromocresol purple | 0,04 g/l |
| Chromogene Mixture | 0,16 g/l |
| D-Cycloserine | 0,4 g/l |
| Polymyxin B sulphate | 0,025 g/l |
| Tryptose | 30 g/l |
| Yeast extract | 20 g/l |
| Agar | 15 g/l |
| pH value | 7,6 ±0,2 |
| Colour | purple |
| Growth of test strains | complies |
| Diameter | 55 mm |

| | | | |
|---|---|---|---|
| **9649.1** | 30 pieces | box | 54,75 € |

## Roti®-Aquatest Plate Staph

**Ph.Eur., ready-to-use, sterile, for microbiology**

For isolation of pathogenic staphylococci.

Storage temp.: +4-15 °C • Transport temp.: cooled

The Mannitol Salt Agar (Chapman Agar) (Art. No. CL81) is recommended by the Ph.Eur. for isolation of pathogenic staphylococci.
Expiration time on request. Do NOT freeze!

**Formulation:**

| | |
|---|---|
| Pancreatic digest of casein | 5 g/l |
| Peptone (peptic digest of animal tissue) | 5 g/l |
| Beef extract | 1 g/l |
| Sodium chloride (NaCl) | 75 g/l |
| D-Mannitol | 10 g/l |
| Phenol red | 0,025 g/l |
| Agar | 15 g/l |
| pH value | 7,4 ±0,2 |
| Colour | red |
| Growth of test strains | complies |
| Diameter | 55 mm |

| | | | |
|---|---|---|---|
| **9650.1** | 30 pieces | box | 47,85 € |

## Roti®-Aquatest Plate Strep

**DEV, ISO 7899-2, ready-to-use, sterile, for microbiology**

For enumeration of intestinal streptococci.

Storage temp.: +4-15 °C • Transport temp.: cooled

**Warning** H312-H412-EUH032

The Slanetz-Bartley Agar (Art. No. X935) is recommended by the ISO 7899-2 for enumeration of intestinal streptococci.
Expiration time on request. Do NOT freeze!

**Formulation:**

| | |
|---|---|
| di-Potassium hydrogen phosphate | 4 g/l |
| Sodium azide | 0,4 g/l |
| Tetrazolium chloride (TTC) | 0,1 g/l |
| Tryptose | 20 g/l |
| Yeast extract | 5 g/l |
| Glucose | 2 g/l |
| Agar | 12 g/l |
| pH value | 7,2 ±0,1 |
| Colour | amber, slightly opalescent |
| Growth of test strains | complies |
| Diameter | 55 mm |

| | | | |
|---|---|---|---|
| **9648.1** | 30 pieces | box | 54,75 € |

Our tip for most simple **filtration and microbiological analysis of liquids:**

Bottle-top filter holders **KA90.1**
+ Cellulose mixed ester (CME) membrane filters **NH80.1** (non-sterile)
+ Screw neck bottles DURAN - pressure plus (e.g. 1 Litre, **H995.1**)

- Apply membrane to filter holder
- Screw filter holder onto bottle
- *Optional:* Wrap whole construct in aluminum foil
- Steam sterilize
- Ready-for-use (or ready-for-store)

▶ Membrane filters see page 505

# Compact Dry Ready-Made Plates

## Dry ready-made plates for easy microbiological analysis of solutions and compact samples.

made by NISSUI

- Storage and transport at room temperature
- Simple and safe use
- Safely stackable
- Easy interpretation through chromogenic additives and 1 x 1 cm grid
- Detailed instructions-for-use included
- Suitable for control of foods and feeds, cosmetics and pharmaceutical samples, for hygiene monitoring and contamination survey, for schooling and student's courses

Compact Dry plates made by NISSUI are suitable for detection and enumeration of microorganisms from foods and feeds, cosmetics and pharmaceutical samples, as well as for hygiene monitoring and contamination control in food-producing areas. Due to the chromogenic additives, bacterial colonies depict specific colouring, making them easy to interpret.
Compact Dry plates are easy and safe to handle. Due to storage at room temperature, they may be used even on site. One millilitre of the sample to be analysed is applied onto the sterile plate surface, spreading itself evenly over the plate during rehydration of the medium. Dry sample matter is homogenised and solubilised using the Compact Dry Dilution Rack (Art. No. 4823.1) prior to plate inoculation.

Growth area is 20 $cm^2$. Inner Ø 47 mm.

### Compact Dry CF

**NISSUI for microbiology**

Ready-made plates with anhydrous chromogenic nutrient medium for detection of coliforms.

Ready-made agar plate coliforms

Storage temp.: +20 °C

Due to the chromogenic additives, bacterial colonies depict specific colouring, making them easy to interpret. The nutrient medium used for Compact Dry CF plates is related to the Coliform chromogenic Agar and resembles a modified version of the Compact dry EC plates. The Chromogenic mixture has been replaced by X-Gal, causing all coliform bacteria to grow in colonies of a bright blue colour.

AOAC-, MicroVal-, and NordVal- certified.

| | | | |
|---|---|---|---|
| **4827.1** | 40 plates | blister | 76,90 € |
| **4827.2** | 240 plates | blister | 396,70 € |

### Compact Dry EC

**NISSUI for microbiology**

Ready-made plates with anhydrous chromogenic nutrient medium for detection of coliforms in general, particularly *E. coli*.

Ready-made agar plate *E. coli*

Storage temp.: +20 °C

Due to the chromogenic additives, bacterial colonies depict specific colouring, making them easy to interpret. The nutrient medium used for Compact Dry EC plates is related to the Coliform chromogenic Agar. Colonies of *E. coli* show a bright blue colour, while other coliforms grow in red to pink coloured colonies. Addition of red and blue colonies results in total count of coliforms.

AOAC-, MicroVal-, and NordVal- certified.

| | | | |
|---|---|---|---|
| **4826.1** | 40 plates | blister | 76,90 € |
| **4826.2** | 240 plates | blister | 396,70 € |

## Compact Dry ETB

**NISSUI for microbiology**

Ready-made plates with anhydrous chromogenic nutrient medium for detection of enterobacteriaceae.

Ready-made agar plate enterobacteria

Storage temp.: +20 °C

Due to the chromogenic additives, bacterial colonies depict specific colouring, making them easy to interpret. The nutrient medium used for Compact Dry ETB plates is deduced from the Violet Red Bile Agar with Dextrose (VRBD). Enterobacteriaceae grow in red colonies.

MicroVal- and NordVal-certified.

| | | | |
|---|---|---|---|
| **4828.1** | 40 plates | blister | 84,85 € |
| **4828.2** | 240 plates | blister | 443,45 € |

## Compact Dry TC

**NISSUI for microbiology**

Ready-made plates with anhydrous chromogenic nutrient medium for total germ count.

Ready-made agar plate total count

Storage temp.: +20 °C

Due to the chromogenic additives, bacterial colonies depict specific colouring, making them easy to interpret. Compact Dry TC are based on a standard total-germ-count agar under addition of TTC which, being a redox-indicator, stains all living bacterial colonies red.

AOAC- MicroVal-, and Nordval certified.

| | | | |
|---|---|---|---|
| **4816.1** | 40 plates | blister | 73,00 € |
| **4816.2** | 240 plates | blister | 364,45 € |

## Compact Dry SL

**NISSUI for microbiology**

Ready-made plates with anhydrous chromogenic nutrient medium for detection of salmonellae.

Ready-made agar plate salmonells

Storage temp.: +20 °C

Due to the chromogenic additives, bacterial colonies depict specific colouring, making them easy to interpret. The nutrient medium used for Compact Dry SL plates is deduced from the formulation of Triple Sugar Iron Agar. Salmonellae may easily be identified by the green colouring of the colonies, accompanied by colour shift of the plate to yellow due to alcalization of the medium. Salmonellae producing hydrogen sulphide grow in black colonies on yellow medium.

| | | | |
|---|---|---|---|
| **4817.1** | 40 plates | blister | 99,45 € |
| **4817.2** | 240 plates | blister | 493,45 € |

## Compact Dry X-BC

**NISSUI for microbiology**

Ready-made plates with anhydrous chromogenic nutrient medium for detection of *Bacillus cereus.*

Storage temp.: +20 °C

Due to the chromogenic additives, bacterial colonies depict specific colouring, making them easy to interpret. The nutrient medium used for Compact Dry X-BC plates is based on a nutritious formulation, using mannitol as selective agent. Colonies of *Bacillus cereus* grow in a light blue or blue colour.

MicroVal certified.

| | | | |
|---|---|---|---|
| **1070.1** | 40 plates | blister | 103,75 € |
| **1070.2** | 240 plates | blister | 547,20 € |

| Art. No. | Compact Dry | Detection of | Certificate |
|---|---|---|---|
| 4816 | TC | whole germs | AOAC, MicroVal, NordVal |
| 1070 | X-BC | *Bacillus cereus* | MicroVal |
| 1087 | X-SA | *Staphylococcus aureus* | AOAC, MicroVal, NordVal |
| 4817 | SL | salmonells | - |
| 4818 | YM | yeast/moulds | AOAC, MicroVal, NordVal |
| 4826 | EC | coliforms /*E. coli* | AOAC, MicroVal, NordVal |
| 4827 | CF | coliforms | AOAC, MicroVal, NordVal |
| 4828 | ETB | enterobacteria | MicroVal, NordVal |

## Compact Dry X-SA

**NISSUI for microbiology**

Ready-made plates with anhydrous chromogenic nutrient medium for detection of *Staphylococcus aureus.*

Storage temp.: +20 °C

Due to the chromogenic additives, bacterial colonies depict specific colouring, making them easy to interpret. The nutrient medium used for Compact Dry X-SA plates is based on a mannitol agar, using lithium as additional selective agent. *Staphylococci* grow in a light to bright cyan-blue colour.

AOAC-, MicroVal-, and NordVal certified.

| | | | |
|---|---|---|---|
| **1087.1** | 40 plates | blister | 103,75 € |
| **1087.2** | 240 plates | blister | 547,20 € |

## Compact Dry Swab

**NISSUI for microbiology**

All-in-one set of swab and nutrient broth for microbiological sampling of surfaces.

Storage temp.: +20 °C

Sterile all-in-one system for sampling in the microbiological field of work. Suitable for analysis of foods and feeds, in pharmaceutical areas, as well as for hygiene monitoring, and for exclusion of contaminations.
Compact Dry Swabs made by NISSUI are particularly easy to apply, and may also be used by laymen. In order to test a surface, the respective area is wiped with the sterile cotton swab. After returning the swab into the tube, the germs are released into the nutrient broth by agitation. The amount of 1 ml medium has been optimised for inoculation of nutrient agar plates in general, also making this swab most compatible with Compact Dry plates.

Compact Dry Swabs are particularly suitable for sampling at difficult-to-access areas or when working on site. The sample taken may be transported inside the swab.
Storage at room temperature as well as easy application makes them a very versatile tool in microbiology.

Contains 1 ml **Peptone Water, buffered**

**Type analysis:**

Appearance nutrient broth. ..... light yellow
Turbidity..... clear
Sterility.....complies
pH value. .....6,8-7,2

| | | | |
|---|---|---|---|
| **4809.1** | 40 swabs | box | 99,45 € |
| **4809.2** | 240 swabs | box | 493,45 € |

## Compact Dry YM

**NISSUI for microbiology**

Ready-made plates with anhydrous chromogenic nutrient medium for detection of yeasts and moulds.

Ready-made agar plate yeasts and moulds

Storage temp.: +20 °C

Due to the chromogenic additives, bacterial colonies depict specific colouring, making them easy to interpret. The nutrient medium used for Compact Dry YM plates is deduced from an enriched version of the Potato Extract Glucose Agar. While accompanying bacteria are inhibited by inherent antibiotics, yeast colonies show a bright blue colour. Due to the net quality of the plate matrix, moulds are able to form their natural, three-dimensional growth structure accompanied by their respective characteristic colouring.

**Figure:**

▶ Membrane filters see page 505

Our tip for most simple **filtration and microbiological analysis of liquids:**

Bottle-top filter holders **KA90.1**
+ Cellulose mixed ester (CME) membrane filters **NH80.1** (non-sterile)
+ Screw neck bottles DURAN - pressure plus (e.g. 1 Litre, **H995.1**)

- Apply membrane to filter holder
- Screw filter holder onto bottle
- *Optional:* Wrap whole construct in aluminum foil
- Steam sterilize
- Ready-for-use (or ready-for-store)

## Compact Dry Dilution Rack MRD

**ELMEX for microbiology**

For preparation of dilution series of microbiological samples.
Sterile nutrient broth.

**Maximum Recovery Solution** in racks

Storage temp.: +20 °C

Ready-made nutrient broth in racks for easy preparation of dilution series for microbiological assays.
Each rack consist of 4 wells with 9 mls of Maximum Recovery Solution each (Art. No. 5766). By transferring 1 ml, 10-fold dilution series are very easily prepared.
Each well is sealed by an aluminium foil, and may be separated from the others at a perforation line. Using the Compact Dry Opener (Art. No. 4825.1, please order separately) a hole may be pierced into the lid, providing access for pipetting.

128 wells in 32 racks of 4 separable wells each.

**Type analysis:**

Appearance of solution. ..... light beige
Turbidity ..... clear
Peptone. ..... 1,0 g/l
NaCl. ..... 8,5 ±0,5 g/l
Sterility ..... complies
pH value. ..... 7,1 ±0,5

| | | | |
|---|---|---|---|

# Nutrient Media

## Microbiological Nutrient Media

ROTH provides the most important microbiological nutrient media as ready-made mixtures. Our anhydrous media fulfil the highest purity and quality requirements, several media are formulated according to the specifications of the European Pharmakopoeia (Ph.Eur.), European and German drinking water regulations, APHA, and other ISO standards.
Our microbiological nutrient media are suitable for analysis of food, cosmetics, pharmaceutics, and research, as well as for service and waste water analysis.

- **Optimised formulation**
- **Superior quality and purity**
- **Tried and tested ready-made mixtures**
- **Big packs on request**

### Acetamide Broth (Solution A)

**DEV, EN ISO 16266:2008, for microbiology**

For confirmation of *Pseudomonas aeruginosa* in water samples.

Storage temp.: +20 °C

**Warning** H351

Application: Use 3,4 g for 1 l broth. Solubilise in 900 ml, add freshly prepared solution B (sodium molybdate, Art. No. 0274.1, and iron sulfat, Art. No. P015.1) and adjust with water to 1 l.

**Guarantee analysis:**

| | |
|---|---|
| Potassium dihydrogen phosphate. | 1 g/l |
| Magnesium sulphate ($MgSO_4$) | 0,2 g/l |
| Acetamide. | 2 g/l |
| Sodium chloride (NaCl). | 0,2 g/l |
| pH value. | 7,0 ±0,5 |

| | | | |
|---|---|---|---|
| **CP61.1** | 500 g | plastic | 177,95 € |
| Original pack 6 x 500 g | | | 169,05/500 g |

### Antibiotic Medium No. 1

**Ph.Eur., for microbiology**

Standard agar medium for detection and for assaying the potency of antibiotics.

Antibiotic Agar No. 1 (Ph.Eur. 7,0), Penassay Seed Agar

Storage temp.: +20 °C

Application: Use 30,5 g for 1 l agar.

**Guarantee analysis:**

| | |
|---|---|
| Peptone. | 6,0 g/l |
| Casein peptone (Pancreas hydrolysate). | 4,0 g/l |
| Yeast extract. | 3,0 g/l |
| Beef extract. | 1,5 g/l |
| Glucose monohydrate. | 1,0 g/l |
| Agar. | 15,0 g/l |
| pH value | 6,6 ±0,1 |

| | | | |
|---|---|---|---|
| **CL53.1** | 500 g | plastic | 116,65 € |
| Original pack 6 x 500 g | | | 110,82/500 g |

### Antibiotic Medium No. 23

**for microbiology**

Agar medium for detection and for assaying the potency of antibiotics.

Storage temp.: +20 °C

Application: Use 27,1 g for 1 l agar. Directly prior to pouring add 14,3 g ammonium chloride in 10 ml sterile water.

**Guarantee analysis:**

| | |
|---|---|
| Glucose. | 10,0 g/l |
| Yeast extract. | 2,5 g/l |
| di-Potassium hydrogen phosphate. | 0,69 g/l |
| Potassium dihydrogen phosphate. | 0,45 g/l |
| Agar. | 13,5 g/l |
| pH value . | 5,6 ±0,1 |

| | | | |
|---|---|---|---|
| **CL54.1** | 500 g | plastic | 104,20 € |
| Original pack 6 x 500 g | | | 98,99/500 g |

### Azide Dextrose Broth

**for microbiology**

For enrichment and detection of enterococci.

Storage temp.: +20 °C

**Warning** H302-H412

Application: Use 34,7 g (1x) or 69,4 g (2x) for 1 l broth.

**Formulation:**

| | |
|---|---|
| Casein peptone. | 15 g/l |
| Meat extract. | 4,5 g/l |
| Glucose. | 7,5 g/l |
| Sodium chloride (NaCl). | 7,5 g/l |
| Sodium azide. | 0,2 g/l |
| pH value. | 7,2 ±0,2 |

| | | | |
|---|---|---|---|
| **CL79.1** | 500 g | plastic | 94,10 € |
| Original pack 6 x 500 g | | | 89,40/500 g |

## Baird Parker Agar (Base)

**Ph.Eur., for microbiology**

For isolation and enumeration of staphylococci.
Agar medium O (Ph.Eur. 6.0)
Storage temp.: +20 °C

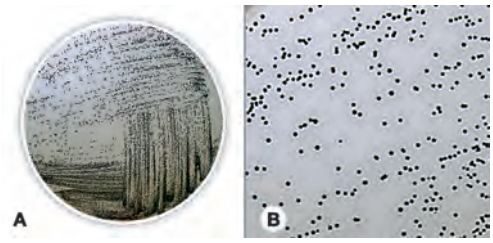

**Figure:**
**A**: *Staphylococcus aureus*
**B**: Enlargement of A, showing clear zones round the colonies (Lecithinase break-down of egg yolk).

Application: Use 63 g for 1 l agar. Add egg yolk emulsion tellurit (Art. No. 0339.1) to 5 % final concentration.

**Guarantee analysis:**

| | |
|---|---|
| Casein peptone (pancreas hydrolysate) | 10 g/l |
| Beef extract | 5 g/l |
| Yeast extract | 1 g/l |
| Lithium chloride | 5 g/l |
| Glycine | 12 g/l |
| Sodium pyruvate | 10 g/l |
| Agar | 20 g/l |
| pH value | 6,8 ±0,2 |

## Bengal Red Agar (with chloroamphenicol)

**for microbiology**

Standard-selective agar for counting yeast and food mould fungi.

**RBC Agar**

Storage temp.: +20 °C

The addition of chloroamphenicol inhibits bacterial growth.
Bengal red limits the size and the spreading of fungal colonies, so that slow-growing species are not overgrown by fast-growing ones.

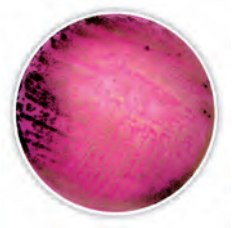

**Figure:**
*Aspergillus niger*
Application: Use 31,6 g for 1 l agar.

**Formulation:**

| | |
|---|---|
| Peptone | 5 g/l |
| Glucose | 10 g/l |
| Potassium phosphate | 1 g/l |
| Magnesium sulphate ($MgSO_4$) | 0,5 g/l |
| Chloroamphenicol | 0,1 g/l |
| Bengal red | 0,05 g/l |
| Agar | 15 g/l |
| pH value | 7,2 ±0,2 |

| | | | |
|---|---|---|---|
| AE24.1 | 500 g | plastic | 112,90 € |
| Original pack 6 x 500 g | | | 107,26/500 g |

## Bile Esculin Azide Agar

**DEV, ISO 7899-2:2000, for microbiology**

For isolation and identification of intestinal enterococci from water samples.
Storage temp.: +20 °C

**Warning** H412-H302

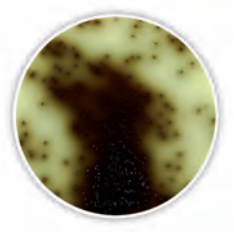

**Figure:**
Esculin hydrolysis and reaction with ferric citrate caused by *Enterococcus faecalis*. Medium surrounding the brown to black coloured *E. faecalis* colonies is also stained brown.
Application: Use 56,6 g for 1 l agar.

**Guarantee analysis:**

| | |
|---|---|
| Tryptone | 17 g/l |
| Peptone | 3 g/l |
| Yeast extract | 5 g/l |
| Ox bile dehydrated | 10 g/l |
| Sodium chloride (NaCl) | 5 g/l |
| Esculin | 1 g/l |
| Ammonium iron(III) citrate | 0,5 g/l |
| Sodium azide | 0,15 g/l |
| Agar | 15 g/l |
| pH value | 7,1 ±0,1 |

| | | | |
|---|---|---|---|
| CP62.1 | 500 g | plastic | 198,90 € |
| Original pack 6 x 500 g | | | 188,96/500 g |

## Blood Agar (Base)

**for microbiology**

For isolation, cultivation and detection of haemolytic reaction of fastidious microorganisms.
Storage temp.: +20 °C

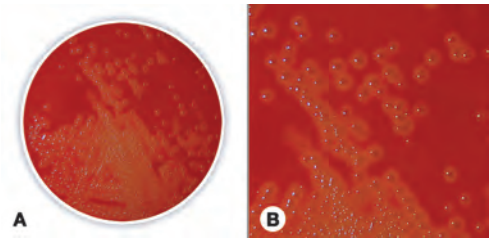

**Figure:**
**A:** *Streptococcus pyogenes*
**B:** Enlargement of A, showing β-haemolysis caused by *S. pyogenes*
Application: Use 40 g for 1 l agar. If required, add 50-110 ml defibr. blood.

**Formulation:**

| | |
|---|---|
| Meat peptone | 10 g/l |
| Heart infusion | 10 g/l |
| Sodium chloride (NaCl) | 5 g/l |
| Agar | 15 g/l |
| pH value | 7,3 ±0,2 |

| | | | |
|---|---|---|---|
| X914.1 | 500 g | plastic | 154,30 € |
| Original pack 6 x 500 g | | | 146,59/500 g |

**Instructions for use**
can be found on the Internet next to the product description.

## Blood Agar No. 2 (Base)

**ISO 7932, ISO 11290-1, for microbiology**

For cultivation and detection of haemolytic reaction of fastidious microorganisms.

Storage temp.: +20 °C

Particularly recommended for confirmation of *Bacillus cereus* and *Listeria monocytogenes*.

Application: Use 39,5 g for 1 l agar, add 50-70 ml defibr. blood.

**Guarantee analysis:**

| | |
|---|---|
| Proteose peptone. | 15 g/l |
| Yeast extract. | 5 g/l |
| Sodium chloride (NaCl). | 5 g/l |
| Liver extract. | 2,5 g/l |
| Agar. | 12 g/l |
| pH value. | 7,0 ±0,2 |

| | | | |
|---|---|---|---|
| **8281.1** | 500 g | plastic | 113,85 € |
| Original pack 6 x 500 g | | | 108,16/500 g |

## Brain-Heart-Infusion Broth

**for microbiology**

For cultivation of fastidious microorganisms.

**BHI Broth**

Storage temp.: +20 °C

Application: Use 37 g for 1 l broth.

**Formulation:**

| | |
|---|---|
| Pig brain infusion. | 7,5 g/l |
| Pig heart infusion. | 10 g/l |
| Peptone. | 10 g/l |
| Glucose. | 2 g/l |
| Sodium chloride (NaCl). | 5 g/l |
| Disodium phosphate. | 2,5 g/l |
| pH value. | 7,4 ±0,2 |

| | | | |
|---|---|---|---|
| **X916.1** | 500 g | plastic | 89,80 € |
| Original pack 6 x 500 g | | | 85,31/500 g |
| **X916.2** | 1 kg | plastic | 154,30 € |
| Original pack 6 x 1 kg | | | 146,59/1 kg |

## Brain-Heart-Infusion Agar

**for microbiology**

For cultivation of fastidious microorganisms.

**BHI Agar**

Storage temp.: +20 °C

Application: Use 52 g for 1 l agar.

**Formulation:**

| | |
|---|---|
| Calf Brain Infusion. | 7,5 g/l |
| Beef Heart Infusion. | 10 g/l |
| Peptone. | 10 g/l |
| Glucose. | 2 g/l |
| Sodium chloride (NaCl). | 5 g/l |
| Disodium phosphate. | 2,5 g/l |
| Agar. | 15 g/l |
| pH value. | 7,4 ±0,2 |

| | | | |
|---|---|---|---|
| **X915.1** | 500 g | plastic | 97,30 € |
| Original pack 6 x 500 g | | | 92,44/500 g |

**„Infusion“**

In the early days of bacteriology, so-called "infusions" (tissue extraction) were used in microbiological media. During the development of the dry media, these extracts were dried and used in a powdery form to produce purified and standardised extracts. Today, extracts or special, highly purified peptones are commonly used in modern media.

As simply manufactured and non-standardised natural products, "infusion" have a relatively low batch-to-batch constancy and vary both in composition and in nutrient content. However, they are still commonly used in several classic media.

## Brilliant Green Bile Broth

**DIN 10172, for microbiology**

For selective enrichment and enumeration of coli bacteria in milk, water samples, faeces and other material.

Storage temp.: +20 °C

Adding 40 mg/l Novobiocin (Art. No. 0247.1) during selective detection of coliform bacteria further reduces the growth of attendant flora (Alcaide *et al.*, 1982, *J. Appl. Bact.* 53:143-6).

**Figure:**
① *Escherichia coli* (turbidity and gas formation (arrow))
② *Enterobacter aerogenes* (turbidity)
③ Uninoculated broth

Application: Use 40 g for 1 l broth.

**Guarantee analysis:**

| | |
|---|---|
| Gelatine peptone. | 10 g/l |
| Lactose. | 10 g/l |
| Bile salts. | 20 g/l |
| Brilliant green. | 0,0133 g/l |
| pH value. | 7,2 ±0,2 |

| | | | |
|---|---|---|---|
| **CL06.1** | 500 g | plastic | 143,55 € |
| Original pack 6 x 500 g | | | 136,37/500 g |

## Brilliant Green Lactose Sucrose Agar

**Ph.Eur., for microbiology**

Highly selective medium for the isolation of *Salmonellae* from pathological specimens and food.

Agar medium L (Ph.Eur. 6.0), **BPLS**

Storage temp.: +20 °C

Application: Use 58,1 g for 1 l agar.

**Guarantee analysis:**

| | |
|---|---|
| Meat and casein peptone. | 10 g/l |
| Yeast extract. | 3 g/l |
| Sodium chloride (NaCl). | 5 g/l |
| Lactose monohydrate. | 10 g/l |
| Saccharose. | 10 g/l |
| Phenol red. | 0,08 g/l |
| Brilliant green. | 0,0125 g/l |
| Agar. | 20 g/l |
| pH value. | 6,9 ±0,2 |

| | | | |
|---|---|---|---|
| **AE43.1** | 500 g | plastic | 97,30 € |
| Original pack 6 x 500 g | | | 92,44/500 g |

## Brilliant Green Tetrathionate Bile Broth

**Ph.Eur., for microbiology**

For selective enrichment of *Salmonellae* in food and faeces.
Broth medium I (Ph.Eur. 6.0)
Storage temp.: +20 °C

Application: Use 63 g for 1 l broth.

**Guarantee analysis:**

| | |
|---|---|
| Peptone | 8,6 g/l |
| Dried beef bile | 8 g/l |
| Sodium chloride (NaCl) | 6,4 g/l |
| Calcium carbonate | 20 g/l |
| Potassium tetrathionate | 20 g/l |
| Brilliant green | 0,07 g/l |
| pH value | 7,0 ±0,2 |

| | | | |
|---|---|---|---|
| **AE42.2** | 100 g | plastic | 114,50 € |
| **AE42.1** | 500 g | plastic | 450,45 € |
| Original pack 6 x 500 g | | | 427,93/500 g |

## Brucella Broth

**for microbiology**

For cultivation of *Brucella* and other fastidious microorganisms.
Storage temp.: +20 °C
Also suitable for enrichment of fastidious microorganisms like, e.g. *Campylobacter*.

Application: Use 28,1 g for 1 l broth.

**Formulation:**

| | |
|---|---|
| Meat peptone | 10 g/l |
| Casein peptone | 10 g/l |
| Sodium chloride | 5 g/l |
| Yeast extract | 2 g/l |
| Glucose | 1 g/l |
| Sodium bisulfite | 0,1 g/l |
| pH value | 7,0 ±0,2 |

| | | | |
|---|---|---|---|
| **5754.1** | 500 g | plastic | 83,35 € |
| Original pack 6 x 500 g | | | 79,18/500 g |

## Brucella Agar

**for microbiology**

For cultivation of *Brucella* and other fastidious microorganisms in foods and other specimens.
Storage temp.: +20 °C
In order to gain a selective medium, supplement with Nystatin, Bacitracin, Polymyxin B, Cycloheximide, Vancomycin and Nalidixic acid.

Application: Use 43,1 g for 1 l agar, add 50 ml defibr. sheep blood.

**Formulation:**

| | |
|---|---|
| Meat peptone | 10 g/l |
| Casein peptone | 10 g/l |
| Sodium chloride | 5 g/l |
| Yeast extract | 2 g/l |
| Glucose | 1 g/l |
| Sodium bisulfite | 0,1 g/l |
| Agar | 15 g/l |
| pH value | 7,0 ±0,2 |

| | | | |

## Campylobacter Agar, blood-free (Base)

**for microbiology**

For isolation of *Campylobacter jejuni*, *Campylobacter coli*, and *Campylobacter laridis* in foods, and other samples.
Campy-Selective-Bloodfree-Medium, Bolton-Agar, Blood-free **CCDA**, Modified **CCDA**
Storage temp.: +20 °C
Modified formulation acc. to Bolton (Bolton *et al.*, (1984) *Clin. Microbiol.* 19:169-171), replacing blood with charcoal, sodium pyruvate and iron sulphate.

Application: Use 45,5 g for 1 l agar. After cooling add 2 vials (2x5 ml) reconstituted Campylobacter Supplement (Art. No. 4857.1).

**Formulation:**

| | |
|---|---|
| Casein peptone | 10 g/l |
| Beef extract | 10 g/l |
| Sodium chloride | 5 g/l |
| Casein hydrolysed | 3 g/l |
| Bacteriological charcoal | 4 g/l |
| Sodium deoxycholate | 1 g/l |
| Iron sulphate | 0,25 g/l |
| Sodium pyruvate | 0,25 g/l |
| Agar | 12 g/l |
| pH value | 7,4 ±0,2 |

| | | | |
|---|---|---|---|
| **5756.1** | 500 g | plastic | 155,90 € |
| Original pack 6 x 500 g | | | 148,11/500 g |

▶ Campylobacter Supplement see page 1406

Please note our **Technical Information Brochure** on the Internet next to the products:

Manual for preparation and storage

## Campylobacter Selective Agar (Base)

**for microbiology**

For isolation of *Campylobacter coli* and *C. jejuni*.
Preston Agar, Campy Agar
Storage temp.: +20 °C
The Campylobacter Selective Agar is based on the formulation of Bolton and Robertson (Bolton and Robertson (1982) *J. Clin. Path.* 35:462-7). Trough addition of the Campylobacter Preston Supplement (Art. No. 8851), the Agar is highly selective for *Campylobacter coli* and *C. jejuni.*

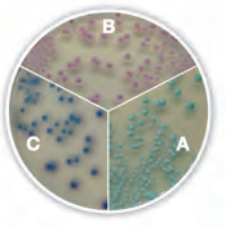
Application: Use 18,5 g for 475 ml agar. After cooling add 5-7 % lysed blood and 1 vial of Campylobacter Preston Supplement (Art. No. 8851).

**Formulation:**

| | |
|---|---|
| Casein peptone | 10 g/l |
| Beef extract | 10 g/l |
| Sodium chloride (NaCl) | 5 g/l |
| Agar | 12 g/l |
| pH value | 7,5 ±0,2 |

| | | | |
|---|---|---|---|
| **8847.1** | 500 g | plastic | 138,70 € |
| Original pack 6 x 500 g | | | 131,77/500 g |

▶ Campylobacter Preston Supplement see page 1406



## Candida chromogenic Agar

**for microbiology**

Selective medium for isolation and quick identification of pathogeneous Candida species.

Storage temp.: +4 °C

**Warning** H351

**Staining of species:**
**A:** *Candida albicans* turquoise-green (glucuronidase)
**B:** *Candida krusei* purple-pink (galactosidase)
**C:** *Candida tropicalis* blue (glucosidase)
*Candida parasilosis* and *C. glabrata* light-purple to light white

Application: Use 45,9 g for 1 l agar.

**Formulation:**

Peptone. ..... 10 g/l
Glucose. ..... 20 g/l
Chloroamphenicol. ..... 0,5 g/l
Chromogene Mixture. ..... 0,4 g/l
Agar. ..... 15 g/l
pH value. ..... 6,1 ±0,2

## CASO Broth

**Ph.Eur., for microbiology**

For cultivation of fastidious and non-fastidious microorganisms.
Broth medium A (Ph.Eur. 6.0), Casein Soya Bean Digest Broth (Ph.Eur. 6.3, 7.0, 8.0 and 9.0), Soy Peptone Broth, **TSB Broth**, Tryptic Soy Broth
Storage temp.: +20 °C

Application: Use 30 g for 1 l broth.

**Guarantee analysis:**

Casein peptone (pancreas hydrolysate) . ..... 17 g/l
Soy peptone (papain hydrolysate). ..... 3 g/l
di-Potassium hydrogen phosphate. ..... 2,5 g/l
Sodium chloride (NaCl). ..... 5 g/l
Glucose monohydrate. ..... 2,5 g/l
pH value. ..... 7,3 ±0,2

## CASO Broth vegetal

animal-free

**for microbiology, animal-free**

For cultivation of fastidious and non-fastidious microorganisms.
Soy Peptone Broth, **TSB Broth**, Tryptic Soy Broth
Storage temp.: +20 °C
Application: Use 30 g for 1 l broth.

**Formulation:**

Vegetable peptone . ..... 20 g/l
di-Potassium hydrogen phosphate. ..... 2,5 g/l
Sodium chloride (NaCl). ..... 5 g/l
Glucose. ..... 2,5 g/l
pH value. ..... 7,3 ±0,2

| Original pack 6 x 500 g | | | 78,57/500 g |

## CASO Agar

**Ph.Eur., for microbiology**

For isolation and cultivation of non-fastidious organisms.
Agar medium B (Ph.Eur. 6.0), Casein Soya Bean Digest Agar (Ph.Eur. 6.3, 7.0, 8.0 and 9.0), Soy Peptone Agar, **TSB Agar**, Trypticasein Soy Agar
Storage temp.: +20 °C

Application: Use 40 g for 1 l agar.

**Guarantee analysis:**

Casein peptone (pancreas hydrolysate) . ..... 15 g/l
Soy peptone (papain hydrolysate). ..... 5 g/l
Sodium chloride (NaCl). ..... 5 g/l
Agar. ..... 15 g/l
pH value. ..... 7,3 ±0,2

| | | | |
|---|---|---|---|

▶ CASO Agar, **granulated** see page 1404

## CASO Agar with Lecithin/Polysorbate 80

**for microbiology**

For detection of microorganisms from cosmetics and disinfected surfaces.
TSA Letheen, Tryptone Soy Agar Letheen, TSA with Tween® 80 and Lecithin
Storage temp.: +20 °C
Lecithin and Tween® 80 enable growth and colony counting of bacteria through inactivating disinfectants and preservatives like quaternary ammonium compounds.

Application: Use 45,7 g for 1 l agar.

**Formulation:**

| | |
|---|---|
| Pancreatic digest of casein. | 15 g/l |
| Soy peptone. | 5 g/l |
| Sodium chloride (NaCl). | 5 g/l |
| Lecithin. | 0,7 g/l |
| Polysorbate 80. | 5 g/l |
| Agar. | 15 g/l |
| pH value. | 7,2 ±0,2 |

| | | | |
|---|---|---|---|
| **8848.1** | 500 g | plastic | 112,90 € |
| Original pack 6 x 500 g | | | 107,26/500 g |

## Cetrimide Agar (Base)

**Ph.Eur., for microbiology**

For isolation and identification of *Pseudomonas aeruginosa*.
Agar medium N (Ph.Eur. 6.0), Cetrimide Agar (Ph.Eur. 6.3, 7.0, 8.0 and 9.0)
**CTM**
Storage temp.: +20 °C

**Warning** H400

Recommended by the Harmonized Method (Ph.Eur. 6.0, 2.6.13.B) for growth of *Pseudomonas aeruginosa*.

**Figure:**
Production of pyoverdin by *Pseudomonas aeruginosa*. Being water soluble, pyoverdin diffuses through the agar, staining the originally opaque-white medium fluorescent greenish-yellow where *P. aeruginosa* colonies are located.

Application: Use 45,3 g for 1 l agar, add 10 ml glycerol.

**Guarantee analysis:**

| | |
|---|---|
| Gelatin peptone (Pancreas hydrolysate) | 20 g/l |
| Magnesium chloride. | 1,4 g/l |
| Potassium sulphate. | 10 g/l |
| Cetrimide. | 0,3 g/l |
| Agar. | 13,6 g/l |
| pH value. | 7,2 ±0,2 |

| | | | |
|---|---|---|---|
| **X918.1** | 500 g | plastic | 95,15 € |
| Original pack 6 x 500 g | | | 90,39/500 g |

**Safety data sheets**
can be found on the Internet next to the product description.

## CLED Agar

**for microbiology**

For cultivation, differentiation and enumeration of gram-positive and gram-negative bacteria from the urinary tract.
Storage temp.: +20 °C
Inhibits swarming of *Proteus*.

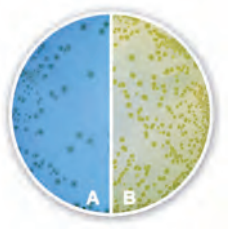

**Figure:**
**A:** *Proteus vulgaris* (blue colour due to pH-shift to >7.6)
**B:** *Escherichia coli* (colour greenish-yellow due to acid production caused by lactose fermentation)

Application: Use 36 g for 1 l agar.

**Formulation:**

| | |
|---|---|
| Casein peptone. | 4 g/l |
| Gelatine peptone. | 4 g/l |
| Beef extract. | 3 g/l |
| Lactose. | 10 g/l |
| L-Cystine. | 0,128 g/l |
| Bromothymol blue. | 0,02 g/l |
| Agar. | 15 g/l |
| pH value. | 7,3 ±0,2 |

| | | | |
|---|---|---|---|
| **2835.1** | 500 g | plastic | 93,00 € |
| Original pack 6 x 500 g | | | 88,35/500 g |
| **2835.2** | 1 kg | plastic | 155,90 € |
| Original pack 6 x 1 kg | | | 148,11/1 kg |

## CLED Agar plus

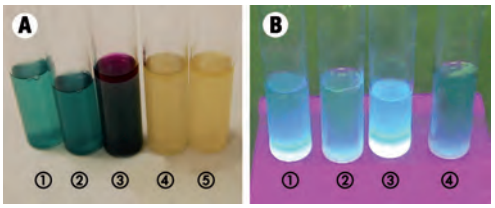
**for microbiology**

For cultivation, easy differentiation by colour, and enumeration of gram-positive and gram-negative bacteria from the urinary tract.
Storage temp.: +20 °C
Inhibits swarming of *Proteus*. **With Andrade´s indicator**.

Application: Use 36,2 g for 1 l agar.

**Formulation:**

| | |
|---|---|
| Casein peptone. | 4 g/l |
| Gelatine peptone. | 4 g/l |
| Beef extract. | 3 g/l |
| Lactose. | 10 g/l |
| L-Cystine. | 0,128 g/l |
| Bromothymol blue. | 0,02 g/l |
| Andrade's indicator. | 0,1 g/l |
| Agar. | 15 g/l |
| pH value. | 7,5 ±0,2 |



| | | | |
|---|---|---|---|
| **2836.1** | 500 g | plastic | 104,20 € |
| Original pack 6 x 500 g | | | 98,99/500 g |

## Coli Fluoro Broth

**for microbiology**

Enrichment medium for the simultaneous and easy detection of total Coliforms and *E. coli* in water, foods and dairy products.

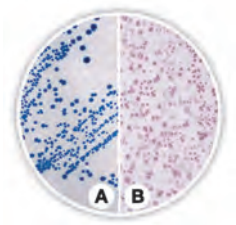
Storage temp.: +4 °C

**A) Staining of species:**
*E. coli* greenish-blue (1,2), black-red after Indole reaction (3)
*Enterobacter, Klebsiella, Citrobacter* greenish-blue (1,2)
*Shigella, Salmonella* no colour change (4,5)
**B) Fluorescence detection (365 nm):**
*E. coli* fluorescence-positive (1,3)
*Enterobacter, Klebsiella, Citrobacter, Shigella, Salmonella* no fluorescence (2,4)
Application: Use 17 g for 1 l broth.

**Formulation:**

| | |
|---|---|
| Tryptose | 5 g/l |
| Sodium chloride | 5 g/l |
| Dipotassium phosphate | 2,7 g/l |
| Potassium phosphate | 2 g/l |
| Sorbitol | 1 g/l |
| Tryptophane | 1 g/l |
| Sodium lauryl sulphate | 0,1 g/l |
| Chromogenic-fluorogenic mixture | 0,23 g/l |
| pH value | 6,8 ±0,2 |

| | | | |
|---|---|---|---|
| **2923.2** | 100 g | plastic | 88,05 € |
| **2923.1** | 500 g | plastic | 353,70 € |
| Original pack 6 x 500 g | | | 336,02/500 g |



## Coliforms chromogenic Agar (ISO)

**ISO 9308-1, for microbiology**

For detection and enumeration of *E. coli* and other coliforms in water.

CCA

Storage temp.: +4 °C

**Staining of species:**
*E. coli* ATCC 25922 blue -dark violet (by reaction of the ß-D-Glucuronidase). *Enterobacter aerogenes* ATCC 13048 red rose (by reaction of the ß-D-galactosidase).
The addition of tryptophane enables an indole test for *E. coli*.
Application: Use 26,45 g for 1 l agar.

**Guarantee analysis:**

| | |
|---|---|
| Sodium chloride (NaCl) | 5,0 g/l |
| di-Sodium hydrogen phosphate | 2,7 g/l |
| Sodium dihydrogen phosphate | 2,2 g/l |
| Yeast extract | 2,0 g/l |
| Casein, enzymatically digested | 1,0 g/l |
| Sodium pyruvate | 1,0 g/l |
| Tryptophane | 1,0 g/l |
| Sorbitol | 1,0 g/l |
| Chromogene Mixture | 0,4 g/l |
| Sodium heptadecyl sulphate (Tergitol-7) | 0,15 g/l |
| Agar | 10 g/l |
| pH value | 6,8 ±0,2 |

| | | | |
|---|---|---|---|
| **8849.1** | 500 g | plastic | 461,20 € |
| Original pack 6 x 500 g | | | 438,14/500 g |

## Coliforms chromogenic Agar

**for microbiology**

For selective enrichment and simultaneous detection of *E. coli* and other Coliforms in water and food samples.

Storage temp.: +20 °C

**Staining of species:**
**A:** *E. coli* blue (by reaction of the ß-D-Glucuronidase)
**B:** Other Coliforms salmon (by reaction of the ß-D-galactosidase)
*E. coli* (blue) and *Citrobacter* (salmon).

Application: Use 26,4 g for 1 l agar.

**Formulation:**

| | |
|---|---|
| Sodium chloride (NaCl) | 5 g/l |
| Phosphate buffer | 4,9 g/l |
| Peptone | 3 g/l |
| Sodium pyruvate | 1 g/l |
| Tryptophane | 1 g/l |
| Sorbitol | 1 g/l |
| Chromogene Mixture | 0,36 g/l |
| Sodium heptadecyl sulphate (Tergitol-7) | 0,1 g/l |
| Agar | 10 g/l |
| pH value | 6,8 ±0,2 |

| | | | |
|---|---|---|---|
| **CL45.2** | 100 g | plastic | 124,20 € |
| **CL45.1** | 525 g | plastic | 456,90 € |

## Columbia Agar (Base)

**Ph.Eur., for microbiology**

For cultivation of fastidious and non-fastidious microorganisms, also for Mycoplasms.

Medium Q (Ph.Eur. 6.0), Columbia Agar (Ph.Eur. 6.3, 7.0, 8.0 and 9.0), Columbia Blood Agar (Base)

Storage temp.: +20 °C

Application: Use 42,5 g for 1 l agar. If required, add 50-110 ml defibr. blood.

**Guarantee analysis:**

| | |
|---|---|
| Casein peptone (Pancreas hydrolysate) | 10 g/l |
| Meat peptone (Pepsin hydrolysate) | 5 g/l |
| Heart peptone (Pancreas hydrolysate) | 3 g/l |
| Yeast extract | 5 g/l |
| Corn starch | 1 g/l |
| Sodium chloride (NaCl) | 5 g/l |
| Agar | 13,5 g/l |
| pH value | 7,3 ±0,2 |

| | | | |
|---|---|---|---|
| **X919.1** | 500 g | plastic | 75,80 € |
| Original pack 6 x 500 g | | | 72,01/500 g |
| **X919.2** | 1 kg | plastic | 137,10 € |
| Original pack 6 x 1 kg | | | 130,25/1 kg |

▶ Columbia Agar (Base), **granulated**
see page 1404

## Cronobacter chromogenic Agar

**ISO 22964:2006, for microbiology**

Selective medium for detection of *Cronobacter* (formerly *Enterobacter*) *sakazakii* in milk powder and powdered infant formulae.

Storage temp.: +4 °C

**Staining of species:**
*Cronobacter* (*Enterobacter) sakazakii* green to turquois
(by reaction of the α-D-glucosidase)
*E. coli* transparent to red/violet
*Staphylococcus* inhibited

Application: Use 30,7 g for 1 l agar.

**Guarantee analysis:**

| | |
|---|---|
| Casein peptone (Pancreas hydrolysate) | 7 g/l |
| Sodium chloride | 5 g/l |
| Yeast extract | 3 g/l |
| Sodium deoxycholate | 0,6 g/l |
| Chromogene Mixture | 0,15 g/l |
| Crystal Violet | 0,002 g/l |
| Agar | 15 g/l |
| pH value | 7,0 ±0,2 |

| | | | |
|---|---|---|---|
| **2997.1** | 100 g | plastic | 227,40 € |

## Deoxycholate Citrate Agar

**Ph.Eur., for microbiology**

For highly selective isolation of enteric pathogenes, particularly *Salmonella* and *Shigella*.

Agar medium J (Ph.Eur. 6.0)

Storage temp.: +20 °C

**Figure:**
*Salmonella typhimurium* grows well-developed, colourless colonies with a distinct black center.

Application: Use 70 g for 1 l agar.

**Guarantee analysis:**

| | |
|---|---|
| Beef extract | 10 g/l |
| Meat peptone | 10 g/l |
| Lactose monohydrate | 10 g/l |
| Sodium citrate | 20 g/l |
| Iron(III) citrate | 1 g/l |
| Sodium deoxycholate | 5 g/l |
| Neutral red | 0,02 g/l |
| Agar | 13,5 g/l |
| pH value | 7,5 ±0,2 |

| | | | |
|---|---|---|---|
| **AE44.1** | 500 g | plastic | 104,20 € |
| Original pack 6 x 500 g | | | 98,99/500 g |
| **AE44.2** | 1 kg | plastic | 181,70 € |
| Original pack 6 x 1 kg | | | 172,62/1 kg |

## D/E Neutralizing Agar

**for microbiology**

For detection and enumeration of microorganisms from a sanitized environment.

Dey-Engley Agar

Storage temp.: +20 °C

⚠ **Warning** H317-EUH031

Particularly recommended for testing areas or samples that have been treated with disinfectants or preservatives.

Application: Use 54 g for 1 l agar.

**Formulation:**

| | |
|---|---|
| Dextrose | 10 g/l |
| Lecithin | 7 g/l |
| Sodium thiosulphate | 6 g/l |
| Casein peptone | 5 g/l |
| Polysorbate 80 | 5 g/l |
| Yeast extract | 2,5 g/l |
| Sodium bisulfite | 2,5 g/l |
| Sodium thioglycolate | 1 g/l |
| Bromocresol purple | 0,02 g/l |
| Agar | 15 g/l |
| pH value | 7,6 ±0,2 |

| | | | |
|---|---|---|---|
| **8850.1** | 500 g | plastic | 96,65 € |
| Original pack 6 x 500 g | | | 91,82/500 g |

## Dichlorane Bengal Red Agar (with chloroamphenicol)

**ISO 21527-1, for microbiology**

Selective agar for enumeration of yeast and food mould fungi, especially for strongly hyphen-forming fungi.

**DRBC Agar**

Storage temp.: +20 °C

The addition of dichlorane inhibits hyphae-forming fungi from spreading and improves counting. Chloroamphenicol and a low pH-value inhibit the growth of bacteria.

**Figure:**
*Aspergillus brasiliensis*
Application: Use 31,6 g for 1 l agar.

**Formulation:**

| | |
|---|---|
| Peptone | 5 g/l |
| Glucose | 10 g/l |
| Potassium phosphate | 1 g/l |
| Magnesium sulphate ($MgSO_4$) | 0,5 g/l |
| Chloroamphenicol | 0,1 g/l |
| Dichlorane | 0,002 g/l |
| Bengal red | 0,025 g/l |
| Agar | 15 g/l |
| pH value | 5,6 ±0,2 |

| | | | |
|---|---|---|---|
| **AE25.1** | 500 g | plastic | 149,45 € |
| Original pack 6 x 500 g | | | 141,98/500 g |

## Dichlorane Glycerol Agar (Base)

**ISO 21527-2, for microbiology**

Selective agar for enumeration of yeast and food mould fungi, especially in half-dry and dry food.

**DG18 Agar**

Storage temp.: +20 °C

The addition of dichlorane, the reduction of the water content by adding glycerol, and the low pH-value inhibit bacterial growth.

**Figure:**
*Saccharomyces cerevisiae*
Application: Use 31,6 g for 1 l agar, add 18 vol.-% glycerol.

**Formulation:**

| | |
|---|---|
| Peptone. | 5 g/l |
| Glucose. | 10 g/l |
| Potassium phosphate. | 1 g/l |
| Magnesium sulphate ($MgSO_4$) | 0,5 g/l |
| Chloroamphenicol. | 0,1 g/l |
| Dichlorane. | 0,002 g/l |
| Agar. | 15 g/l |
| pH value. | 5,6 ±0,2 |

| | | | |
|---|---|---|---|
| **AE26.1** | 500 g | plastic | 126,35 € |
| Original pack 6 x 500 g | | | 120,03/500 g |

## Differential Reinforced Clostridial Medium

**for microbiology**

For enrichment and enumeration of clostridia in foods and other samples.

**DRCM**

Storage temp.: +20 °C

Application: Use 27,5 g for 1 l broth.

**Formulation:**

| | |
|---|---|
| Casein peptone. | 5 g/l |
| Meat peptone | 5 g/l |
| Beef extract. | 8 g/l |
| Yeast extract. | 1 g/l |
| Soluble starch. | 1 g/l |
| Glucose monohydrate. | 1 g/l |
| Cystein hydrochloride. | 0,5 g/l |
| Sodium acetate. | 5 g/l |
| Sodium bisulfite. | 0,5 g/l |
| Ammonium iron(III) citrate. | 0,5 g/l |
| Sodium resazurin. | 0,002 g/l |
| pH value. | 7,1 ±0,2 |

| | | | |
|---|---|---|---|
| **CL78.1** | 500 g | plastic | 112,90 € |
| Original pack 6 x 500 g | | | 107,26/500 g |

## DNase Test Agar

**for microbiology**

For detection of DNase activity for identification of pathogenic bacteria.

Storage temp.: +20 °C

Particularly recommended for identification of pathogenic *Staphylococci*.

**Figure:**
Clear, DNA-free zone around a streak of *Staphylococcus aureus* ATCC 25923 (DNase positive).
Application: Use 42 g for 1 l agar.

**Formulation:**

| | |
|---|---|
| Casein peptone. | 15 g/l |
| Soy peptone. | 5 g/l |
| Sodium chloride (NaCl). | 5 g/l |
| Deoxyribonucleic acid. | 2 g/l |
| Agar. | 15 g/l |
| pH value. | 7,3 ±0,2 |

| | | | |
|---|---|---|---|
| **8295.1** | 500 g | plastic | 235,45 € |
| Original pack 6 x 500 g | | | 223,68/500 g |

## EC Broth

**ISO 7251, for microbiology**

For detection and enumeration of coliform bacteria in water.

*E. coli* Bouillon

Storage temp.: +20 °C

Application: Use 37,4 g for 1 l broth.

**Guarantee analysis:**

| | |
|---|---|
| Tryptose. | 20 g/l |
| Lactose. | 5 g/l |
| Sodium chloride (NaCl). | 5 g/l |
| Dipotassium phosphate. | 4 g/l |
| Potassium phosphate. | 1,5 g/l |
| Bile salts No. 3. | 1,5 g/l |
| pH value. | 6,9 ±0,2 |

| | | | |
|---|---|---|---|
| **8310.1** | 500 g | plastic | 107,40 € |
| Original pack 6 x 500 g | | | 102,03/500 g |

### Microbiological Quality Control

Microbiological quality control of Roth molecular biological and microbiological culture media and agar is carried out according to following guidelines:

- Plating relevant bacterial strains from standardized stock solution (as a rule in dilutions of $10^{-1}$ to $10^{-10}$) on agar plates of culture medium to be tested. The preparation of the media and agar must be carried out strictly according to the instructions, which are included.
- Plates from a checked batch of culture media are used as a reference
- The developed colonies are counted and rated after adequate incubation. Counting is always carried out using the plate with colony number 30-300.
- Standardization and validation of test: reference plates are compared with the number of bacteria expected
- Reference and test plate colonies are analysed for size, colour, appearance and possible reaction to certain chemicals
- Growth count on the test plates:

| | |
|---|---|
| „good“ or „satisfactory“ | colony number = 50 % - 99 % of expected growth |
| „moderate“ | colony number = 30 % - 50 % of expected growth |
| „inhibited“ | colony number ≤ 30 % of expected growth |
| „zero“ | no growth |

## Endo Agar (Base)

**for microbiology**

For isolation of enteric gram-negative bacteria, especially coliforms, from water, dairy products and foods.

Storage temp.: +20 °C

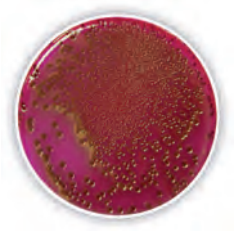


**Figure:**
*Escherichia coli* grows red colonies accompanied by red staining of the surrounding medium (sodium sulphite/fuchsin reaction). Application: Use 36 g for 1 l agar, add 5 ml basic fuchsin solution.

**Formulation:**

Peptone. ..... 10 g/l
Lactose. ..... 10 g/l
di-Potassium phosphate. ..... 3,5 g/l
Sodium sulphite. ..... 2,5 g/l
Agar. ..... 10 g/l
pH value. ..... 7,5 ±0,2

| | | | |
|---|---|---|---|
| **X920.1** | 500 g | plastic | 79,45 € |
| Original pack 6 x 500 g | | | 75,48/500 g |

## Fraser Broth (Base)

**ISO 11290-1, for microbiology**

Enrichment medium for detection and isolation of *Listeria* in foods and environmental samples.

Storage temp.: +20 °C

Full Fraser Broth including esculin, acriflavine and nalidixic acid. Application: Use 57,3 g for 1 l broth. A slight precipitate may appear after autoclaving. Prior to use add sterile filtered ferric(III) ammonium citrate solution ad 0,5 g/l broth (Art. No. 3130.1).

**Guarantee analysis:**

Pancreatic digest of casein. ..... 5 g/l
Meat peptone. ..... 5 g/l
Beef extract. ..... 5 g/l
Yeast extract. ..... 5 g/l
Sodium chloride. ..... 20 g/l
Disodium phosphate. ..... 12 g/l
Potassium phosphate. ..... 1,35 g/l
Lithium chloride. ..... 3 g/l
Esculin. ..... 1 g/l
Acriflavine. ..... 0,025 g/l
Nalidixic acid. ..... 0,02 g/l
pH value. ..... 7,2 ±0,2

| | | | |
|---|---|---|---|
| **HP17.1** | 500 g | plastic | 125,25 € |
| Original pack 6 x 500 g | | | 118,99/500 g |

▶ Ammonium iron(III)citrate solution
see page 1406

**Light-coloured precipitates in nutrient media**

In media containing potassium or sodium phosphate, large amounts of yeast extract,or non-fat milk, light-coloured precipitates may form during autoclaving, appearing as opaqueness, light-coloured clouding or white precipitate. In the majority of cases this is insoluble calcium- or magnesium phosphates, which originate in exceeding of the solubility product during heating, and which don't resolubilise during cooling. Typical media showing these phosphate crystals are, for instance, Terrific Broth (TB), Plate Count Agar with non-fat milk, or **Fraser media**.

The amount of phosphates present is only slightly reduced by that, so the medium may be used without any problems. In case the cloudiness hinders analyses, the bouillon may be cleared from precipitates by sterile filtration. Agar media may generally be used directly.

In cases of recurrence we recommend to thoroughly check the desalting plant, or to desalt the water used repeatedly, in order to remove residual calcium carbonate (chalk).

## Fraser Half Broth (Base)

**ISO 11290-1, for microbiology**

Enrichment medium for detection and isolation of *Listeria* in foods and environmental samples.

Storage temp.: +20 °C

Fraser Broth including esculin. With reduced amounts of acriflavine and nalidixic acid.
Application: Use 57,3 g for 1 l broth. A slight precipitate may appear after autoclaving. Prior to use add sterile filtered iron(III) ammonium citrate solution ad 0,5 g/l broth (Art. No. 3130.1).

**Guarantee analysis:**

Pancreatic digest of casein. ..... 5 g/l
Meat peptone. ..... 5 g/l
Beef extract. ..... 5 g/l
Yeast extract. ..... 5 g/l
Sodium chloride. ..... 20 g/l
Disodium phosphate. ..... 12 g/l
Potassium phosphate. ..... 1,3 g/l
Lithium chloride. ..... 3 g/l
Esculin. ..... 1 g/l
Acriflavine. ..... 0,0125 g/l
Nalidixic acid. ..... 0,01 g/l
pH value. ..... 7,2 ±0,2

| | | | |
|---|---|---|---|
| **HP18.1** | 500 g | plastic | 97,75 € |

| Original pack 6 x 1 kg | | | 165,97/1 kg |

## Gelatin Agar (DEV)

**DEV, for microbiology**

For enumeration of the total microbial population and detection of gelatin-liquefying microorganisms in water samples.

Storage temp.: +20 °C

Application: Use 50 g for 1 l agar.

**Guarantee analysis:**

Meat peptone. ..... 10 g/l
Meat extract. ..... 10 g/l
Sodium chloride (NaCl). ..... 5 g/l
Gelatine. ..... 10 g/l
Agar. ..... 15 g/l
pH value. ..... 7,3 ±0,2

| | | | |
|---|---|---|---|
| **HP07.1** | 500 g | plastic | 145,05 € |
| Original pack 6 x 500 g | | | 137,80/500 g |

## King's B Medium (Base)

**DEV, EN ISO 16266:2008, for microbiology**

For confirmation of *Pseudomonas aeruginosa* in water samples.

Storage temp.: +20 °C

Application: Use 38 g for 990 ml agar. Add 10 ml glycerol.

**Guarantee analysis:**

Peptone. ..... 20 g/l
di-Potassium hydrogen phosphate. ..... 1,5 g/l
Magnesium sulphate heptahydrate. ..... 1,5 g/l
Agar. ..... 15 g/l
pH value. ..... 7,2 ±0,2

| | | | |
|---|---|---|---|
| **CP64.1** | 500 g | plastic | 160,20 € |
| Original pack 6 x 500 g | | | 152,19/500 g |

**Instructions for use**
can be found on the Internet next to the product description.

## Kligler Iron Agar

**for microbiology**

For differentiation of gram-negative enterobacteria.
Double Sugar Iron Agar, **KIA**
Storage temp.: +20 °C

**Figure:**
① *Salmonella enteritidis*
② Uninoculated agar
Application: Use 52 g for 1 l agar.

**Formulation:**

| | |
|---|---|
| Peptone mixture | 20 g/l |
| Lactose | 10 g/l |
| Sodium chloride | 5 g/l |
| Glucose | 1 g/l |
| Ammonium iron(III) citrate | 0,5 g/l |
| Sodium thiosulphate | 0,5 g/l |
| Phenol red | 0,025 g/l |
| Agar | 15 g/l |
| pH value | 7,4 ±0,2 |

| | | | |
|---|---|---|---|
| **5758.1** | 500 g | plastic | 85,90 € |
| Original pack 6 x 500 g | | | 81,61/500 g |

## Lactose Broth

**Ph.Eur., for microbiology**

For detection and enumeration of coliform bacteria and for enrichment of *Salmonellae*.
Broth medium D (Ph.Eur. 6.0)
Storage temp.: +20 °C

**Figure:**
① *Escherichia coli* (gas formation (arrow))
② Uninoculated broth
Application: Use 13 g for 1 l broth.

**Guarantee analysis:**

| | |
|---|---|
| Gelatin peptone (Pancreas hydrolysate) | 5 g/l |
| Lactose monohydrate | 5 g/l |
| Beef extract | 3 g/l |
| pH value | 6,9 ±0,2 |

| | | | |
|---|---|---|---|
| **X921.1** | 500 g | plastic | 68,70 € |
| Original pack 6 x 500 g | | | 65,27/500 g |

## Lactose-Broth (DEV)

**DEV, for microbiology**

For confirmation of *Escherichia coli* in water samples by lactose fermentation.
Storage temp.: +20 °C
Application: Use 28 g for 1 l broth.

**Guarantee analysis:**

| | |
|---|---|
| Meat peptone | 10 g/l |
| Meat extract | 3 g/l |
| Sodium chloride (NaCl) | 5 g/l |
| Lactose | 10 g/l |
| Bromcresol purple | 0,02 g/l |
| pH value | 7,2 ±0,2 |

| | | | |
|---|---|---|---|
| **CL76.1** | 500 g | plastic | 90,85 € |
| Original pack 6 x 500 g | | | 86,31/500 g |

## Lactose Peptone Broth (DEV)

**DEV, for microbiology**

For enrichment and enumeration of coliform bacteria in water samples.
Storage temp.: +20 °C
Application: Use 35 g for 1 l broth.

**Guarantee analysis:**

| | |
|---|---|
| Meat peptone | 17 g/l |
| Soy peptone | 3 g/l |
| Sodium chloride (NaCl) | 5 g/l |
| Lactose | 10 g/l |
| Bromcresol purple | 0,02 g/l |
| pH value | 7,2 ±0,2 |

| | | | |
|---|---|---|---|
| **CL77.1** | 500 g | plastic | 109,15 € |
| Original pack 6 x 500 g | | | 103,69/500 g |
| **CL77.2** | 1 kg | plastic | 187,60 € |
| Original pack 6 x 1 kg | | | 178,22/1 kg |

## Lactose Sulphite Broth (Base)

**Ph.Eur., for microbiology**

For selective detection and enumeration of *C. perfringens*.
Medium R (Ph.Eur. 6.0)
Storage temp.: +20 °C
Application: Use 20,3 g for 1 l broth. Prior to use add sodium bisulphite solution and iron(III) ammonium citrate solution (Art. No. 3130.1).

**Guarantee analysis:**

| | |
|---|---|
| Casein peptone (Pancreas hydrolysate) | 5 g/l |
| Yeast extract | 2,5 g/l |
| Sodium chloride (NaCl) | 2,5 g/l |
| Lactose monohydrate | 10 g/l |
| Cystein hydrochloride | 0,3 g/l |
| pH value | 7,1 ±0,2 |

| | | | |
|---|---|---|---|
| **AE46.1** | 500 g | plastic | 80,10 € |
| Original pack 6 x 500 g | | | 76,10/500 g |

▶ Ammonium iron(III)citrate solution
see page 1406

**Instructions for use**
can be found on the Internet next to the product description.

## Lauryl Sulphate Broth

**ISO 4831:2006, for microbiology**

For enrichment and detection of coliform bacteria in waters.

**Flu Broth** • Storage temp.: +20 °C

Application: Use 35,6 g for 1 l broth.

**Guarantee analysis:**

| | |
|---|---|
| Tryptose. | 20 g/l |
| Lactose. | 5 g/l |
| Sodium chloride (NaCl). | 5 g/l |
| Potassium phosphate. | 2,75 g/l |
| di-Potassium phosphate. | 2,75 g/l |
| Sodium lauryl sulphate. | 0,1 g/l |
| pH value. | 6,8 ±0,2 |

| | | | |
|---|---|---|---|
| **CL80.1** | 500 g | plastic | 107,00 € |
| Original pack 6 x 500 g | | | 101,65/500 g |

## Legionella Agar (Base)

**EN ISO 11731-2, for microbiology**

For selective cultivation of *Legionella*.

**BCYE Agar** (Base), **GVCP Agar** (Base) • Storage temp.: +20 °C

**Figure:** *Legionella pneumophila*

Application: Use 2,5 g for 90 ml agar. After autoclaving add 1 vial (10 ml) reconstituted *Legionella* Growth Supplement (Art. No. CL49.1). If required also add reconstituted *Legionella* GVCP Supplement (Art. No. CL50.1).

**Guarantee analysis:**

| | |
|---|---|
| Yeast extract. | 10,0 g/l |
| Charcoal activated. | 2,0 g/l |
| Agar. | 13,0 g/l |
| pH value. | 6,9 ±0,2 |

| | | | |
|---|---|---|---|
| **CL48.1** | 500 g | plastic | 122,05 € |
| Original pack 6 x 500 g | | | 115,95/500 g |

▶ Legionella Supplements see page 1407

▶ Legionella Acid Buffer see page 1411 NEW

## Letheen Broth modified

**for microbiology**

For microbiological analyses of cosmetics, and samples containing disinfectants or preservatives. • Storage temp.: +20 °C

Based on the formulation acc. to FDA (Food and Drug Administration, USA), Bacteriological Analytical Manual (1995), Microbiological Methods for Cosmetics.

Application: Use 43,8 g for 1 l broth.

**Formulation:**

| | |
|---|---|
| Meat peptone. | 20 g/l |
| Casein peptone. | 5 g/l |
| Polysorbate 80. | 5 g/l |
| Sodium chloride. | 5 g/l |
| Beef extract. | 5 g/l |
| Yeast extract. | 2 g/l |
| Glucose. | 1 g/l |
| Lecithin. | 0,7 g/l |
| Sodium bisulfite. | 0,1 g/l |
| pH value. | 7,2 ±0,2 |

| | | | |
|---|---|---|---|
| **5761.1** | 500 g | plastic | 102,70 € |
| Original pack 6 x 500 g | | | 97,57/500 g |

## Letheen Agar modified

**for microbiology**

For microbiological analyses of cosmetics, and samples containing disinfectants or preservatives.

Storage temp.: +20 °C

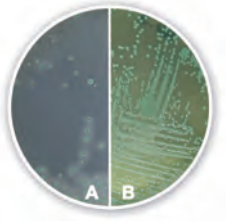
Based on the formulation acc. to FDA (Food and Drug Administration, USA), Bacteriological Analytical Manual (1995), Microbiological Methods for Cosmetics.

Application: Use 59,1 g for 1 l agar.

**Formulation:**

| | |
|---|---|
| Meat peptone. | 10 g/l |
| Casein peptone. | 10 g/l |
| Polysorbate 80. | 7 g/l |
| Sodium chloride. | 5 g/l |
| Beef extract. | 3 g/l |
| Yeast extract. | 2 g/l |
| Glucose. | 1 g/l |
| Lecithin. | 1 g/l |
| Sodium bisulfite. | 0,1 g/l |
| Agar. | 20 g/l |
| pH value. | 7,2 ±0,2 |

| | | | |
|---|---|---|---|
| **5759.1** | 500 g | plastic | 113,45 € |
| Original pack 6 x 500 g | | | 107,78/500 g |



## Listeria chromogenic Agar (Base)

**ISO 11290:2004, for microbiology**

Selective medium for detection and enumeration of *Listeria monocytogenes*.

Storage temp.: +4 °C

**Warning** H315-H319

**Staining of species:**
**A:** *Listeria monocytogenes* cyan-blue to turquois (by reaction of the β-D-glucosidase) with halo
**B:** *Listeria innocua* green to light greenish-blue
*Enterococcus* and *E. coli* inhibited

Application: Use 70,55 g for 1 l agar. After cooling add 2 vials (10 ml reconstituted) Listeria Chromo Selective Supplement (Art. No. 2947.1) and 2 vials (10 ml each) Listeria Chromo Lipase C Supplement (Art. No. 2948.1).

**Guarantee analysis:**

| | |
|---|---|
| Meat peptone. | 18 g/l |
| Lithium chloride. | 10 g/l |
| Yeast extract. | 10 g/l |
| Tryptone. | 6 g/l |
| Sodium chloride. | 5 g/l |
| di-Sodium hydrogen phosphate. | 2,5 g/l |
| Glucose. | 2 g/l |
| Sodium pyruvate. | 2 g/l |
| Magnesium glycerophosphate. | 1 g/l |
| Magnesium sulphate. | 0,5 g/l |
| Chromogene Mixture. | 0,05 g/l |
| Agar. | 13,5 g/l |
| pH value. | 7,2 ±0,2 |

| | | | |
|---|---|---|---|
| **3008.1** | 100 g | plastic | 64,40 € |

▶ Listeria Supplements see page 1408

## Lysine Iron Agar

**for microbiology**

For rapid differentiation of *Enterobacteriaceae,* particularly *Salmonella arizonae.*

Storage temp.: +20 °C

Differentiation of *Enterobacteriaceae* on the basis of Lysine decarboxylation and -deamination, as well as of $H_2S$ production.
Application: Use 33 g for 1 l agar.

**Formulation:**

| | |
|---|---|
| L-Lysin | 10 g/l |
| Gelatine peptone | 5 g/l |
| Yeast extract | 3 g/l |
| Dextrose | 1 g/l |
| Ammonium iron(III) citrate | 0,5 g/l |
| Sodium thiosulphate | 0,04 g/l |
| Bromocresol purple | 0,02 g/l |
| Agar | 13,5 g/l |
| pH value | 6,7 ±0,2 |

| | | | |
|---|---|---|---|
| **8322.1** | 500 g | plastic | 171,50 € |
| Original pack 6 x 500 g | | | 162,93/500 g |

## MacConkey Broth

**Ph.Eur., for microbiology**

For detection of coliform bacteria in water, milk and other liquids.

Broth medium G (Ph.Eur. 6.0), MacConkey Broth (Ph.Eur. 6.3, 7.0, 8.0 and 9.0)

Storage temp.: +20 °C

Application: Use 35 g for 1 l broth.

**Guarantee analysis:**

| | |
|---|---|
| Gelatin peptone (Pancreas hydrolysate) | 20 g/l |
| Lactose monohydrate | 10 g/l |
| Dehydrated ox bile | 5 g/l |
| Bromocresol purple | 0,01 g/l |
| pH value | 7,3 ±0,2 |

| | | | |
|---|---|---|---|
| **AE47.1** | 500 g | plastic | 80,55 € |
| Original pack 6 x 500 g | | | 76,52/500 g |

## MacConkey Agar

**Ph.Eur., EN ISO 21567, for microbiology**

For selective isolation and identification of enterobacteria from waste water, foods and other samples.

Agar medium H (Ph.Eur. 6.0), MacConkey Agar (Ph.Eur. 6.3, 7.0, 8.0 and 9.0) • Storage temp.: +20 °C

**Figure: A**: *Enterobacter aerogenes,* **B**: *Shigella dysenteriae*
Application: Use 50 g for 1 l agar.

**Guarantee analysis:**

| | |
|---|---|
| Gelatin peptone (Pancreas hydrolysate) | 17 g/l |
| Meat and casein peptone | 3 g/l |
| Lactose monohydrate | 10 g/l |
| Bile salt (Cholate) | 1,5 g/l |
| Sodium chloride (NaCl) | 5 g/l |
| Neutral red | 0,03 g/l |
| Crystal Violet | 0,001 g/l |
| Agar | 13,5 g/l |
| pH value | 7,1 ±0,2 |

| | | | |
|---|---|---|---|
| **X922.1** | 500 g | plastic | 81,20 € |
| Original pack 6 x 500 g | | | 77,14/500 g |
| **X922.2** | 1 kg | plastic | 146,10 € |
| Original pack 6 x 1 kg | | | 138,80/1 kg |

▶ MacConkey Agar, **granulated**, see page 1404

## Malt Extract Broth

**for microbiology**

For isolation and enumeration of yeasts and moulds, as well as for sterility testing.

Storage temp.: +20 °C

Application: Use 19 g for 1 l broth.

**Formulation:**

| | |
|---|---|
| Malt extract | 13,0 g/l |
| Gelatine peptone | 5,5 g/l |
| Yeast extract | 0,5 g/l |
| pH value | 4,7 ±0,2 |

| | | | |
|---|---|---|---|
| **CP75.1** | 500 g | plastic | 87,65 € |
| Original pack 6 x 500 g | | | 83,27/500 g |

**Sterilisation of media containing sugar**

Media containing sugar or **malt extract**, particularly those with a low pH, must be sterilised with care. We recommend autoclaving at up to 118 °C for a maximum of 15 min. Please observe the guidelines given in the instructions for use.

The reasons are as follows:

a) Heating sugar in combination with amino acids (from peptone, meat extract, yeast extract, or similar) can result in **toxic Maillard reaction products** which may interfere with proliferation of micro-organisms.

b) Inclusion of different sugar molecules and sugar degradation products will cause premature chain termination and inhibit chain cross-linking. The **gelability of agars containing sugar** will thereby be reduced.

## Malt Extract Agar

**for microbiology**

For cultivation of fungi and yeasts.

Storage temp.: +20 °C

Application: Use 33,6 g for 1 l agar.

**Formulation:**

| | |
|---|---|
| Malt extract | 12,75 g/l |
| Gelatine peptone | 0,78 g/l |
| Glycerol | 2,35 g/l |
| Dextrine | 2,75 g/l |
| Agar | 15 g/l |
| pH value | 4,7 ±0,2 |

| | | | |
|---|---|---|---|
| **X923.1** | 500 g | plastic | 81,20 € |
| Original pack 6 x 500 g | | | 77,14/500 g |
| **X923.2** | 1 kg | plastic | 146,10 € |
| Original pack 6 x 1 kg | | | 138,80/1 kg |

Basics, tips & tricks

## Mannitol Egg Yolk Polymyxin Agar (Base)

**for microbiology**

For enumeration and isolation of *Bacillus cereus* in food, acc. to Mossel.
Bacillus cereus Selective Agar, **MYP Agar**
Storage temp.: +20 °C

**Figure:**
*Bacillus cereus*
Application: Use 43 g for 1 l agar. After cooling add 100 ml Egg Yolk Emulsion (Art. No. 0402.1) and 2 vials (2x5 ml) reconstituted Bacillus cereus Supplement (Art. No. 4856.1).

**Formulation:**

| | |
|---|---|
| Meat peptone | 10 g/l |
| Sodium chloride | 10 g/l |
| D-Mannitol | 10 g/l |
| Beef extract | 1 g/l |
| Phenol red | 0,025 g/l |
| Agar | 12 g/l |
| pH value | 7,1 ±0,2 |

| | | | |
|---|---|---|---|
| **5765.1** | 500 g | plastic | 97,30 € |
| Original pack 6 x 500 g | | | 92,44/500 g |

▶ Bacillus cereus Supplement see page 1406

## Mannitol Salt Agar

**Ph.Eur., for microbiology**

For isolation of pathogenic *Staphylococci*.
Chapman Agar, Mannitol Salt Agar (Ph.Eur. 6.3, 7.0, 8.0 and 9.0)
Storage temp.: +20 °C
Recommended by the Harmonized Method (Ph. Eur. 6.0, 2.6.13.B) for proliferation and identification of *Staphylococcus aureus*.

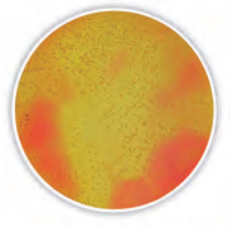

**Figure:**
*Staphylococcus aureus*
Application: Use 111 g for 1 l agar. Optional: Add egg yolk emulsion (Art. No. 0402.1) to 5 % final concentration.

**Guarantee analysis:**

| | |
|---|---|
| Pancreatic digest of casein | 5 g/l |
| Peptone (peptic digest of animal tissue) | 5 g/l |
| Beef extract | 1 g/l |
| Sodium chloride | 75 g/l |
| D-Mannitol | 10 g/l |
| Phenol red | 0,025 g/l |
| Agar | 15 g/l |
| pH value | 7,4 ±0,2 |

| | | | |
|---|---|---|---|
| **CL81.1** | 500 g | plastic | 62,90 € |
| Original pack 6 x 500 g | | | 59,76/500 g |

▶ Egg Yolk Emulsion see page 1407

## Marine Broth

**for microbiology**

For enumeration and isolation of heterotropic marine bacteria.
Storage temp.: +20 °C
Application: Use 40,1 g for 1 l broth. May be slightly opalescent and may present a light precipitation.

**Formulation:**

| | |
|---|---|
| Sodium chloride (NaCl) | 19,4 g/l |
| Magnesium chloride | 8,8 g/l |
| Peptone | 5 g/l |
| Sodium sulphate ($Na_2SO_4$) | 3,24 g/l |
| Calcium chloride | 1,8 g/l |
| Yeast extract | 1 g/l |
| Potassium chloride (KCl) | 0,55 g/l |
| Sodium bicarbonate | 0,16 g/l |
| Ferric citrate | 0,1 g/l |
| Potassium bromide | 0,08 g/l |
| Strontium chloride | 0,034 g/l |
| Boric acid | 0,022 g/l |
| Sodium silicate | 0,004 g/l |
| Sodium fluoride | 0,0024 g/l |
| Ammonium nitrate | 0,0016 g/l |
| Disodium phosphate | 0,008 g/l |
| pH value | 7,6 ±0,2 |

| | | | |
|---|---|---|---|
| **CP73.1** | 500 g | plastic | 90,85 € |
| Original pack 6 x 500 g | | | 86,31/500 g |

## Maximum Recovery Solution

**DIN 10162, LMBG, DIN EN ISO 6887-1, for microbiology**

For homogenization and dilution of microbiological samples.
Storage temp.: +20 °C
Application: Use 9,5 g for 1 l broth.

**Guarantee analysis:**

| | |
|---|---|
| Sodium chloride | 8,5 g/l |
| Casein peptone | 1 g/l |
| pH value | 7,0 ±0,2 |

| | | | |
|---|---|---|---|
| **5766.1** | 500 g | plastic | 53,65 € |
| Original pack 6 x 500 g | | | 50,97/500 g |

Please note our **Technical Information Brochure** on the Internet next to the products:

**Guidelines for the production and storage of media and agars**
Basics, tips & tricks

## m-CP Agar

**acc. to TWVO 2001, for microbiology**

For isolation and enumeration of *Clostridium perfringens.*

Storage temp.: +20 °C

Application: Use 71,1 g for 1 l agar. After autoclaving add 2 vials (4 ml) reconstituted Clostridium perfringens Supplement (Art. No. CL52.1) and other supplements.

**Guarantee analysis:**

| | |
|---|---|
| Tryptose. | 30 g/l |
| Yeast extract. | 20 g/l |
| Saccharose. | 5 g/l |
| L-Cysteine hydrochloride. | 1 g/l |
| Magnesium sulphate heptahydrate. | 0,1 g/l |
| Bromocresol purple. | 0,04 g/l |
| Agar. | 15 g/l |
| pH value | 7,6 ±0,2 |

| | | | |

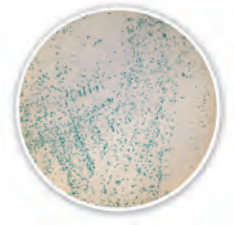
| Original pack 6 x 500 g | | | 179,27/500 g |

▶ Clostridium perfringens Supplement 1406



## m-EI-chromogenic Agar (Base)

**for microbiology**

For detection and enumeration of *Enterococcus* in water via single step membrane filtration.

Storage temp.: +4 °C

⚠ **Warning** H302

**Staining of species:**
*Enterococcus* blue (by reaction of the β-D-glucosidase)
*E. coli* inhibited
Application: Use 71,95 g for 1 l agar. After autoclaving add 0,24 g nalidixic acid (Art. No. CN32.1) solubilised in water.

**Formulation:**

| | |
|---|---|
| Yeast extract. | 30 g/l |
| Sodium chloride. | 15 g/l |
| Peptone. | 10 g/l |
| Esculin. | 1 g/l |
| Chromogene Mixture. | 0,75 g/l |
| Sodium azide. | 0,15 g/l |
| Cycloheximide. | 0,05 g/l |
| Agar. | 15 g/l |
| pH value. | 7,1 ±0,2 |

| | | | |
|---|---|---|---|
| **3014.1** | 100 g | plastic | 87,00 € |

## Mossel EE Broth

**Ph.Eur., for microbiology**

For selective enrichment of enterobacteria in foods, particularly *Salmonella* and Coliforms.

Enriched broth medium E (Ph.Eur. 6.0), Enterobacteria enrichment broth-Mossel (Ph.Eur. 6.3, 7.0, 8.0 and 9.0)

Storage temp.: +20 °C

**Figure:**
① Enterobacteria (here: *E. coli*), indicated by colour yellow caused by pH-shift
② Uninoculated broth
Application: Use 45 g for 1 l broth.

**Guarantee analysis:**

| | |
|---|---|
| Pancreas hydrolysate made from gelatin. | 10 g/l |
| Glucose monohydrate. | 5 g/l |
| Dehydrated ox bile. | 20 g/l |
| Potassium dihydrogen phosphate. | 2 g/l |
| di-Sodium hydrogenphosphate dihydrate. | 8 g/l |
| Brilliant green. | 0,015 g/l |
| pH value. | 7,2 ±0,2 |

| | | | |
|---|---|---|---|
| **AE65.1** | 500 g | plastic | 174,70 € |
| Original pack 6 x 500 g | | | 165,97/500 g |

## MRSA chromogenic Agar (Base)

**for microbiology**

For detection of methicillin resistant staphylococci.

Storage temp.: +4 °C

**Staining of species:**
*Staphylococcus aureus* ATCC 43300 blue
(by reaction of the α-D-glucosidase)
*Staphylococcus aureus* ATCC 25923 and *E. coli* inhibited
Application: Use 103,4 g for 1 l agar. Do not overheat! After cooling add 2 vials (10 ml) reconstituted MRSA Cefoxitin Supplement (Art. No. 2975.1).

**Formulation:**

| | |
|---|---|
| Nutrients. | 78 g/l |
| Peptone. | 11 g/l |
| Chromogene Mixture. | 1,9 g/l |
| Agar. | 12,5 g/l |
| pH value. | 7,2 ±0,2 |

| | | | |
|---|---|---|---|
| **3026.1** | 100 g | plastic | 75,15 € |

▶ MRSA Cefoxitin Supplement see page 1409

## MRS Broth
**for microbiology**

For cultivation of lactobacilli. According to deMan, Rogosa and Sharpe.
Storage temp.: +4 °C
Application: Use 52 g for 1 l broth.

**Formulation:**

| | |
|---|---|
| Peptone. | 10 g/l |
| Yeast extract. | 4 g/l |
| Beef extract. | 8 g/l |
| Glucose. | 20 g/l |
| Dipotassium phosphate. | 2 g/l |
| Sodium acetate. | 5 g/l |
| Ammonium citrate. | 2 g/l |
| Magnesium sulphate ($MgSO_4$). | 0,2 g/l |
| Manganese sulphate. | 0,05 g/l |
| Polysorbate 80. | 1 g/l |
| pH value. | 6,2 ±0,2 |

| | | | |
|---|---|---|---|
| **X925.1** | 500 g | plastic | 72,60 € |
| Original pack 6 x 500 g | | | 68,97/500 g |
| **X925.2** | 1 kg | plastic | 122,05 € |
| Original pack 6 x 1 kg | | | 115,95/1 kg |
| **X925.3** | 2,5 kg | plastic | 260,70 € |

## MRS Broth pH 5.7
**ISO 15214, for microbiology**

For cultivation of pH sensitive lactobacilli from foods and feeding stuff. According to deMan, Rogosa and Sharpe.
Storage temp.: +4 °C
MRS Broth with low pH value. For cultivation of special strains of lactobacilli, which show reduced growth under higher pH-values. Also for efficient protein expression of many proteins of *Lactobacillus*. 0.1 g/l Magnesium sulphate (anhydrous) is equivalent to 0.2 g/l Magnesium sulphate heptahydrate. 0.003 g/l Manganese sulphate (anhydrous) is equivalent to
0.05 g/l Manganese sulphate tetrahydrate.
Application: Use 54 g for 1 l broth.

**Guarantee analysis:**

| | |
|---|---|
| Casein peptone. | 10 g/l |
| Yeast extract. | 4 g/l |
| Beef extract. | 10 g/l |
| Glucose. | 20 g/l |
| Dipotassium phosphate. | 2 g/l |
| Sodium acetate. | 5 g/l |
| Triammonium citrate. | 2 g/l |
| Magnesium sulphate heptahydrate. | 0,20 g/l |
| Mangansulphate tetrahydrate. | 0,05 g/l |
| Polysorbate 80. | 1,08 g/l |
| pH value. | 5,7 ±0,1 |

| | | | |
|---|---|---|---|
| **HP64.1** | 500 g | plastic | 76,90 € |
| Original pack 6 x 500 g | | | 73,06/500 g |

## MRS Agar
**for microbiology**

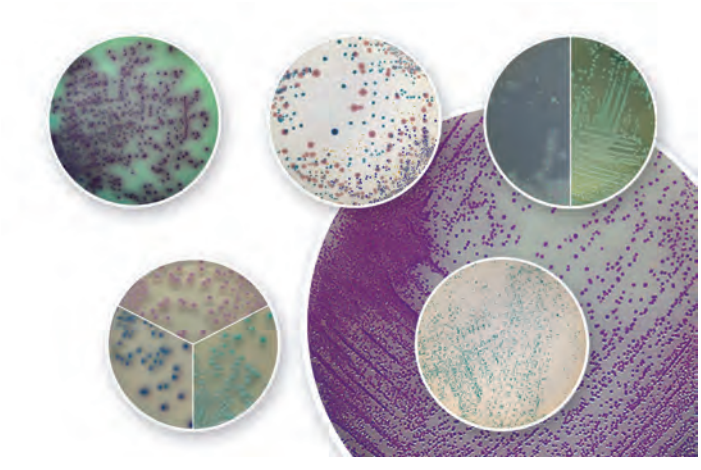
For cultivation of lactobacilli. According to deMan, Rogosa and Sharpe.
Storage temp.: +4 °C
Application: Use 62 g for 1 l agar.

**Formulation:**

| | |
|---|---|
| Peptone. | 10 g/l |
| Yeast extract. | 4 g/l |
| Beef extract. | 8 g/l |
| Glucose. | 20 g/l |
| Dipotassium phosphate. | 2 g/l |
| Sodium acetate. | 5 g/l |
| Ammonium citrate. | 2 g/l |
| Magnesium sulphate ($MgSO_4$). | 0,2 g/l |
| Manganese sulphate. | 0,05 g/l |
| Polysorbate 80. | 1 g/l |
| Agar. | 10 g/l |
| pH value. | 6,2 ±0,2 |

| | | | |
|---|---|---|---|
| **X924.1** | 500 g | plastic | 76,25 € |
| Original pack 6 x 500 g | | | 72,44/500 g |
| **X924.2** | 1 kg | plastic | 132,80 € |
| Original pack 6 x 1 kg | | | 126,16/1 kg |

## MRS Agar pH 5.7
**ISO 15214, for microbiology**



For cultivation of pH sensitive lactobacilli from foods and feeding stuff. According to deMan, Rogosa and Sharpe.
Storage temp.: +4 °C
MRS Agar with low pH value. For cultivation of special strains of lactobacilli, which show reduced growth under higher pH-values. Also for efficient protein expression of many proteins of *Lactobacillus*.
0.1 g/l Magnesium sulphate (anhydrous) is equivalent to 0.2 g/l Magnesium sulphate heptahydrate. 0.003 g/l Manganese sulphate (anhydrous) is equivalent to 0.05 g/l Manganese sulphate tetrahydrate.
Application: Use 64 g for 1 l agar.

**Guarantee analysis:**

| | |
|---|---|
| Casein peptone. | 10 g/l |
| Yeast extract. | 4 g/l |
| Beef extract. | 10 g/l |
| Glucose. | 20 g/l |
| Dipotassium phosphate. | 2 g/l |
| Sodium acetate. | 5 g/l |
| Triammonium citrate. | 2 g/l |
| Magnesium sulphate heptahydrate. | 0,20 g/l |
| Mangansulphate tetrahydrate. | 0,05 g/l |
| Polysorbate 80. | 1,08 g/l |
| Agar. | 10 g/l |
| pH value. | 5,7 ±0,1 |

| | | | |

| **HP65.1** | 500 g | plastic | 83,35 € |
| Original pack 6 x 500 g | | | 79,18/500 g |

## Chromogenic Agars made by Roth

## Mueller Hinton Broth

**for microbiology**

For cultivation of microorganisms and for antibiotic-sensitivity testing.
Storage temp.: +20 °C

Application: Use 21 g for 1 l broth. Slightly opalescent.

**Formulation:**

| | |
|---|---|
| Beef Infusion | 2 g/l |
| Casein peptone (acidic hydrolysate) | 17,5 g/l |
| Corn starch | 1,5 g/l |
| pH value | 7,4 ±0,2 |

| | | | |
|---|---|---|---|
| **X927.1** | 500 g | plastic | 120,95 € |
| Original pack 6 x 500 g | | | 114,90/500 g |

## Mueller Hinton Agar

**for microbiology**

For testing of organism susceptibility to antimicrobial agents by disk diffusion method. Also for cultivation of *Neisseria*.
Storage temp.: +20 °C
Application: Use 38 g for 1 l agar. Slightly opalescent.

**Formulation:**

| | |
|---|---|
| Beef Infusion | 2 g/l |
| Casein peptone (acidic hydrolysate) | 17,5 g/l |
| Corn starch | 1,5 g/l |
| Agar | 17 g/l |
| pH value | 7,4 ±0,2 |

| | | | |
|---|---|---|---|
| **X926.1** | 500 g | plastic | 92,35 € |
| Original pack 6 x 500 g | | | 87,73/500 g |

▶ McFarland Turbidity standards see page 1436

## Mueller Kauffmann Broth (Base)

**for microbiology**

For selective enrichment of *Salmonella* from meat and other foods.
Tetrathionate Broth, Tetrathionate Enrichment Broth
Storage temp.: +20 °C

Application: Use 82 g for 1 l broth. Add iodine and brilliant green.

**Formulation:**

| | |
|---|---|
| Sodium thiosulphate | 40,7 g/l |
| Calcium carbonate | 25 g/l |
| Dehydrated ox bile | 4,75 g/l |
| Sodium chloride (NaCl) | 4,5 g/l |
| Meat peptone | 4,5 g/l |
| Yeast extract | 1,8 g/l |
| Meat extract | 0,9 g/l |
| pH value | 7,6 ±0,2 |

| | | | |
|---|---|---|---|
| **8323.1** | 500 g | plastic | 82,70 € |
| Original pack 6 x 500 g | | | 78,57/500 g |

## Nutrient Broth

**for microbiology**

For cultivation of non-fastidious microorganisms.
Storage temp.: +20 °C

Application: Use 8 g for 1 l broth.

**Formulation:**

| | |
|---|---|
| Beef extract | 3 g/l |
| Gelatine peptone | 5 g/l |
| pH value | 6,8 ±0,2 |

| | | | |
|---|---|---|---|
| **X929.1** | 500 g | plastic | 76,25 € |
| Original pack 6 x 500 g | | | 72,44/500 g |
| **X929.2** | 1 kg | plastic | 134,40 € |
| Original pack 6 x 1 kg | | | 127,68/1 kg |

## Nutrient Agar

**EN ISO 6579, ISO 10273, for microbiology**

For cultivation of non-fastidious microorganisms.
Storage temp.: +20 °C

Application: Use 23 g for 1 l agar.

**Guarantee analysis:**

| | |
|---|---|
| Gelatine peptone | 5 g/l |
| Beef extract | 3 g/l |
| Agar | 15 g/l |
| pH value | 6,8 ±0,2 |

| | | | |
|---|---|---|---|
| **X928.1** | 500 g | plastic | 88,70 € |
| Original pack 6 x 500 g | | | 84,27/500 g |
| **X928.2** | 1 kg | plastic | 155,90 € |
| Original pack 6 x 1 kg | | | 148,11/1 kg |

## Nutrient Agar (DEV)

**DEV, DIN 38 411, for microbiology**

For biochemical analysis of *E.coli* and Coliforms in water samples and other sample material.
Storage temp.: +20 °C
Application: Use 43 g for 1 l agar.

**Guarantee analysis:**

| | |
|---|---|
| Meat peptone | 10 g/l |
| Meat extract | 10 g/l |
| Sodium chloride (NaCl) | 5 g/l |
| Agar | 18 g/l |
| pH value | 7,3 ±0,2 |

| | | | |
|---|---|---|---|
| **CL02.1** | 500 g | plastic | 102,15 € |
| Original pack 6 x 500 g | | | 97,04/500 g |
| **CL02.2** | 1 kg | plastic | 182,75 € |
| Original pack 6 x 1 kg | | | 173,61/1 kg |

## Nutrient Agar (DEV/ISO)

**DEV, EN ISO 16266:2008, for microbiology**

For confirmation of *Pseudomonas aeruginosa* in water samples.
Storage temp.: +20 °C
Application: Use 28 g for 1 l agar.

**Guarantee analysis:**

| | |
|---|---|
| Peptone | 5 g/l |
| Meat extract | 1 g/l |
| Yeast extract | 2 g/l |
| Sodium chloride (NaCl) | 5 g/l |
| Agar | 15 g/l |
| pH value | 7,4 ±0,2 |

| | | | |
|---|---|---|---|
| **CP66.1** | 500 g | plastic | 111,30 € |
| Original pack 6 x 500 g | | | 105,74/500 g |

**Instructions for use**
can be found on the Internet next to the product description.

## Orange Serum Agar

**for microbiology**

For isolation, detection and enumeration of acid-tolerant pathogens in fruit juices and fruit juice concentrates, particularly citrus products.

Storage temp.: +20 °C

**Warning** H315-H317-H411-EUH208

Application: Use 40 g for 1 l agar.

**Formulation:**

| | |
|---|---|
| Casein peptone. | 10 g/l |
| Orange extract. | 5 g/l |
| Glucose. | 4 g/l |
| Potassium phosphate. | 3 g/l |
| Yeast extract. | 3 g/l |
| Agar. | 15 g/l |
| pH value. | 5,5 ±0,2 |

| | | | |
|---|---|---|---|
| **HP09.1** | 500 g | plastic | 165,05 € |
| Original pack 6 x 500 g | | | 156,80/500 g |

▶ Orange Serum Agar, **granulated**, see page 1404

## Oxford Listeria Agar (Base)

**ISO 11290-1, for microbiology**

Selective medium for detection of *Listeria monocytogenes.*

Oxford Agar

Storage temp.: +20 °C

**Warning** H302-H315-H319

Based on Columbia Agar (Base) (Art. No. X919).

**Figure:**
*Listeria monocytogenes*
Application: Use 55,5 g for 1 l agar. After cooling add 2 vials (2x2 ml) reconstituted Listeria Oxford Supplement (Art. No. 5801.1).

**Guarantee analysis:**

| | |
|---|---|
| Peptone mixture. | 23 g/l |
| Sodium chloride. | 5 g/l |
| Starch. | 1 g/l |
| Lithium chloride. | 15 g/l |
| Esculin. | 1 g/l |
| Ammonium iron(III) citrate. | 0,5 g/l |
| Agar. | 10 g/l |
| pH value. | 7,0 ±0,2 |

| | | | |
|---|---|---|---|
| **5767.1** | 500 g | plastic | 154,30 € |
| Original pack 6 x 500 g | | | 146,59/500 g |

▶ Listeria Oxford Supplement see page 1408

## Palcam Listeria Agar (Base)

**ISO 11290-1, for microbiology**

Differential medium for detection of *Listeria ssp.*, particularly *L. monocytogenes.*

**Palcam Agar**

Storage temp.: +20 °C

**Warning** H315-H319

Based on Columbia Agar (Base) (Art. No. X919).

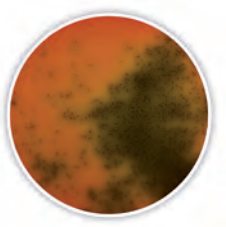

**Figure:**
*Listeria monocytogenes*
Application: Use 68,8 g for 1 l agar. After cooling add 2 vials (2x2 ml) reconstituted Listeria Palcam Supplement (Art. No. 5803.1).

**Guarantee analysis:**

| | |
|---|---|
| Peptone mixture. | 23 g/l |
| Sodium chloride. | 5 g/l |
| Starch. | 1 g/l |
| Lithium chloride. | 15 g/l |
| D-Mannitol. | 10 g/l |
| Yeast extract. | 3 g/l |
| Esculin. | 0,8 g/l |
| Glucose. | 0,5 g/l |
| Phenol red. | 0,08 g/l |
| Ammonium iron(III) citrate. | 0,5 g/l |
| Agar. | 10 g/l |
| pH value. | 7,2 ±0,2 |

| | | | |
|---|---|---|---|
| **5768.1** | 500 g | plastic | 142,45 € |
| Original pack 6 x 500 g | | | 135,33/500 g |

▶ Listeria Palcam Supplement see page 1408

## Ready-Made Media by Roth

see the front part of this chapter

## Peptone Water, buffered

**Ph.Eur., for microbiology**

For dilution and homogenisation of samples during microbiological analysis of food.
Sodium peptone buffer solution (Ph.Eur. 6.0), Buffered Sodium Chloride-Peptone Solution (Ph.Eur. 6.3, 7.0, 8.0 and 9.0) .
Storage temp.: +20 °C
Application: Use 16,1 g for 1 l broth.

**Guarantee analysis:**

Potassium hydrogen phosphate*..... 3,6 g/l
di-Sodium hydrogen phosphate dihydrate*..... 7,2 g/l
Sodium chloride (NaCl). ..... 4,3 g/l
Casein peptone (Pancreas hydrolysate)..... 1,0 g/l
pH value. ..... 7,0 ±0,2
*equivalent to 0,067 M phosphate

| Original pack 6 x 1 kg | | | 103,69/1 kg |

Please note our **Technical Information Brochure** on the Internet next to the products:

**Clouding of Microbiological Nutrient Media**
Basics, tips and tricks

## Peptone Water, buffered

**EN ISO 6887, EN ISO 6579, ISO 22964, EN ISO 19250, for microbiology**

Diluent for homogenisation of food samples and for sample preparation for microbiological analysis.
Storage temp.: +20 °C
Application: Use 20 g for 1 l broth.

**Guarantee analysis:**

Pancreatic digest of casein..... 10 g/l
Sodium chloride (NaCl). ..... 5 g/l
Disodium phosphate..... 3,5 g/l
Potassium phosphate. ..... 1,5 g/l
pH value. ..... 7,0 ±0,2

▶ Peptone water, buffered, **granulated**, see page 1404

## Plate Count Agar

**APHA, ISO 4833:2003, for microbiology**

For enumeration of the aerobic microbial flora in milk, foods and other material.
Storage temp.: +20 °C
Application: Use 23,5 g for 1 l agar.

**Guarantee analysis:**

Casein peptone . ..... 5 g/l
Yeast extract..... 2,5 g/l
Glucose. ..... 1 g/l
Agar..... 15 g/l
pH value. ..... 7,0 ±0,2

| Original pack 6 x 1 kg | | | 149,63/1 kg |
| **X930.3** | 2,5 kg | plastic | 321,45 € |

▶ Plate Count Agar, **granulated**, see page 1405

## Plate Count Agar with Powdered Milk

**APHA, DIN 10192, LMBG, IDF, for microbiology**

For enumeration of microorganisms in milk and dairy derivatives.
Storage temp.: +20 °C
Application: Use 24.5 g for 1 l agar.

**Guarantee analysis:**

Tryptone (Peptone from Casein)..... 5 g/l
Yeast extract..... 2,5 g/l
Glucose. ..... 1 g/l
Skimmed Milk Powder. ..... 1 g/l
Agar..... 15 g/l
pH value. ..... 7,0 ±0,2

| | | | |
|---|---|---|---|

## Potato Extract Glucose Broth

**for microbiology**

For identification, cultivation and enumeration of yeasts and moulds.
Storage temp.: +20 °C
Application: Use 26,5 g for 1 l broth. Slightly opalescent.

**Formulation:**

Potato infusion. ..... 6,5 g/l
Glucose. ..... 20 g/l
pH value. ..... 5,6 ±0,2

| | | | |
|---|---|---|---|
| **CP74.1** | 500 g | plastic | 66,55 € |
| Original pack 6 x 500 g | | | 63,22/500 g |
| **CP74.2** | 1 kg | plastic | 121,40 € |
| Original pack 6 x 1 kg | | | 115,33/1 kg |

## Potato Extract Glucose Agar

**Ph.Eur., for microbiology**

For cultivation and identification of yeasts and moulds.
Potato Dextrose Agar (Ph.Eur. 6.3, 7.0, 8.0 and 9.0)
Storage temp.: +20 °C
Recommended by the Harmonized Method (Ph.Eur. 6.0, 2.6.12.B) for preperation of strains of *Aspergillus brasiliensis*.

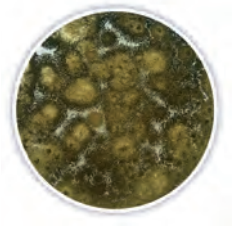

**Figure:**
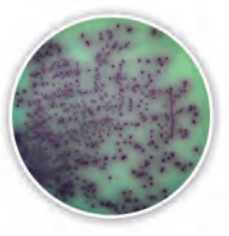
*Aspergillus brasiliensis*
Application: Use 39 g for 1 l agar. Slightly opalescent.

**Guarantee analysis:**



Potato infusion. ..... 4 g/l
Glucose. ..... 20 g/l
Agar. ..... 15 g/l
pH value. ..... 5,6 ±0,2

| | | | |
|---|---|---|---|
| **X931.1** | 500 g | plastic | 96,25 € |
| Original pack 6 x 500 g | | | 91,44/500 g |
| **X931.2** | 1 kg | plastic | 170,95 € |
| Original pack 6 x 1 kg | | | 162,40/1 kg |
| **X931.3** | 2,5 kg | plastic | 396,70 € |

## Pseudomonas chromogenic Agar

**for microbiology**

For detection and isolation of *Pseudomonas*.
Storage temp.: +4 °C

**Staining of species:**
*Pseudomonas aeruginosa* magenta on green-blue coloured agar
*E. coli*, *Enterococcus*, *Salmonella* and *Staphylococcus* inhibited or colourless
Application: Use 37 g for 1 l agar. Do not overheat!

**Formulation:**

Nutrients. ..... 14 g/l
Peptone. ..... 10 g/l
Chromogene Mixture. ..... 1 g/l
Bromothymol blue. ..... 0,02 g/l
Agar. ..... 12 g/l
pH value. ..... 7,2 ±0,2

| | | | |
|---|---|---|---|
| **3075.1** | 100 g | plastic | 114,50 € |

## Pseudomonas Selective Agar (Base)

**DEV, EN ISO 16266:2008, for microbiology**

For determination and enumeration of *Pseudomonas aeruginosa* from water samples by membrane filtration method.

**CN Agar**

Storage temp.: +20 °C

**Warning** H400

Application: Use 50,6 g for 990 ml agar. Add 10 ml glycerol.

**Guarantee analysis:**

Gelatine peptone. ..... 16 g/l
Casein hydrolysed. ..... 10 g/l
Anhydrous potassium sulphate. ..... 10 g/l
Anhydrous magnesium chloride. ..... 1,4 g/l
Cetrimide. ..... 0,2 g/l
Nalidixic acid. ..... 0,015 g/l
Agar. ..... 13 g/l
pH value. ..... 7,1 ±0,2

| | | | |
|---|---|---|---|
| **CP67.1** | 500 g | plastic | 138,70 € |
| Original pack 6 x 500 g | | | 131,77/500 g |

## R2A-Agar

**Ph.Eur., for microbiology**

For enumeration of heterotrophic bacteria from water samples.

Agar medium S (Ph.Eur. 6.0), Reasoner's 2A Agar

Storage temp.: +20 °C

Nutritionally reduced medium. Incubation of water samples on R2A Agar often leads to higher colony numbers of micro organisms than found for rich media, particularly when incubation is performed at lower temperatures. The medium was originally developed by Reasoner and Geldreich to determine the total germ number in drinking water (Reasoner and Geldreich, 1985, *Appl. Environ. Microbiol.* 49:1).
Application: Use 18,1 g for 1 l agar.

**Guarantee analysis:**

| | |
|---|---|
| Yeast extract | 0,5 g/l |
| Peptone | 0,5 g/l |
| Casein hydrolysed | 0,5 g/l |
| Glucose | 0,5 g/l |

▶ R2A-Agar, **granulated** see page 1405

## Rappaport Vassiliadis Broth

**Ph.Eur., for microbiology**

For selective enrichment of *Salmonellae* in foods, water- and other samples.

R10 Broth, Rappaport Vassiliadis *Salmonella* Enrichment Broth (Ph.Eur. 6.3, 7.0, 8.0 and 9.0), RVS Broth

Storage temp.: +20 °C

Recommended by the Harmonized Method (Ph.Eur. 6.0, 2.6.13.B) for proliferation of *Salmonella*.
This particular formulation is a slight modification of the original medium developed by Rappaport (Rappaport *et al.*, 1956, *J. Clin. Pathol.* 9: 261-1).
Application: Use 27,1 g for 1 l broth.

**Guarantee analysis:**

| | |
|---|---|
| Anhydrous magnesium chloride | 13,58 g/l |
| Sodium chloride (NaCl) | 8,0 g/l |
| Soy peptone | 4,5 g/l |
| Potassium dihydrogen phosphate | 0,6 g/l |
| di-Potassium hydrogen phosphate | 0,4 g/l |
| Malachite green | 0,036 g/l |
| pH value | 5,2 ±0,2 |

| | | | |
|---|---|---|---|
| **CL03.1** | 500 g | plastic | 94,10 € |
| Original pack 6 x 500 g | | | 89,40/500 g |

## Reinforced Clostridial Medium

**Ph.Eur., for microbiology**

For enrichment and enumeration of *Clostridiae* and other anaerobes from foods and other specimens.

Medium P (Ph.Eur. 6.0), Reinforced Medium for *Clostridia* (Ph.Eur. 6.3, 7.0, 8.0 and 9.0), **RCM**

Storage temp.: +20 °C

Application: Use 38 g for 1 l broth.

**Guarantee analysis:**

| | |
|---|---|
| Beef extract | 10 g/l |
| Peptone | 10 g/l |
| Yeast extract | 3 g/l |
| Soluble starch | 1 g/l |
| Glucose monohydrate | 5 g/l |
| Cystein hydrochloride | 0,5 g/l |
| Sodium chloride (NaCl) | 5 g/l |
| Sodium acetate | 3 g/l |
| Agar | 0,5 g/l |
| pH value | 6,8 ±0,2 |

| | | | |
|---|---|---|---|
| **AE66.1** | 500 g | plastic | 103,75 € |
| Original pack 6 x 500 g | | | 98,56/500 g |

## Rogosa Agar

**for microbiology**

For selective cultivation of lactobacilli.

Lactobacillus Selective Agar acc. to Rogosa

Storage temp.: +20 °C

Application: Use 75 g for 1 l agar.

**Formulation:**

| | |
|---|---|
| Sodium acetate | 15 g/l |
| Tryptone | 10 g/l |
| Dextrose | 10 g/l |
| Potassium phosphate | 6 g/l |
| Yeast extract | 5 g/l |
| Sucrose | 5 g/l |
| Arabinose | 5 g/l |
| Ammonium citrate | 2 g/l |
| Polysorbate 80 | 1 g/l |
| Magnesium sulphate ($MgSO_4$) | 0,57 g/l |
| Manganese sulphate | 0,12 g/l |
| Iron sulphate | 0,03 g/l |
| Agar | 15 g/l |
| pH value | 5,4 ±0,2 |

| | | | |
|---|---|---|---|
| **8329.1** | 500 g | plastic | 138,70 € |
| Original pack 6 x 500 g | | | 131,77/500 g |

## Sabouraud 2 % Glucose Broth

**Ph.Eur., for microbiology**

Selective media for taxonomic analysis of pathogenic fungi.

Sabouraud Dextrose Broth (Ph.Eur. 6.3, 7.0, 8.0 and 9.0)

Storage temp.: +20 °C

Recommended by the Harmonized Method (Ph.Eur. 6.0, 2.6.13.B) for growth of *Candida albicans*.
The low amount of glucose supports the activation of the secondary metabolism and, subsequently, pigment formation.

Application: Use 30 g for 1 l broth.

**Guarantee analysis:**

| | |
|---|---|
| Meat and casein peptone | 10 g/l |
| Glucose | 20 g/l |
| pH value | 5,6 ±0,2 |

| | | | |
|---|---|---|---|
| **AE23.1** | 500 g | plastic | 65,50 € |
| Original pack 6 x 500 g | | | 62,23/500 g |

▶ Sabouraud 2 % Glucose Broth, **granulated** see page 1405

## Sabouraud 2 % Glucose Agar

**for microbiology**

Selective agar for taxonomic analysis of pathogenic fungi.

Storage temp.: +20 °C

The low amount of glucose supports the activation of the secondary metabolism and, subsequently, pigment formation.

Application: Use 47 g for 1 l agar.

**Formulation:**

| | |
|---|---|
| Meat and casein peptone | 10 g/l |
| Glucose | 20 g/l |
| Agar | 17 g/l |
| pH value | 5,6 ±0,2 |

| | | | |
|---|---|---|---|
| **AE22.1** | 500 g | plastic | 77,30 € |
| Original pack 6 x 500 g | | | 73,44/500 g |

## Sabouraud 4 % Glucose Agar

**Ph.Eur., for microbiology**

For isolation, differentiation and cultivation of yeasts and fungi.
Agar medium C (Ph.Eur. 6.0), Sabouraud Dextrose Agar (Ph.Eur. 6.3, 7.0, 8.0 and 9.0)
Storage temp.: +20 °C
Recommended by the Harmonized Method (Ph.Eur. 6.0, 2.6.13.B) for growth and identification of *Candida albicans*.

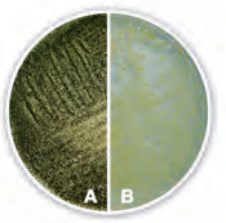

**Figure:**
**A**: *Aspergillus brasiliensis*
**B**: *Candida albicans*

Application: Use 65 g for 1 l agar.

**Guarantee analysis:**

| | |
|---|---|
| Meat and casein peptone. | 10 g/l |
| Glucose monohydrate. | 40 g/l |
| Agar. | 15 g/l |
| pH value. | 5,6 ±0,2 |

| | | | |
|---|---|---|---|
| **X932.1** | 500 g | plastic | 66,15 € |
| Original pack 6 x 500 g | | | 62,84/500 g |
| **X932.2** | 1 kg | plastic | 118,80 € |
| Original pack 6 x 1 kg | | | 112,86/1 kg |

## Sabouraud 4 % Glucose Agar (with chloroamphenicol)

**Ph.Eur., for microbiology**

Selective agar for cultivation and isolation of yeasts and pathogenic fungi.
Agar medium C with chloroamphenicol (Ph.Eur. 6.0)
Storage temp.: +20 °C

Application: Use 65 g for 1 l agar.

**Guarantee analysis:**

| | |
|---|---|
| Meat and casein peptone. | 10 g/l |
| Glucose monohydrate. | 40 g/l |
| Chloroamphenicol. | 0,05 g/l |
| Agar. | 15 g/l |
| pH value. | 5,6 ±0,2 |

| | | | |
|---|---|---|---|
| **AE48.1** | 500 g | plastic | 83,75 € |
| Original pack 6 x 500 g | | | 79,56/500 g |

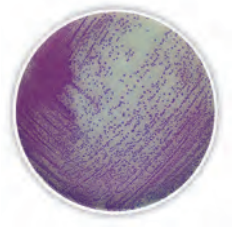
## Sabouraud 4 % Glucose Agar (with chloroamphenicol)

**for microbiology**

For selective isolation of yeasts and pathogenic fungi.
Storage temp.: +20 °C

Application: Use 65,5 g for 1 l agar.

**Formulation:**



| | |
|---|---|
| Meat and casein peptone. | 10 g/l |
| Glucose. | 40 g/l |
| Chloroamphenicol. | 0,5 g/l |
| Agar. | 15 g/l |
| pH value. | 5,6 ±0,2 |

| | | | |
|---|---|---|---|
| **X933.1** | 500 g | plastic | 74,75 € |
| Original pack 6 x 500 g | | | 71,01/500 g |

## Salmonella chromogenic Agar

**for microbiology**

For isolation of *Salmonella* from foods, waters and other samples.
Storage temp.: +4 °C

**Staining of species:**
*Salmonella* magenta (by reaction of the ß-D-galactosidase)
*E. coli* turquoise (by reaction of the ß-D-glucuronidase)
other *Enterobacteriaceae* clear or inhibited

Application: Use 37,1 g for 1 l agar.

**Formulation:**

| | |
|---|---|
| Sodium citrate | 8,5 g/l |
| Casein peptone. | 5 g/l |
| Beef extract. | 5 g/l |
| Chromogene Mixture. | 5,81 g/l |
| Agar. | 12,8 g/l |
| pH value. | 7,2 ±0,2 |

| | | | |
|---|---|---|---|
| **CL46.2** | 100 g | plastic | 142,90 € |
| **CL46.1** | 575 g | plastic | 473,00 € |

## Salmonella-Shigella Agar

**for microbiology**

For isolation of pathogenic enterobacteria, especially *Salmonella* and *Shigella*.
Storage temp.: +20 °C

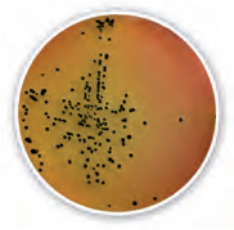


**Figure:**
*Salmonella typhimurium*

Application: Use 60 g for 1 l agar.

**Formulation:**

| | |
|---|---|
| Beef extract. | 5 g/l |
| Peptone mixture. | 5 g/l |
| Lactose. | 10 g/l |
| Ferric citrate. | 1 g/l |
| Bile salts. | 8,5 g/l |
| Sodium citrate. | 8,5 g/l |
| Sodium thiosulphate. | 8,5 g/l |
| Brilliant green. | 0,0003 g/l |
| Neutral red. | 0,025 g/l |
| Agar. | 13,5 g/l |
| pH value. | 7,0 ±0,2 |

| | | | |
|---|---|---|---|
| **X934.1** | 500 g | plastic | 59,70 € |
| Original pack 6 x 500 g | | | 56,72/500 g |

## Schaedler Broth

**for microbiology**

For enrichment and cultivation of anaerobic microorganisms.
Storage temp.: +20 °C

**Warning** H315-H319

Based on CASO Broth / Trypticasein Soy Broth (Art. No. X938).

Application: Use 28,4 g for 1 l broth.

**Formulation:**

| | |
|---|---|
| Casein peptone. | 5,66 g/l |
| Soy peptone. | 1 g/l |
| Sodium chloride. | 1,66 g/l |
| Dipotassium hydrogen phosphate. | 0,83 g/l |
| Peptone mixture. | 5 g/l |
| Yeast extract. | 5 g/l |
| Glucose. | 5,83 g/l |
| Tris (hydroxymethyl aminomethane). | 3 g/l |
| L-Cystine. | 0,4 g/l |
| Hemin. | 0,01 g/l |
| pH value. | 7,6 ±0,2 |

| | | | |
|---|---|---|---|
| **5772.1** | 500 g | plastic | 107,40 € |
| Original pack 6 x 500 g | | | 102,03/500 g |

## Schaedler Agar

**for microbiology**

For recovery and cultivation of anaerobic microorganisms.
Storage temp.: +20 °C
Based on CASO Broth / Trypticasein Soy Broth (Art. No. X938).

Application: Use 41,9 g for 1 l agar.

**Formulation:**

| | |
|---|---|
| Casein peptone. | 5,66 g/l |
| Soy peptone. | 1 g/l |
| Sodium chloride. | 1,66 g/l |
| Dipotassium hydrogen phosphate. | 0,83 g/l |
| Peptone mixture. | 5 g/l |
| Yeast extract. | 5 g/l |
| Glucose. | 5,83 g/l |
| Tris (hydroxymethyl aminomethane). | 3 g/l |
| L-Cystine. | 0,4 g/l |
| Hemin. | 0,01 g/l |
| Agar. | 13,5 g/l |
| pH value. | 7,6 ±0,2 |

| | | | |
|---|---|---|---|
| **5771.1** | 500 g | plastic | 123,10 € |
| Original pack 6 x 500 g | | | 116,95/500 g |

## Simmons Citrate Agar

**ISO 10273, for microbiology**

For differentiation of microorganisms on the basis of citrate utilization.
Koser Citrate Agar (modified)
Storage temp.: +20 °C

Application: Use 24,3 g for 1 l agar.

**Guarantee analysis:**

| | |
|---|---|
| Sodium chloride. | 5 g/l |
| Sodium citrate. | 2 g/l |
| Ammonium dihydrogen phosphate. | 1 g/l |
| di-Potassium hydrogen phosphate. | 1 g/l |
| Magnesium sulphate. | 0,2 g/l |
| Bromothymol blue. | 0,08 g/l |
| Agar. | 15 g/l |
| pH value. | 6,9 ±0,2 |

| | | | |
|---|---|---|---|
| **5774.1** | 500 g | plastic | 134,40 € |
| Original pack 6 x 500 g | | | 127,68/500 g |

## Slanetz-Bartley Agar

**for microbiology**

For detection and enumeration of faecal *streptococci* by membrane filtration method or by direct plating.
Storage temp.: +20 °C

**Warning** H302-H412

Application: Use 41,5 g for 1 l agar.

**Formulation:**

| | |
|---|---|
| Tryptose. | 20 g/l |
| Yeast extract. | 5 g/l |
| Glucose. | 2 g/l |
| Dipotassium phosphate. | 4 g/l |
| Sodium azide. | 0,4 g/l |
| Tetrazolium chloride (TTC). | 0,1 g/l |
| Agar. | 10 g/l |
| pH value. | 7,2 ±0,1 |

| | | | |
|---|---|---|---|
| **X935.1** | 500 g | plastic | 149,45 € |
| Original pack 6 x 500 g | | | 141,98/500 g |

## Slanetz-Bartley Medium (with tetrazolium chloride)

**DEV, ISO 7899-2:2000, for microbiology**

For detection and enumeration of intestinal enterococci from water samples.
Storage temp.: +20 °C

**Warning** H302-H412

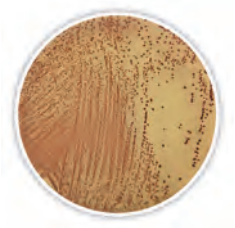

**Figure:**
*Enterococcus faecalis*

Application: Use 41,5 g for 1 l agar.
Sterilise by sterile filtration, do not autoclave.

**Guarantee analysis:**

| | |
|---|---|
| Tryptose. | 20 g/l |
| Yeast extract. | 5 g/l |
| Glucose. | 2 g/l |
| di-Potassium hydrogen phosphate. | 4 g/l |
| Sodium azide. | 0,4 g/l |
| Tetrazolium chloride (TTC). | 0,1 g/l |
| Agar. | 10 g/l |
| pH value. | 7,2 ±0,1 |

| | | | |
|---|---|---|---|
| **CP68.1** | 500 g | plastic | 163,95 € |
| Original pack 6 x 500 g | | | 155,75/500 g |

**Instructions for use**
can be found on the Internet next to the product description.

## Sorbitol MacConkey Agar

**for microbiology**

Selective and differential medium for detection of sorbitol-fermenting *E. coli* O157:H7.

MacConkey Agar with sorbitol, **SMAC Agar**

Storage temp.: +20 °C

**Figure:**
**A:** *Escherichia coli* ATCC 25922
**B:** *Escherichia coli* O157:H7

Application: Use 51,5 g for 1 l agar.

**Formulation:**

| | |
|---|---|
| Gelatine peptone. | 20 g/l |
| Sorbitol. | 10 g/l |
| Sodium chloride. | 5 g/l |
| Bile salts No. 3. | 1,5 g/l |
| Neutral red. | 0,03 g/l |
| Crystal Violet. | 0,001 g/l |
| Agar. | 15 g/l |
| pH value. | 7,1 ±0,2 |

| | | | |
|---|---|---|---|
| **5778.1** | 500 g | plastic | 102,05 € |
| Original pack 6 x 500 g | | | 96,95/500 g |

## Standard Count Agar

**for microbiology**

For enumeration of aerobic bacteria in milk, water and wastewaters.

Storage temp.: +20 °C

Application: Use 25 g for 1 l agar.

**Formulation:**

| | |
|---|---|
| Meat extract. | 3 g/l |
| Casein peptone. | 5 g/l |
| Sodium chloride (NaCl). | 5 g/l |
| Agar. | 12 g/l |
| pH value. | 7,2 ±0,2 |

| | | | |
|---|---|---|---|
| **AE91.1** | 500 g | plastic | 98,80 € |
| Original pack 6 x 500 g | | | 93,86/500 g |

## Standard Nutrient Broth I

**for microbiology**

For cultivation and enumeration of fastidious bacteria. Also high-base for preparing special culture media.

Storage temp.: +20 °C

Application: Use 25 g for 1 l broth.

**Formulation:**

| | |
|---|---|
| Peptone. | 15 g/l |
| Yeast extract. | 3 g/l |
| Sodium chloride (NaCl). | 6 g/l |
| Glucose. | 1 g/l |
| pH value. | 7,5 ±0,2 |

| | | | |
|---|---|---|---|
| **AE92.1** | 500 g | plastic | 77,30 € |
| Original pack 6 x 500 g | | | 73,44/500 g |
| **AE92.2** | 1 kg | plastic | 138,70 € |
| Original pack 6 x 1 kg | | | 131,77/1 kg |

▶ Standard Nutrient Broth I, **granulated** see page 1405

## Standard Nutrient Agar I

**for microbiology**

For cultivation and enumeration of fastidious bacteria. Also high-base for preparing special culture agars.

Storage temp.: +20 °C

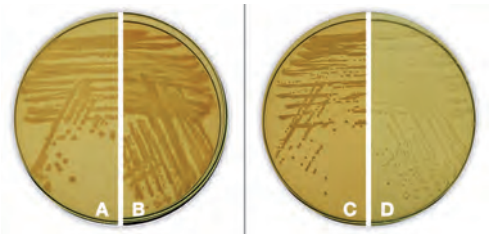

**Figure:**
**A:** *Escherichia coli*
**B:** *Pseudomonas aeruginosa*
**C:** *Staphylococcus aureus*
**D:** *Streptococcus agalactiae*

With kind permission of Nils Niederstebruch, GLOBOLAB e.V., Assling

Application: Use 37 g for 1 l agar.

**Formulation:**

| | |
|---|---|
| Peptone. | 15 g/l |
| Yeast extract. | 3 g/l |
| Sodium chloride (NaCl). | 6 g/l |
| Glucose. | 1 g/l |
| Agar. | 12 g/l |
| pH value. | 7,5 ±0,2 |

## TAT Broth (Base)

**for microbiology**

For proliferation and regeneration of microorganisms from a variety of matters, e.g. from cosmetics, and matters contaminated with antimicrobial reagents.

Casein peptone Lecithin Polysorbate Broth, **CPLP Broth**

Storage temp.: +20 °C

Application: Use 25 g for 1 l broth. Before autoclaving add 40 ml Tween® 20 (polysorbate).

**Guarantee analysis:**

| | |
|---|---|
| Casein peptone. | 20 g/l |
| Soya lecithin. | 5 g/l |
| pH value. | 7,1 ±0,2 |

| | | | |
|---|---|---|---|
| **3935.1** | 500 g | plastic | 107,40 € |
| Original pack 6 x 500 g | | | 102,03/500 g |
| **3935.2** | 1 kg | plastic | 190,85 € |
| Original pack 6 x 1 kg | | | 181,31/1 kg |

## TBX chromogenic Agar

**ISO 16649-2 and -3, for microbiology**

Selective agar for detection of *E.coli* in food samples.
Storage temp.: +20 °C

**Staining of species:**
*E. coli* turquoise (by reaction of the ß-D-glucuronidase)
other Enterobacteriaceae (*Salmonella, Streptococcus, Klebsiella*)
clear or inhibited
Application: Use 36,6 g for 1 l agar.

**Guarantee analysis:**

| | |
|---|---|
| Casein peptone. | 20,0 g/l |
| Bile salts. | 1,5 g/l |
| x-ß-D-Glucuronide. | 0,075 g/l |
| Agar. | 15,0 g/l |
| pH value. | 7,2 ±0,2 |

| | | | |
|---|---|---|---|
| **CL47.2** | 100 g | plastic | 94,10 € |
| **CL47.1** | 500 g | plastic | 338,65 € |
| Original pack 6 x 500 g | | | 321,72/500 g |

## TCBS Agar

**for microbiology**

For selective isolation of *Vibrio.*
Thiosulphate Citrate Bile Sucrose Agar, Cholera Medium TCBS, Cholera Agar
Storage temp.: +20 °C
Application: Use 88 g for 1 l agar.

**Formulation:**

| | |
|---|---|
| Sucrose. | 20 g/l |
| Sodium chloride (NaCl). | 10 g/l |
| Sodium thiosulphate. | 10 g/l |
| Sodium citrate. | 10 g/l |
| Meat peptone. | 5 g/l |
| Casein peptone. | 5 g/l |
| Yeast extract. | 5 g/l |
| Dehydrated ox bile. | 5 g/l |
| Sodium cholate. | 3 g/l |
| Ammonium iron(III) citrate. | 1 g/l |
| Thymol blue. | 0,04 g/l |
| Bromothymol blue. | 0,04 g/l |
| Agar. | 14 g/l |
| pH value. | 8,6 ±0,2 |

| | | | |
|---|---|---|---|
| **8333.1** | 500 g | plastic | 114,50 € |
| Original pack 6 x 500 g | | | 108,78/500 g |

## Todd-Hewitt-Broth

**for microbiology**

For cultivation of β-hemolytic streptococci for serological typing.
Storage temp.: +20 °C
Application: Use 30 g for 1 l broth.

**Formulation:**

| | |
|---|---|
| Heart infusion. | 3,1 g/l |
| Peptone. | 20 g/l |
| Glucose. | 2 g/l |
| Sodium carbonate. | 2,5 g/l |
| Sodium chloride (NaCl). | 2 g/l |
| Disodium phosphate. | 0,4 g/l |
| pH value. | 7,8 ±0,2 |

| | | | |
|---|---|---|---|
| **X936.1** | 500 g | plastic | 88,05 € |
| Original pack 6 x 500 g | | | 83,65/500 g |

## Triple Sugar Iron Agar

**Ph.Eur., for microbiology**

For identification and differentiation of enterobacteria and for determination of *Salmonellae*.
Agar medium M (Ph.Eur. 6.0), **TSI agar**
Storage temp.: +20 °C
Application: Use 64.6 g for 1 l agar.

**Guarantee analysis:**

| | |
|---|---|
| Beef extract. | 3 g/l |
| Yeast extract. | 3 g/l |
| Beef- and casein peptone. | 20 g/l |
| Sodium chloride (NaCl). | 5 g/l |
| Lactose monohydrate. | 10 g/l |
| Saccharose. | 10 g/l |
| Glucose monohydrate. | 1 g/l |
| Ammonium iron(III) citrate. | 0,3 g/l |
| Sodium thiosulphate. | 0,3 g/l |
| Phenol red. | 0,025 g/l |
| Agar. | 12 g/l |
| pH value. | 7,4 ±0,2 |

| | | | |
|---|---|---|---|
| **AE49.1** | 500 g | plastic | 79,45 € |
| Original pack 6 x 500 g | | | 75,48/500 g |

## Tryptone Bile Salts Agar

**DEV, EN ISO 9308-1:2000, for microbiology**

For detection and enumeration of *E. coli* in foods and water samples.
**TBA**
Storage temp.: +20 °C
Application: Use 36,5 g for 1 l agar.

**Guarantee analysis:**

| | |
|---|---|
| Tryptone. | 20 g/l |
| Bile salts. | 1,5 g/l |
| Agar. | 15 g/l |
| pH value. | 7,2 ±0,1 |

| | | | |
|---|---|---|---|
| **CP69.1** | 500 g | plastic | 118,80 € |
| Original pack 6 x 500 g | | | 112,86/500 g |

## Tryptone Soy Agar

**DEV, EN ISO 9308-1:2000, for microbiology**

For the detection and enumeration of *E. coli* and other coliform bacteria in foods and water samples.
**TSA**, Trypticase-Soya-Agar
Storage temp.: +20 °C
Application: Use 40 g for 1 l agar.

**Guarantee analysis:**

| | |
|---|---|
| Casein, tryptic digest. | 15 g/l |
| Soy peptone. | 5 g/l |
| Sodium chloride (NaCl). | 5 g/l |
| Agar. | 15 g/l |
| pH value. | 7,2 ±0,1 |

| | | | |
|---|---|---|---|
| **CP70.1** | 500 g | plastic | 80,55 € |
| Original pack 6 x 500 g | | | 76,52/500 g |

## Tryptophane Culture Broth

**DEV, EN ISO 9308-1:2000, for microbiology**

For the detection of *E. coli* in foods and water samples by indole production.
Storage temp.: +20 °C
Escherichia transform lactose under acid production via β-galactosidase, and are negative in oxidase test and positive in indole production test. Kovac Reagent (Art. No. 2950.1) is added to 24-48 h old cultures in a concentration of 0.2 to 0.5 ml per 5 ml broth. A colour shift to dark red shows presence of indole.
Application: Use 16 g for 1 l broth.

**Guarantee analysis:**

| | |
|---|---|
| Casein, tryptic digest. | 10 g/l |
| L-Tryptophan. | 1 g/l |
| Sodium chloride (NaCl). | 5 g/l |
| pH value. | 7,5 ±0,1 |

| | | | |
|---|---|---|---|
| **CP71.1** | 500 g | plastic | 163,95 € |
| Original pack 6 x 500 g | | | 155,75/500 g |

▶ Kovacs' Reagent see page 1411

## TSC Agar (Base)

**DEV, EN ISO 7937:2004, for microbiology**

For detection and enumeration of *Clostridium perfringens* in foods and animal feed.

Tryptose Soy Citrate Agar, Perfringens Agar, Clostridium perfringens Agar,

**SFP Agar**

Storage temp.: +20 °C

**Warning** H319

Application: Use 42 g for 1 l agar. After autoclaving add 2 vials (4 ml) reconstituted Clostridium perfringens Supplement (Art. No. CL52.1). Add 50 ml egg yolk emulsion (Art. No. 0402.1).

**Guarantee analysis:**

| | |
|---|---|
| Tryptose. | 15 g/l |
| Soy peptone. | 5 g/l |
| Yeast extract. | 5 g/l |
| Sodium bisulfite. | 1 g/l |
| Ammonium iron(III) citrate. | 1 g/l |
| Agar. | 15,0 g/l |
| pH value. | 7,6 ±0,2 |

| | | | |
|---|---|---|---|
| **CL51.1** | 500 g | plastic | 115,60 € |
| Original pack 6 x 500 g | | | 109,82/500 g |

▶ Clostridium perfringens Supplement see page 1406

▶ Egg Yolk Emulsion see page 1407

## TTC Chapman Agar (with sodium heptadecylsulphate) (Base)

**DEV, EN ISO 9308-1:2000, for microbiology**

For isolation and enumeration of coliform bacteria from water samples.

**Chapman TTC Agar**, Chapman Lactose Agar, TTC Tergitol 7 Agar

Storage temp.: +20 °C

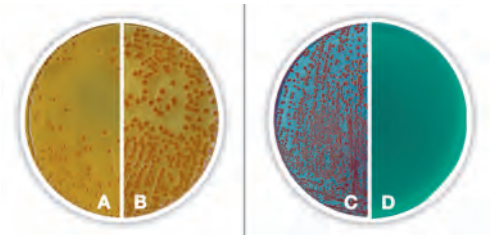

**Figure:**
**A:** *E. coli* ATCC 25922 (yellow colonies with orange centre)
**B:** *Klebsiella spp.* (orange colonies)
**C:** non-lactose fermenting species
**D:** non-induced agar

Application: Use 56,2 g for 1 l agar. Contains Tergitol. After autoclaving add TTC solution (Art. No. CP72.1) to 0.0025 %.

**Guarantee analysis:**

| | |
|---|---|
| Lactose. | 20 g/l |
| Peptone. | 10 g/l |
| Yeast extract. | 6 g/l |
| Meat extract. | 5 g/l |
| Bromothymol blue. | 0,05 g/l |
| Sodium heptadecyl sulphate (Tergitol 7). | 0,1 g/l |
| Agar. | 15 g/l |
| pH value. | 7,2 ±0,1 |

| | | | |
|---|---|---|---|
| **CP65.1** | 500 g | plastic | 81,60 € |
| Original pack 6 x 500 g | | | 77,52/500 g |

▶ TTC Supplement see page 1409

## Universal Beer Agar (Base)

**for microbiology**

For cultivation of beer spoiling microorganisms.

**UBA**

Storage temp.: +20 °C

Application: Use 55 g for 1 l agar. Add 250 ml beer.

**Formulation:**

| | |
|---|---|
| Peptonised milk. | 15 g/l |
| Yeast extract. | 10 g/l |
| Dextrose. | 10 g/l |
| Tomato juice. | 7 g/l |
| Potassium phosphate. | 0,5 g/l |
| Dipotassium phosphate. | 0,5 g/l |
| Sodium chloride (NaCl). | 0,01 g/l |
| Magnesium sulphate ($MgSO_4$). | 0,01 g/l |
| Manganese sulphate. | 0,01 g/l |
| Iron sulphate. | 0,01 g/l |
| Agar. | 12 g/l |
| pH value. | 6,3 ±0,2 |

| | | | |
|---|---|---|---|
| **8337.1** | 500 g | plastic | 107,40 € |
| Original pack 6 x 500 g | | | 102,03/500 g |

## Urea Agar acc. to Christensen (Base)

**ISO 6579, ISO 19250, for microbiology**

For differentiation of enterobacteria on the basis of urease production.

Christensen Agar

Storage temp.: +20 °C

Particularly recommended for differentiation between members of the *genera Proteus* and *Salmonella/Shigella*.

Application: Use 29 g for 1 l medium. Add 15 g Agar.

**Guarantee analysis:**

| | |
|---|---|
| Urea. | 20 g/l |
| Sodium chloride (NaCl). | 5 g/l |
| Potassium phosphate. | 2 g/l |
| Gelatine peptone. | 1 g/l |
| Dextrose. | 1 g/l |
| Phenol red. | 0,012 g/l |
| pH value. | 6,8 ±0,2 |

| | | | |
|---|---|---|---|
| **8320.1** | 500 g | plastic | 120,95 € |
| Original pack 6 x 500 g | | | 114,90/500 g |

## UTI chromogenic Agar

**for microbiology**

For detection and differentiation of microorganisms causing urinary tract infections.

Urinary Tract Infection chromogenic Agar

Storage temp.: +4 °C

**Staining of species:**
*E. coli* pink (by reaction of the β-D-galactosidase)
*Enterobacter, Klebsiella* dark blue to violet (by reaction of the β-D-galactosidase and β-D-glucosidase)
*Proteus* light brown (by reaction of the tryptophan deaminase)
*Enterococcus* light to medium blue (by reaction of the β-D-glucosidase)
*Staphylococcus* light beige (natural colony colour)
Application: Use 47,5 g for 1 l agar.

**Formulation:**

| | |
|---|---|
| Nutrients. | 13 g/l |
| Peptone. | 16 g/l |
| Tryptophane. | 2 g/l |
| Chromogene Mixture. | 0,5 g/l |
| Agar. | 16 g/l |
| pH value. | 7,2 ±0,2 |

| | | | |
|---|---|---|---|
| **3089.1** | 100 g | plastic | 143,95 € |

## Violet Red Bile Agar with Dextrose and Lactose

**Ph.Eur., for microbiology**

For detection and enumeration of enterobacteria.
Agar Medium F (Ph.Eur. 6.0)
Storage temp.: +20 °C
Application: Use 51,5 g for 1 l agar.

**Guarantee analysis:**

| | |
|---|---|
| Yeast extract | 3 g/l |
| Pancreas hydrolysate made from gelatin | 7 g/l |
| Cholate | 1,5 g/l |
| Lactose monohydrate | 10 g/l |
| Sodium chloride (NaCl) | 5 g/l |
| Glucose monohydrate | 10 g/l |
| Neutral red | 0,03 g/l |
| Crystal Violet | 0,002 g/l |
| Agar | 15 g/l |
| pH value | 7,4 ±0,2 |

| | | | |
|---|---|---|---|
| **AE45.1** | 500 g | plastic | 79,45 € |
| Original pack 6 x 500 g | | | 75,48/500 g |

## Violet Red Bile Agar with Glucose

**ISO 21528, Ph.Eur., for microbiology**

For cultivation and enumeration of enterobacteria in water, foods and other materials.
Violet Red Bile Glucose Agar (Ph.Eur. 6.3, 7.0, 8.0 and 9.0),
**VRBD Agar**
Storage temp.: +20 °C
Recommended by the Harmonized Method (Ph.Eur. 6.0, 2.6.13.B) for growth and identification of *Escherichia coli* and *Pseudomonas aeruginosa* durin testing for bile-tolerant gram-negative bacteria.
Application: Use 41,5 g for 1 l agar.

**Guarantee analysis:**

| | |
|---|---|
| Yeast extract | 3 g/l |
| Pancreas hydrolysate made from gelatin | 7 g/l |
| Sodium chloride (NaCl) | 5 g/l |
| Bile salts | 1,5 g/l |
| Glucose monohydrate | 10 g/l |
| Neutral red | 0,03 g/l |
| Crystal Violet | 0,002 g/l |
| Agar | 15 g/l |
| pH value | 7,4 ±0,2 |

| | | | |
|---|---|---|---|
| **X939.1** | 500 g | plastic | 76,25 € |
| Original pack 6 x 500 g | | | 72,44/500 g |
| **X939.2** | 1 kg | plastic | 132,80 € |
| Original pack 6 x 1 kg | | | 126,16/1 kg |
| **X939.3** | 2,5 kg | plastic | 263,40 € |

▶ Violet Red Bile Agar with Glucose, **granulated** see page 1405

## Violet Red Bile Agar with Lactose

**ISO 4832, for microbiology**

For detection and enumeration of coliforms in milk, foods and other materials.
**VRB Agar**
Storage temp.: +20 °C

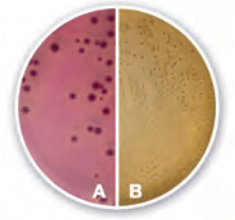

**Figure:**
**A:** *Escherichia coli*
**B:** *Salmonella gallinarium*
Application: Use 41,5 g for 1 l agar.

**Guarantee analysis:**

| | |
|---|---|
| Yeast extract | 3 g/l |
| Gelatine peptone | 7 g/l |
| Sodium chloride (NaCl) | 5 g/l |
| Bile salts | 1,5 g/l |
| Lactose | 10 g/l |
| Neutral red | 0,03 g/l |
| Crystal Violet | 0,002 g/l |
| Agar | 15 g/l |
| pH value | 7,4 ±0,2 |

| | | | |
|---|---|---|---|
| **X940.1** | 500 g | plastic | 73,65 € |
| Original pack 6 x 500 g | | | 69,97/500 g |

## Wort Broth

**for microbiology**

For cultivation and enumeration of fungi, particularly of yeast.
Storage temp.: +20 °C

Application: Use 33 g for 1 l broth.

**Formulation:**

| | |
|---|---|
| Malt extract | 15 g/l |
| D-Maltose | 12,5 g/l |
| Dextrine | 2,5 g/l |
| Casein peptone | 1 g/l |
| Dipotassium hydrogen phosphate | 1 g/l |
| Ammonium chloride | 1 g/l |
| pH value | 4,8 ±0,2 |

| | | | |
|---|---|---|---|
| **5779.1** | 500 g | plastic | 133,85 € |
| Original pack 6 x 500 g | | | 127,16/500 g |

## Wort Agar (Base)

**for microbiology**

For cultivation and enumeration of yeasts.
Storage temp.: +20 °C

Application: Use 48,25 g for 1 l agar. Add 2,35 g (1,9 ml) glycerol.

**Formulation:**

| | |
|---|---|
| Malt extract | 15 g/l |
| Maltose | 12,75 g/l |
| Dextrine | 2,75 g/l |
| di-Potassium hydrogen phosphate | 1 g/l |
| Ammonium chloride | 1 g/l |
| Peptone | 0,75 g/l |
| Agar | 15 g/l |
| pH value | 4,8 ±0,2 |

| | | | |
|---|---|---|---|
| **CL04.1** | 500 g | plastic | 154,30 € |
| Original pack 6 x 500 g | | | 146,59/500 g |

## XLD-Agar

**Ph.Eur., for microbiology**

For isolation of enteropathogenic bacteria, especially from the genera *Shigella* and *Salmonella*.

Agar medium K (Ph.Eur. 6.0), Xylose Lysine Desoxycholate Agar (Ph.Eur. 6.3, 7.0, 8.0 and 9.0) • Storage temp.: +20 °C

**Figure:** *Salmonella typhimurium*
Application: Use 55,2 g for 1 l agar.

**Guarantee analysis:**

| | |
|---|---|
| Xylose | 3,5 g/l |
| Lactose monohydrate | 7,5 g/l |
| L-Lysin | 5 g/l |
| Saccharose | 7,5 g/l |
| Sodium chloride (NaCl) | 5 g/l |
| Yeast extract | 3 g/l |
| Phenol red | 0,08 g/l |
| Ammonium iron(III) citrate | 0,8 g/l |
| Sodium deoxycholate | 2,5 g/l |
| Sodium thiosulphate | 6,8 g/l |
| Agar | 13,5 g/l |
| pH value | 7,4 ±0,2 |

| | | | |
|---|---|---|---|
| **X941.1** | 500 g | plastic | 112,35 € |
| Original pack 6 x 500 g | | | 106,73/500 g |
| **X941.2** | 1 kg | plastic | 196,20 € |
| Original pack 6 x 1 kg | | | 186,39/1 kg |

## Yeast Extract Agar

**DEV, EN ISO 6222, for microbiology**

For the isolation and enumeration of microorganisms in general, e.g. bacteria, moulds, or yeast.
Particularly for count of microorganisms isolated from water samples.

Water Plate Count Agar, **WPCA**

Storage temp.: +20 °C

Application: Use 24 g for 1 l agar.

**Guarantee analysis:**

| | |
|---|---|
| Tryptone | 6 g/l |
| Yeast extract | 3 g/l |
| Agar | 15 g/l |
| pH value | 7,2 ±0,2 |

| | | | |
|---|---|---|---|
| **CP63.1** | 500 g | plastic | 88,70 € |
| Original pack 6 x 500 g | | | 84,27/500 g |

## Yeast Glucose Agar (with chloroamphenicol)

**for microbiology**

Selective medium for enumeration of yeasts and mould in milk and dairy products. **YGC Agar**

Storage temp.: +20 °C

Application: Use 40,2 g for 1 l agar.

**Formulation:**

| | |
|---|---|
| Yeast extract | 5 g/l |
| Glucose | 20 g/l |
| Chloroamphenicol | 0,2 g/l |
| Agar | 15 g/l |
| pH value | 6,6 ±0,2 |

| | | | |
|---|---|---|---|
| **CL00.1** | 500 g | plastic | 88,70 € |
| Original pack 6 x 500 g | | | 84,27/500 g |
| **CL00.2** | 1 kg | plastic | 152,15 € |
| Original pack 6 x 1 kg | | | 144,54/1 kg |

▶ Yeast Glucose Agar (with chloroamphenicol), **granulated**, see page 1405

## Yersinia Selective Agar (Base)

**ISO 10273, for microbiology**

Selective medium for isolation of *Yersinia*, particularly *Y. enterocolitica.*

**CIN Agar**, Yersinia Agar acc. to Schiemann

Storage temp.: +20 °C

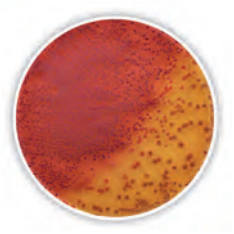

**Figure:**
*Yersinia enterocolitica*
Application: Use 58 g for 1 l agar. After cooling add 2 vials (2x5 ml) reconstituted Yersinia Supplement (Art. No. 4880.1).

**Guarantee analysis:**

| | |
|---|---|
| D-Mannitol | 20 g/l |
| Gelatine peptone | 17 g/l |
| Peptone mixture | 3 g/l |
| Yeast extract | 2 g/l |
| Sodium pyruvate | 2 g/l |
| Sodium chloride | 1 g/l |
| Sodium deoxycholate | 0,5 g/l |
| Neutral red | 0,03 g/l |
| Magnesium sulphate anhydrous | 0,01 g/l |
| Crystal Violet | 0,001 g/l |
| Agar | 12,5 g/l |
| pH value | 7,4 ±0,2 |

| | | | |
|---|---|---|---|
| **5780.1** | 500 g | plastic | 110,65 € |
| Original pack 6 x 500 g | | | 105,12/500 g |

▶ Yersinia Supplement see page 1409

### Microbiological Quality Control

Microbiological quality control of Roth molecular biological and microbiological culture media and agar is carried out according to following guidelines:

- Plating relevant bacterial strains from standardized stock solution (as a rule in dilutions of $10^{-1}$ to $10^{-10}$) on agar plates of culture medium to be tested. The preparation of the media and agar must be carried out strictly according to the instructions, which are included.
- Plates from a checked batch of culture media are used as a reference
- The developed colonies are counted and rated after adequate incubation. Counting is always carried out using the plate with colony number 30-300.
- Standardization and validation of test: reference plates are compared with the number of bacteria expected
- Reference and test plate colonies are analysed for size, colour, appearance and possible reaction to certain chemicals
- Growth count on the test plates:

| | |
|---|---|
| „good“ or „satisfactory“ | colony number = 50 % - 99 % of expected growth |
| „moderate“ | colony number = 30 % - 50 % of expected growth |
| „inhibited“ | colony number ≤ 30 % of expected growth |
| „zero“ | no growth |

# Granulated Media for Microbiology

- **Easy:** high solubility
- **Safe:** dust minimised granules reduce health risk
- **Clean:** minimised contamination of workplace
- **Homogeneous:** reduced formation of lumps or separation of the cor
- **Fast:** improved flowability for faster processing
- **Tried and tested:** formulation equals our powder media, without any
- **All-round:** suitable for enviromental analysis, cosmetic-, food- and water-industry, and many more
- **Storage temp.:**+20 °C

## CASO Broth, granulated

**granulated, Ph.Eur., for microbiology**

For cultivation of fastidious and non-fastidious microorganisms.

Broth medium A (Ph.Eur. 6.0), Casein Soya Bean Digest Broth (Ph.Eur. 6.3, 7.0, 8.0 and 9.0), Soy Peptone Broth, **TSB Broth**, Tryptic Soy Broth

Application: Use 30 g for 1 l broth.

**Guarantee analysis:**

| | |
|---|---|
| Casein peptone (pancreas hydrolysate) | 17 g/l |
| Soy peptone (papain hydrolysate) | 3 g/l |
| di-Potassium hydrogen phosphate | 2,5 g/l |
| Sodium chloride (NaCl) | 5 g/l |
| Glucose monohydrate | 2,5 g/l |
| pH value | 7,3 ±0,2 |
| Granulation | complies |

| | | | |
|---|---|---|---|
| **6678.1** | 500 g | plastic | 102,05 € |
| Original pack 6 x 500 g | | | 96,95/500 g |
| **6678.2** | 1 kg | plastic | 164,40 € |
| Original pack 6 x 1 kg | | | 156,18/1 kg |

## CASO Agar, granulated

NEW

**granulated, Ph.Eur., for microbiology**

For isolation and cultivation of non-fastidious organisms.

Agar medium B (Ph.Eur. 6.0), Agar medium with Casein- and Soy Peptone (Ph.Eur. 6.3, 7.0, 8.0 and 9.0), Soy Pepton Agar, **TSB Agar**, Trypticasein Soy Agar

Application: Use 40 g for 1 l agar.

**Guarantee analysis:**

| | |
|---|---|
| Casein peptone (pancreas hydrolysate) | 15 g/l |
| Soy peptone (papain hydrolysate) | 5 g/l |
| Sodium chloride (NaCl) | 5 g/l |
| Agar | 15 g/l |
| pH value | 7,3 ±0,2 |

| | | | |
|---|---|---|---|
| **1506.1** | 500 g | plastic | 110,20 € |
| Original pack 6 x 500 g | | | 104,69/500 g |

## Columbia Agar (Base), granulated

NEW

**granulated, Ph.Eur., for microbiology**

For cultivation of fastidious and non-fastidious micro-organisms, also for Mycoplasms.

Medium Q (Ph.Eur. 6.0), Columbia Agar (Ph.Eur. 6.3, 7.0, 8.0 and 9.0), Columbia Blood Agar (Base)

Application: Use 44 g for 1 l agar. If required, add 50-110 ml defibr. blood.

**Guarantee analysis:**

| | |
|---|---|
| Casein peptone (Pancreas hydrolysate) | 10 g/l |
| Meat peptone (Pepsin hydrolysate) | 5 g/l |
| Heart peptone (Pancreas hydrolysate) | 3 g/l |
| Yeast extract | 5 g/l |
| Corn starch | 1 g/l |
| Sodium chloride (NaCl) | 5 g/l |
| Agar | 15 g/l |
| pH value | 7,3 ±0,2 |

| | | | |
|---|---|---|---|
| **1507.1** | 500 g | plastic | 99,45 € |
| Original pack 6 x 500 g | | | 94,48/500 g |

## MacConkey Agar, granulated

NEW

**granulated, Ph.Eur., for microbiology**

For selective isolation and identification of enterobacteria from waste water, foods and other samples.

Agar medium H (Ph.Eur. 6.0), MacConkey Agar (Ph.Eur. 6.3, 7.0, 8.0 and 9.0)

Application: Use 49,53 g for 1 l agar.

**Guarantee analysis:**

| | |
|---|---|
| Gelatin peptone (Pancreas hydrolysate) | 17 g/l |
| Meat and casein peptone | 3 g/l |
| Lactose monohydrate | 10 g/l |
| Bile salt (Cholate) | 1,5 g/l |
| Sodium chloride (NaCl) | 5 g/l |
| Neutral red | 0,03 g/l |
| Crystal Violet | 0,001 g/l |
| Agar | 13,5 g/l |
| pH value | 7,1 ±0,2 |

| | | | |
|---|---|---|---|
| **1514.1** | 500 g | plastic | 102,15 € |
| Original pack 6 x 500 g | | | 97,04/500 g |

## Orange Serum Agar, granulated

NEW

**granulated, for microbiology**

For isolation, detection and enumeration of acid-tolerant pathogens in fruit juices and fruit juice concentrates, particularly citrus products.

**Warning** H315-H317-H411-EUH208

Application: Use 45,5 g for 1 l agar.

**Formulation:**

| | |
|---|---|
| Casein peptone | 10 g/l |
| Orange extract | 9 g/l |
| Glucose | 4 g/l |
| Potassium phosphate | 2,5 g/l |
| Yeast extract | 3 g/l |
| Agar | 17 g/l |
| pH value | 5,5 ±0,2 |

| | | | |
|---|---|---|---|
| **1520.1** | 500 g | plastic | 193,50 € |
| Original pack 6 x 500 g | | | 183,83/500 g |

## Peptone water, buffered, granulated

**granulated, EN ISO 6887, EN ISO 6579, ISO 22964, EN ISO 19250, for microbiology**

Diluent for homogenisation of food samples and for sample preparation for microbiological analysis.

Application: Use 20 g for 1 l broth.

**Guarantee analysis:**

| | |
|---|---|
| Pancreatic digest of casein | 10 g/l |
| Sodium chloride (NaCl) | 5 g/l |
| Disodium phosphate | 3,5 g/l |
| Potassium phosphate | 1,5 g/l |
| pH value | 7,0 ±0,2 |
| Granulation | complies |

| | | | |
|---|---|---|---|
| **6680.1** | 500 g | plastic | 81,60 € |
| Original pack 6 x 500 g | | | 77,52/500 g |
| **6680.2** | 1 kg | plastic | 145,15 € |
| Original pack 6 x 1 kg | | | 137,89/1 kg |

## Plate Count Agar, granulated

NEW

**granulated, for microbiology**

For enumeration of the aerobic microbial flora in milk, foods and other material. **PCA**

Application: Use 23,5 g for 1 l agar.

**Formulation:**

| | |
|---|---|
| Casein peptone | 5 g/l |
| Yeast extract | 2,5 g/l |
| Glucose | 1 g/l |
| Agar | 15 g/l |
| pH value | 7,0 ±0,2 |

| | | | |
|---|---|---|---|
| **1521.1** | 500 g | plastic | 111,80 € |
| Original pack 6 x 500 g | | | 106,21/500 g |

## R2A-Agar, granulated

NEW

**granulated, Ph.Eur., for microbiology**

For enumeration of heterotrophic bacteria from water samples.

Nutritionally reduced medium. Incubation of water samples on R2A Agar often leads to higher colony numbers of micro organisms than found for rich media, particularly when incubation is performed at lower temperatures.
Application: Use 18,1 g for 1 l agar.

**Guarantee analysis:**

| | |
|---|---|
| Yeast extract | 0,5 g/l |
| Peptone | 0,5 g/l |
| Casein hydrolysed | 0,5 g/l |
| Glucose | 0,5 g/l |
| Starch | 0,5 g/l |
| di-Potassium hydrogen phosphate | 0,3 g/l |
| Magnesium sulphate ($MgSO_4$) | 0,024 g/l |
| Sodium pyruvate | 0,3 g/l |
| Agar | 15 g/l |
| pH value | 7,2 ±0,2 |

| | | | |
|---|---|---|---|
| **1523.1** | 500 g | plastic | 172,00 € |
| Original pack 6 x 500 g | | | 163,40/500 g |

## Sabouraud 2 % Glucose Broth, granulated

NEW

**granulated, Ph.Eur., for microbiology**

Selective media for taxonomic analysis of pathogenic fungi.

Sabouraud Dextrose Broth (Ph.Eur. 6.3, 7.0, 8.0 and 9.0)

Recommended by the Harmonized Method (Ph.Eur. 6.0, 2.6.13.B) for growth of *Candida albicans*.
The low amount of glucose supports the activation of the secondary metabolism and, subsequently, pigment formation.
Application: Use 30 g for 1 l broth.

**Guarantee analysis:**

| | |
|---|---|
| Meat and casein peptone | 10 g/l |
| Glucose | 20 g/l |
| pH value | 5,7 ±0,2 |

| | | | |
|---|---|---|---|
| **1508.1** | 500 g | plastic | 82,80 € |
| Original pack 6 x 500 g | | | 78,66/500 g |

▶ Granulated media for molecular biology see page 1415

## Standard Nutrient Broth I, granulated

NEW

**granulated, for microbiology**

For cultivation and enumeration of fastidious bacteria. Also base for preparing special culture media.

Application: Use 25 g for 1 l broth.

**Formulation:**

| | |
|---|---|
| Peptone | 15 g/l |
| Yeast extract | 3 g/l |
| Sodium chloride (NaCl) | 6 g/l |
| Glucose | 1 g/l |
| pH value | 7,5 ±0,2 |

| | | | |
|---|---|---|---|
| **1533.1** | 500 g | plastic | 104,30 € |
| Original pack 6 x 500 g | | | 99,09/500 g |

## Standard Nutrient Agar I, granulated

NEW

**granulated, for microbiology**

For cultivation and enumeration of fastidious bacteria. Also base for preparing special culture agars.

Application: Use 37 g for 1 l agar.

**Formulation:**

| | |
|---|---|
| Peptone | 15 g/l |
| Yeast extract | 3 g/l |
| Sodium chloride (NaCl) | 6 g/l |
| Glucose | 1 g/l |
| Agar | 12 g/l |
| pH value | 7,5 ±0,2 |

| | | | |
|---|---|---|---|
| **1524.1** | 500 g | plastic | 107,50 € |
| Original pack 6 x 500 g | | | 102,13/500 g |

## Violet Red Bile Agar with Glucose, granulated

NEW

**granulated, Ph.Eur., for microbiology**

For cultivation and enumeration of enterobacteria in water, foods and other materials. **VRBD agar**

Recommended by the Harmonized Method (Ph.Eur. 6.0, 2.6.13.B) for growth and identification of *Escherichia coli* and *Pseudomonas aeruginosa* durin testing for bile-tolerant gram-negative bacteria.
Application: Use 38,53 g for 1 l agar.

**Guarantee analysis:**

| | |
|---|---|
| Yeast extract | 3 g/l |
| Pepton | |
| Sodium chloride (NaCl) | 5 g/l |
| Bile salts | 1,5 g/l |
| Glucose monohydrate | 10 g/l |
| Neutral red | 0,03 g/l |
| Crystal Violet | 0,002 g/l |
| Agar | 12 g/l |
| pH value | 7,4 ±0,2 |

| | | | |
|---|---|---|---|
| **1525.1** | 500 g | plastic | 106,45 € |
| Original pack 6 x 500 g | | | 101,13/500 g |

## Yeast Glucose Agar (with chloroamphenicol), granulated

NEW

**granulated, for microbiology**

Selective medium for enumeration of yeasts and mould in milk and dairy products. **YGC agar**

Application: Use 40,1 g for 1 l agar.

**Formulation:**

| | |
|---|---|
| Yeast extract | 5 g/l |
| Glucose | 20 g/l |
| Chloroamphenicol | 0,1 g/l |
| Agar | 15 g/l |
| pH value | 6,6 ±0,2 |

| | | | |
|---|---|---|---|
| **1526.1** | 500 g | plastic | 126,35 € |
| Original pack 6 x 500 g | | | 120,03/500 g |

# Additives

## Ammonium iron(III) citrate solution

**12,5 %, sterile, ready-to-use**

Media supplement for detection of *Listeria monocytogenes*.

Storage temp.: +20 °C

Ammonium iron (III) citrate (ferric ammonium (III) citrate) is used as additive in nutrient media for detection of Listeria species. Hydrolysis of esculin by *Listeria* species results in 6,7-dihydroxycoumarin which reacts with ferric ions producing blackening of the medium. Additionally, ferric ammonium citrate has been shown to improve the growth of *Listeria monocytogenes* (Cowart and Foster (1985) *J. Infect. Dis.* 151:721).

**Application:** One vial ferric ammonium (III) citrate solution (0.25 g in 2 ml) is added to 500 ml autoclaved Fraser Broth (Art. No. HP17) or Fraser Half Broth (Art. No. HP18). Mix carefully and store cooled for 2 weeks in maximum. Fraser Broth is used in the rapid detection of Listeria from food and environmental samples (Fraser and Sperber (1988) *J. Food Protect.* 51:762).
One box of 10 vials Ammonium iron(III) citrate solution is sufficient for 10 x 500 ml Fraser Broth.

**Formulation per vial:**

Ammonium iron(III) citrate..... 0,25 g

| | | | |
|---|---|---|---|
| **3130.1** | 10 x 2 ml | plastic | 40,35 € |
| **3130.2** | 30 x 2 ml | plastic | 100,95 € |

▶ Fraser media see page 1385

## Bacillus cereus Supplement

**lyophilised**

Media supplement for selective isolation of *Bacillus cereus.*

Storage temp.: +4 °C

**Application:** One vial Bacillus cereus Supplement is reconstituted in 5 ml sterile distilled water, and is subsequently added to 450 ml autoclaved Mannitol Egg Yolk Polymyxin Agar (Base) (Art. No. 5765.1) plus 50 ml Egg Yolk Emulsion (Art. No. 0402.1).
One box of 10 vials Bacillus cereus Supplement is sufficient for 10 x 500 ml Mannitol Egg Yolk Polymyxin Agar.

**Formulation per vial:**

Polymyxin B..... 50 000 I.U.

| | | | |
|---|---|---|---|
| **4856.1** | 10 vials | glass | 107,40 € |

▶ Mannitol Egg Yolk Polymyxin Agar (Base) see page 1389

## Campylobacter Preston Supplement

**lyophilised**

For selective isolation of *Campylobacter spp.*

Preston Supplement

Storage temp.: +4 °C

**Danger** H300-H341-H360D-H411

**Application:** One vial Campylobacter Preston Supplement is reconstituted in 5 ml sterile 1:1 mixture of acetone and demineralized water and is subsequently added to 500 ml autoclaved Campylobacter Selective Agar (Art. No. 8847.1) and 5-10 % defibrinated blood.
One box of 10 vials Campylobacter Preston Supplement is sufficient for 10 x 500 ml Campylobacter Selective Agar.

**Formulation per vial:**

Polymyxin B sulphate..... 2500 IU
Cycloheximide..... 50 mg
Rifampicin..... 5 mg
Trimetoprim..... 5 mg

| | | | |
|---|---|---|---|
| **8851.1** | 10 vials | glass | 181,70 € |

▶ Campylobacter Selective Agar (Base) see page 1379

## Campylobacter Supplement

**lyophilised**

Media supplement for selective isolation of *Campylobacter jejuni, C. coli,* and *C. laridis.*

**CCDA Supplement**

Storage temp.: +4 °C

**Danger** H334-H317

Amphotericin reduces growth of yeasts and moulds, while Cefoperazone inhibits Enterobacteriaceae.
**Application:** One vial Campylobacter Supplement is reconstituted in 5 ml sterile distilled water, and is subsequently added to 500 ml autoclaved Campylobacter Agar, blood-free (Base) (Art. No. 5756.1).
One box of 10 vials Campylobacter Supplement is sufficient for 10 x 500 ml Campylobacter Agar, blood-free.

**Formulation per vial:**

Cefoperazone..... 16 mg
Amphotericin B..... 5 mg

| | | | |
|---|---|---|---|
| **4857.1** | 10 vials | glass | 154,30 € |

▶ Campylobacter Agar, blood-free (Base) see page 1379

## Clostridium perfringens Supplement

**lyophilised**

Media supplement for selective isolation of *Clostridium perfringens.*

Storage temp.: +4 °C

D-cycloserine largely inhibits the accompanying bacterial flora, hence providing selective growth of small and distinct colonies of *Clostridium perfringens.*
**Application:** One vial Clostridium perfringens Supplement (0.2 g) is reconstituted in 2 ml sterile, demineralized water and is subsequently added to 500 ml autoclaved TSC Agar (Base) (Art. No. CL51.1) or to 500 ml autoclaved m-CP Agar (Art. No. CL55.1).
One box of 10 vials Clostridium perfringens Supplement is sufficient for 10 x 500 ml TSC Agar or for 10 x 500 ml m-CP Agar.

**Formulation per vial:**

D-Cycloserine..... 0,2 g

| | | | |
|---|---|---|---|
| **CL52.1** | 10 vials | glass | 220,40 € |

▶ TSC Agar (Base) see page 1401
▶ m-CP Agar (Base) see page 1390

## Egg Yolk Emulsion (20 %)

NEW S

**ISO 7932, sterile, stabilised, for microbiology**

Media supplement for preparation of egg yolk agar for detection of microbial lecithinase activity.

Storage temp.: +4 °C • Transport temp.: room temp.

Egg Yolk Emulsion is used as supplement in nutrient agars for detection of lecithinase activity in microbial colonies. Herewith, bacterial species like *Bacillus cereus* and *Clostridium perfringens*, or *Staphylococcus aureus* may be identified. The lecithinase activity can be noted by formation of light, sometimes whitish halos surrounding the colonies.

**Application:** The ISO 7932 recommends a final concentration of 10 % emulsion in the prepared medium in general, e.g. in Mannitol Egg Yolk Polymyxin Agar (Base) (Art. No. 5765.1) for examining the lecithinase activity of *Bacillus cereus*.

We recommend using TSC Agar (Base) (Art. No. CL51.1), Mannitol Salt Agar (Art. No. CL81.1) or Palcam Listeria Agar (Base) (Art. No. 5768.1) for base agar with the addition of 5 % emulsion.
Add after autoclaving.

100 ml Egg Yolk Emulsion are sufficient for 1 l agar medium.

**Guarantee analysis:**

| | |
|---|---|
| Colour | yellow |
| Egg yolk | 20 % |
| Sterility | complies |

| | | | |
|---|---|---|---|
| **0402.1** | 100 ml | glass | 42,90 € |

▶ Mannitol Salt Agar see page 1389
▶ TSC Agar (Base) see page 1401
▶ Palcam Listeria Agar (Base) see page 1393

## Egg Yolk Tellurite Emulsion (20 %)

NEW S

**ISO 6888, sterile, stabilised, for microbiology**

Media supplement for preparation of egg yolk tellurite agar, for detection of *Staphylococcus aureus*.

Storage temp.: +4 °C • Transport temp.: room temp.

Egg Yolk Tellurite Emulsion is used as supplement in nutrient agars for detection of lecithinase activity and concurrent tellurite reduction in microbial colonies. Hence, *Staphylococcus aureus* may be identified by the dark grey to black staining of the colonies due to tellurite reduction, accompanied by lecithinase-caused formation of light, sometimes whitish halos surrounding the colonies.

We recommend using Baird Parker Agar (Base) (Art. No. X913.1) for base agar.
**Application:** The ISO 6888 recommends a final concentration of 5 % emulsion in the prepared medium.
Add after autoclaving.

100 ml Egg Yolk Tellurite Emulsion is sufficient for 2 l agar medium.

**Guarantee analysis:**

| | |
|---|---|
| Colour | yellow |
| Egg yolk | 20 % |
| Sterile saline sol. | 80 % |
| Potassium tellurite | 0,21 % |
| Sterility | complies |

| | | | |
|---|---|---|---|
| **0339.1** | 100 ml | glass | 46,80 € |

▶ Baird Parker Agar (Base) see page 1377

## Legionella GVPC Supplement

**lyophilised**

Media supplement for selective isolation of *Legionella.*

Storage temp.: +4 °C

**Danger** H301-H360D-H341-H412-EUH208

The mixture of glycine and antibiotics largely inhibits the accompanying bacterial flora, hence providing selective growth of legionella.
**Application:** One vial Legionella GVPC Supplement is reconstituted in 10 ml sterile, warm, demineralized water and is subsequently added to 500 ml autoclaved Legionella Agar (Art. No. CL48.1).

One box of 10 vials Legionella GVPC Supplement is sufficient for 10 x 500 ml Legionella Agar.

**Formulation per vial:**

| | |
|---|---|
| Glycine | 1,5 g |
| Polymyxin B | ~39 600 IU |
| Cycloheximide | 0,04 g |
| Vancomycin | 0,5 mg |

| | | | |
|---|---|---|---|
| **CL50.1** | 10 vials | glass | 181,70 € |

## Legionella Growth Supplement

**lyophilised**

Growth supplement for isolation of *Legionella.*

**BCYE additive**

Storage temp.: +4 °C

**Danger** H314-H302

**Application:** One vial Legionella Growth Supplement is reconstituted in 10 ml sterile, demineralized water and is subsequently added to 90 ml autoclaved Legionella Agar (Art. No. CL48.1). For selective isolation of legionella we recommend additional supplementation with Legionella GVPC Supplement (Art. No. CL50.1).

One box of 10 vials Legionella Growth Supplement is sufficient for 10 x 100 ml Legionella Agar.

**Formulation per vial:**

| | |
|---|---|
| ACES Buffer | 1,0 g |
| Potassium hydroxide (KOH) | 0,2 g |
| alpha-Ketoglutarate | 0,1 g |
| L-Cysteine | 0,04 g |
| Ferric pyrophosphate | 0,025 g |

| | | | |
|---|---|---|---|
| **CL49.1** | 10 vials | glass | 188,15 € |

▶ Legionella Agar (Base) see page 1387
▶ Legionella Acid Buffer see page 1411 NEW

## Listeria Chromo Lipase C Supplement

**0,1 g/ml, sterile, ready-to-use**

Media supplement for selective isolation of *Listeria*.

Storage temp.: +4 °C

**Application:** One vial Listeria Chromo Lipase C Supplement is added to 500 ml autoclaved Listeria chromogenic Agar (Art. No. 3008.1). For selective isolation of *Listeriae* we recommend additional supplementation with Listeria Chromo Selective Supplement (Art. No. 2947.1).

One box of 10 vials Listeria Chromo Lipase C Supplement is sufficient for 10 x 500 ml Listeria chromogenic Agar.

**Formulation per vial:**

Phospholipase C substrate..... 1 g

| | | | |
|---|---|---|---|
| **2948.1** | 10 x 10 ml | glass | 104,20 € |

## Listeria Chromo Selective Supplement

**lyophilised**

Media supplement for selective isolation of *Listeria*.

Storage temp.: +4 °C

**Danger** H300-H334-H317-H341-H360D-H411

**Application:** One vial Listeria Chromo Selective Supplement is reconstituted in 5 ml sterile distilled water and is subsequently added to 500 ml autoclaved Listeria chromogenic Agar (Art. No. 3008.1). For activation of the listerial phospholipase C we recommend additional supplementation with Listeria Chromo Lipase C Supplement (Art. No. 2948.1).

One box of 10 vials Listeria Chromo Selective Supplement is sufficient for 10 x 500 ml Listeria chromogenic Agar.

**Formulation per vial:**

Cycloheximide..... 0,025 g
Polymyxin B sulphate..... 38500 I.E.
Nalidixic acid sodium salt..... 0,01 g
Ceftazidime (Fortam)..... 0,01 g

| | | | |
|---|---|---|---|
| **2947.1** | 10 vials | glass | 104,20 € |

▶ Listeria chromogenic Agar (Base) see page 1387

▶ Kovacs' Reagent see page 1411

## Listeria Oxford Supplement

**lyophilised**

Media supplement for selective isolation of *Listeria monocytogenes.*

Oxford Supplement

Storage temp.: +4 °C

**Danger** H300-H341-H360D-H411

**Application:** One vial Listeria-Oxford Supplement is reconstituted in 5 ml of a sterile 1:1 mixture of acetone and distilled water, and is subsequently added to 500 ml autoclaved Oxford Listeria Agar (Base) (Art. No. 5767.1).

One box of 10 vials Listeria Oxford Supplement is sufficient for 10 x 500 ml Oxford Listeria Agar.

**Formulation per vial:**

Cycloheximide..... 200 mg
Colistinsulphate..... 10 mg
Fosfomycin..... 5 mg
Acryflavine..... 2,5 mg
Cefotetan..... 1 mg
Acriflavinium hydrochloride..... 2,5 mg

| | | | |
|---|---|---|---|
| **5801.1** | 10 vials | glass | 136,00 € |

▶ Oxford Listeria Agar (Base) see page 1393

## Listeria Palcam Supplement

**lyophilised**

Media supplement for selective isolation of *Listeria monocytogenes.*

Palcam Supplement

Storage temp.: +4 °C

**Danger** H334-H317

**Application:** One vial Listeria-Palcam Supplement is reconstituted in 2 ml sterile distilled water, and is subsequently added to 500 ml autoclaved Palcam Listeria Agar (Base) (Art. No. 5768.1).

One box of 10 vials Listeria Palcam Supplement is sufficient for 10 x 500 ml Palcam Listeria Agar.

**Formulation per vial:**

Ceftazidime (Fortam)..... 10 mg
Polymyxin B..... 5 mg
Acryflavine..... 2,5 mg

| | | | |
|---|---|---|---|
| **5803.1** | 10 vials | glass | 99,90 € |

▶ Palcam Listeria Agar (Base) see page 1393

## MRSA Cefoxitin Supplement

**lyophilised**

Media supplement for selective detection of methicillin resistent *Staphylococcus aureus*.

Storage temp.: +4 °C

Cefoxitin inhibits growth of methicillin sensitive *Staphylococcus aureus* strains.

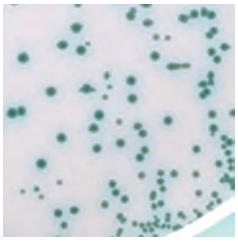

**Figure:** Detection of *Staphylococcus aureus* ATCC 43300 by MRSA chromogenic Agar (Art. No. 3026.1) plus MRSA Cefoxitin Supplement.

**Application:** One vial MRSA Cefoxitin Supplement is reconstituted in 5 ml sterile, distilled water, and is subsequently added to 500 ml solubilised MRSA chromogenic Agar (Base) (Art. No. 3026.1).
One box of 10 vials MRSA Cefoxitin Supplement is sufficient for 10 x 500 ml MRSA chromogenic Agar.

**Formulation per vial:**

Cefoxitin. ..... 0,002 g

| | | | |
|---|---|---|---|
| **2975.1** | 10 vials | glass | 72,60 € |

▶ MRSA chromogenic Agar (Base) see page 1390

## RPF Supplement

**lyophilised**

Media supplement for identification and enumeration of *Staphylococcus aureus.*

Rabbit Plasma Fibrinogen Supplement

Storage temp.: +4 °C

**Warning** H302+H312+H332

**Application:** One vial RPF Supplement is reconstituted in 10 ml sterile distilled water, and is incubated for 10 mins. at room temperature until completely dissolved.
Subsequently add to 90 ml autoclaved Baird Parker Agar (e.g. Art. No. X913.1).
One box of 10 vials RPF Supplement is sufficient for 10x 100 ml Baird Parker Agar.

**Formulation per vial:**

Rabbit plasma..... 2,5 ml
Bovine fibrinogen..... 380 mg
Trypsin inhibitor. ..... 2,5 mg
Potassium tellurite. ..... 2,5 mg

| | | | |
|---|---|---|---|
| **6064.1** | 10 vials | glass | 407,45 € |

▶ Baird Parker Agar (Base) see page 1377

## TTC-Supplement

**lyophilised**

Media supplement for identification of coliform enterobacteria.

2,3,5-Triphenyl-tetrazolium chloride, Red tetrazolium

Storage temp.: +4 °C

**Warning** H315-H319-H335

TTC is used as additive for microbiological nutrient media, in order to accelerate the identification of coliform enterobacteria, e.g. TTC Chapman Agar acc. to EN ISO 9308-1:2000 (Art. No. CP65.1).

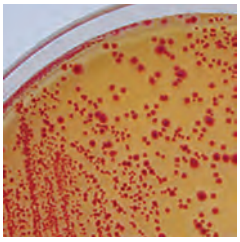

**Figure:** Detection of *E. coli* (wild type) by TTC Chapman Agar (Art. No. CP65.1) plus TTC supplement.

**Application:** One vial TTC-Supplement (50 mg) is reconstituted in 5 ml sterile, distilled water. Store solution at 4 °C for one week in maximum. Long-term storage in aliquots at -20 °C.
One box of 10 x 50 mg TTC-Supplement is sufficient for 20 l TTC Chapman Agar.

**Guarantee analysis:**

Triphenyltetrazolium chloride (per vial). ..... 50 mg

| | | | |
|---|---|---|---|
| **CP72.1** | 10 vials | glass | 74,10 € |

▶ TTC Chapman Agar (Base) see page 1401

## Yersinia Supplement

**lyophilised**

Media supplement for selective isolation of *Yersinia enterocolitica*

**CIN Supplement**

Storage temp.: +4 °C

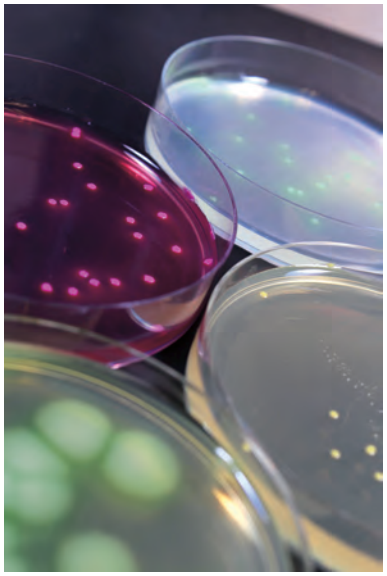
**Danger** H315-H317-H319-H334-H400-H410

**Application:** One vial Yersinia Supplement is reconstituted in 5 ml sterile distilled water, and is subsequently added to 500 ml autoclaved Yersinia Selective Agar (Base) (Art. No. 5780.1).
One box of 10 vials Yersinia Supplement is sufficient for 10 x 500 ml Yersinia Selective Agar.

**Formulation per vial:**

Cefsulodin. ..... 7,5 mg
Novobiocin. ..... 1,25 mg
Irgasan..... 2 mg

| | | | |
|---|---|---|---|
| **4880.1** | 10 vials | glass | 107,00 € |



▶ Yersinia Selective Agar (Base) see page 1403

# Identification of Microorganisms

## Testing Reagents

### Kovacs' Reagent

**for microbiology**

Media supplement for detection of microbial indole.

Indole Reagent

Storage temp.: +4 °C

**Danger** H226-H290-H302-H315-H318-H335-H336

Tryptophanase-positive microorganisms (e.g. *E. coli, S. faecalis, Proteus sp.*) that cleave tryptophane hereby release indole, which may be detected by reaction with dimethylaminobenzaldehyde by forming a dark red dye. Microorganisms must be incubated in a glucose-free broth with high concentrations of tryptophane present.
Kovacs' Reagent is added to 24-48 h old cultures in a concentration of 0.2 to 0.5 ml per 5 ml broth. A colour shift to dark red shows presence of indole, thus confirming the inoculating colony as being indole-/tryptophanase-positive.

**Application:** Customary concentration in medium: 4-10 %
100 ml Kovacs' Reagent is sufficient for approx. 2 l medium.

**Type analysis:**

| | |
|---|---|
| Appearance | yellowish, clear liquid |
| 4-(Dimethylamino)benzaldehyde | 50 g/l |
| 1-Butanol | 75 % |
| Hydrochloric acid (37 %) | 25 % |
| pH value | >1 |

| | | | |
|---|---|---|---|
| **2950.1** | 100 ml | glass | 45,05 € |

For additional product data and safety information, see chapter Chemicals A-Z.

### Rotitest® Oxidase strips

**Rotitest® Bio Analysis**

Rapid test system for detection of cytochrome oxidase in microorganisms.

Storage temp.: +4 °C

Rapid test system for detection of oxidase-positive microorganisms.
A green coloured area indicates the reaction zone, impregnated with detection reagent, at one end of the paper strip. The colony to be analysed is smeared onto this reaction zone. Within 15 seconds, a dark-blue to violet colouring indicates presence of oxidase-positive microorganisms.

The following microorganisms are typically oxidase-positive: *Helicobacter pylori, Vibrio cholerae, Campylobacter jejuni, Legionella pneumophila, Neisseria, Moraxella*, many *Pseudomonaceae* and *Diplococci*.
Many *Enterobacteriaceae* are typically oxidase-negative.

NEW ready-to-use S

### Legionella Acid Buffer

**EN ISO 11731-2, sterile, ready-to-use for microbiology**

Sterile acid buffer solution for detection of legionella.

0.2 M HCl/KCl Solution, pH 2.2, Acid buffer pH 2.2, HCl/KCl-Puffer

Storage temp.: +20 °C • Transport temp.: +20 °C

To minimize the accompanying bacterial flora, 30 ±5 ml of Legionella Acid Buffer are applied to the membrane after membrane filtration. After an exposure time of approx. 5 minutes, the buffer is vacuumed off and the membrane rinsed with sterile distilled water.
The filter is transferred sterile to a legionella selective agar, e.g. Legionella Agar (Base) (Art. No. CL48.1) and incubated.
Bottle with 50 ml graduation. With original seal.
The buffer should be used within 4 weeks after opening.

| | | | |

# RiboFlow® Kits for biomolecular detection of germs

By SY-LAB
- Specificity comparable to PCR
- Short assay time (<30 min)
- Simple protocol
- No expensive instrumentation necessary
- Particularly convenient for testing foods, toiletries and cosmetics
- Storage temp.: room temp.

SY-LAB´s RiboFlow® Test Kits were especially developed for detection of relevant bacterial contamination on-site, based on molecular flow technology - quickly and highly specific, without the need for sophisticated sampling , complex amplification techniques and expensive equipment.
Replicating cells are reliably detected by their ribosomal RNA in less than 30 minutes.
RiboFlow® Salmonella and RiboFlow® Listeria Twin are validated according to ISO 16140-2:2016.

The test is easily performed with usual cultures in enrichment media or with single colonies from agar plates. The sample is just mixed with the included solutions and pipetted on the test cassette. As result, a distinctive and easy to read line occurs only in the presence of the target organism.
Every kit includes a detailed manual with Standard- and Quick reference protocols.

We recommend the usage of a small laboratory centrifuge with at least 2000 x g (e.g. Art. No. CX73.1), a mini incubator, optimally with window (e.g. Art. No. YC53.1) and a tray (e.g. Art. No. YH58.1, Measures: 26 x 20 x 2 cm) as accessories for the application of the kits.

For research use only. Not approved for human or veterinary use, for application to humans or animals, or for use in clinical or *in vitro* diagnostics.

**Fig.: Example result of the RiboFlow® test cassettes**

**A: RiboFlow®-Listeria Twin** (Art. No. 9884.1):
**Line topmost:** Control line
**Line in the middle:** positive result for *Listeria monocytogenes*
**Bottom line:** positive result for *Listeria* spp.

**B: RiboFlow®-Salmonella** (Art. No. 9881.1)
**Line topmost:** Control line
**No other line:** negative result, the organism has not been detected

| Product | Use | Art. No. | Pack Qty | € |
|---|---|---|---|---|
| **RiboFlow® Salmonella** | For detection of *Salmonella* spp. | **9881.1** | 24 tests | 267,70 |
| **RiboFlow® Cronobacter** | For detection of *Cronobacter* spp. | **9882.1** | 24 tests | 214,90 |
| **RiboFlow® Listeria Twin*** | For detection and differentiation of *Listeria* spp. and *Listeria monocytogenes* | **9884.1** | 24 tests | 364,45 |
| **RiboFlow® Campylobacter** | For detection of thermophilic *Campylobacter* spp. | **9885.1** | 24 tests | 274,15 |
| **RiboFlow® Vibrio parahaemolyticus** | For detection of *Vibrio parahaemolyticus* | **9888.1** | 24 tests | 289,20 |
| **RiboFlow® Staphylococcus aureus** | For detection of *Staphylococcus aureus* | **9889.1** | 24 tests | 255,85 |
| **RiboFlow® Enterobacteriaceae** | For detection of enterobacteria | **9890.1** | 24 tests | 255,85 |
| **RiboFlow® E. coli** | For detection of *Escherichia coli* | **9891.1** | 24 tests | 255,85 |
| **RiboFlow® Pseudomonas aeruginosa** | For detection of *Pseudomonas aeruginosa* | **9892.1** | 24 tests | 255,85 |
| **RiboFlow® Candida albicans** | For detection of *Candida albicans* | **9893.1** | 24 tests | 255,85 |
| **RiboFlow® Cosmetics**** | For detection and differentiation of *E. coli, Ps. aeruginosa, S. aureus, C. albicans* | **9894.1** | 6 x 4 tests | 197,30 |
| **RiboFlow® P/En***** | For detection and differentiation of *Pseudomonas* spp. and *Enterobacteriaceae* | **9895.1** | 24 tests | 255,85 |

* Within the RiboFlow® Listeria Twin Kit, one test cassette detects simultaneously the presence of *Listeria monocytogenes* and/or of other *Listeria spp*.

** The RiboFlow® Cosmetics Combi test Kit consists of 6 sets with 4 test cassettes each with whom the target organisms *Escherichia coli, Pseudomonas aeruginosa, Staphylococcus aureus* and *Candida albicans* can be tested parallely.

*** Within the RiboFlow® P/En Kit, one test cassette detects simultaneously the presence of *Pseudomonas aeruginosa* and/or of enterobacteria.

# Microbiological Staining

Microbiological staining is mostly applied for identification of microorganisms during microscopic analysis. Due to their affinity to certain cell structures, acidic dyes or salts of basic aniline dyes are used frequently for contrastation of cells, differential staining, or accentuation of specific structures (flagella, spores, or capsules).

For detailed information on the products please see chapters Histology/Staining and Chemicals A-Z.

## Solutions for Gram Staining

Classic Staining acc. to Gram for differentiation of microorganisms.

| Product | Art. No. | Pack Qty | € |
|---|---|---|---|
| **Ethanol 96 %** | **P075.1** | 1 l | 70,85 |

# Nutrient Media for Molecular Biology

## Selective Media with Antibiotics

**Nutrient media for selection and selective cultivation of recombinant *E.coli*.**

- Tried and tested Standard media for molecular biology complemented with antibiotics
- Easy and uncomplicated storage of the powder at 20 °C
- With low or high salt content according to Luria/Miller or Lennox
- With antibiotics in different end concentrations
- Instruction for use: 35 g (according to the Lennox method) or 40 g (according to the Luria/Miller method) of the powder are weighed out per 1 litre of agar.

| Product | Properties | Art. No. | Pack Qty | Packaging | € |
|---|---|---|---|---|---|
| **LB-Agar (Lennox) / Amp100** | Low salt content acc. to Lennox.<br>With ampicillin: end concentration of 100 µg/ml. | **8852.1** | 500 g | plastic | 85,90 |

**Instructions for use**
can be found on the Internet next to the product description.

# Granulated Media

Storage temp.: +20 °C

**Benefits of granulated Media:**
- Dust minimized
- High solubility
- Without additives

## LB Broth (Lennox), granulated

**granulated, for molecular biology**

Standard formulation used for propagation and culturing of *E. coli*. Low salt content for high-copy plasmid proliferation and preparation, as well as for phage propagation under supplementation with magnesium chloride.
Granulated, dust-minimized version with high solubility and superior homogeneity.
Application: Use 20 g for 1 l broth.

**Formulation:**

| | |
|---|---|
| Tryptone | 10 g/l |
| Yeast extract | 5 g/l |
| Sodium chloride (NaCl) | 5 g/l |
| pH value | 7,0 ±0,2 |
| Granulation | complies |

| | | | | |
|---|---|---|---|---|
| **6669.1** | 500 g | | plastic | 86,55 € |
| Original pack 6 x 500 g | | | | 82,22/500 g |
| **6669.2** | 1 kg | | plastic | 153,20 € |
| Original pack 6 x 1 kg | | | | 145,54/1 kg |
| **6669.3** | 2,5 kg | | plastic | 342,95 € |
| **6669.4** | 5 kg | BIG PACK | plastic | 618,15 € |

## LB-Agar (Lennox), granulated

**granulated, for molecular biology**

Granulated, dust-minimized version of the Luria-Bertani Agar formulated acc. to Lennox; With high solubility and superior homogeneity.
Application: Use 35 g for 1 l agar.

**Formulation:**

| | |
|---|---|
| Tryptone | 10 g/l |
| Yeast extract | 5 g/l |
| Sodium chloride (NaCl) | 5 g/l |
| Agar-Agar | 15 g/l |
| pH value | 7,0 ±0,2 |
| Granulation | complies |

| | | | | |
|---|---|---|---|---|
| **6671.1** | 500 g | | plastic | 95,70 € |
| Original pack 6 x 500 g | | | | 90,92/500 g |
| **6671.2** | 1 kg | | plastic | 179,55 € |
| Original pack 6 x 1 kg | | | | 170,57/1 kg |
| **6671.3** | 2,5 kg | | plastic | 388,10 € |

## LB Broth (Luria/Miller), granulated

**granulated, for molecular biology**

Standard formulation used for propagation and culturing of *E. coli*. Due to the high salt content particularly suited for bacterial proliferation prior to plasmid preparation.
Granulated, dust-minimized version with high solubility and superior homogeneity.
Application: Use 25 g for 1 l broth.

**Formulation:**

| | |
|---|---|
| Tryptone | 10 g/l |
| Yeast extract | 5 g/l |
| Sodium chloride (NaCl) | 10 g/l |
| pH value | 7,0 ±0,2 |
| Granulation | complies |

| | | | | |
|---|---|---|---|---|

| Original pack 6 x 1 kg | | | | 139,94/1 kg |
| **6673.3** | 2,5 kg | | plastic | 319,30 € |
| **6673.4** | 5 kg | BIG PACK | plastic | 581,60 € |

## LB Agar (Luria/Miller), granulated

**granulated, for molecular biology**

Granulated, dust-minimized version of the Luria-Bertani Agar formulated acc. to Luria and Miller; With high solubility and superior homogeneity.
Application: Use 40 g for 1 l agar.

**Formulation:**

| | |
|---|---|
| Tryptone | 10 g/l |
| Yeast extract | 5 g/l |
| Sodium chloride (NaCl) | 10 g/l |
| Agar-Agar | 15 g/l |
| pH value | 7,0 ±0,2 |
| Granulation | complies |

| Original pack 6 x 1 kg | | | | 145,02/1 kg |
| **6675.3** | 2,5 kg | | plastic | 335,40 € |

## 2x YT Broth, granulated

**granulated, for molecular biology**

Nutritious medium for proliferation of *E. coli*, formulated in order to increase replication and yield of filamentous ssDNA bacteriophages (such as the M13 phage).
Granulated, dust-minimized version with high solubility and superior homogeneity.
Application: Use 31 g for 1 l broth.

**Formulation:**

| | |
|---|---|
| Tryptone | 16 g/l |
| Yeast extract | 10 g/l |
| Sodium chloride (NaCl) | 5 g/l |
| pH value | 7,0 ±0,2 |
| Granulation | complies |

| | | | | |
|---|---|---|---|---|
| **6676.1** | 500 g | | plastic | 98,80 € |
| Original pack 6 x 500 g | | | | 93,86/500 g |
| **6676.2** | 1 kg | | plastic | 166,65 € |
| Original pack 6 x 1 kg | | | | 158,32/1 kg |
| **6676.3** | 2,5 kg | | plastic | 381,65 € |

# Standard Media

Storage temp.: +20 °C

All nutrient media for molecular biology are according to the data given in Sambrook and Russell, *Cold Spring Harbour Laboratory Press*, Cold Spring Harbour, New York, 2001.

## Yeast-Nitrogen-Base (without Amino Acids)

**for molecular biology**

For yeast classification based on amino acid and carbohydrate requirements. **YNB Medium**

Yeast Nitrogen Base (without amino acids) contains ammonium sulphate, all vitamins and all organic salts needed to cultivate yeasts, **except for the amino acids and carbohydrate sources**. By selective addition of single amino acids and sugars the yeast cells are tested for sugar assimilation and for their dependency on specific amino acids, hereby revealing parameters for their classification.
Application: Add 6,7 g for 100 ml broth for 10x stock solution.
Use selected sugar/amino acid.
Do not boil, do not autoclave! Sterilise by sterile filtration!

**Formulation:**

| | |
|---|---|
| Ammonium sulphate. | 5,0 g/l |
| Potassium phosphate. | 1,0 g/l |
| Magnesium sulphate. | 0,5 g/l |
| Calcium chloride. | 0,1 g/l |
| Sodium chloride (NaCl). | 0,1 g/l |
| Inositol. | 2,0 mg/l |
| Boric acid. | 0,5 mg/l |
| Niacin. | 0,4 mg/l |
| Thiamine hydrochloride. | 0,4 mg/l |
| Pyridoxin hydrochloride. | 0,4 mg/l |
| Calcium pantothenate. | 0,4 mg/l |
| Manganese sulphate. | 0,4 mg/l |
| Zinc sulphate. | 0,4 mg/l |
| P-Aminobenzoic acid. | 0,2 mg/l |
| Iron chloride. | 0,2 mg/l |
| Riboflavine. | 0,2 mg/l |
| Sodium molybdate. | 0,2 mg/l |
| Potassium iodide. | 0,1 mg/l |
| Copper sulphate. | 0,04 mg/l |
| Biotin. | 0,002 mg/l |
| Folic acid. | 0,002 mg/l |
| pH value. | 5,4 ±0,2 |

| | | | |
|---|---|---|---|
| **HP26.1** | 500 g | plastic | 142,45 € |
| Original pack 6 x 500 g | | | 135,33/500 g |

▶ Amino Acids for drop-out mixtures see chapter Chemicals A-Z.

## LB Broth (Lennox)

**for molecular biology**

Standard formulation used for propagation and culturing of *E. coli*. The salt content was adjusted to enable high-copy plasmid proliferation and preparation. Additionally, LB medium may be supplemented with magnesium chloride in order to gain an enriched broth for phage propagation.
Application: Use 20 g for 1 l broth.

**Formulation:**

| | |
|---|---|
| Tryptone. | 10 g/l |
| Yeast extract. | 5 g/l |
| Sodium chloride (NaCl). | 5 g/l |
| pH value. | 7,0 ±0,2 |

| | | | |
|---|---|---|---|
| **X964.1** | 500 g | plastic | 58,60 € |
| Original pack 6 x 500 g | | | 55,67/500 g |
| **X964.2** | 1 kg | plastic | 103,75 € |
| Original pack 6 x 1 kg | | | 98,56/1 kg |
| **X964.3** | 2,5 kg | plastic | 239,20 € |
| **X964.4** | 5 kg BIG PACK | plastic | 428,95 € |

## LB Agar (Lennox)

**for molecular biology**

Application: Use 35 g for 1 l agar.

**Formulation:**

| | |
|---|---|
| Tryptone. | 10 g/l |
| Yeast extract. | 5 g/l |
| Sodium chloride (NaCl). | 5 g/l |
| Agar-Agar. | 15 g/l |
| pH value. | 7,0 ±0,2 |

| | | | |
|---|---|---|---|
| **X965.1** | 500 g | plastic | 72,60 € |
| Original pack 6 x 500 g | | | 68,97/500 g |
| **X965.2** | 1 kg | plastic | 138,70 € |
| Original pack 6 x 1 kg | | | 131,77/1 kg |
| **X965.3** | 2,5 kg | plastic | 317,15 € |

## LB Broth (Luria/Miller)

**for molecular biology**

Standard medium for propagation of *E. coli*. Due to the high salt content, this classical formulation acc. to Luria and Bertani is superior when culturing cells for plasmid preparation.
Application: Use 25 g for 1 l broth.

**Formulation:**

| | |
|---|---|
| Tryptone. | 10 g/l |
| Yeast extract. | 5 g/l |
| Sodium chloride (NaCl). | 10 g/l |
| pH value. | 7,0 ±0,2 |

| | | | |
|---|---|---|---|
| **X968.1** | 500 g | plastic | 52,15 € |
| Original pack 6 x 500 g | | | 49,54/500 g |

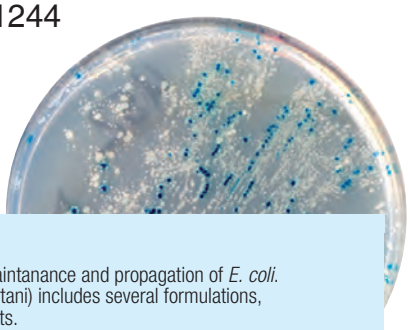
| **X968.3** | 2,5 kg | plastic | 209,65 € |
| **X968.4** | 5 kg BIG PACK | plastic | 378,40 € |

## LB Agar (Luria/Miller)

**for molecular biology**



Application: Use 40 g for 1 l agar.

**Formulation:**

| | |
|---|---|
| Tryptone. | 10 g/l |
| Yeast extract. | 5 g/l |
| Sodium chloride (NaCl). | 10 g/l |
| Agar-Agar. | 15 g/l |
| pH value. | 7,0 ±0,2 |

| | | | |

| Original pack 6 x 1 kg | | | 110,20/1 kg |
| **X969.3** | 2,5 kg | plastic | 258,00 € |

▶ IPTG see page 1244
▶ X-ß-Gal see page 1244

**LB-Broth**

LB-Broth is a standard medium for maintanance and propagation of *E. coli*. The LB-series of media (**L**uria and **B**ertani) includes several formulations, which differ mainly in their salt contents.

Typical LB-Broth formulations are: Luria, Luria-Bertani, LennoxL, LennoxLB, Luria/Miller. For plasmid propagation, salt concentrations between 5 and 10 g/l are recommended.

## NZCYM Broth

**for molecular biology**

A superior medium for increased yields of phage Lambda.
Application: Use 22 g for 1 l broth.

**Formulation:**

Casein, enzymatically digested. ..... 10 g/l
Yeast extract. ..... 5 g/l
Sodium chloride (NaCl). ..... 5 g/l
Casamino Acids. ..... 1 g/l
Magnesium sulphate ($MgSO_4$), anhydrous. ..... 0,98 g/l
pH value. ..... 7,0 ±0,2

| | | | |
|---|---|---|---|
| **X974.1** | 500 g | plastic | 59,05 € |
| Original pack 6 x 500 g | | | 56,10/500 g |

## NZYM Broth

**for molecular biology**

Designed for increased replication of phage Lambda.
Application: Use 21 g for 1 l broth.

**Formulation:**

Casein, enzymatically digested. ..... 10 g/l
Yeast extract. ..... 5 g/l
Sodium chloride (NaCl). ..... 5 g/l
Magnesium sulphate ($MgSO_4$), anhydrous. ..... 0,98 g/l
pH value. ..... 7,0 ±0,2

| | | | |
|---|---|---|---|
| **X973.1** | 500 g | plastic | 59,05 € |
| Original pack 6 x 500 g | | | 56,10/500 g |

**NZYM- and NZCYM Broth**

These media were designed for the propagation of **bacteriophage Lambda**.
In order to encourage multi phage insertion into the host cell, supplementation with 0.2 % maltose is recommended (prepare a 20 % solution and add 1 ml per 100 ml of medium), which promotes expression of LamB (lambda receptor).

If maltose is added, the medium should not be used to create phage stocks, as binding of phage particles to membrane fragments will occur because of increased LamB density.

## SOB Broth

**for molecular biology**

Enriched broth for propagation of *E. coli*, particularly suited for proliferation of competent cells after transformation.
May be enriched to SOC-medium with 20 mM glucose.
Application: Use 26,64 g for 1 l broth.

**Formulation:**

Tryptone. ..... 20 g/l
Yeast extract. ..... 5 g/l
Magnesium chloride. ..... 0,96 g/l
Sodium chloride (NaCl). ..... 0,5 g/l
Potassium chloride (KCl). ..... 0,186 g/l
pH value. ..... 7,0 ±0,2

| | | | |
|---|---|---|---|
| **AE27.1** | 500 g | plastic | 65,50 € |
| Original pack 6 x 500 g | | | 62,23/500 g |

**SOB**

**S**uper **O**ptimal **B**roth (SOB) is a complex, nutritious nutrient medium which is used prior to and after transformation of *E. coli* bacteria. By adding 20 mM glucose it is enriched to SOC (**S**uper **O**ptimal Broth with **C**atabolite repression) which is optimal for coddling up of freshly transformed bacteria. Through this, SOC increases transformation efficiency.
In order to avoid caramelisation, glucose may only be added after autoclaving.
Acc. to D. Hanahan (1983) *J. Mol. Biol.* 166/4:557-580

## Terrific Broth

**for molecular biology**

Terrific Broth is a nutricious medium for the culture and proliferation of *E. coli*. Compared to LB medium Terrific Broth supports higher cellular density, therefore increasing the yield during plasmid and protein preparations.
Application: Use 50,8 g for 1 l broth. Before autoclaving add 4 ml glycerol per litre medium.

**Formulation:**

Casein, enzymatically digested. ..... 12 g/l
Yeast extract. ..... 24 g/l
$K_2HPO_4$. ..... 12,54 g/l
$KH_2PO_4$. ..... 2,31 g/l
pH value. ..... 7,2 ±0,2

| | | | |
|---|---|---|---|
| **X972.1** | 500 g | plastic | 65,50 € |
| Original pack 6 x 500 g | | | 62,23/500 g |
| **X972.2** | 1 kg | plastic | 115,60 € |
| Original pack 6 x 1 kg | | | 109,82/1 kg |
| **X972.3** | 2,5 kg | plastic | 241,90 € |

## Terrific Broth modified

**for molecular biology**

Nutricious medium for the culture and proliferation of *E. coli*. Terrific Broth supports high cellular density and is recommended for use during cultivation of bacteria for plasmid isolation or *in vitro* protein expression.
**In the formulation of Terrific Broth modified, the phosphate content has been reduced, in order to prevent precipitation of insoluble salts during autoclaving.**
Application: Use 47,6 g for 1 l broth. Before autoclaving add 4 ml glycerol per litre medium.

**Formulation:**

Casein, enzymatically digested. ..... 12 g/l
Yeast extract. ..... 24 g/l
$K_2HPO_4$. ..... 9,4 g/l
$KH_2PO_4$. ..... 2,2 g/l
pH value. ..... 7,2 ±0,2

| | | | |
|---|---|---|---|
| **HP61.1** | 500 g | plastic | 61,20 € |
| Original pack 6 x 500 g | | | 58,14/500 g |
| **HP61.2** | 1 kg | plastic | 109,15 € |
| Original pack 6 x 1 kg | | | 103,69/1 kg |

**Terrific Broth**

Terrific Broth is a phosphate buffered, highly nutritious medium that is particularly used prior to plasmid isolation, in order to increase the yield. Compared with LB Broth, TB contains a nearly 5x elevated concentration of yeast extract, providing the required growth factors, vitamis and nucleotides. The phosphate buffer stabilises pH values. Hence, bacteria proliferate to high cell density, while lysation is slowed down.

The high phosphate concentration may lead to precipitation of insoluble magnesium- or calcium phosphates. After autoclaving, antibiotics, glycerine, dextrose etc. may be added for further enrichment of the broth.

## YPD Broth

**for molecular biology**

For maintenance and propagation of *S. cerevisiae*.
Application: Use 50 g for 1 l broth.

**Formulation:**

Peptone. ..... 20 g/l
Yeast extract. ..... 10 g/l
Glucose. ..... 20 g/l
pH value. ..... 6,5 ±0,2

| | | | |
|---|---|---|---|
| **X970.1** | 500 g | plastic | 60,10 € |
| Original pack 6 x 500 g | | | 57,10/500 g |
| **X970.2** | 1 kg | plastic | 104,85 € |
| Original pack 6 x 1 kg | | | 99,61/1 kg |
| **X970.3** | 2,5 kg | plastic | 233,85 € |

## YPD Agar

**for molecular biology**

Application: Use 65 g for 1 l agar.

**Formulation:**

Peptone. ..... 20 g/l
Yeast extract. ..... 10 g/l
Glucose. ..... 20 g/l
Agar-Agar. ..... 15 g/l
pH value. ..... 6,5 ±0,2

| | | | |
|---|---|---|---|
| **X971.1** | 500 g | plastic | 76,90 € |
| Original pack 6 x 500 g | | | 73,06/500 g |
| **X971.2** | 1 kg | plastic | 132,80 € |
| Original pack 6 x 1 kg | | | 126,16/1 kg |
| **X971.3** | 2,5 kg | plastic | 303,70 € |

**YPD Medium**

YPD is a rich medium for the maintenance and propagation of *S. cerevisiae*.
It is suitable if selections for auxotrophies are not intended.

Glucose is included as a carbon source.

Wild type strains of *S. cerevisiae* show a doubling time of approx. 90 min in YPD.

## 2xYT Broth

**for molecular biology**

A nutritious liquid medium formulated to promote the growth of host cells *(E. coli)*, thereby encouraging increased replication and yield from filamentous ssDNA bacteriophages (such as the M13 phage).
Application: Use 31 g for 1 l broth.

**Formulation:**

Tryptone. ..... 16 g/l
Yeast extract. ..... 10 g/l
Sodium chloride (NaCl). ..... 5 g/l
pH value. ..... 7,0 ±0,2

| | | | |
|---|---|---|---|
| **X966.1** | 500 g | plastic | 65,05 € |
| Original pack 6 x 500 g | | | 61,80/500 g |
| **X966.2** | 1 kg | plastic | 112,90 € |
| Original pack 6 x 1 kg | | | 107,26/1 kg |
| **X966.3** | 2,5 kg | plastic | 263,40 € |

## 2xYT Agar

**for molecular biology**

Application: Use 46 g for 1 l agar.

**Formulation:**

Tryptone. ..... 16 g/l
Yeast extract. ..... 10 g/l
Sodium chloride (NaCl). ..... 5 g/l
Agar. ..... 15 g/l
pH value. ..... 7,0 ±0,2

| | | | |
|---|---|---|---|
| **X967.1** | 500 g | plastic | 78,40 € |
| Original pack 6 x 500 g | | | 74,48/500 g |

**2x YT Media**

Very nutricious medium for proliferation of M13 and other filamentous phages in *E. coli*.
2x YT Medium (**Y**east extract / **T**ryptone) contains big amounts of vitamins, amino acids, nucleic acids and other base components, allowing phages to propagate without weakening the host bacterium.

This medium may also be used for proliferation of recombinant *E. coli*.

▶ Granulated Nutrient Media see page 1415

# Nutrient Media of vegetable origin

Storage temp.: +20 °C

animal-free

- Free from animal components
- Product origin statement available on request
- Free from TSE/BSE

## LB Broth (Lennox) vegetal

**for molecular biology, animal-free**

Standard formulation made from compounds of pure vegetable origin, used for propagation and culturing of *E. coli*. Low salt content for plasmid isolation. Supplemented with magnesium chloride also suitable for phage propagation.
Application: Use 20 g for 1 l broth.

**Formulation:**

Vegetable peptone . ..... 10 g/l
Yeast extract. ..... 5 g/l
Sodium chloride (NaCl). ..... 5 g/l
pH value. ..... 7,0 ±0,2

| | | | |
|---|---|---|---|

| **0161.1** | 500 g | plastic | 77,30 € |
| Original pack 6 x 500 g | | | 73,44/500 g |

# Basic Reagents for Nutrient Media

High-quality compounds are vital for rapid growth and efficient selection of microorganisms. Peptones in particular are an easily accessible source of carbohydrates as well as nitrogen and amino acids. Yeast extracts additionally are very rich in vitamins, growth factors, and nucleic acids. The most common basic reagents for nutrient media have been assembled here.

## Casein hydrolysate, bacteriological

**for biochemistry, acidic hydrolysate**

Casamino acids

Storage temp.: +20 °C

Manufactured by hydrolysation of casein by hydrochloric acid. Tryptophane-free. High-grade casein hydrolysate **with superior amino-nitrogen/total nitrogen ratio (AN/TN)**. Particularly suitable for sensitive assays and applications requiring high yields, like production of bacterial toxins or vaccines.

**Type analysis:**

Total nitrogen. ..... 7,0-8,5 %
pH value . ..... 4,5-6,0
Loss on drying. ..... <6 %
Ratio AN/TN. ..... 56-93 %

| | | | |
|---|---|---|---|
| **A157.3** | 250 g | plastic | 91,30 € |
| **A157.1** | 500 g | plastic | 139,25 € |

| **A157.2** | 1 kg | plastic | 249,95 € |
| Original pack 6 x 1 kg | | | 237,45/1 kg |

## Casein hydrolysate, standard

**for molecular biology, acidic hydrolysate**

Ingredient of molecular and microbiological nutrient media, vitamin-free.

Casamino acids

Storage temp.: +20 °C

Acidic hydrolysate of casein with low cystein and tryptophane content, free of vitamins. Excellent for the production of bacterial toxins and vaccins. **With standard amino-nitrogen/total nitrogen ratio (AN/TN).**

**Type analysis:**

Total nitrogen. ..... ≥5,0 %
Amino nitrogen. ..... ≥3,5 %
Ratio AN/TN. ..... ≥46 %
Ash content. ..... ≤45 %
pH value (2 % solution). ..... 6,5-7,5

| | | | |

## Yeast Extract

**powdered, for bacteriology**

Storage temp.: +20 °C

Water-soluble. Produced through aqueous extraction of autolysed brewer´s yeast. High content of vitamins. Ideal, therefore, in many standard nutrient media, e.g. LB-medium as for vitamins, carbohydrates, and amino acids.

**Guarantee analysis:**

Total nitrogen. ..... ≥8 %
Amino nitrogen. ..... 4,8-6,3 %
Ratio AN/TN. ..... 41-60

## Yeast Extract, micro-granulated

**micro-granulated, for bacteriology**

Storage temp.: +20 °C

Micro-granulated, water soluble extract of selected autolysed yeast cells. Easy to handle and dust-reduced.

**Fig.:** Close-up

Yeast extract is used as a rich source for vitamins, carbon and amino acids in many microbiological culture media formulations. Rich in B-vitamines and growth factors.

**Type analysis:**

Total nitrogen.....≥10 %
Amino nitrogen. .....≥4,5 %
Dry substance.....≥94 %
Ash. .....≤16 %
pH (2 % solution). .....6,8-7,2

## Heart infusion

**for microbiology**

Storage temp.: +20 °C

Heart Infusion is an especially formulated preparation of dried infusion from bovine hearts retaining all the nutritive and growth stimulating properties of fresh tissues. It is a typical ingredient of Blood Agar, Brain-Heart-Infus Media etc.

**Type analysis:**

Total nitrogen.....≥10 %
Amino nitrogen. .....≥3 %
Loss on drying. .....≤6 %
Ash. .....≤15 %
pH (2 % solution). .....6,5-7,5

In the early days of bacteriology, so-called **"infusions"** (tissue extraction) were used in microbiological media. As simply manufactured and non-standardised natural products, "infusion" have a relatively low batch-to-batch constancy and vary both in composition and in nutrient content. However, they are still commonly used in several classic media (Art. No. 7596).

## Starch, soluble

**soluble**

Oxidized corn starch

Important compound of many nutrient media for cultivation of fastidious microorganisms in general, and *Clostridia* in particular. Please solubilise the starch in very few cold water prior to addition to the medium.

| | | | | |
|---|---|---|---|---|

## Lactalbumin

**for microbiology**

Storage temp.: +20 °C

Lactalbumin is produced by enzymatic hydrolysis of milk whey. It consists of peptides, amino acids and carbohydrates, simple and complex.
It is used in media for culturing of bacterial cells (e.g. *lactobacilli*), for tissue culture, production of vaccines and in fermentation procedures.

**Type analysis:**

Total nitrogen.....≥10 %
Amino nitrogen. .....≥4,8 %
Loss on drying. .....≤6 %

## Malt extract, bacteriological

**powdered, for microbiology**

Additive to malt containing culture media and agars.

Storage temp.: +20 °C

High quality additive for nutrient media requiring a superior malt content. Optimally suited for bacteriological applications due to low pH value. Free of nitrite. Do not overheat!

**Type analysis:**

Colour. ..... beige

## Malt extract, standard

**powdered, for culture media**

Storage temp.: +20 °C

Powdered malt extract for standard applications.
Malt extract possesses a very large amount of carbohydrates. The medium, therefore, turns dark brown very quickly when overheated.

**Type analysis:**

Colour. ..... beige
Loss on drying. .....≤6,0 %
Reducing sugar. .....≥60,0 %
Ash. .....≤4,5 %

| Original pack 6 x 1 kg | | | | 57,71/1 kg |

**Sterilisation of media containing sugar**

Media containing sugar or **malt extract**, particularly those with a low pH, must be sterilised with care. We recommend autoclaving at up to 118 °C for a maximum of 15 min. Please observe the guidelines given in the instructions for use.

The reasons are as follows:

a) Heating sugar in combination with amino acids (from peptone, meat extract, yeast extract, or similar) can result in **toxic Maillard reaction products** which may interfere with proliferation of micro-organisms.

b) Inclusion of different sugar molecules and sugar degradation products will cause premature chain termination and inhibit chain cross-linking. The **gelability of agars containing sugar** will thereby be reduced.

The term **peptone** is used for all proteins digested by acid or enzymes. In addition, the source (e. g. 8986.1: Peptone ex Casein) and the digesting compound should be given (e. g. "tryptic"). Source of nitrogen and amino acids.

**Tryptone** is manufactured by digestion of casein with pancreas extract (pancreatic digest). Tryptone is rich in tryptophane, and an ideal source of nitrogen and amino acids used in a number of microbiological nutrient media (Art. No. 8952 and 6681).

**NZamine** also is manufactured by pancreatic digestion of casein. Being similar to tryptone it is often used as source of nitrogen and amino acids in nutrient media for bacterial growth in molecular biology (Art. No. CP76).

**Proteose peptone** is formed by hydrolytic cleavage of proteins from animal tissue, more complete that which occurs for peptones in general, but not strong enough to form single amino acids. Proteose peptone is rich for peptides with high molecular weight, beeing a high-grade component of microbiological nutrient media (Art. No. HP32).

**Casamino acids** originate from hydolysis of casein by acid. This compound is used as source of nitrogen and amino acids when completely hydrolysed protein is required, e. g. in proliferation assays or during production of vaccines and toxins (Art. No. AE41 and A157).

## NZamine

**for molecular biology**

Component of nutrition media for molecular biological assays, particularly LB Broth.

Storage temp.: +20 °C

Highly nutritive peptone, produced by pancreatic digest of Casein under distinct conditions. Best source of nitrogen and amino acids in nutrient media for molecular biological assays, particularly broth acc. to Luria/Bertani (LB).

**Guarantee analysis:**

## Ox Bile, bacteriological

**for microbiology**

Storage temp.: +20 °C

Ox Bile is produced by a low dehydration process of bovine liver. It is a mixture of free and conjugated bile salts. It works as a selective agent for bile-tolerant microorganisms in culture media; gram positive bacteria are inhibited.

**Type analysis:**

## Peptone ex gelatin

**pancreatic digest, for microbiology**

Storage temp.: +20 °C

Peptone produced from porcine skin by digestion with pancreatic extract. Gelatin pepton is low in fermentable carbohydrates, and is used in culture media especially for non-fastidious microorganisms and for fermentation studies.

**Type analysis:**

Total nitrogen.....≥10 %
Amino nitrogen. .....≥2,7 %

## Peptone ex meat

**peptic digest, for microbiology**

Storage temp.: +20 °C

Extremely high-grade peptone, particularly nutritive. Peptone from meat is gained from animal tissue by peptic digestion. It is used as a biological nutrient for tissue cultures, fermentations and for the production of vaccines.

**Type analysis:**

## Peptone ex soya

**papainic digest, for microbiology**

Storage temp.: +20 °C

Particularly broad nutrient spectrum and high content of carbohydrates and vitamins. Peptone from soya beans is gained from papainic digestion of soya bean flour and used for culture media, for fermentation and for the production of vaccines.

**Type analysis:**

Total nitrogen.....≥9,0 %
Amino nitrogen. .....≥2,5 %

## Peptone ex soya (animal-free/GMO-free)

**animal-free and GMO-free, papainic digest, for microbiology**

Storage temp.: +20 °C

Soya peptone (animal-free/GMO-free) is extracted by papainic digestion from soybean flour from non-genetically modified plants. Moreover, strict production guidelines guarantee that it is free from all animal substances, even TSE/BSE. Peptone ex soja (animal-free/GVO-free) complies with EG regulations 1829/2003 and 1830/2003. The corresponding certificates are available upon request.
Peptone ex soya is particularly characterized by its broad nutrient spectrum and high vitamin content. It is suitable for application in microbiology, tissue culture and fermentation.

## Polypeptone

**for microbiology**

Storage temp.: +20 °C

Specially designed mixture of casein peptone and meat peptone. Polypeptone may be used as a rich source for vitamins, carbon and amino acids in many microbiological culture media formulations. For several microorganisms it is known to stimulate proliferation better than the individual petones.

**Type analysis:**

Total nitrogen.....≥10 %

## Proteose Peptone

**for microbiology**

Rich component of microbiological nutrition media, particularly used for production of toxins and vaccines. From enzymatic digestion of animal tissue.

Storage temp.: +20 °C

Highly nutritious source for the growth of a wide range of fastidious micro-organisms or when bacteria have to be well fed. Best suited for the production of vaccines, antibiotics, and other substances like enzymes, ideal for starter cultures and well usable for bacterial stocks. Proteose peptone has been used for, e.g., the production of Diphteria toxin, *Pneumococcus* toxin and the toxins from *Clostridium botulinum* and *Cl. perfringens*, as well as for culture of *Neisseria, Haemophilus, Salmonella, Corynebacterium* and *Staphylococcus*.

## Peptone ex pea

**for microbiology**

NEW

Storage temp.: +20 °C

The nitrogen-rich peptone from peas is produced by the enzymatic hydrolysis from non-genetically modified plants. As an alternative to soy peptone, it is used in media for fastidious microorganisms in industry, in cell culture or in microbiological analysis.

**Type analysis:**

Total nitrogen.....≥12 %

**Agar types**

The designation Agar **Kobe I** derives from the geographical origin of the agar, which is the Japanese city of Kobe on the main island of Honshu. In former times, when agar was still traded in strips, threads or squares, agar was graded into three main quality groups:

**Kobe I** - top quality, pure white
**Korea I** - slightly inferior quality, slightly yellowish to light beige
**China** - inferior quality, yellow-beige

These terms and the associated differences in quality are now obsolete - for some time now, agar of consistent quality has been available from all parts of Asia. However, for reasons unknown, the designation Kobe I is used today to describe ground agar of very high quality which is used as a microbiological standard agar.

**BioScience Agar** forms clear gels and is of high purity without any residues that could hinder growth of transformed - and therefore stressed - GMOs. Hence, it is particularly recommended for production of agar plates for bioengeneering. **BioScience Agar** is used as gelating agent in our *Anhydrous Nutrient Media for Molecular Biology*.

In addition, the designation **bacteriological agar** has become an established definition for ultra-pure agar, which represents a preliminary stage of purified agarose and is manufactured for special microbiological applications.

**Danish agar**, also known as Furcelleran, is a saccharide-enriched **carrageenan** extracted from the red algae *Furcellaria fastgiata*.

▶ Self-adhesive labels for Petri dishes, see page 1437

Please note our **Technical Information Brochure** on the Internet next to the products:

**Why Doesn't My Agar Gel?**
Basics, tips & tricks

## Agar-Agar, BioScience

**BioScience-Grade, powdered**

Agar of high purity for all culture media used in molecular- and microbiology. Recommended for plating in genetic engineering (GMOs).
Storage temp.: +20 °C
Highly pure Agar-Agar, essentially free of impurities that could hinder bacterial growth. Forms very clear gels.
Particularly recommended for preparation of culture plates used for plating of recombinant bacteria (GMOs) during genetic engineering.

**Guarantee analysis:**

Water content. ..... ≤10 %
Ash. ..... ≤4,5 %
Gel strength (1,5 % Nikan). ..... 800-1100 g/cm²

## Agar-Agar, BioScience, granulated

**BioScience-Grade, granulated**

Agar of high purity for all culture media used in molecular- and microbiology. Recommended for plating in genetic engineering (GMOs).
Storage temp.: +20 °C
Granulated, dust-minimized Agar-Agar.
Essentially free of impurities that could hinder bacterial growth.
Forming very clear gels.
Particularly recommended for preparation of culture plates used for plating of recombinant bacteria (GMOs) during genetic engineering.

**Guarantee analysis:**

## Agar-Agar, bacteriological

**for bacteriology, extremely pure quality**

Ideal for immunodiffusion and electrophoresis and as a medium for tissue and cell cultures, bacteriology and mycology.

Storage temp.: +20 °C

Qualitatively high-grade Agar which is clearly superior to bacteriological Agar in its purity. Forms very clear gels.
Essentially free of impurities that could interfere with other products in culture media formulation. Free of bacterial inhibitors.
Recommended in media to be used for the determination of susceptibility of microorganisms to antibiotics or drugs.

**Guarantee analysis:**

## Agar-Agar, plant

**Genetic engineering quality, for plants**

For plant propagation and plant cell culture.

Storage temp.: +20 °C

High-pure agar recommended for propagation of ornamental and economic plant species, as for *in vitro* genetic engineering in plant research and commercial applications. The high gel strength of the agar allows usage at low concentrations of about 0.5 %. Forms very clear and transparent gels.

**Guarantee analysis:**

| | |
|---|---|
| Water content | <18 % |
| Ash | 3,0 ±0,5 % |
| Gel strength (1,5 % Nikan) | ≥1000 g/cm² |

| **4807.3** | 1 kg | plastic | 231,15 € |
| Original pack 6 x 1 kg | | | 219,59/1 kg |
| **4807.4** | 2,5 kg | plastic | 493,45 € |

**Instructions:**

**Culture-Plates:** 15 g/l medium;

approx. 30-35 ml medium is required for a 90 mm culture plate.

**Top-Agar:** 7 g/l medium.

The solution should be autoclaved for 20 min and the preparation carefully swayed to distribute the agar evenly. Cool the agar down to 50 °C before adding the antibiotic. Sway the agar solution again before casting the plates.

Any air bubbles on the surface of the culture plates can be removed with a bunsen burner flame. Once the agar has hardened, the plates should be stored top-down at 4 °C.

# Carrageenans

Carrageenans are agar-related hydrocolloids consisting of esters of galactose and anhydro-galactose polysaccarides and forming particularly clear gels. In order to polymerise, carrageenans require cations, while gel strength may be altered by addition of $MgCl_2$ or KCl.

## Agar-Agar, danish

**Standardised Carrageenan mixture, sugar-containing, powdered**

Mixture of highly pured Carrageen extracts. For gelling of watery liquids like, e.g. media for cultivation of plants, and for special microbiological applications. Saccharated.

Storage temp.: +20 °C

Each lot of this Carrageenan mixture is standardised with sugars and KCl to the gel strength noted in the type analysis. Being extracts from natural products, the properties (e.g. gelling behaviour, salt content) may vary from lot to lot. Further information on analysis data see Chemicals A-Z.

**Type analysis:**

| | |
|---|---|
| Appearance | cream-coloured powder |
| Moisture | <12 % |
| Sulphate (as $SO_4$, dry substance) | 15-40 % |
| Gel strength (1,5 % sol.) | ~400-500 g/cm² |
| Viscosity (1,5 % sol., 75 °C) | ≥0,005 Pas |
| pH value (1,5 % sol.) | 7,0-10,5 |
| Arsenic (As) | ≤0,0003 % |
| Lead (Pb) | ≤0,0005 % |
| Cadmium (Cd) | ≤0,0002 % |
| Mercury (Hg) | ≤0,0001 % |

| Original pack 6 x 1 kg | | | 69,97/1 kg |
| **4508.2** | 5 kg BIG PACK | plastic | 317,15 € |

**Please Note:**

Being extracts from natural products, the properties (e.g. gelling behaviour, salt content) may vary from lot to lot. Further information on analysis data see Chemicals A-Z.

## Carrageenan, kappa

**acc. to FAO/WHO, EEC, FCC, highly pure**

Strongly gelling Carrageenan of kappa type. Forms gels of high gel strength. For gelling of watery liquids like e.g. culture media for plants or animals. Manufactured from cultured and controlled sea weeds.

Carrageenan E407

Carrageenans are agar-related hydrocolloids consisting of esters of galactose and anhydro-galactose polysaccarides. Kappa Carrageenan is obtained by alkaline extraction from red algae (*Rhodophyceae*) of the order *Gigartinales*, purified by filtration and recovered by KCl precipitation. In ionic solutions, heat-solubilized kappa Carrageenan self-assembles into helical structures and gels during cooling, the gel parameters depending on the ions present: Potassium ions form rigid gels, calcium gels are strong but more flexibel. Being an extract from natural products, the properties (e.g. gelling behaviour, salt content) may vary from lot to lot.

**Guarantee analysis:**

| | |
|---|---|
| Appearance | white-pale tan |
| Gel strength (1,5 %, aqueous) | 1200-1800 g/cm² |

## Carrageenan, iota

**acc. to FAO/WHO, EEC, FCC, highly pure**

Weakly gelating Carrageenan of iota type. Forms soft gels. For gelling of watery liquids like culture media for plants or animals in general, and for gelling of dairy products in particular. Manufactured from cultured and controlled sea weeds.

Carrageenan E407

Carrageenans are agar-related hydrocolloids consisting of esters of galactose and anhydrogalactose polysaccarides. Iota Carrageenan is obtained by alkaline extraction from red algae (*Rhodophyceae*) of the order *Gigartinales*, purified by filtration and recovered by alcoholic precipitation. In solutions containing calcium ions, heat-solubilised iota Carrageenan self-assembles into helical structures and gels during cooling.
Being an extract from natural products, the properties (e.g. gelling behaviour, salt content) may vary from lot to lot.

**Guarantee analysis:**

| | |
|---|---|
| Appearance | white-pale tan |
| Viscosity (in milk) | 2000-3500 mPa s |
| Particle size (98 %) | <0,149 mm |
| Loss on drying | <12 % |

## GELRITE®

**Gelling agent for microbiological culture media**

Alternative to Agar

Storage temp.: +20 °C

GELRITE® is a highly-purified, natural heteropolysaccharide which forms stable, agar-like gels when exposed to soluble salts. Compared to agar however, only about half the amount is required.
GELRITE® has been specially developed as a gelling agent for microbiological culture media. It can however, replace agar in other applications, too. Polymerisation of GELRITE® is enhanced in the presence of (bivalent) kations. It is therefore supplemented by $MgCl_2$ if a solid gel structure is required. Elevated salt concentrations increase gelling temperature (e.g. 500 mM $Na^+$ to approx. 68 °C with 1 % GELRITE®). When using very high salt concentrations like e.g. seawater, gelling capacity may be significantly reduced.

**Chemical composition:**
Linear polysaccharide comprising of O-acetylate glycuronic acid, glucose and rhamnose units.

**Advantages of GELRITE® compared to Agar:**

- consistent product quality, almost 100 % batch-to-batch conformity
- forms remarkably clear gels
- reduces preparation time as gels form faster
- remains stable even at high temperatures and is therefore also ideal for thermophilic microorganisms; gels can withstand repeated autoclaving without any changes to gel strength
- indicates no toxic contaminations (e.g. through phenols, as found in agar)
- is chemically inert against most media additives
- is resistant to enzymatic degradation
- is non-toxic (no signs of toxicity in rats exposed to a dose of 5.000 mg/kg)
- is very economical to use

**Type analysis:**

| | |
|---|---|
| Gel strength | 400-700 g/cm² |
| Loss on drying | ≤15,0 % |

| | | | |
|---|---|---|---|
| **0039.1** | 500 g | plastic | 256,95 € |
| Original pack 6 x 500 g | | | 244,10/500 g |
| **0039.2** | 1 kg | plastic | 418,20 € |
| Original pack 6 x 1 kg | | | 397,29/1 kg |

**Media preparation with GELRITE®**

Dissolve the corresponding amounts of media additive, GELRITE® and $MgCl_2 \cdot 6\ H_2O$ in 1 litre of distilled water.
Autoclave mixture for 15 min at +120 °C.
Cool to 60 °C and pour the medium into Petri dishes.

**Examples:**

| Medium | GELRITE® | $MgCl_2 \cdot 6\ H_2O$ |
|---|---|---|
| Bismuth sulphite | 10.0 g/l | 0.75 g/l |
| Brillant green | 9.0 g/l | 0.75 g/l |
| Eosin methylene blue | 7.5 g/l | 0.75 g/l |
| Triple Iron Sugar | 6.0 g/l | 0.75 g/l |
| MacConkey | 7.0 g/l | 0.75 g/l |
| Nutrient broth | 8.0 g/l | 0.75 g/l |
| Plant agar | 2.0 g/l | - |
| Salmonella Shigella | 5.5 g/l | - |
| Seawater (High Salt solution) | not recommended | - |

# Antibiotics/Antimycotics

Reliable quality for microbiology, molecular biology and cell culture.

Denoted concentrations of working solutions are guiding values and have to be established for each application and cell type.

## Actinomycin D

**≥95 %, for biochemistry**

Peptide antibiotic. Pure actinomycin $C_1$.

Actinomycin IV, Actinomycin $C_1$, Dactinomycin

$C_{62}H_{86}N_{12}O_{16}$ • M 1255,5 g/mol • Storage temp.: +4 °C

**Danger** H300

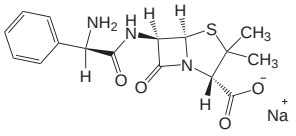
Specific inhibitor of DNA-dependent RNA-synthesis. Inhibition is caused byintercalation in dsDNA and, therefore, is not specific for procaryotic cells. Standard application is the preparation of cDNA. Actinomycin D is cytostatic, toxic and sensitive to light. Stock solution should be kept in a bottle covered with foil.
**Stock solution** 10 mg/ml in DMSO or methanol.
Storage of stock solution: -20 °C
Working concentration: 50 µg/ml

| | | | |
|---|---|---|---|
| **8969.1** | 5 mg | glass | 77,95 € |

## Amphotericin B

**≥850 I.U./mg, for biochemistry**

Broad-range fungicide, polyene.



Fungizon

$C_{47}H_{73}NO_{17}$ • M 924,10 g/mol • Storage temp.: +4 °C

**Warning** H315-H319-H335

Alteration of cell membrane permeability by attachment to sterols. High concentration causes pore formation in cell membranes in general.
Amphotericin A: ≤0,4 %
**Stock solution:** 40 mg/ml in DMSO
Storage of stock solution: -20 °C
Working concentration: ≥3 µg/ml

| | | | |
|---|---|---|---|
| **0246.1** | 50 mg | glass | 21,40 € |
| **0246.2** | 250 mg | glass | 68,30 € |
| **0246.3** | 500 mg | glass | 123,65 € |

## Ampicillin

**CELLPURE® ≥91 %**

β-lactam antibiotic. Semi synthetic penicillin.
For cell culture and biochemistry.

D-α-Aminobenzylpenicillin sodium salt

$C_{16}H_{18}N_3NaO_4S$ • M 371,39 g/mol • Storage temp.: +4 °C

**Danger** H334-H317

Inhibits cell wall biosynthesis in growing bacteria.
**Endotoxins: <0.15 E.U./mg**
**Stock solution:** 50 mg/ml in $H_2O$
Storage of stock solution: -20 °C, aliquoted
Working concentration in LB-plates or media: 50-100 µg/ml.
**Important:**
Solubilised ampicillin loses approx. 65 % activity after 7 days at +4 °C

| | | | |
|---|---|---|---|
| **HP62.1** | 10 g | plastic | 45,70 € |
| **HP62.2** | 50 g | plastic | 168,70 € |

## Ampicillin

**≥97 %, BioScience-Grade, for molecular biology and biochemistry**

β-lactam antibiotic. Semi synthetic penicillin.

D-α-Aminobenzylpenicillin sodium salt

$C_{16}H_{18}N_3NaO_4S$ • M 371,39 g/mol • Storage temp.: +4 °C

**Danger** H334-H317

Inhibits cell wall biosynthesis in growing bacteria.
**Stock solution:** 50 mg/ml in $H_2O$
Storage of stock solution: -20 °C, aliquoted
Working concentration in LB-plates or media: 50-100 µg/ml.
**Important:**
Solubilised ampicillin loses approx. 65 % activity after 7 days at +4 °C

| | | | |
|---|---|---|---|
| **K029.1** | 10 g | plastic | 22,50 € |
| **K029.4** | 25 g | plastic | 42,50 € |

| **K029.3** | 250 g BIG PACK | plastic | 267,70 € |

▶ IPTG and X-ß-Gal see chapter Life Science - Molecular Biology page 1244

## Bacitracin

**≥60 IU/mg, Ph.Eur., for biochemistry**

Peptide antibiotic and protease inhibitor.

$C_{66}H_{103}N_{17}O_{16}S$ • M 1422,72 g/mol • Storage temp.: +4 °C

Inhibits cell wall biosynthesis in gram-positive bacteria and *Neisseria* by interaction with murein biosynthesis.
Also used as protease-inhibitor for inhibition of the gluthatione-insuline-transhydrogenase or some endopeptidases.

**Application:**
Stock solution: 100-1000 mg/ml in $H_2O$ or ethanol
Storage of stock solution at -20 °C
Working concentration: 0.1-1 mg/ml (0.07-0.7 mM)
Bacitracin is very stable in a pH range of 4-5, but is rapidly inactivated in pH of over 5 at room temperature.
Do not use at a pH of over 8.

| | | | |
|---|---|---|---|
| **5655.1** | 5 g | glass | 53,25 € |
| **5655.2** | 25 g | plastic | 220,40 € |

## Blasticidin

**≥98 %, for biochemistry**

Nucleoside antibiotic, Blasticidin S hydrochloride

$C_{17}H_{26}N_8O_5 \cdot HCl$ • M 458,90 g/mol • Storage temp.: +4 °C

**Danger** H300

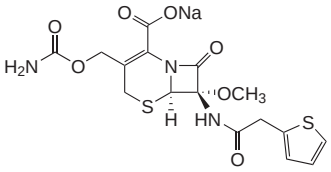
Inhibits protein biosynthesis in pro- and eukaryotes by blocking of formation of peptide bonds. Selection marker for cells transfected with *brs* or *BSD* resistance genes.
**Stock solution:** 50 mg/ml in $H_2O$, PBS or HEPES
Storage of stock solution at -20 °C.
Working concentration: 3-100 µg/ml

| | | | |
|---|---|---|---|
| **CP14.1** | 10 mg | plastic | 69,35 € |
| **CP14.2** | 25 mg | plastic | 138,70 € |

## Carbenicillin

**≥88 %, for biochemistry**

β-lactam antibiotic, semi synthetic penicillin



α-Carboxybenzyl penicillin disodium salt

$C_{17}H_{16}N_2O_6SNa_2 \cdot HCl$ • M 422,4 g/mol • Storage temp.: +4 °C

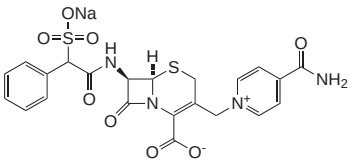
**Danger** H334-H317

Carbenicillin inhibits cell wall biosynthesis in bacteria. Compared to ampicilline, carbenicillin is more resistant to hydrolysis by β-lactamase.
**Stock solution:** 50 mg/ml in 50 % ethanol / 50 % water
Working concentration: 20-60 µg/ml

| | | | |
|---|---|---|---|
| **6344.1** | 1 g | glass | 28,50 € |
| **6344.2** | 5 g | plastic | 65,05 € |
| **6344.3** | 25 g | plastic | 295,65 € |

## Cefoxitin

**≥98 %, for biochemistry**



Cephalosporin-antibiotic, Cefoxitin sodium salt

$C_{16}H_{16}N_3NaO_7S_2 \cdot HCl$ • M 449,43 g/mol • Storage temp.: +4 °C

**Danger** H334-H335-H315-H319-H317

Semi-synthetic second generation cephalosporin derivate. Cefoxitin interferes with peptidoglycan layer composition during cell wall synthesis and is effective against a broad spectrum of gram-positive bacteria. Its effectivity against gram-negative bacteria is lower. Also active against anaerobic bacteria. Zone of inhibition analysis with Cefoxitin is used to detect methicilin resistance. Stable against cleavage by β-lactamase. Sensitive to light and temperature!
**Stock solution:** 100 mg/ml in water
Store stock solution in the dark at -20 °C (durability 30 weeks)
Working concentration: 2-100 µg/ml

| | | | |
|---|---|---|---|
| **4156.1** | 250 mg | glass | 52,15 € |
| **4156.2** | 500 mg | glass | 84,40 € |

## Cefsulodin

**≥97 %, for biochemistry**

Cephalosporin-antibiotic, Cefsulodin sodium salt

Cefomonil, Pseudocef

$C_{22}H_{19}N_4O_8S_2Na$ • M 554,53 g/mol

Storage temp.: -20 °C • Transport temp.: room temp.

**Danger** H334-H335-H315-H319-H317

Semi-synthetic third generation cephalosporin derivate. Cefsulodin interferes with peptidoglycan layer composition during cell wall synthesis and is effective against a broad spectrum of gram-positive and gram-negative bacteria. Also active against anaerobes. Stable against cleavage by β-lactamase. Sensitive to light and temperature!
**Stock solution:** 20 mg/ml in water
Store stock solution in the dark at -20 °C
Working concentration: 2-20 µg/ml

| | | | |
|---|---|---|---|
| **4014.1** | 100 mg | glass | 52,15 € |
| **4014.2** | 250 mg | glass | 91,30 € |

## Chloroamphenicol

**≥98,5 %, Ph.Eur., for biochemistry**

Bacteriostatic antibiotic

Chloromycetin

$C_{11}H_{12}Cl_2N_2O_5$ • M 323,15 g/mol • Storage temp.: +20 °C

**Warning** H351-H361d

Broad application range against gram-negative and gram-positive bacteria. Bacteriostatic effect by inhibiting bacterial protein biosynthesis. Light-sensitive. Store in the dark!
**Stock solution:** 34 mg/ml in ethanol
Storage of stock solution at -20 °C in the dark
Working concentration:
For plasmid amplification: 170 µg/ml
For selection of resistant bacteria: 10-30 µg/ml
For culture plates: 10-30 µg/ml (storage at +4 °C for 1-5 days)

| | | | | |
|---|---|---|---|---|
| **3886.2** | 25 g | | plastic | 19,25 € |
| **3886.1** | 50 g | | plastic | 32,15 € |
| **3886.3** | 100 g | BIG PACK | plastic | 52,60 € |

## Colistin

**≥19000 IU/mg, for biochemistry**

Bacteriostatic antibiotic, peptide antibiotic

Polymyxin $E_1$-disulphate, Colinsulphate

$C_{45}H_{85}N_{13}O_{10} \cdot H_2SO_4$ • M 1066,32 g/mol • Storage temp.: +4 °C

**Danger** H301

Effectual against proliferating and non-proliferating gram-negative bacteria. Coupling to bacterial lipopolysaccharides results in permeabilisation of cell membranes.
**Stock solution:** 1-10 mg/ml in $H_2O$
Storage of stock solution: -20 °C
Working concentration: 2-200 µg/ml

| | | | |
|---|---|---|---|
| **CN31.1** | 100 mg | glass | 25,30 € |
| **CN31.2** | 250 mg | glass | 50,45 € |
| **CN31.3** | 1 g | glass | 77,95 € |

## Cycloheximide

**≥98 %, for biochemistry**

Glutarimid antibiotiotic, fungicidal

Naramycin A, Actidione

$C_{15}H_{23}NO_4$ • M 281,36 g/mol • Storage temp.: +4°C

**Danger** H300-H360D-H341-H411

Antibiotic isolated from *Streptomyces griseus*. Its main biological activity is translation inhibition in eukaryotes by binding to the 60S subunit of the ribosomes. Cycloheximide inhibits binding of Aminoacyl-tRNA to the ribosomes, Peptidyltransferase, detachment of deacylated tRNA, and translocation of Aminoacyl-tRNA, resulting in cell growth arrest and apoptotic cell death. Not effective against bacteria.
Cycloheximide is widely used for selection of cycloheximide-resistant strains of yeast and fungi, for inhibition of eukaryotic contaminants in bacterial microbiology, for controlled inhibition of protein synthesis in cell culture and for detection of short-lived proteins, and for apoptosis induction or facilitation of apoptosis induction by death receptors.
**Stock solution:** 10 mg/ml in $H_2O$ or acetone
Storage of stock solution at -20 °C
Working concentration: 1-10 µg/ml
**Note:** Inactivated at basic pH values. Heat- and acid stabile.
No inactivation after 15 mins. 95 °C in pH 7.0.

| | | | |
|---|---|---|---|
| **8682.1** | 1 g | glass | 38,20 € |
| **8682.3** | 5 g | glass | 149,45 € |
| **8682.4** | 10 g | glass | 256,95 € |

▶ More physical and chemical details on antibiotics see chapter Chemicals A-Z.

## D-Cycloserine

**≥90 %, for biochemistry**

Bacteriostatic antibiotic

Oxamycin, D-4-Amino-3-isoxazolidinone

$C_3H_6N_2O_2$ • M 102,09 g/mol • Storage temp.: +4 °C

Bacteriostatic against gram negative and gram positive bacteria and some protozoans by inhibition of synthesis of the cell wall.
**Stock solution:** 10-100 mg/ml in $H_2O$ and 96 % ethanol
Stability of stock solution: Neutral or acidic solutions are unstable. Sodium carbonate buffered solutions (pH 10) may be stored at +4 °C for approx. 7 days without loosing activity.
Recommended storage of stock solution at -20 °C (6 months).
Working concentration: 20-100 µg/ml
**Note:** Optimum of activity at pH 6.4-7.4.
It is recommended to prepare fresh solutions each time for use.

| | | | |
|---|---|---|---|
| **CN37.1** | 1 g | glass | 24,65 € |
| **CN37.2** | 5 g | plastic | 53,65 € |
| **CN37.3** | 10 g | plastic | 100,55 € |

## Erythromycin

**≥93 %, for biochemistry**

Macrolide antibiotic

$C_{37}H_{67}NO_{13}$ • M 733,95 g/mol • Storage temp.: +4 °C

Erythromycin is a macrolide antibiotic (macrocyclic lactone antibiotic) which is produced from an actinomycete strain (*Saccharopolyspora erythraea*, formerly known as *Streptomyces erythraeus*). Its spectrum of activity is similar to but broader than that of penicillin, which means that erythromycin is also very effective against bacteria such as legionella or mycoplasma. Erythromycin binds to the bacterial 70s rRNA, interferes with the aminoacyl translocation and consequently inhibits biosynthesis. It is used in microbiological fungal culture to prevent bacterial growth and as a selection marker for selection on bacteria with an erythromycin resistance-mediating gene cassette (*erm*).
**Stock solution:** 10 mg/ml in ethanol
Store stock solution at -20 °C (2 months)
Working concentration: 0.1-5 µg/ml
pH-optimum at 8.5. Only stable for approx. 24 hours at pH-range 7 to 7.5. Extremely unstable below pH 6.0

| | | | |
|---|---|---|---|
| **4166.1** | 5 g | glass | 28,95 € |
| **4166.2** | 10 g | glass | 47,20 € |

## Geldanamycin

**≥98 %, for biochemistry**

HSP90 inhibitor, tyrosin kinase inhibitor. Benzoquinone ansamycin antibiotic. Binds specifically to the heat shock protein HSP90.

$C_{29}H_{40}N_2O_9$ • M 560,64 g/mol

Storage temp.: -20 °C • Transport temp.: room temp.

The specific binding of geldanamycin to heat shock protein 90 (HSP90) and its ER homologue GP96 leads to inhibition of the chaperone, results in degradation of Hsp90 substrates and, subsequently, to deregulation of central cell mechanisms - cell cycle, cell proliferation, apoptosis/cell vitality. Geldanamycin arrests cells in $G_2$ phase, thus interfering with angiogenesis and oncogenesis. Due to its antitumor potential it may be used as antibiotic against several eucaryotic carcinogenic cell lines. Additionally, geldanamycin is used as inhibitor of tyrosin-kinase and during analysis of several other physiological regulatory mechanisms.

**Application:**
Stock solution: 1000x in DMSO or methanol
Storage of stock solution at -20 °C, max. 2 weeks at 4 °C
Working concentration: 1-10 µg/ml
Photo sensitive! Store protected from light.

| | | | |
|---|---|---|---|
| **HN71.1** | 1 mg | glass | 67,20 € |
| **HN71.2** | 5 mg | glass | 166,10 € |
| **HN71.3** | 10 mg | glass | 238,15 € |

## Geneticin (G418 Sulphate)

**≥650 U/mg, for biochemistry**

Aminoglycoside antibiotic

Antibiotic G418, Geneticin disulphate, G418 sulphate

$C_{20}H_{40}N_4O_{10} \cdot 2\ H_2SO_4$ • M 692,70 g/mol • Storage temp.: +4 °C

**Danger** H334-H317

Inhibits protein biosynthesis by binding to ribosomes, particularly to eukaryotic 80S ribosomes. Through interference with the tRNA docking process, sequence errors appear and the elongating peptide chain is truncated. Geneticin disulphate unspecifically effects all cells, and is highly toxic for eukaryotic cells. Resistance is mediated by the bacterial enzyme aminoglycoside-3-phosphotransferase.
Application: Selection of transfected eukaryotic cells
Resistance gene: *Neomycin*
**Stock solution:** 10-50 mg/ml in $H_2O$ or culture medium
Storage of stock solution: -20 °C
Working concentration: 50-1000 µg/ml, has to be established for each cell type

| | | | |
|---|---|---|---|
| **0239.1** | 250 mg | glass | 35,40 € |
| **0239.2** | 500 mg | glass | 46,15 € |

| **0239.4** | 10 g | glass | 596,65 € |

## Geneticin (G418)-solution

ready-to-use S

**CELLPURE® 50 mg/ml, steril**

Aminoglycoside antibiotic. For cell culture, biochemistry and molecular biology.

Aqueous G418 sulphate solution, G418 solution

$C_{20}H_{40}N_4O_{10} \cdot 2\ H_2SO_4$ • M 692,70 g/mol • Storage temp.: +4 °C

**Danger** H334-H317

Inhibits protein biosynthesis by binding to ribosomes, particularly to eukaryotic 80S ribosomes. Through interference with the tRNA docking process, sequence errors appear and the elongating peptide chain is truncated. Geneticin disulphate unspecifically effects all cells, and is highly toxic for eukaryotic cells. Resistance is mediated by the bacterial enzyme aminoglycoside-3-phosphotransferase.
Application: Selection of transfected eukaryotic cells
Resistance gene: *Neomycin*
**Endotoxins: <10 E.U./ml**
Stock solution, specifically suitable for cell culturing
Working concentration: 50-1000 µg/ml, has to be determined for each cell type.

| | | | |

## Geneticin (G418)-solution

**50 mg/ml, BioScience-Grade, sterile**

Aminoglycoside antibiotic. For cell culture, biochemistry and molecular biology.

Aqueous G418 sulphate solution, G418 solution, Geneticin disulphate (G418)-solution

$C_{20}H_{40}N_4O_{10} \cdot 2\ H_2SO_4$ • M 692,70 g/mol • Storage temp.: +4 °C

**Danger** H334-H317

Inhibits protein biosynthesis by binding to ribosomes, particularly to eukaryotic 80S ribosomes. Through interference with the tRNA docking process, sequence errors appear and the elongating peptide chain is truncated. Geneticin disulphate unspecifically effects all cells, and is highly toxic for eukaryotic cells. Resistance is mediated by the bacterial enzyme aminoglycoside-3-phosphotransferase.
Application: Selection of transfected eukaryotic cells
Resistance gene: *neomycin*.
**Sterile stock solution,** suitable for cell culturing, as well as for biochemical and biomolecular assays.
Extracted from *Micromonospora rhodorangea*.
Working concentration: 50-1000 µg/ml, has to be determined for each cell type.

| | | | |

## Gentamycin

**≥590 I.U./mg, for biochemistry**

Aminoglycoside antibiotic

Gentamicin sulphate

$C_{19\text{-}21}H_{39\text{-}43}N_5O_7 \cdot 2{,}5\ H_2SO_4$ • M 694,75-723,75 g/mol • Storage temp.: +4 °C

**Danger** H334-H317

Inhibits protein biosynthesis through binding to ribosomal 50S subunits. Effectual against gram-positive and -negative bacteria.
**Stock solution:** 10-20 mg/ml in $H_2O$ or formamide.
Storage of stock solution: -20 °C.
Working concentration: 15-50 µg/ml.
Extracted from *Micromonospora purpurea*.

| | | | |
|---|---|---|---|
| **0233.1** | 1 g | glass | 11,00 € |

| **0233.4** | 25 g | glass | 62,25 € |

## Gentamycin solution

**CELLPURE® 50 mg/ml, sterile**

Aminoglycoside antibiotic. For cell culture and biochemistry.

Aqueous gentamycin sulphate solution

$C_{19\text{-}21}H_{39\text{-}43}N_5O_7 \cdot 2{,}5\ H_2SO_4$ • M 694,75-723,75 g/mol • Storage temp.: +4 °C

**Danger** H334-H317

Inhibits protein biosynthesis through binding to ribosomal 50S subunits. Effectual against gram-positive and -negative bacteria.
**Endotoxins: ≤10 E.U./ml**
**Stock solution,** specifically suitable for cell culturing.
Working concentration: 15-50 µg/ml
Extracted from *Micromonospora purpurea*.

| | | | |
|---|---|---|---|
| **HN09.1** | 20 ml | plastic | 96,25 € |
| **HN09.2** | 100 ml | plastic | 310,70 € |

## Gentamycin solution

**50 mg/ml, BioScience-Grade, sterile**

Aminoglycoside antibiotic. For cell culture and biochemistry.

Aqueous gentamycin sulphate solution

$C_{19\text{-}21}H_{39\text{-}43}N_5O_7 \cdot 2{,}5\ H_2SO_4$ • M 694,75-723,75 g/mol • Storage temp.: +4 °C

**Danger** H334-H317

Inhibits protein biosynthesis through binding to ribosomal 50S subunits. Effectual against gram-positive and -negative bacteria.
**Sterile stock solution,** suitable for cell culturing and biochemical assays.
Working concentration: 15-50 µg/ml

| | | | |
|---|---|---|---|
| **2475.1** | 20 ml | plastic | 95,70 € |
| **2475.2** | 100 ml | plastic | 303,15 € |

Please note our **Technical Information Brochure** on the Internet next to the products:

**Antibiotics**
Overview and recommendations for application

## Hygromycin B

**>950 µg/mg, for biochemistry**

Aminoglycoside antibiotic.

$C_{20}H_{37}N_3O_{13}$ • M 527,53 g/mol • Storage temp.: +4 °C

**Danger** H300+H310+H330-H318-H334-H317

Inhibits protein biosynthesis in pro- and eukaryotes by altering translocation during ribosomal chain elongation, therefore resulting in frame reading errors and abortion of chain elongation. Selection marker for *hph* transfected cells.
**Stock solution:** 50-400 mg/ml in $H_2O$ or PBS.
Storage of stock solution at -20 °C.
Working concentration: 20-1000 µg/ml.

| | | | |
|---|---|---|---|
| **CP13.1** | 250 mg | glass | 58,60 € |
| **CP13.2** | 500 mg | glass | 100,95 € |
| **CP13.3** | 1 g | glass | 177,40 € |
| **CP13.4** | 5 g | glass | 607,40 € |

## Hygromycin B solution

ready-to-use S

**50 mg/ml, BioScience-Grade, sterile**

Aminoglycoside antibiotic. For cell culture, biochemistry, molecular biology and microbiology. **In a septum bottle.**

Hygromycin B solution **in PBS**

$C_{20}H_{37}N_3O_{13}$ • M 527,53 g/mol • Storage temp.: +4 °C

**Danger** H301-H310+H330-H318-H334-H317

Inhibits protein biosynthesis in pro- and eukaryotes by blocking translocation, therefore resulting in frame reading errors and abortion of chain elongation. Selection marker for *hph* transfected cells.
**Sterile stock solution,** suitable for cell culturing and microbiology, as well as for biochemical and biomolecular assays.
Extracted from *Streptomyces hygroscopicus*.
Working concentration: 20-1000 µg/ml

| | | | |
|---|---|---|---|
| **1287.1** | 10 ml | glass | 99,45 € |
| **1287.2** | 20 ml | glass | 150,40 € |

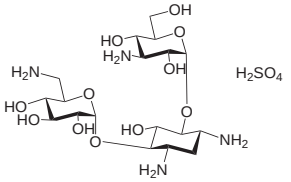
**Safety data sheets**
can be found on the Internet next to the product description.

## Hygromycin B solution

ready-to-use S

**CELLPURE® 50 mg/ml, sterile**

Aminoglycoside antibiotic. For cell culture, biochemistry, molecular biology and microbiology.



Aqueous hygromycin B solution

$C_{20}H_{37}N_3O_{13}$ • M 527,53 g/mol • Storage temp.: +4 °C

**Danger** H301-H310+H330-H318-H334-H317

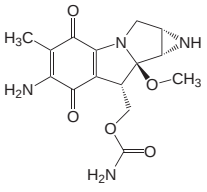
Inhibits protein biosynthesis in pro- and eukaryotes by blocking translocation, therefore resulting in frame reading errors and abortion of chain elongation. Selection marker for *hph* transfected cells.
**Endotoxins: <10 E.U./ml**
Stock solution, specifically suitable for cell culturing.
Working concentration: 20-1000 µg/ml

| | | | |
|---|---|---|---|
| **CP12.1** | 10 ml | plastic | 114,50 € |
| **CP12.2** | 20 ml | plastic | 197,30 € |

## Kanamycin

**≥750 I.U./mg, for biochemistry**

Bacteriostatic antibiotic



Kanamycin sulphate

$C_{18}H_{36}N_4O_{11} \cdot H_2SO_4$ • M 582,58 g/mol • Storage temp.: +20 °C

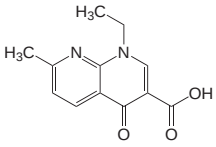
**Danger** H360D

Kanamycin inhibits protein biosynthesis and is effective against gram-negative and gram-positive bacteria.
Easily water-soluble, stable powder.
Main component: Kanamycin A
**Stock solution:** 10 mg/ml in $H_2O$
Storage of stock solution: -20 °C
Working concentration: 100 µg/ml

| | | | | |
|---|---|---|---|---|
| **T832.1** | 5 g | | plastic | 21,40 € |
| **T832.2** | 25 g | | plastic | 59,05 € |
| **T832.3** | 50 g | | plastic | 97,75 € |
| **T832.4** | 100 g | BIG PACK | plastic | 162,90 € |

## Mitomycin C

**≥98 %, for biochemistry**



Mitosis inhibitor

$C_{15}H_{18}N_4O_5$ • M 334,30 g/mol • Storage temp.: +4 °C

**Danger** H300-H351

Covalent linkage to DNA. Causes cross-linking of complementary DNA-strands and strand breakage. Mitomycin C is unstable at low pH-value. Mitomycin C should always be stored away from light.
**Stock solution:** 1 mg/ml in $H_2O$
Storage of stock solution: -20 °C
Working concentration: variable (1 µg/ml up to 100 µg/ml)

| | | | |
|---|---|---|---|
| **4150.1** | 2 mg | glass | 78,40 € |

## Nalidixic acid

**≥99 %, for biochemistry**

Quinolon antibiotiotic

1,4-Dihydro-1-ethyl-7-methyl-1,8-naphthyridin-4-on-3-carbolic acid

$C_{12}H_{12}N_2O_3$ • M 232,23 g/mol • Storage temp.: +20 °C

**Danger** H334-H317

Inhibits proliferation of gram-negative bacteria and coccae by inhibition of topoisomerase II (gyrase) and, therefore, of DNA replication.
Also effective against mycoplasms.
**Stock solution:** 10 mg/ml in chloroform or toluol
Storage of stock solution: -20 °C
Working concentration: 2-200 µg/ml

| | | | | |
|---|---|---|---|---|
| **CN32.1** | 10 g | | plastic | 17,10 € |
| **CN32.2** | 25 g | | plastic | 32,80 € |
| **CN32.3** | 100 g | BIG PACK | plastic | 99,90 € |

## Neomycin

**≥600 I.U./mg, for biochemistry**

Inhibitor for protein biosynthesis, aminoglycoside antibiotic, Neomycin sulphate

$C_{23}H_{46}N_6O_{13} \cdot 3\ H_2SO_4$

Storage temp.: +4 °C

**Danger** H317-H334

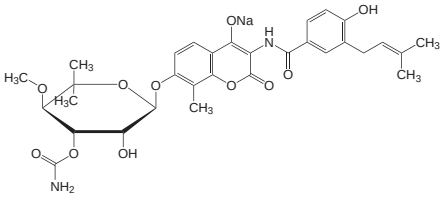
Antibiotic from *Streptomyces fradiae* which inhibits bacterial protein synthesis in a broad range of procaryotes (even in dormant germs).
Inhibition of protein biosynthesis through binding to ribosomal 30S subunits.
Resistance: Neomycin resistance
Main component: Neomycin B
**Stock solution:** e.g. 100 mg/ml in $H_2O$
Storage of stock solution: -20 °C
Working concentration: variable

| | | | | |
|---|---|---|---|---|
| **8668.1** | 10 g | | plastic | 14,20 € |
| **8668.2** | 100 g | BIG PACK | plastic | 64,40 € |

## Nourseothricin

**≥85 %, for biochemistry and microbiology**

Broad-band antibiotic and antimycotic of viruses, bacteria and fungi.



Streptothricine, Nourseothricin dihydrogen sulphate

Storage temp.: +4 °C

**Warning** H302-H315-H319-H335

Antibiotic of the streptothricine family, effective against a broad spectrum of viruses, bacteria and fungi. Used as selection antibiotic for genetically modified bacteria, yeasts, filamentous fungi, protozoa and plants.
Nourseothricin inhibits biosynthesis and induces miscoding. Resistance is mediated by the *sat1* encoded N-acetyltransferase, which inactivates nourseothricin by acetylation of the β-amino group of the β-lysin.
Streptothricine F: n=1 (MW 599.59), Streptothricine D: n=3 (MW 857.95)
**Stock solution:** 100 mg/ml in water
Storage of stock solution at -20 °C
Working concentration: ca. 100 µg/ml
**Recommendation:** One package Nourseothricin should be solubilized in whole and the stock solution should be frozen in aliquots. By removing the overlaying argon during weighing, the stability of the lyophilsate is reduced.

| | | | | |
|---|---|---|---|---|
| **3011.1** | 25 mg | | plastic | 41,85 € |
| **3011.2** | 100 mg | | plastic | 97,30 € |
| **3011.3** | 1 g | | plastic | 499,90 € |

## Novobiocin

**≥850 µg/mg, for biochemistry**

Bacteriostatic antibiotic, HSP90 inhibitor, Novobiocin sodium salt

$C_{31}H_{35}N_2NaO_{11}$ • M 634,62 g/mol • Storage temp.: +4 °C

**Warning** H319-H317

Reduces growth of gram-positive bacteria by inhibition of initiation of DNA-synthesis via binding to ATP-binding sites of gyrase and topoisomerase. Novobiocin also interacts with the C-terminal ATP-binding site of HSP90, hence inhibiting its Chaperon quality.
Also well suited as additive to microbiological nutrient media. Adding 40 mg/l Novobiocin during selective detection of coliform bacteria on Brilliant Green Bile broth (Art. No. CL06.1) efficiently reduces the growth of attendant flora (Alcaide et al., 1982, *J. Appl. Bact.* 53:143-6).

**Application:**
Stock solution: 100 mg/ml in $H_2O$
Storage of stock solution: -20 °C
Working concentration: variable

| | | | | |
|---|---|---|---|---|
| **0247.1** | 1 g | | glass | 28,95 € |
| **0247.2** | 5 g | | glass | 115,60 € |
| **0247.3** | 10 g | | glass | 160,20 € |

## Nystatin

**≥4400 I.U./mg, for biochemistry**

Broad-range fungizide, polyene, Nystatin dihydrate

Mycostatin, Fungicidin

$C_{47}H_{75}NO_{17} \cdot 2\ H_2O$ • M 962,14 g/mol • Storage temp.: +4 °C

Alteration of cell membrane permeability by attachment to sterols.
High concentration causes pore formation in cell membranes in general.
**Stock solution:** 5 mg/ml in DMSO or DMF
Storage of stock solution: -20 °C
Working concentration: 2-50 µg/ml

| | | | | |
|---|---|---|---|---|
| **0241.1** | 5 g | | glass | 35,40 € |
| **0241.2** | 10 g | | glass | 60,10 € |

**Safety data sheets**
can be found on the Internet next to the product description.

## Pen/Strep-PreMix

**CELLPURE®**

For elimination and prevention of bacterial contamination in cell culture.

**Danger** H302-H317-H334-H361d

Antibiotic compound of penicillin, streptomycin and stabilising sodium chloride for application in cell culture. The premixed powder is extremely stable during storage at room temperature and, due to the excellent solubility of the reagents in pyrogen-free water (e.g. Art. No. 3255.1), it can be mixed quickly to a 100x stock solution.

Penicillin inhibits cell wall biosynthesis in Gram-positive bacteria.
Streptomycin produces the antibiotic effect in Gram-negative bacteria through inhibition of the translation.
The dissolved antibiotics are stable for approx. 3 days at 37 °C.
The final concentration of the 100x stock solution is:
Penicillin: 10.000 I.U. / ml
Streptomycin: 10 mg / ml
Sodium chloride: 0.9 %

**Endotoxin content per vial: ≤210 I.U. complies ≤4.2 I.U. / ml**

**Application:** The pack contains 2 vials with premixed powder for 2 times 50 ml 100x stock solution. 50 ml of the 100x stock solution can be obtained directly by adding 49.2 ml pyrogen-free water (Art. No. 3255).
We recommend application in a 1:100 dilution.
The stock solution mix (100 ml) is sufficient for 10 l medium.
Storage of stock solution: in 1-10 ml aliquots at -20 °C.
Comes with original seal.

| | | | |
|---|---|---|---|
| **HP10.1** | powder mix for 100 ml | plastic | 60,75 € |

## Penicillin G potassium salt

**CELLPURE® ≥1550 U/mg**

β-Lactam antibiotic. For cell culture and biochemistry.
Benzylpenicillin potassium salt
$C_{16}H_{17}KN_2O_4S$ • M 372,48 g/mol • Storage temp.: +4 °C

**Danger** H334-H317

**Endotoxins: ≤0.25 E.U./mg**
Inhibits cell wall biosynthesis in gram-positive bacteria by irreversible interaction with transpeptidase.
Application equivalent to Penicillin G sodium salt.
**Preferable when addition of sodium is to be avoided.**
Stock solution: 10-100 mg/ml in $H_2O$
Storage of stock solution: -20 °C
Working concentration: 20-100 µg/ml

| | | | |
|---|---|---|---|
| **HP49.1** | 1 g | plastic | 19,60 € |
| **HP49.2** | 10 g | plastic | 37,10 € |
| **HP49.3** | 25 g | plastic | 73,00 € |

## Penicillin G potassium salt

**~1600 U/mg, for biochemistry**

β-Lactam antibiotic
Benzylpenicillin potassium salt
$C_{16}H_{17}KN_2O_4S$ • M 372,48 g/mol • Storage temp.: +4 °C

**Danger** H334-H317

Inhibits cell wall biosynthesis in gram-positive bacteria by irreversible interaction with transpeptidase.
Application equivalent to Penicillin G sodium salt.
**Preferable when addition of sodium is to be avoided.**
Stock solution: 10-100 mg/ml in $H_2O$
Storage of stock solution: -20 °C
Working concentration: 20-100 µg/ml

| | | | | |
|---|---|---|---|---|
| **CN29.1** | 10 g | | plastic | 19,60 € |

## Penicillin G sodium salt

**CELLPURE® ≥1550 U/mg**

β-Lactam antibiotic. For cell culture and biochemistry.
Benzylpenicillin sodium salt
$C_{16}H_{17}N_2NaO_4S$ • M 356,37 g/mol • Storage temp.: +4 °C

**Danger** H334-H317

**Endotoxins: ≤0.25 E.U./mg**
Inhibits cell wall biosynthesis in gram-positive bacteria by irreversible interaction with transpeptidase.
Application equivalent to Penicillin G potassium salt.
**Preferable when addition of potassium is to be avoided.**
Stock solution: 10-100 mg/ml in $H_2O$
Storage of stock solution: -20 °C
Working concentration: 20-100 µg/ml

| | | | |
|---|---|---|---|
| **HP48.1** | 1 g | plastic | 16,05 € |
| **HP48.2** | 10 g | plastic | 33,25 € |
| **HP48.3** | 25 g | plastic | 65,50 € |

## Penicillin G sodium salt

**≥96 %, for biochemistry**

β-Lactam antibiotic
Benzylpenicillin sodium salt
$C_{16}H_{17}N_2NaO_4S$ • M 356,37 g/mol • Storage temp.: +4 °C

**Danger** H334-H317

Inhibits cell wall biosynthesis in gram-positive bacteria by irreversible interaction with transpeptidase.
Application equivalent to Penicillin G potassium salt.
**Preferable when addition of potassium is to be avoided.**
Stock solution: 10-100 mg/ml in $H_2O$
Storage of stock solution: -20 °C
Working concentration: 20-100 µg/ml

| | | | | |
|---|---|---|---|---|
| **CN28.1** | 10 g | | plastic | 17,75 € |
| **CN28.2** | 25 g | | plastic | 29,60 € |

## Polymyxin B

**≥80 %, for biochemistry**

Bacteriostatic antibiotic, peptide antibiotic

Aerosporin, Polymyxin B sulphate

$C_{55}H_{96}N_{16}O_{13} \cdot 2\ H_2SO_4$ • M 1385,63 g/mol • Storage temp.: +4 °C

**Warning** H302

Effectual against proliferating and non-proliferating gram-negative bacteria. Coupling to bacterial lipopolysaccharides results in permeabilisation of cell membranes.
**Stock solution:** 10-20 mg/ml in $H_2O$ or methanol
Storage of stock solution: -20 °C
Working concentration: 5-500 ng/ml
Extracted from strains of *Bacillus polymyxa*.

| | | | |
|---|---|---|---|
| **0235.1** | 1 g | glass | 47,20 € |
| **0235.2** | 5 g | glass | 192,45 € |
| **0235.3** | 10 g | glass | 342,95 € |

## Puromycin

**≥99 %, for biochemistry**

Inhibitor of proteine biosynthesis, aminonucleoside antibiotic.

Purimycin, Puromycin dihydrochloride

$C_{22}H_{29}N_7O_5 \cdot 2$ HCl • M 544,44 g/mol

Storage temp.: -20 °C • Transport temp.: room temp.

**Warning** H302

Inhibits protein biosynthesis by premature release of the nascent polypeptide chain. Functions as analogon to amino acyl-tRNA molecules.
**Stock solution:** 10-100 mg/ml in $H_2O$ or HEPES
Storage of stock solution: -20 °C
Working solution: 1-50 µg/ml

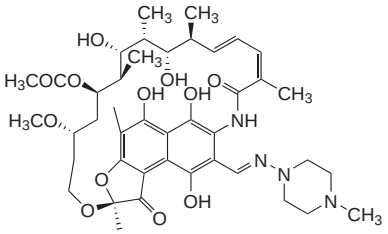
| | | | |
|---|---|---|---|
| **0240.1** | 5 mg | glass | 19,25 € |
| **0240.2** | 10 mg | glass | 30,65 € |
| **0240.3** | 25 mg | glass | 67,65 € |
| **0240.4** | 50 mg | glass | 123,65 € |

## Radicicol

**≥98 %, for biochemistry**

Strong HSP90 inhibitor, macrolactone antibiotic. Binds specifically to the heat shock protein HSP90.

$C_{18}H_{17}ClO_6$ • M 364,79 g/mol



Storage temp.: -20 °C • Transport temp.: room temp.

**Danger** H301-H315-H319-H335

The strong specific binding of radicicol to heat shock protein 90 (HSP90) leads to deregulation of its target mechanisms: cell cycle, cell proliferation, apoptosis/cell vitality. Also binds to yeast HSP90, *E.coli* HtpG and TRAP-1. Antifungal effects are probably caused by inactivation of chitin synthase in fungal cells.

**Application:**
Stock solution: 10 mg/ml (27 mM) in ethanol or DMSO
Storage of stock solution at -20 °C, max. 2 weeks at 4 °C
Working concentration: 5-300 µM
Photo sensitive! Store protected from light.

| | | | |
|---|---|---|---|
| **HN72.1** | 1 mg | glass | 94,50 € |
| **HN72.2** | 5 mg | glass | 381,65 € |
| **HN72.3** | 10 mg | glass | 600,95 € |

## Rifampicin

**≥90 %, for biochemistry**

Bacteriostatic antibiotic

3-(4-Methylpiperazinyliminomethyl)rifamycin SV

$C_{43}H_{58}N_4O_{12}$ • M 822,94 g/mol • Storage temp.: +4 °C

**Warning** H302-H315-H319-H335

Rifampicin inhibits bacterial DNA-dependent RNA-polymerase and consequently prevents transcription. Its spectrum of activity is strictly bacterial (the eukaryotic DNA-dependent RNA-polymerase can only be inhibited at extremely high concentrations) and rifampicin is particularly very effective against mycobacteria. Enterbacteria, acinetobacteria and pseudomonades are resistant against rifampicin. The resistance-mediating genes can be applied as selection markers in molecular biology. Light-sensitive. Store in the dark!
**Stock solution:** 100 mg/ml in chloroform or DMSO, 15 mg/ml in methanol, 1 mg/ml in water (pH 7,3)
Store stock solution at -20 °C, is stable for approx. 2 weeks in DMSO when stored in the dark at 4 °C
Working concentration: 20-200 µg/ml
**Art. No. 4163.3:** A stock solution with a concentration of 100 mg/ml can be prepared directly by adding 5 ml chloroform or DMSO.

| | | | |
|---|---|---|---|
| **4163.1** | 500 mg | glass | 31,10 € |
| **4163.3** | 500 mg (in a 10 ml glass bottle) | | 38,60 € |
| **4163.2** | 1 g | glass | 53,65 € |

## Streptomycin

**CELLPURE® ≥720 I.U./mg**

Bacteriostatic antibiotic. For cell culture and biochemistry,
Streptomycin sulphate

$C_{42}H_{84}N_{14}O_{36}S_3$ • M 1457,38 g/mol • Storage temp.: +20 °C

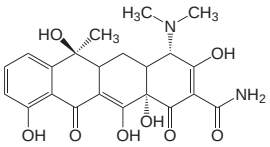
**Warning** H302-H361d

Effectual against mycobacteria, many gram-negative cocci and gram-negative bacteria in general. Results in translation errors by interaction with ribosomal 30S subunits.
Streptomycin B: ≤3,0 %
**Endotoxins: ≤0.25 E.U./mg**
Stock solution: 10-50 mg/ml in $H_2O$
Storage of stock solution: -20 °C
Working concentration: 10-100 µg/ml

| | | | |
|---|---|---|---|
| **HP66.1** | 10 g | glass | 27,85 € |
| **HP66.2** | 25 g | glass | 40,75 € |
| **HP66.3** | 50 g | glass | 65,50 € |

## Streptomycin

**>720 I.U./mg, for biochemistry**



Bacteriostatic antibiotic, Streptomycin sulphate

$C_{42}H_{84}N_{14}O_{36}S_3$ • M 1457,38 g/mol • Storage temp.: +20 °C

**Warning** H302-H361d

Effectual against mycobacteria, many gram-negative cocci and gram-negative bacteria in general. Results in translation errors by interaction with ribosomal 30S subunits.
**Stock solution:** 10-50 mg/ml in $H_2O$
Storage of stock solution: -20 °C
Working concentration: 10-100 µg/ml

| | | | |
|---|---|---|---|
| **0236.1** | 10 g | glass | 20,35 € |
| **0236.2** | 25 g | glass | 30,65 € |
| **0236.3** | 50 g | glass | 48,30 € |

HCl

## Tetracycline

**CELLPURE® ≥900 µg/mg**

Bacteriostatic antibiotic. For cell culture, molecular biology and biochemistry.

Achromycin hydrochloride, Tetracycline hydrochloride

$C_{22}H_{25}Cl\ N_2O_8$ • M 480,90 g/mol • Storage temp.: -20 °C

**Warning** H319-H361d

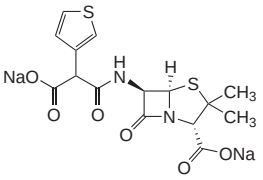
Effectual against gram-positive and -negative bacteria. Inhibits bacterial protein biosynthesis by coupling to amino acyl-tRNA. Modern application: Activation or inhibition of gene expression through tetracyclin-regulated promotor systems *in vitro* and *in vivo*. Light-sensitive.
**Endotoxins: ≤0.5 E.U./mg**
Stock solution: 10-20 mg/ml in $H_2O$
Storage of stock solution: -20 °C
Working concentration: 10-50 µg/ml

| | | | |
|---|---|---|---|
| **HP63.1** | 10 g | glass | 24,20 € |
| **HP63.2** | 50 g | glass | 84,85 € |

## Tetracycline

**≥900 µg/mg, for biochemistry and molecular biology**

Bacteriostatic antibiotic



Achromycin hydrochloride, Tetracycline hydrochloride

$C_{22}H_{25}Cl\ N_2O_8$ • M 480,90 g/mol • Storage temp.: -20 °C

**Warning** H319-H361d

Effectual against gram-positive and -negative bacteria. Inhibits bacterial protein biosynthesis by coupling to amino acyl-tRNA. Modern application: Activation or inhibition of gene expression through tetracyclin-regulated promotor systems *in vitro* and *in vivo*. Light-sensitive.
**Stock solution:** 10-20 mg/ml in $H_2O$
Storage of stock solution: -20 °C
Working concentration: 10-50 µg/ml

| | | | | |
|---|---|---|---|---|
| **0237.1** | 25 g | | glass | 29,60 € |
| **0237.2** | 50 g | | glass | 51,10 € |
| **0237.3** | 100 g | BIG PACK | glass | 89,80 € |

## Ticarcillin

**≥90 %, for biochemistry**

β-Lactam antibiotic

α-Carboxy-α-3-thienylmethylpenicillin disodium salt, Ticarcillin · 2 Na

$C_{15}H_{14}N_2Na_2O_6S_2$ • M 428,4 g/mol • Storage temp.: +4 °C

**Danger** H334-H335-H315-H319-H317

Ticarcillin belongs to the carboxy penicillin family, the only difference to carbenicillin being a group of a side chain. It is inactivated through β-lactamase. Ticarcillin inhibits bacterial cell wall synthesis by inhibiting the transpeptidase.
**Stock solution:** 100 mg/ml in water
Store stock solution at -20 °C
Working concentration: 25-250 µg/ml
The stock solution should be cooled immediately as its activity decreases quickly and ticarcillin may precipitate.

| | | | |
|---|---|---|---|
| **4161.1** | 500 mg | glass | 38,60 € |
| **4161.2** | 1 g | glass | 62,90 € |

## Vancomycin

**CELLPURE® ≥900 U./mg**

Bacteriostatic antibiotic. For cell culture and biochemistry.

Glycopeptide antibiotic, Vancomycin hydrochloride

$C_{66}H_{75}Cl_2N_9O_{24} \cdot HCl$

M 1485,73 g/mol

Storage temp.: +4 °C

**Warning** H317

Inhibits bacterial cell cleavage through binding to cell membrane pre-stages.
**Endotoxins: ≤0.33 E.U./mg**
Stock solution: e.g. 100 mg/ml in $H_2O$
Storage of stock solution: -20 °C
Working concentration: variable

| | | | |
|---|---|---|---|

### The History of Antibiotics

In the history of mankind there have always been highly developed cultures who have possessed remarkable knowledge. For example, surgeons in the ancient world and Middle Ages placed mouldy rags on wounds to prevent infection.

First observations of antibiotic effects in modern times were made by the French chemist Louis Pasteur in the 19th century, who discovered that certain bacteria could kill anthrax germs. The German bacteriologist Rudolf von Emmerich isolated the antibiotic medium pyocyan (cholera and diptheria) around 1900 and in 1910 experiments carried out by the German doctor and chemist Paul Ehrlich led to the development of salvarsan (syphillis and tropical diseases).

Penicillin was discovered by accident in 1928 by Alexander Fleming in *Penicillium notatum* mould fungus cultures when he observed that in laboratory cultures *P. notatum* inhibited the growth of vicinal bacteria colonies. Streptomycin followed in 1943.

The first antibiotics were isolates from bacteria cultures. The preparations used nowadays, however, are almost exclusively of chemical origin, which has enabled specialisation and optimisation.

# Cryo-Conservation

## Roti®-Store cryo vials

Sterile. Suitable for freezing all types of microorganisms, including recombinant bacteria.
Storage temp.: +4 °C

- Preparation of cryogenic cultures
- Safe storage
- Simple recultivation

**Roti®-Store cryo vials** are ideal for preparing freezing stocks from different microorganisms, even DMSO-sensitive organisms. The stocks are protected by a special cryo medium during freezing.
Optimally suited for cryopreservation of recombinant bacteria in genetic engineering.
Store at -80 °C or in liquid nitrogen.
Short-term storage for a few days at -20 °C is possible.
Also suitable for conservation of marine microorganisms, even during field work (Siebert *et al.*, *Appl. Environ. Microbiol.* 2004 (70) 5912-5).
∅ 11 mm, length 47 mm.

**Instructions:**
To freeze, pipette and mix 0.5 ml fresh culture solution into a Roti®-Store cryo vial. Remove the supernatant and freeze the vial. To recultivate, take one of the glass pellets and inoculate the desired culture medium.

One cryo vial contains 25 glass pellets suitable for 25 recultivations per cryogenic culture.

| | | |
|---|---|---|
| **P730.3** | 5 vials, with 25 glass globules each | 12,90 € |
| **P730.1** | 50 vials, with 25 glass globules each | 106,45 € |
| **P730.2** | 250 vials, with 25 glass globules each | 499,90 € |

**Instructions for use**
can be found on the Internet next to the product description.

## Roti®-Store yeast cryo vials

Sterile. Ideal for freezing yeast and monocellular moulds.
Storage temp.: +4 °C
**Roti®-Store yeast cryo vials** contain a special yeast cryo medium, developed for safe storage of yeasts such as *Saccaromyces cerevisiae* or *Candida albicans*.
Cryo-conversation has been succesfully tested for *S. cerevisiae*, *C. albicans*, *C. sake*, *C. tropicals*, *Zygosaccharomyces rouxii*, *Dekkera bruxellensis* and *Malesezzia furfur*.

The yeast is protected by a special yeast cryo medium during freezing.
Long-term storage at -80 °C or in liquid nitrogen, short-term storage for a few days at -20 °C is possible.
Suitable for preparing 50 different cryo-cultures and for up to 25 recultivations per cryogenic culture.
∅ 11 mm, length 47 mm.

## Glycerol

**ROTIPURAN® ≥99,5 %, p.a., anhydrous**
1,2,3-Propanetriol
$C_3H_8O_3$
M 92,09 g/mol
This anhydrous glycerol is used for the storage and concentration of enzymes and other samples at low temperatures. It is also used for the purification of bacteriophages and other biological molecules by a glycerol step gradient.
Due to its high density it is often a component of electrophoresis loading buffers.

# Accessories

## Turbidity standards

ready-to-use

### McFarland BSS 0,5

**for microbiology**

Turbidity Standard for adjusting the density of a bacterial suspension.

Turbidity Standard, Barium sulphate suspension

Storage temp.: +20 °C • Transport temp.: room temp.

The McFarland BSS Standards are used as turbidity standards since 1907 to produce an expected reproducible cell density of a bacterial suspension. The cell density is adjusted in the simple comparison to the standard. This can be directly performed visually or by measuring with a spectrophotometer.

The turbidity value of the standard of 0,5 MFU (McFarland Units) corresponds to approximately a culture density of 1,5 x $10^8$ cells/ml. This cell density is specially needed as bacterial inoculum for the antibiotic susceptibility test.

**Guarantee analysis:**

Turbidity (625 nm, 1 cm cuvette)..... 0,5 MFU

| | | |
|---|---|---|
| **1307.1** | 1 vial | 26,90 € |

▶ Mueller Hinton Agar see page 1392

### McFarland PMS 0,5

ready-to-use

**for microbiology**

Turbidity Standard for adjusting the density of a bacterial suspension.

Turbidity Standard, Polymer Microparticle Suspension

Storage temp.: +20 °C • Transport temp.: room temp.

The McFarland PMS Standards are equivalent turbidity standards to the original barium sulfate standards. The optimised Polymer Microparticle Suspension (PMS) separates slower than the barium sulfate version. The cell density is adjusted in the simple comparison to the standard. This can be directly performed visually or by measuring with a spectrophotometer.
The turbidity value of the standard of 0,5 MFU (McFarland Units) corresponds to approximately a culture density of 1,5 x $10^8$ cells/ml. This cell density is specially needed as bacterial inoculum for the antibiotic susceptibility test.

# Kit for preparation of competent cells

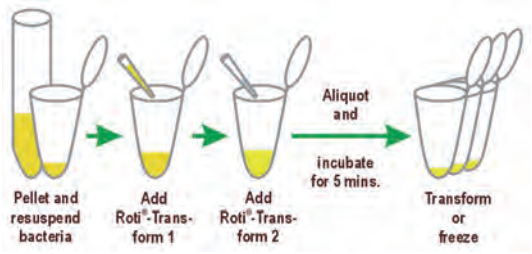
S

ready-to-use

### Roti®-Transform

Sterile. For preparation of competent *E. coli*.

Storage temp.: -20 °C • Transport temp.: room temp.



- Flexible selection of strains
- Effective, simple and fast
- Adequate for 500 transformations

**Roti®-Transform**

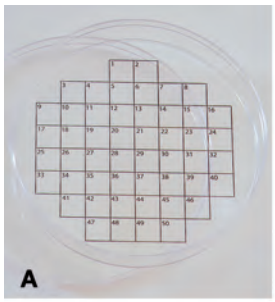
Roti®-Transform is a simple, effective and fast method of producing competent *E. coli* in three steps. The competent cells may be used directly for transformation or may be frozen for later transformations. Transformation efficiency is 5 x $10^5$ to 1 x $10^6$ colonies per µg DNA.

**Protocol:**

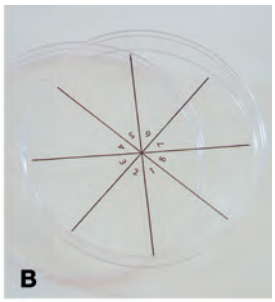
1. Resuspend cells in fresh, cold LB-medium
2. Add Roti®-Transform 1
3. Add Roti®-Transform 2 and incubate for 5 minutes on ice

**Long-term Storage** of the Kit at -20 °C.

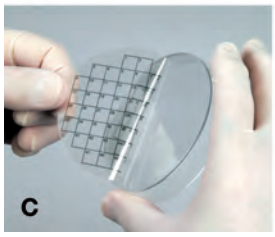
**Storage for use:**



Reagent 1: Short-term storage may be done at 4 °C. For long-term storage of over 14 days we recommend a storage temperature of -20 °C.
Reagent 2: Storage at 4 °C.



Roti®-Transform consists of 45 ml Roti®-Transform 1 (Art. No. P041) and 5 ml Roti®-Transform 2 (Art. No. P042). One kit is sufficient for producing competent *E. coli* for 500 transformations.
Contents of this Kit may not be bought separately.



| | | |

▶ A wide range of accessories for microbiology is available from page 253

## Replicator stamp

Replicator stamp for transfer of bacterial or yeast colonies from one culture medium plate to another. Stamp with fixationring in yellow coloured. 12 autoclavable transfer tissues are included. Transfer tissues may also be bought separately in colours blue, red, and beige (for brightly coloured colonies).

In order to duplicate the colony plates, fix one of the sterile tissues on the stamp with the aluminium ring (see figure). Then press the top side of the original colony plate gently onto the stamp. For cloning press a fresh plate onto the inoculated tissue surface.

Applicable for petri dishes of 90 to 100 mm diameter. The replicator stamp is made of PVC. Height: 72 mm, diameter: 81 mm. Fixation rings are made from coated aluminium. Transfer tissues are made from an autoclavable cotton-polyester mix. Size of one tissue: 15 x 15 cm. The stamps can be disinfected with ethanol (sanitisation).

| Art. No. | Pack Qty. | € |
|---|---|---|
| **4708.1** | Stamp + aluminium ring (yellow) + 12 autoclavable tissues (blue) | 117,20 |

## Transfer tissues for replicator stamps

| Art. No. | Pack Qty. | € |

| **4670.1** | 36 autoclavable transfer tissues (blue) | 124,70 |
| **4688.1** | 36 autoclavable transfer tissues (red) | 124,70 |
| **4698.1** | 36 autoclavable transfer tissues (beige) | 124,70 |

## Replicator stamp

The replicator stamp enables the transfer of bacterial or yeast colonies from one culture medium plate to another. To duplicate the colony plates, fix one of the sterile tissues on the stamp with the aluminium ring. Then press the top side of the colony plate gently onto velvety surface of the stamp. Use a new plate to produce the duplication.

The replicator stamp is made of PVC. Height: 69 mm, ∅: 81 mm.
Size of one tissue: 15 x 15 cm. It is suitable for max. 100 mm ∅ petri dishes.

The stamps can be disinfected with ethanol.

| Art. No. | Pack Qty. | € |
|---|---|---|
| **X994.1** | Stamp + aluminium ring + 12 autoclavable tissues | 170,95 |
| **X995.1** | 36 autoclavable tissues | 170,95 |

# Xylene Alternatives

- Adequate replacement for xylene
- Miscible with IPA, butanol, ethanol
- Application as clearing agent and dewaxing medium

## Roti®-Histol on base of limonene

The alternative solvent for histology and cytology. Excellent for all histological hand work. Replaces clearing agents like xylene or toluol without the need for changing working procedures.

### Roti®-Histol
**for histology**

Clearing agent on base of limonene.
For dewaxing of histological sections. Alternative product for xylene.

**Danger** H304-H226-H400-H410-H315-H317

Roti®-Histol is a natural product, manufactured from untreated orange peel. It consists of 96-98 % limonene, a terpene with a characteristic odour of lemon or orange.
Roti®-Histol replaces current clearing agents without the need for changing working procedures. **No harmful vapours!** It can be mixed with IPA, butanol, ethanol and all standard embedding media.

Clearing with Roti®-Histol prevents tissue samples from hardening and brittleness. It is particularly suitable for manual work which usually exposes the user to solvent vapours in high concentrations.

Roti®-Histol produces excellent results with **Roti®-Histokitt** mounting medium **(Art. No. 6638)** and special paraffins such as Roti®-Plast (Art. No. 6642).

## Roticlear® on base of aliphatic hydrocarbons

The alternative product for use in histology and cytology. Roticlear® is a special formulation to replace toluene, xylene and trichloromethane. Excellent for dewaxing histological sections.

### Roticlear®

**for histology**

ready-to-use

Clearing agent of aliphatic hydrocarbons, practically free from aromatic compounds. For dewaxing of histological sections. Alternative product for xylene.

**Danger** H226-H304-H336-H412-EUH066

Roticlear® consists of different aliphatic hydrocarbons with only little own odour. It is **practically free from aromatic compounds** (≤0,005 %) and can be mixed with IPA, butanol, ethanol and acetone.

Roticlear® can be used like xylene. The absorption capacity for paraffin is even better than that known from xylene. Therefore, water baths for removing the paraffin need not to be changed so frequently. Due to a short evaporation period, Roticlear® enables fast and effective working.

Roticlear® produces excellent results with **Roti®-Mount (Art. No. HP68)**. After clearing with Roticlear® the sample can be embedded in Roti®-Mount immediately.

Roticlear® can be used in automates without any difficulty.

# Xylene

Xylene is the typical solvent in histology. ROTH xylenes have been used very successfully in histology for dewaxing histological sections and as clearing agent.

Xylene can be used together with **Roti®-Histokitt II mounting medium (Art. No. T160)** and ROTH paraffins such as Roti®-Plast special paraffin (Art. No. 6642).

| | | **9713.5** | 5 l | 70,45 |
| | | **9713.2** | 10 l | 119,90 |
| | | **9713.4** | 25 l | 223,10 |
| **Xylene (isomers)** | ≥97 %, for synthesis | **2662.1** | 1 l | 20,35 |
| | | **2662.2** | 2,5 l | 31,10 |
| | | **2662.5** | 5 l | 54,30 |
| | | **2662.3** | 10 l | 85,90 |
| | | **2662.4** | 25 l | 177,40 |

For additional product data and safety information, see chapter Chemicals A-Z.

**Please note:**
**Xylene** can only dissolve a limited amount of paraffin, it should therefore be changed frequently. Please also note that the solubilizing process is often very slow at low temperatures. We recommend working in a warming cupboard at 25 to 30 °C.

**Our Tip:**
You can use a pipe wrench to open the solvent canister 10 l and 25 l. However, it's much easier and simpler with our **barrel and keg key** (Art. No. 0398).

**Safety data sheets**
can be found on the Internet next to the product description.

# Alcohols

Variously usable in histology: for hydration and dehydration (series of alcohol), for fixation, as an ingredient of staining solution etc.

### Alcohols - Summary

| Product | Purity | Art. No. | Pack Qty | Packa-ging | € |
|---|---|---|---|---|---|
| **Ethanol** | ≥99,8 %, p.a. | **9065.1** | 1 l | glass | 81,20 |
| | | **9065.3** | 1 l | plastic | 80,10 |

| | | **6752.6** | 25 l | tinplate | 238,15 |

For additional product data and safety information, see chapter Chemicals A-Z.

**Isopropanol as clearing agent**
Isopropanol is well suited as clearing agent for paraffin-embedding, because it is compatible to melted paraffin: After dehydrating with isopropanol the sample is incubated in a mixture of isopropanol abs. and paraffin (1:1) at approx. 60 °C. After a further incubation step with pure paraffin, the sample is embedded as usual. This method is particularly suitable to smooth organs. Since embedding can start immediately after alcohol step, the working process is shortened significantly.

# General Reagents

Essential helpers for routine histological work such as fixing, embedding, staining and so on.

## APES

**≥98 %, for GC**
Silylation reagent
γ-Aminopropyltriethoxysilane, 3-Aminopropyltriethoxysilane, APTES
$C_9H_{23}NO_3Si$
M 221,37 g/mol

**Danger** H314-H302

APES is used for silanising microscope slides causing better adherence of cut to slide.

| | | | |
|---|---|---|---|
| **2328.1** | 25 g | glass | 21,00 € |
| **2328.2** | 100 g | glass | 60,10 € |

## Chloral hydrate

**≥99,5 %, Ph.Eur., BP, USP**
Trichloroacetaldehyde monohydrate
$C_2H_3Cl_3O_2$
M 165,40 g/mol

**Danger** H301-H315-H319

In botany chloralhydrate is used as clearing agent and for removing cell content of plant samples.

| | | | |
|---|---|---|---|
| **K318.3** | 100 g | plastic | 26,35 € |
| **K318.1** | 500 g | plastic | 107,40 € |
| Original pack 6 x 500 g | | | 102,03/500 g |
| **K318.2** | 2,5 kg | plastic | 450,45 € |

## HCl-ethanol solutions

**for histology**
Differentiating solution for histological staining.
Hydrochloric acid in ethanol
After staining tissues are rinsed with HCl-ethanol solution to remove excessive stain. This decolourisation is selective for certain tissue structures retain the stain better than others (differentiation). HCl-ethanol solution is used for regressive hemalum staining, but also for detection of mycobacteria.

### HCl-ethanol solution 0,75 %

ready-to-use

**Danger** H225-H290-H319

Solution of 0,75 % hydrochloric acid in ethanol 70 %.

| | | | |
|---|---|---|---|
| **9969.1** | 500 ml | plastic | 14,95 € |
| **9969.2** | 1 l | plastic | 24,20 € |

| | | **3867.2** | 5 g | 536,45 |

For additional product data and safety information, see chapter Chemicals A-Z.

# Reagents for Decalcification

Tissues containing solid material such as bones or keratin are to be decalcified before paraffin embedding. Usually the specimens are treated with acids of different concentrations and mixtures.

An especially gentle method is decalcification with EDTA solution.

## Decalcifier soft

**for histology**

ready-to-use

Decalcifier solution on base of EDTA.
Used for gentle decalcification of bones and other calcified tissues.
The solution is also suitable for immunological applications.

**Danger** H290-H314-H373

The solution contains 25 % EDTA. The process of decalcification takes more time than acid decalcification (see Decalcifier standard, Art. No. 6483), e.g. bone biopsies need approx. 3-4 days. The procedure can be accelerated by using a magnetic stirrer. The decalcification takes place in a weakly basic milieu. Nucleic acids and enzymes are not affected; therefore, the solution is also suitable for immunological applications.

**Type analysis:**

Appearance. ..... clear, colourless
pH (20 °C) ..... 7-9

| | | | | |
|---|---|---|---|---|
| **6484.1** | 500 ml | | glass | 23,15 € |
| **6484.2** | 1 l | | glass | 35,40 € |
| Original pack 6 x 1 l | | | | 33,63/1 l |
| **6484.3** | 2,5 l | new size | plastic | 53,65 € |
| Original pack 4 x 2,5 l | | | | 50,97/2,5 l |
| **6484.4** | 5 l | new size | plastic | 92,35 € |
| Original pack 2 x 5 l | | | | 87,73/5 l |

## Decalcifier standard

**for histology**

ready-to-use

Acid-based decalcifier. Contains trichloracetic acid and formalin.
Used for acid decalcification of bones and other calcified tissues.

**Danger** H314-H335-H350-H411-EUH208

The solution contains trichloroacetic acid and formalin and, therefore, has also fixing qualities. Nevertheless, we recommend sufficient fixing of specimens before decalcifying for trichloroacetic acid may cause morphological changes in unfixed tissue. The length of the decalcification process depends on the specimen's size and type. Little bones (diameter a few mm) need 1-2 days for complete decalcification.
The decalcifier standard is not suitable for immunological applications. We recommend our Decalcifier soft (Art. No. 6484) on base of EDTA.

**Type analysis:**

Appearance. ..... clear, colourless
pH (20 °C) ..... 0,9 ±0,3

**Instructions for use**
can be found on the Internet next to the product description.

# Blocking Reagents

In immunohistological assays it is necessary to block non-specific antibody binding sites or other unspecific protein-protein-interactions.
For that purpose ROTH offers protein-containing and protein free blocking reagents.

## Albumins/BSA

| Product | Purity | Art. No. | Pack Qty. | € |
|---|---|---|---|---|
| **Albumin, IgG free** | >98 %, IgG-free, for biochemistry and molecular biology | **3737.1** | 10 g | 54,75 |
| | | **3737.2** | 50 g | 152,15 |
| | | **3737.3** | 200 g | 456,90 |

| | | **3854.5** | 1 kg | 1116,95 |

For additional product data and safety information, see chapter Chemicals A-Z.

## Roti®-ImmunoBlock

**ready-to-use, 10x conc.**

Protein free blocking reagent for immunocytological assays.
Roti®-ImmunoBlock is an innovative blocking reagent on a polymer base without detergents and proteins.

**Suitable for**
- Immunocytological assays
- Immunohistological assays
- Paraffin- and cryosections
- *in situ* hybridisation
- Cell culture samples
- Whole mount samples

| | | | |
|---|---|---|---|
| **T144.1** | 250 ml | glass | 45,05 € |

▶ For detailed information on albumins see page 1294

▶ Additional blocking reagents see page 1310

# Buffer Salts

## Buffer Salts - Summary

| Product | Purity | Art. No. | Pack Qty. | € |
|---|---|---|---|---|
| **Cacodylic acid sodium salt trihydrate** | ≥98 % | **5169.3** | 10 g | 22,05 |
| | | **5169.1** | 50 g | 62,25 |
| | | **5169.2** | 250 g | 203,20 |
| **Citric acid monohydrate** | ≥99,5 %, p.a., ACS, ISO new size | **3958.2** | 500 g | 18,85 |
| | | **3958.1** | 1 kg | 30,00 |

For additional product data and safety information, see chapter Chemicals A-Z.

▶ Ready-to-use solutions PBS and TBS see page 1314

# Formalin-free Fixing Solution

ready-to-use

An adequate substitute for formalin on base of hexamethylene tetramine. Roti®-Histofix ECO Plus is classified as non-hazardous.

## Roti®-Histofix ECO Plus

**Fixing agent without formalin**

For fixing of histological and immunochemical specimens.
Formalin substitute.
Storage temp.: +20 °C

- Formaldehyde-free, non-toxic fixative
- Good fixation properties
- pH 4,5 -5,0
- No denaturing effect, e.g. shrinkage or crosslinking
- Adequate substitute for formaldehyde

Roti®-Histofix ECO Plus is a ready-to-use, aqueous solution on base of hexamethylene tetramine. The solution has as similar good fixation properties as formaldehyde, but is, unlike formaldehyde, classified as non-toxic. The original morphology of the tissue is preserved during the fixation process. The protein molecules are cross-linked in a reversible way, their structures are preserved. That is especially important for antigen-antibody reactions. Samples are - in contrary to other fixative media - free of artefacts such as shrinkage of tissue or irreversible protein crosslinking. The solution is therefore ideal for immunohistochemistry. All conventional staining processes can be carried out following fixation.
Roti®-Histofix ECO Plus has an indicator dye and is scented for better identification (< 1ppm).

Formalin-free, non-toxic reddish solution. For fixing of histological specimens. Pleasantly aromatic odour. Forrmalin substitute.

| | | | |
|---|---|---|---|
| **8907.1** | 500 ml | plastic | 14,95 € |
| **8907.2** | 2,5 l | plastic | 45,70 € |

| **8907.3** | 5 l | plastic | 85,50 € |
| Original pack 2 x 5 l | | | 81,23/5 l |

▶ Drain cocks see chapter Labware - Sampling, Pumps & Dispenser.

**Do not store formaldehyde solutions below +15 °C!**

Experience shows that low temperatures support polymerisation to paraformaldehyde. Small amounts of solids (fine precipitation) can be filtered off, the formaldehyde solution is still fully functional. In case of major amounts of solids, however, the solution should be discarded, for the concentration of formaldehyde is too much reduced.

# Ready-to-use Formaldehyde Solutions

ready-to-use

Roti®-Histofix solutions are **stabilised formaldehyde solutions**. The added phosphate buffer (pH 7) neutralises formic acid formed by oxidation of formaldehyde during storage. Furthermore, a small amount of methanol is added to protect against polymerisation.

## Roti®-Histofix in prefilled containers

Fixative for histology, prefilled in screw cap containers.
Stabilised with methanol.
Storage temp.: +15-25 °C

**Danger** H302-H317-H341-H350

Neutral buffered formaldehyde solution (pH 7), prefilled in screw cap containers, packaged in a cardboard shipping box. The containers are labelled, specimen data can be added.

- Specimen can be added directly
- Sample is securely packaged and ready for shipment within a short time
- Reduced health risk for user because no diluting and decanting of concentrated formaldehyde solution is necessary
- Time saving, containers are ready-to-use

**Technical specifications:**

| Dimension containers | 20 ml | 100 ml | 180 ml |
|---|---|---|---|
| Diameter bottom (mm) | 27 | 43 | 52 |
| Diameter cap (mm) | 31 | 48 | 57 |
| Height with cap (mm) | 48 | 88 | 104 |

## Roti®-Histofix 4 %, prefilled containers

**acid free (pH 7), phosphate-buffered formaldehyde solution 4 %**

**Type analysis:**

Appearance. ..... clear, colourless liquid
Assay (formaldehyde) ..... 4,0 %
pH value. ..... 7,0 ±0,5
Stabilised with methanol

| | | | |
|---|---|---|---|
| **3105.1** | 100 x 10 ml (in 20 ml-container) | carton | 81,20 € |
| **3105.2** | 54 x 50 ml (in 100 ml-container) | carton | 55,40 € |

## Roti®-Histofix 4,5 %, prefilled containers

**acid free (pH 7), phosphate-buffered formaldehyde solution 4,5 %**

**Type analysis:**

Appearance. ..... clear, colourless liquid
Assay (formaldehyde) ..... 4,0-5,0 %
pH value. ..... 7,2 ±0,2
Stabilised with methanol

| | | | |
|---|---|---|---|
| **8244.1** | 100 x 10 ml (in 20 ml container) | carton | 79,45 € |

| | | **7398.3** | 30 l | 109,15 |
| **Formaldehyde solution 35 %** | ≥35 % DAB, for histology | **4980.1** | 1 l | 16,05 |
| | | **4980.2** | 5 l | 37,55 |
| | | **4980.4** | 10 l | 59,70 |
| | | **4980.3** | 30 l | 118,15 |

For additional product data and safety information, see chapter Chemicals A-Z.

## Special Solutions

### Formaldehyde solution 30 %, methanol-free

**30 %**

Formol, Formalin

$CH_2O$

M 30,03 g/mol

Storage temp.: >+15 °C

**Danger** H302-H311+H331-H314-H317-H341-H350-H335

The solution is nearly free from methanol (≤1,5 %). It is used for sensitive assays e.g. enzyme histochemical assays. Do not store solution below 15 °C.

| | | | | |
|---|---|---|---|---|
| **4235.1** | 1 l | | plastic | 12,40 € |
| Original pack 6 x 1 l | | | | 11,78/1 l |
| **4235.2** | 5 l | | plastic | 30,00 € |
| Original pack 2 x 5 l | | | | 28,50/5 l |
| **4235.3** | 10 l | | plastic | 41,85 € |
| **4235.4** | 30 l | BIG PACK | plastic | 99,90 € |

### Formaldehyde solution, non-acidic

**≥37 %, for histology**

Stabilized with methanol and calcium carbonate.

Formol, Formalin

Storage temp.: >+15 °C

**Danger** H301+H311+H331-H341-H350-H314-H317-H370-H335

Stabilised with calcium carbonate (acid-binding solids) and methanol (8-12 %). If required, filter before use. Do not store solution below 15 °C.

| | | | | |
|---|---|---|---|---|
| **P733.1** | 1 l | | plastic | 17,75 € |
| Original pack 6 x 1 l | | | | 16,86/1 l |
| **P733.2** | 2,5 l | | plastic | 32,15 € |
| Original pack 4 x 2,5 l | | | | 30,54/2,5 l |
| **P733.3** | 30 l | BIG PACK | plastic | 120,95 € |

# Paraformaldehyde

Paraformaldehyde is a formaldehyde polymer.
It is used for applications requiring a formaldehyde solution without stabilising additives.

### Paraformaldehyde

**extra pure, DAC**
Fixative
Polyoxymethylene
$(CH_2O)_n$
Storage temp.: +4-15 °C

**Warning** H228-H351-H302+H332-H315-H319-H317-H335

Paraformaldehyde is a formaldehyde polymer. It is used for applications requiring a formaldehyde solution without stabilising additives.
Store product below 15 °C.

| | | | |
|---|---|---|---|
| **0335.1** | 250 g | plastic | 14,55 € |
| **0335.2** | 500 g | plastic | 18,20 € |
| Original pack 6 x 500 g | | | 17,29/500 g |
| **0335.3** | 1 kg | plastic | 23,15 € |
| Original pack 6 x 1 kg | | | 21,99/1 kg |
| **0335.4** | 5 kg | plastic | 87,65 € |

**To prepare a 4 % paraformaldhyde solution:**

Mix 4 g of paraformaldehyde into 60 ml distilled water (milky liquid), heat with frequent agitation to 60 °C. Add drop wise 1N NaOH, at pH 7 the solution becomes clear. Add distilled water until the volume reaches 100 ml then let it cool down. The solution is to be used immediately, because it is not stable at room temperature. Store in aliquots at -20 °C, is stable for approx. 6 months.

# Fixing Agents for Cytology

### Roti®-Fix spray fixative

**for cytology**
For fixation of samples from cytological material.

**Danger** H225

Cytological smears must be fixed immediately in order to avoid artefacts. Therefore, the still moist specimens are sprayed about 3 times from a distance of 15-20 cm. After rehydration by descending alcohol series the samples can be stained as usual, e.g. by Papanicolaou staining.

**Type analysis:**
Alcoholic solution of ethanol and 2-propanol

| | | | |
|---|---|---|---|
| **CL85.1** | 100 ml | spray bottle | 16,05 € |

# Other Fixing Agents

Here other important fixative chemicals can be found particularly used in fixative mixtures.

| | | **9383.1** | 10 l | 144,60 |

For additional product data and safety information, see chapter Chemicals A-Z.

**Fixation**

*Fixing agents:* In order to stop their natural degradation process, specimens must be fixed as quickly as possible after extraction. This is usually done with pure fixing agents such as formalin or alcohol. The solutions are easy to use and lead to good results. Formalin, despite its smell and harmful properties, is still the universal fixing agent, whereas alcohol has proved to be best when fixing smears. To get fixing agents with special properties, mixtures from different fixing agents should be used. This also will compensate for the distinct handicaps of many fixing agents, e.g. shrinkage caused by high-percentage alcohol is greatly reduced when glacial acetic acid is added.

*Fixing process:* Alcohols, various salts and acids denature the protein molecules. The structurally altered molecules form cross-links between each other. In contrast, formalin does not denature. It binds directly to proteins and cross-links the molecules actively with each other.

Fixation of pure lipids or carbohydrates is extremely difficult. When using conventional fixing agents, they are only trapped in the tissue and often washed out in subsequent rinsing steps. Better results are achieved with frozen sections. In electron microscopy lipids can be fixed with osmium tetraoxide.

**Our Tip:**

Our **10-l and 30-l standard canisters** with **drain cocks** (Art. No. 5666.2) enable easy and simple withdrawal.

**Safety data sheets**

can be found on the Internet next to the product description.

# Glutaraldehyde for Electron Microscopy

Fixation with glutaraldehyde is similar to the fixation process with formalin. Optimal results can be achieved with a concentration of 1 to 6 %.

## Glutaraldehyde 50 %

**for electron microscopy**
50 % solution in water.
1,5-Pentanedial, Glutaric dialdehyde, Glutaral

In sealed off glass ampoules.
$OsO_4$Storage temp.: +4 °C

**Danger** H301+H331-H310-H315-H318

| | | | |
|---|---|---|---|
| **7436.1** | 5 ml | glass | 37,55 € |

## Osmium tetraoxide solution 4 %

**for electron microscopy**
In sealed off glass ampoules.
$OsO_4$Storage temp.: +4 °C

**Danger** H301+H331-H310-H315-H318

| | | | |
|---|---|---|---|
| **8088.1** | 5 ml | glass | 56,45 € |

**To prepare a 1-4 % solution of osmium tetraoxide, Art. No. 8371:**

- Score the glass ampoule in centre (e.g. with glass cutter Art. No. 8209.1)
- Open it carefully at the section
- Draw the crystals into a sealable glass jar
- Add the needed amount of distilled water
- Place the sealed jar into an ultrasonic bath, the dissolution process requires 1-2 h
- Store the solution in aliquots at -20 °C in a well-sealed container

**Please note:** $OsO_4$ vapours damage the cornea and the mucous membranes of the mouth and the nose. Therefore, working with protective equipment in a fume cupboard is required!

# Paraffins

In order to meet the different requirements of paraffin embedding, we provide a large selection of paraffins.

## Special paraffin Roti®-Plast

- High-purity paraffin
- Top-quality for routine applications
- Available with or without DMSO
- Defined melting range
- Excellent embedding and cutting properties
- Guaranteed tested quality

### Roti®-Plast

**100 % paraffin, for histology**
**Melting range: 54-56 °C**

Roti®-Plast is a special paraffin of highest quality without any additives. It penetrates the tissue quickly, completely and gives it its plasticity.

**Type analysis:**

Appearance. ..... white pastilles
Solidification point. ..... 54-56 °C

| | | | |
|---|---|---|---|
| **6642.1** | 1 kg | plastic | 17,10 € |
| Original pack 6 x 1 kg | | | 16,25/1 kg |
| **6642.5** | 2,5 kg | plastic | 31,10 € |
| **6642.2** | 10 kg | plastic | 105,90 € |
| **6642.6** | 20 kg BIG PACK | plastic | 175,80 € |

### Roti®-Plast with DMSO

**paraffin, for histology**
**Melting range: 56-58 °C**

Special paraffin, treated with DMSO, enriched with polymers. Makes it easier to penetrate the tissue.

**Type analysis:**

Appearance. ..... white droplets
Solidification point. ..... 56-58 °C

| | | | |
|---|---|---|---|
| **6643.1** | 1 kg | carton | 22,05 € |
| Original pack 6 x 1 kg | | | 20,95/1 kg |
| **6643.3** | 20 x 1 kg | carton | 327,90 € |
| **6643.2** | 2 kg | plastic | 37,10 € |

**Please note:**
Protein glycerol (Art. No. P049) contains egg albumin, colloidally dissolved in glycerol. At room temperature it may flocculate. But it will redissolve by gentle warming.

## Low Melting Paraffins

These paraffins allow embedding already at temperatures below 55 °C.

If high solid tissue blocks are required, we recommend a final embedding step at standard temperature (56-58 °C).

### Paraffin 50-52 °C

**extra pure, for histology**

**Type analysis:**

Appearance. ..... pastilles
Solidification point. ..... 50-52 °C

| | | | |
|---|---|---|---|
| **CN48.1** | 500 g | plastic | 20,65 € |
| Original pack 6 x 500 g | | | 19,62/500 g |
| **CN48.2** | 1 kg | plastic | 31,75 € |
| Original pack 6 x 1 kg | | | 30,16/1 kg |

### Paraffin 52-54 °C

**extra pure, for histology**

**Type analysis:**

Appearance. ..... pastilles
Solidification point. ..... 52-54 °C

| | | | |
|---|---|---|---|
| **CN49.1** | 500 g | plastic | 20,35 € |
| Original pack 6 x 500 g | | | 19,33/500 g |
| **CN49.2** | 1 kg | plastic | 31,75 € |
| Original pack 6 x 1 kg | | | 30,16/1 kg |

### Granopent® "P"

**Paraffin, in pellets, for histology**
**Melting range: 52-54 °C**

**Type analysis:**

Appearance. ..... white, wax-like pellets
Solidification point. ..... 52-54 °C
Needle penetration (25 °C, 1/10 mm). ..... 14-20

| | | | |
|---|---|---|---|
| **9279.1** | 1 kg | plastic | 19,25 € |
| Original pack 6 x 1 kg | | | 18,29/1 kg |
| **9279.2** | 2,5 kg | plastic | 38,60 € |

ready-to-use

### Protein glycerol

**for microscopy**

For fixing and stretching of the cuts.

**Type analysis:**

Appearance. ..... turbic, colourless to light yellow solution

| | | | |
|---|---|---|---|
| **P049.1** | 100 ml | glass | 17,10 € |

## Paraplast®-Paraffins

Published on the authority of Leica Biosystems.

Paraplast® is recommended for general tissue embedding. It is composed of a refined mixture of highly purified paraffin containing plastic polymers of regulated molecular weights. This provides improved tissue infiltration and superior quality sections with minimal compression. Paraplast® gives brittle, difficult-to-section tissue an innate elasticity, producing excellent, wrinkle-free sections.

### Paraplast®
**for histology, in pellets**

Tissue embedding medium composed of highly purified paraffin containing complex elastomers with regulated molecular weights.
**Melting point: 56 °C**

| | | | |
|---|---|---|---|
| **X880.1** | 1 kg | paper bag | 16,70 € |
| Original pack 6 x 1 kg | | | 15,87/1 kg |
| **X880.3** | 3 x 1 kg | paper bag | 45,70 € |
| **X880.2** | 8 x 1 kg | paper bag | 110,65 € |

### Paraplast PLUS®
**for histology, in pellets**

Tissue embedding medium composed of highly purified paraffin containing complex elastomers with regulated molecular weights and an addition of DMSO for large and difficult-to-infiltrate tissue samples.
**Melting point: 56 °C**

| | | | |
|---|---|---|---|
| **X881.1** | 1 kg | paper bag | 19,25 € |
| **X881.3** | 3 x 1 kg | paper bag | 54,75 € |
| **X881.2** | 8 x 1 kg | paper bag | 117,20 € |

### Paraplast X-TRA®
**for histology, in pellets**

Tissue embedding medium composed of polymers with low molecular weights and highly purified paraffin for large and difficult-to-infiltrate tissue samples at low temperatures.
**Melting point: 52 °C**

| | | | |
|---|---|---|---|
| **X882.1** | 1 kg | paper bag | 20,35 € |
| **X882.2** | 8 x 1 kg | paper bag | 138,70 € |

**Our Tip:**
**Heat Paraplast paraffin to maximum 62 °C.**
Higher temperatures may damage the synthetic additives.

## Cryo-Embedding

For preparation of cryo-sections.

ready-to-use

### Solidofix®-Cryo spray
**for histology**

Freezing of histological specimens. Cooling of paraffin blocks. Cooling to -45 °C.

**Danger** H222-H229

**Application:**
The tissue is sprayed for a few seconds with Solidofix®-Cryo spray. Then it can be cut.

**Properties:**
- Solidofix®-Cryo spray cools quickly and gently down to -45 °C
- Contents: Propane/butane gas
- For research use only. Not approved for human or veterinary use, for application to humans or animals, or for use in clinical or *in vitro* diagnostics.

| | | | |
|---|---|---|---|
| **T200.1** | 300 ml | spray bottle | 8,50 € |
| **T200.2** | 5 x 300 ml | spray bottle | 33,25 € |

NEW

ready-to-use

### OCT Embedding Matrix
**for histology**

Embedding medium for frozen tissue sections.

OCT is a cryo embedding matrix designed for cryostat sectioning of tissue specimens at temperatures of -10 °C and below. OCT is designed as a supportive and protective aid. The resulting frozen sections are used to rapidly perform examination in laboratory.

**Type analysis:**

| | |
|---|---|
| Appearance | viscous, colourless liquid |
| Spec. gravity | 1,032-1,040 |
| Micro examination | free of undissolved matter |
| Film | hazy |

| | | | |
|---|---|---|---|
| **6478.1** | 125 ml | plastic | 24,65 € |
| **6478.2** | 3 x 125 ml | plastic | 67,20 € |

# Embedding Media for Electron Microscopy

## Glycidether 100

**for electron microscopy**

Formerly known as Epon 812, Epoxipropyl ether of glycerol.
Epon 812

**Warning** H319-H335

| | | | |

## Glycidether Hardener MNA

**for glycidether 100**

1-Methyl-5-norbornene-2,3-dicarboxylic acid anhydride, Methylnadic anhydride
$C_{10}H_{10}O_3$
M 178,15 g/mol

**Danger** H334-H302-H335-H315-H319

| | | | |
|---|---|---|---|
| **8639.1** | 100 g | glass | 32,15 € |
| **8639.2** | 1 kg | glass | 213,95 € |
| Original pack 6 x 1 kg | | | 203,25/1 kg |

## Glycidether Accelerator DMP-30

**for glycidether 100**

2,4,6-Tris(dimethylaminomethyl)-phenol

**Warning** H302-H315-H319

| | | | |
|---|---|---|---|
| **8621.1** | 100 g | glass | 24,65 € |

## Methacrylic acid methyl ester

**≥99 %, extra pure**

For electron microscopy.
Methyl methacrylate
$C_5H_8O_2$
M 100,12 g/mol

**Danger** H225-H315-H317-H335

| | | | |
|---|---|---|---|
| **4233.1** | 1 l | glass | 27,45 € |
| Original pack 6 x 1 l | | | 26,08/1 l |
| **4233.2** | 2,5 l | glass | 53,65 € |
| Original pack 4 x 2,5 l | | | 50,97/2,5 l |

## Gelatine Capsules

**for electron microscopy**

No. 0, length 22 mm, diameter 7 mm, volume 0,68 ml.
Capsules are made of hard gelatine, usually 200-260 Bloom.
Appearance: clear, colourless.

| | | | |
|---|---|---|---|
| **8641.1** | 100 pieces | plastic | 18,85 € |

# Hydrophilic Carbowax-Embedding

This method is particularly suitable for histochemical specimens. It is based on the ability of polyethylene glycol (PEG, carbowax) to polymerise and, therefore, to build hardened blocks.

## Polyethylene glycol 400

**ROTIPURAN® Ph.Eur.**

Type 400 (liquid), PEG 400, Polyglycol, Polyoxyethylene
M 380-420 g/mol

| | | | |
|---|---|---|---|
| **0144.1** | 1 l | plastic | 25,70 € |
| Original pack 6 x 1 l | | | 24,42/1 l |
| **0144.2** | 5 l | plastic | 90,20 € |
| Original pack 2 x 5 l | | | 85,69/5 l |
| **0144.3** | 25 kg BIG PACK | plastic | 304,80 € |

## Polyethylene glycol 1000

**ROTIPURAN® Ph.Eur.**

Type 1000 (solid), PEG 1000, Polyglycol, Polyoxyethylene
M 950-1050 g/mol

| | | | |
|---|---|---|---|
| **0150.3** | 500 g | plastic | 21,40 € |
| Original pack 6 x 500 g | | | 20,33/500 g |
| **0150.1** | 1 kg | plastic | 31,10 € |
| Original pack 6 x 1 kg | | | 29,55/1 kg |
| **0150.2** | 5 kg | plastic | 109,55 € |

## Polyethylene glycol 1500

**ROTIPURAN® Ph.Eur.**

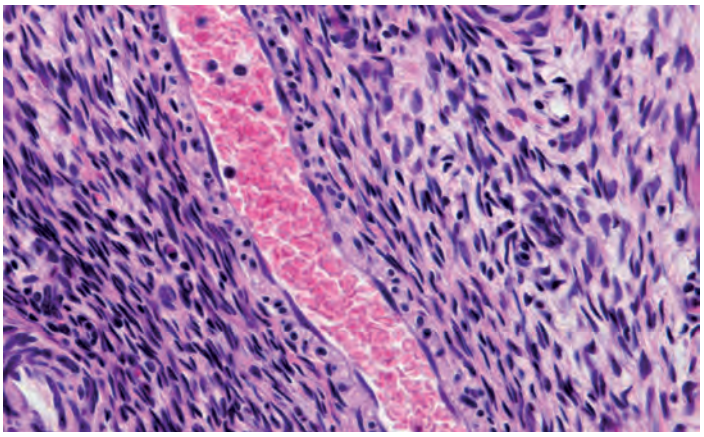
Type 1500 (solid), PEG 1500, Polyglycol, Polyoxyethylene
M 1400-1600 g/mol

| | | | |
|---|---|---|---|
| **0152.3** | 500 g | plastic | 21,40 € |
| Original pack 6 x 500 g | | | 20,33/500 g |
| **0152.1** | 1 kg | plastic | 31,10 € |
| Original pack 6 x 1 kg | | | 29,55/1 kg |
| **0152.2** | 5 kg | plastic | 109,55 € |

## Polyethylene glycol 2000

**ROTIPURAN® Ph.Eur.**

Type 2000 (solid), PEG 2000, Polyglycol, Polyoxyethylene
M 1800-2200 g/mol



| | | | |
|---|---|---|---|
| **0154.3** | 500 g | plastic | 21,40 € |
| Original pack 6 x 500 g | | | 20,33/500 g |
| **0154.1** | 1 kg | plastic | 31,10 € |
| Original pack 6 x 1 kg | | | 29,55/1 kg |
| **0154.2** | 5 kg | plastic | 109,55 € |

▶ Our complete range of polyethylene glycol see chapter Chemicals A-Z.

▶ Accessories for Embedding see chapter Labware - Laboratory Glass, Vessels & Consumables / Microbiology, Histology & Instruments.

# Staining Solutions & Kits

for histology, microscopy and cytology.

ROTH staining solutions have been developed, tested and optimised for scientific routine applications.

**Ready-to-use staining solutions:**
- Simple, quick and solid application
- Excellent quality
- Specially selected starting material
- Good reproducibility

## Staining Methods for Blood Smears

ready-to-use

We offer staining solutions for classic preparing of blood elements and for other standard assays, e.g. detection of blood parasites or bacteria.

### LOEFFLER's methylene blue solution

**for microscopy and cell counting**

For visualising nuclei.

Methylene blue solution 0,5 %

**Warning** H371

LÖFFLER'S methylene blue solution is used for staining bacteria, fungi and blood parasites in blood smears, e.g. together with carbolic fuchsine solution (Art. No. A130) for Ziehl-Neelsen staining (detection of TB bacteria). Furthermore, it is used as a vital staining agent for selective staining of nuclei during counting of eukaryotic cells.

| | | | |
|---|---|---|---|
| **AE64.1** | 500 ml | glass | 24,65 € |
| **AE64.2** | 1 l | glass | 30,65 € |
| Original pack 6 x 1 l | | | 29,12/1 l |
| **AE64.3** | 2,5 l | plastic | 64,00 € |
| Original pack 4 x 2,5 l | | | 60,80/2,5 l |

### Wright's eosin methylene blue solution

**for microscopy**

For differential staining of blood and bone marrow smears.

Wrights staining solution, eosin methylene blue solution acc. to Wright.

**Danger** H225-H370-H301+H311+H331

Wrights eosin methylene blue solution is used especially for staining blood and bone marrow smears. Additionally, there are various applicabilities in staining of cytological material such as urine, sputum etc.

| | | | |
|---|---|---|---|
| **CN05.1** | 500 ml | glass | 25,70 € |
| **CN05.2** | 1 l | glass | 36,45 € |
| Original pack 6 x 1 l | | | 34,63/1 l |

**Application range:**
Giemsa- and May-Grünwald-solution can be combined and then used to obtain particularly high-contrast staining ("Panoptic staining according to Pappenheim").

### May-Gruenwald's solution

**for microscopy**

For differential staining of blood smears and cytological specimens.

Eosine methylene blue solution

**Danger** H225-H370-H301+H311+H331

May-Gruenwald's solution is a methanolic solution of eosin methylene blue. Due to the high concentration of methanol, the specimens are fixed at the same time (recommended residence time: 3 min).
May-Gruenwald's solution is used for differential staining of blood smears and cytological specimens.

| | | | |
|---|---|---|---|
| **T863.1** | 500 ml | plastic | 23,55 € |
| **T863.2** | 1 l | glass | 27,45 € |
| Original pack 6 x 1 l | | | 26,08/1 l |
| **T863.3** | 2,5 l | plastic | 59,05 € |
| Original pack 4 x 2,5 l | | | 56,10/2,5 l |

### Giemsa stock solution

**for microscopy**

For differential staining of blood and bone marrow smears.

Azure eosin solution

**Danger** H225-H301+H311+H331-H370

Giemsa solution contains azure, eosine, methanol and glycerin. Before staining a fixing step with methanol for about 10 min is recommended. Giemsa solution is appropriate for use in all current assays of blood and bone marrow smears.
**Working solution:** Dilute stock solution at a ratio of 1:20 (e.g. 0.5 ml with 9.5 ml dist. water).

| | | | |
|---|---|---|---|
| **T862.1** | 500 ml | plastic | 26,35 € |
| **T862.2** | 1 l | glass | 38,60 € |
| Original pack 6 x 1 l | | | 36,67/1 l |
| **T862.3** | 2,5 l | plastic | 83,75 € |
| Original pack 4 x 2,5 l | | | 79,56/2,5 l |

### Panoptical fast staining kit

**for microscopy**

Staining kit for fast oversight staining of blood smears and other cytological preparations (modified method acc. to Pappenheim), incl. instructions for use.

Pappenheim fast stainingStorage temp.: +20 °C

**Danger** H225-H301+H311+H331-H370

**Formulation:**

Panoptical fast staining solution 1 (Art. No. 8934)
Panoptical fast staining solution 2 (Art. No. 8935)
Panoptical fast staining solution, fixatif (Art. No. 8939)

Contents of this kit may not be bought separately.

| | | | |
|---|---|---|---|
| **6487.1** | 1 kit (3 x 250 ml) | plastic | 76,90 € |
| **6487.2** | 1 kit (3 x 500 ml) | plastic | 138,70 € |

# Elastica Staining

ready-to-use

ROTH staining solutions for preparing elastic fibres in tissue sections.

## Nuclear fast red aluminium sulphate solution

**for microscopy**

For visualising nuclei e.g. during Elastica Staining.

**Danger** H318

| | | | |
|---|---|---|---|
| **N069.1** | 500 ml | glass | 32,15 € |

## Resorcinol-Fuchsine-solution acc. to Weigert

**for microscopy**

For visualising elastic fibres.
WEIGERT'S Resorcinol-Fuchsine-solution

**Danger** H225-H302+H312+H332-H319-H317-H370-H336

| | | | |
|---|---|---|---|
| **X877.1** | 500 ml | glass | 33,25 € |
| **X877.2** | 1 l | glass | 56,45 € |
| Original pack 6 x 1 l | | | 53,63/1 l |
| **X877.3** | 2,5 l | plastic | 115,60 € |
| Original pack 4 x 2,5 l | | | 109,82/2,5 l |

## Elastica van Gieson staining kit

**for microscopy**

Staining kit for visualising connective tissue with elastic fibres, incl. instructions for use. Isolated solutions at the following pages.
Storage temp.: +20 °C

**Danger** H224-H302-H312-H332-H318-H336-H370-EUH001

**Formulation:**

Hematoxylin solution A acc. to Weigert (Art. No. X906)..... 500 ml
Hematoxylin solution B acc. to Weigert (Art. No. X907)..... 500 ml
Van Gieson's Solution (Art.-No. 3925)..... 500 ml
Resorcinol-Fuchsine-solution acc. to Weigert (Art. No. X877)..... 500 ml

| | | | |
|---|---|---|---|
| **8275.1** | 1 kit | glass | 129,55 € |

**Our Tip:**
The ready-to-use staining solutions should be filtrated before use.

**Staining protocols**
can be found on the internet next to the product description.

# Hematoxylin-Eosin Staining (H&E Staining)

ready-to-use

Simple and quick staining method for visualising nuclei and cytoplasm.

## Hemalum solution acid acc. to Mayer

**for microscopy**

For visualising nuclei..

**Warning** H302-H315-H319

| | | | |
|---|---|---|---|
| **T865.1** | 500 ml | glass | 26,35 € |
| **T865.2** | 1 l | glass | 42,90 € |
| Original pack 6 x 1 l | | | 40,76/1 l |
| **T865.3** | 2,5 l | plastic | 77,95 € |
| Original pack 4 x 2,5 l | | | 74,05/2,5 l |

## Eosin Y solutions

For visualising cell structures during standard staining methods.

| Product | Purity | Art. No. | Pack Qty | € |
|---|---|---|---|---|
| **Eosin Y solution 0,5 % in water** | for microscopy | **X883.1** | 500 ml | 20,35 |
| | | **X883.2** | 1 l | 28,95 |
| **Eosin Y solution 1 % in water** | | **3137.1** | 500 ml | 22,50 |
| | | **3137.2** | 1 l | 32,15 |
| **Eosin Y solution 1 % in methanol** | | **3139.1** | 500 ml | 26,35 |
| | | **3139.2** | 1 l | 39,70 |

For additional product data and safety information, see chapter Chemicals A-Z.

## H&E fast staining kit

**for microscopy**

Staining kit for fast oversight staining of tissue sections. Hematoxylin-eosin staining, incl. instructions for use.
Storage temp.: +20 °C

**Danger** H225-H301+H311+H331-H370-H318

**Formulation:**

Fast staining H&E, solution 1 (Art. No. 8947)
Fast staining H&E, solution 2 (Art. No. 8950)
Contents of this kit may not be bought separately.

| | | | |
|---|---|---|---|
| **9194.1** | 2 x 250 ml | plastic | 52,60 € |
| **9194.2** | 2 x 500 ml | plastic | 76,90 € |

# Trichrome Staining

ready-to-use

A standard staining method for analysis of connective tissue, allowing a differentiated visualisation of various fibres of connective tissue against epithelial and muscle tissue.

We offer the necessary solutions for staining acc. to Masson-Goldner and van Gieson and in addition hematoxylin solutions for acid resistant staining of nuclei acc. to Weigert.

## Hematoxylin solutions acc. to Weigert

For visualising nuclei.

**Working solution:**
Mix WEIGERT'S solution A and WEIGERT'S solution B at a ratio of 1:1 prior to use (iron hematoxylin solution). This working solution is stable for 8 days in maximum at room temperature.

| Product | Synonym | Purity | Art. No. | Pack Qty | € |
|---|---|---|---|---|---|
| Hematoxylin solution A acc. to Weigert | Solution A acc. to Weigert | for microscopy | **X906.1** | 500 ml | 55,40 |
| Hematoxylin solution B acc. to Weigert | Solution B acc. to Weigert | | **X907.1** | 500 ml | 21,00 |

For additional product data and safety information, see chapter Chemicals A-Z.

## Weigert's iron hematoxylin staining kit

**for microscopy**

Staining kit for acid resistant staining of nuclei, incl. instructions for use.
Storage temp.: +20 °C

**Danger** H225-H318-H336

**Formulation:**
Hematoxylin solution A acc. to Weigert (Art. No. X906)..... 500 ml
Hematoxylin solution B acc. to Weigert (Art. No. X907)..... 500 ml

| | | | |
|---|---|---|---|
| **9192.1** | 1 kit | glass | 72,60 € |

**Application range:**
WEIGERT'S iron hematoxylin solution results in very acidoresistant staining of nuclei. Therefore, the method is particularly suitable for staining delimed tissues and for sections intended to be counter-stained with acid dyes.

## Masson-Goldner's trichrome staining kit

**for microscopy**

Staining kit for visualising connective tissue (Masson-Goldner trichrome staining), incl. instructions for use.
Storage temp.: +20 °C

**Danger** H225-H315-H318-H336

**Application:** Firstly the nuclei are stained with Weigert's iron hematoxylin solution, an acidoresistant staining. Subsequently the trichrome staining is carried out with the acid stains acc. to Goldner. Every staining step is followed by a rinsing step with acetic acid 1%. This reagent is not included to the kit.
**Result:** Visualisation of nuclei, cytoplasm, muscle, erythrocytes, connective tissue.

**Formulation:**
Hematoxylin solution A acc. to Weigert (Art. No. X906)..... 500 ml
Hematoxylin solution B acc. to Weigert (Art. No. X907)..... 500 ml
Goldner's stain I (Art. No. 3469)..... 500 ml
Goldner's stain II (Art. No. 3470)..... 500 ml
Goldner's stain III (Art. No. 3473)..... 500 ml

| | | | |
|---|---|---|---|
| **3459.1** | 1 kit | glass | 155,90 € |

## Van Gieson's Solution

**for microscopy**

For visualising connective tissue during van Gieson trichrome staining and Elastica van Gieson staining.
Van Gieson's picrofuchsin

EUH001

**Application:** First the nuclei are stained with Weigert's iron hematoxylin solution (Art. No. X906.1 Hematoxylin solution A and Art. No. X907.1 Hematoxylin solution B at a ratio of 1:1). Subsequently the trichrome staining is carried out with van Gieson's picrofuchsin solution.
**Result:** Visualisation of nuclei, connective tissue, cytoplasm, muscle and other tissue components.

| | | | |
|---|---|---|---|
| **3925.1** | 500 ml | glass | 25,30 € |
| **3925.2** | 1 l | glass | 36,45 € |
| Original pack 6 x 1 l | | | 34,63/1 l |

## Van Gieson trichrome staining kit

**for microscopy**

Staining kit for visualising connective tissue, incl. instructions for use.
Storage temp.: +20 °C

**Danger** H225-H318-H336-EUH001

**Formulation:**
Hematoxylin solution A acc. to Weigert (Art. No. X906)..... 500 ml
Hematoxylin solution B acc. to Weigert (Art. No. X907)..... 500 ml
Van Gieson's Solution (Art.-No. 3925)..... 500 ml

| | | | |
|---|---|---|---|
| **9193.1** | 1 kit | glass | 94,10 € |

## Goldner's staining solutions

For visualising connective tissue (Masson-Goldner trichrome staining).

| Product | Synonym | Purity | Art. No. | Pack Qty | € |
|---|---|---|---|---|---|
| **Goldner's staining I** | Ponceau-Fuchsin solution | for microscopy | **3469.1** | 500 ml | 28,50 |
| | | | **3469.2** | 1 l | 39,70 |
| **Goldner's staining II** | Phosphotungstic acid-Orange G solution | | **3470.1** | 500 ml | 50,45 |
| | | | **3470.2** | 1 l | 85,90 |
| **Goldner's staining III** | Light green SF yellowish solution | | **3473.1** | 500 ml | 29,60 |
| | | | **3473.2** | 1 l | 38,60 |

For additional product data and safety information, see chapter Chemicals A-Z.

**Staining protocols**
can be found on the internet next to the product description.

# PAS-Staining

A classical method mainly used for visualising carbohydrates in tissue.

ready-to-use

## PAS staining kit
**for microscopy**

Staining kit for Periodic Acid Schiff (PAS) staining, incl. instructions for use.
Storage temp.: +4 °C

**Danger** H302-H315-H319-H350

Periodic Acid Schiff staining is generally used for detecting carbohydrates in tissue.
**Application:**
Staining is carried out in 3 steps: Periodic acid transforms 1.2 glycol groups to aldehyde groups, which are stained with Schiff´s reagent. Hemalum solution performs counter staining of nuclei.
**Result:**
Carbohydrates red, nuclei blue.

**Formulation:**
Periodic acid solution 1 % (Art. No. HP00)..... 500 ml
Schiff´s reagent (Art. No. X900)..... 500 ml
Hemalum solution acid acc. to Mayer (Art. No. T865)..... 500 ml

| | | | |
|---|---|---|---|
| **HP01.1** | 1 kit | glass | 84,85 € |

## Periodic acid solution 1 %
**for microscopy**

For hydrolysis of carbohydrates, e.g. in PAS reaction (Periodic Acid Schiff reaction).
$H_5IO_6 + H_2O$

**Warning** H315-H319

| | | | |
|---|---|---|---|
| **HP00.1** | 500 ml | glass | 39,70 € |

## Schiff's reagent
**for microscopy**

Staining reagent for detection of carbohydrates in tissue (PAS reaction).
Fuchsine sulphurous acid

**Danger** H350

Schiff´s reagent has a wide spectrum of application in PAS reaction (Periodic Acid Schiff reaction), in combined alcian blue PAS staining and as a reagent for detecting aldehydes.
Storage: At room temperature in the dark. After the bottle has been opened well-sealed at 4-8 °C. Discard the solution if it turns reddish.

| | | | |
|---|---|---|---|
| **X900.1** | 500 ml | glass | 22,50 € |
| **X900.2** | 1 l | glass | 30,00 € |
| Original pack 6 x 1 l | | | 28,50/1 l |

## Alcian blue 1 % in acetic acid 3 %
NEW ready-to-use
**for microscopy**

For selective staining of acidic mucins.
Alcian Blue solution 1 %
The solution stains acidic mucopolysaccharides in tissue blue. Often the staining is combined with the PAS reaction.

| | | | |
|---|---|---|---|
| **1431.1** | 500 ml | glass | 150,00 € |
| **1431.2** | 1 l | glass | 226,85 € |
| Original pack 6 x 1 l | | | 215,51/1 l |

# Cytological Routine Staining

Ready-made solutions for routine applications, like, e.g., staining acc. to Papanicolaou, which is mainly used for visualisation of cancer cells.

ready-to-use

## Hematoxylin solution acc. to Delafield
**20x conc., for microscopy**

Delafield's hematoxylin solution

**Danger** H225-H370-H332+H312+H302

Dilution for use: 1:20 in distilled water (staining 30 min).

**Type analysis:**
Suitability for microscopy..... complies

| | | | |
|---|---|---|---|
| **CN03.1** | 500 ml | glass | 38,60 € |

## Hematoxylin solution acid acc. to Ehrlich
**for microscopy**

Ehrlich's acid hematoxylin solution

**Danger** H225-H319-H336

**Type analysis:**
Suitability for microscopy..... complies

| | | | |
|---|---|---|---|
| **CN04.1** | 500 ml | glass | 38,60 € |

## Hematoxylin solution acc. to Gill II
**for microscopy**

**Danger** H302-H318-H373-EUH208

**Type analysis:**
Suitability for microscopy (tissue section)..... complies

| Original pack 4 x 2,5 l | | | 75,10/2,5 l |

### PAP fast staining kit
**for microscopy**

Staining kit for fast staining of cytological smears (fast staining acc. to Papanicolaou), incl. instructions for use.
Storage temp.: +20 °C

**Danger**
H225-H302+H312+H332-H319-H370-H373-EUH208

**Formulation:**
PAP fast staining, solution 1 (Art. No. 9197)
PAP fast staining, solution 2 (Art. No. 9199)
Contents of this kit may not be bought separately.

| | | | |
|---|---|---|---|
| **9195.1** | 2 x 250 ml | plastic | 59,05 € |
| **9195.2** | 2 x 500 ml | plastic | 90,85 € |

▶ Accessories for staining see chapter Labware - Laboratory Glass, Vessels & Consumables / Microbiology, Histology & Instruments.

**Staining protocols**
can be found on the internet next to the product description.

# Bacteriological Staining

## Staining of acid-fast bacteria

ready-to-use

Acid-fast bacteria (e.g. Mycobacteria) cannot or only difficult be stained by usual staining methods due to the high proportion of lipids in their cell walls.

The most popular method for staining of acid-fast bacteria is the hot staining method acc. to Franz Ziehl and Friedrich Neelsen (Ziehl-Neelsen staining), in which the cell walls are "melted" by heating.

Furthermore cold staining methods have been developed like Kinyoun, Gabett or Ziehl-Neelsen (cold) to avoid harmful vapours resulting in the hot staining method.

### Ziehl-Neelsen staining kit
**for microscopy**

Staining kit for visualising acid-fast bacteria (e.g. pathogen of TB *Mycobacterium tuberculosis*), incl. instructions for use.
Isolated solutions see p. 1452 and 1457
Storage temp.: +20 °C

**Danger** H314-H341-H371

**Formulation:**
Löffler's methylene blue solution (Art. No. AE64) ..... 500 ml
Carbol fuchsine solution (Art. No. A130) ..... 500 ml

| | | | |
|---|---|---|---|
| **8276.1** | 1 kit | glass | 44,65 € |

### Methylene blue solution 0.1 %, aqueous

NEW

**for microscopy**

For staining of nuclei.
Gabett solution
Aqueous methylene blue solution without further additives for staining of nuclei. It is used for cold staining of acid-fast bacteria (e. g. Mycobacteria). Methods are Kinyoun or Gabett's staining.

| | | | |
|---|---|---|---|
| **1433.1** | 250 ml | glass | 17,75 € |
| **1433.2** | 500 ml | glass | 24,65 € |
| **1433.3** | 1 l | glass | 31,75 € |
| Original pack 6 x 1 l | | | 30,16/1 l |

## Neisser Staining

ready-to-use

Standard staining method in bacteriology, especially used for visualising diphtheria bacteria.

| Product | Synonym | Purity | Art. No. | Pack Qty. | € |
|---|---|---|---|---|---|
| **Neisser's solution I** | Methylene blue solution 0,1 % acid | for microscopy | **3463.1** | 100 ml | 19,25 |
| | | | **3463.2** | 500 ml | 36,45 |
| **Neisser's solution II** | Crystal violet solution | | **3464.1** | 100 ml | 19,25 |
| | | | **3464.2** | 500 ml | 36,45 |
| **Neisser's solution III** | Chrysoidine solution 0,3 % | | **3466.1** | 100 ml | 19,25 |
| | | | **3466.2** | 500 ml | 36,45 |

For additional product data and safety information, see chapter Chemicals A-Z.

## Gram Staining

ready-to-use

Gram staining is the most important technique for differentiation and identification of bacteria. It was developed by the Danish bacteriologist Hans Christian Gram (1853-1938).

Due to the structure of their cell walls nearly all bacterial species can be differentiated in gram-positive and gram-negative bacteria.

### Gram staining kit

**for microscopy**

Kit for differentiation of gram-positive and gram-negative bacteria, incl. instructions for use.

Storage temp.: +20 °C

**Danger** H225-H314-H302+H312+H332-H336-H341

This classical staining method allows a quick differentiation of gram-positive and gram-negative bacteria. Subsequently a specific treatment with antibiotics is possible.

**Application:**
In the first step bacteria are stained by Carbol gentianaviolet and Lugol solution. Afterwards gram-negative bacteria are decolourised by Gram's decolourising solution. In the last step these bacteria are counterstained by Carbol fuchsine solution.

**Result:**
Gram-positive bacteria appear blue, gram-negative bacteria red.

**Formulation:**

Carbol gentianaviolet solution (Art. No. CN00). ..... 500 ml
Iodine-potassium iodide solution acc. to Lugol (Art. No. N052). ..... 500 ml
Gram's decolourising solution (Art. No. CN02). ..... 500 ml
Carbol fuchsine solution (Art. No. A130). ..... 500 ml

| | | | |
|---|---|---|---|
| **HP02.1** | 1 kit | glass | 90,20 € |

### Gram's decolourising solution

**for Gram staining**

Ethanolic solution containing 25 % acetone. It is used for differentiation of bacteria during Gram staining.

**Danger** H225-H319-H336

Ethanolic solution containing 25 % acetone. It is used for differentiation of bacteria during Gram staining.

| | | | |
|---|---|---|---|
| **CN02.1** | 500 ml | glass | 22,50 € |

### Iodine-potassium iodide solution acc. to Lugol

**for microscopy**

For Gram staining.

Lugol solution

**Warning** H373

1 % aqueous iodine solution. Contains ~3,3 g/l iodine and ~6,7 g/l potassium iodide.

| | | | |
|---|---|---|---|
| **N052.1** | 250 ml | glass | 17,10 € |
| **N052.3** | 500 ml | glass | 24,20 € |
| **N052.2** | 1 l | glass | 29,60 € |
| Original pack 6 x 1 l | | | 28,12/1 l |

**Our Tip:**
The ready-to-use staining solutions should be filtrated before use.

### Carbolic fuchsine solution

**for microscopy**

For bacterial staining (Gram staining and staining of acid-fast bacteria, e.g. TB bacteria acc. to Ziehl-Neelsen).

**Danger** H314-H341

| | | | |
|---|---|---|---|
| **A130.2** | 500 ml | glass | 22,05 € |
| **A130.1** | 1 l | glass | 34,30 € |
| Original pack 6 x 1 l | | | 32,59/1 l |

### Carbol gentian violet solution

**for microscopy**

For Gram staining.

**Warning** H226

The solution is used for the first step of Gram staining. It can be applied like crystal violet solution acc. to Gram. Gentian violet and crystal violet are two different names for the same dye.

**Type analysis:**
Suitability for microscopy. ..... complies

| | | | |
|---|---|---|---|
| **CN00.1** | 500 ml | glass | 23,15 € |
| **CN00.2** | 1 l | glass | 33,25 € |
| Original pack 6 x 1 l | | | 31,59/1 l |

### Safranin solution

**for Gram staining**

1 % safranine solution in water. Replaces Carbolic fuchsine solution during staining procedure of gram-negative bacteria.

| | | | |
|---|---|---|---|
| **CN01.1** | 500 ml | glass | 32,15 € |

**Preparation of an oxalate gentian violet solution**

Dissolve 0.8 g ammonium oxalate (Art. No. P737.1) in 80 ml dist. water. Then dissolve 2 g gentian violet (crystal violet, Art. No. T123.1) in 20 ml 96 % ethanol (Art. No. T171.1). Mix both solutions well. Filter solution before using.

# Lactophenol Blue Staining

Staining method for identification and visualisation of fungi cells during microbiological assays.

ready-to-use

### Lactophenol blue solution
**for microscopy**

Fungal stain for microbiological material.

**Danger** H302+H312+H332-H314-H341-H373

Lactophenol blue solution is used to visualise fungi cells in air-dried, heat-fixed smears of various cytological materials. After staining the fungi cells appear dark blue.

| | | | |
|---|---|---|---|
| **3097.1** | 100 ml | glass | 25,70 € |

# Staining of Cellulose According to Behrens

ready-to-use

With zinc iodine chloride solution from ROTH.

### Zinc iodine chloride solution
**acc. to Behrens, for microscopy**

Reagent for cellulose.

**Danger** H302-H314-H373-H410

**Type analysis:**

Appearance. ..... yellowish-brown solution

| | | | |
|---|---|---|---|
| **6395.1** | 100 ml | glass | 25,30 € |

**Performing detection of cellulose:**

Add one drop of the solution to the section applied to a slide. After 30 min in maximum cellulose fibres are stained blue; wood, cork and cutin are stained yellow. The cellulose staining is a dichroitic staining. Depending on the polarisation direction of light different wavelengths of light are absorbed. Thus the dye changes from dark blue to colourless.

Acc. to Dieter Gerlach: Bot. Mikrotechnik, 2. Edition, Thieme (1977)

**Safety data sheets**

can be found on the Internet next to the product description.

# Dyes

ROTH offers a wide range of staining agents in a tried and tested quality for use in botany, bacteriology, histology and cell culture.

# Chromogenic Dyes

### Alcian blue 8 GS (C.I. 74240)
**for microscopy**

Bacteriology and histology.

Alcian Blue 8 GX, Ingrain Blue 1

Basic dye, soluble in diluted acetic acid solution (0.1 % - 3 %) in concentrations of 0.05 % to 1 %. Used e.g. for staining of glycoproteins as an alternative to PAS-Staining.

| | | | |
|---|---|---|---|
| **3082.2** | 5 g | glass | 35,40 € |
| **3082.1** | 10 g | glass | 60,10 € |
| **3082.3** | 25 g | glass | 132,15 € |
| **3082.4** | 100 g | glass | 403,15 € |

### Acid blue 93 (C.I. 42780)
**p.a., water soluble**

For staining of histological sections and for cytology.

Aniline blue water soluble, Methyl blue

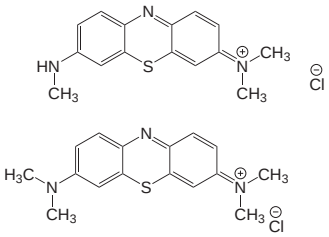
$C_{37}H_{27}N_3O_9S_3Na_2$

M 799,81 g/mol

Acid blue 93 is a plasma stain. It is often used in trichome stains to visualise connective tissue. Solution 1 % in water.

| | | | |
|---|---|---|---|
| **4002.1** | 10 g | glass | 74,75 € |
| **4002.2** | 25 g | glass | 161,80 € |

### Astra blue FM (C.I. 48048)
**for microscopy**



$C_{47}H_{52}CuN_{14}O_6S_3$

M 1068,75 g/mol

**Warning** H315-H319-H335

Soluble in water (0.5 %), staining reagent for cellulose.

| | | | |
|---|---|---|---|
| **5165.1** | 10 g | glass | 13,45 € |
| **5165.2** | 50 g | glass | 27,85 € |

## Azure II

**for microscopy**

1:1 mixture of Azure B and Methylen blue

$C_{16}H_{18}ClN_3S \cdot C_{15}H_{16}ClN_3S$

M 625,68 g/mol

**Warning** H302-H412

Azure II is a mixture of equal parts of the basic coal tar dyes methylene blue and Azure B. These dyes are mainly used for staining of blood elements (e.g. in Giemsa staining solution, Art. No. T862). In watery solution they form special salts with the acid eosin, the eosinates.

| | | | |
|---|---|---|---|
| **7640.1** | 1 g | glass | 11,75 € |

$C_{22}H_{20}O_{13}$

M 492,38 g/mol

Water-insoluble natural dye, obtained from dried female scale insects (Cochenille). Main ingredient is carminic acid. For use as a dye in microscopy it is applied in conjunction with a mordant, usually based on aluminium, producing a well-staining calcium aluminium lake of carminic acid.

| | | | |
|---|---|---|---|
| **6859.1** | 10 g | glass | 44,65 € |
| **6859.2** | 25 g | glass | 93,45 € |

## Celestine blue (C.I. 51050)

**for microscopy**

$C_{17}H_{18}ClN_3O_4$

M 363,80 g/mol

A watery solution of Celestine blue Hemalum is used for acid resistant staining of nuclei. It replaces Weigert's iron hematoxylin solution e.g. during trichrome staining.

| | | | |
|---|---|---|---|
| **7646.1** | 5 g | glass | 24,65 € |
| **7646.2** | 25 g | glass | 89,15 € |
| **7646.3** | 100 g | glass | 299,95 € |

## Chromotrope® 2R (C.I. 16570)

**for microscopy**

Indicator for complexometry.

$C_{16}H_{10}N_2Na_2O_8S_2$

M 468,39 g/mol

**Warning** H315-H319-H335

Water soluble azo dye, stains cytoplasm red. Commonly used in concentrations of 0.5-1.0 %.

| | | | |
|---|---|---|---|
| **4937.2** | 10 g | glass | 28,95 € |
| **4937.1** | 50 g | glass | 107,40 € |

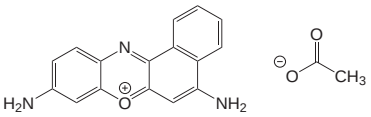
## Congo red (C.I. 22120)

**for microscopy**

Bacteriology, indicator pH 3,0-5,0

Direct Red 28, Disodium-3,3'[[1,1-biphenyl]-4,4'-diylbis(azo)]bis(4-amino-naphthalin-1-sulphonate)

$C_{32}H_{22}N_6Na_2O_6S_2$



M 696,66 g/mol

**Danger** H350-H361d

Azo dye, soluble in water (colloidal solution) and ethanol. A 1% solution in ethanol is used for detection of amyloid proteins (= abnormally mutated proteins).

| | | | |
|---|---|---|---|
| **0322.1** | 5 g | glass | 15,60 € |
| **0322.2** | 25 g | glass | 28,50 € |
| **0322.3** | 100 g | glass | 56,90 € |

▶ Ready-made staining solutions see from page 1452

## Cresyl violet acetate

**p.a.**

Cresyl echt violet, Cresyl fast violet

$C_{18}H_{15}N_3O_3$

M 321,34 g/mol

Cresyl violet acetate is a nuclear stain. It is used for visualising nerve tissue during Nissl staining. Usually, a 1% solution in water is applied.

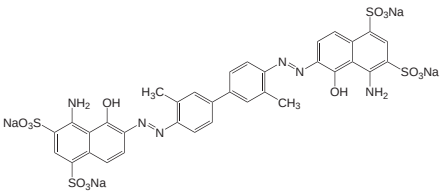
| | | | |
|---|---|---|---|
| **7651.1** | 5 g | glass | 53,25 € |
| **7651.2** | 10 g | glass | 90,20 € |
| **7651.3** | 25 g | glass | 209,65 € |

## Crystal violet (C.I. 42555)

**p.a., ACS**

Indicator pH 0,0-2,0

Hexamethylpararosaniline chloride, Methyl violet 10B, Gentian violet



$C_{25}H_{30}ClN_3$

M 407,99 g/mol

**Danger** H318-H351-H400-H410-H302

Crystal violet, also called gentian violet, is soluble in water and alcohol and is used for multiple histological stains, e.g. Gram staining.

| | | | |
|---|---|---|---|
| **T123.2** | 5 g | glass | 17,10 € |
| **T123.1** | 25 g | glass | 26,80 € |
| **T123.3** | 100 g | glass | 69,35 € |

## Evan's blue (C.I. 23860)

**for microscopy**

Direct Blue 53

$C_{34}H_{24}N_6Na_4O_{14}S_4$

M 960,82 g/mol

**Danger** H350-H361d

Diazo dye for intravital staining.

| | | | |
|---|---|---|---|
| **7684.1** | 5 g | glass | 26,80 € |
| **7684.2** | 25 g | glass | 54,75 € |
| **7684.3** | 100 g | glass | 181,70 € |

## Fast Green FCF

**for microscopy**

For staining proteins.

Food Green 3

$C_{37}H_{34}N_2Na_2O_{10}S_3$

M 808,84 g/mol

**Warning** H341

Soluble in ethanol and water, replaces light green in Masson Goldner Staining or in Papanicolaou solutions.

| | | | |
|---|---|---|---|
| **0301.1** | 25 g | glass | 92,35 € |

## Fuchsine basic (C.I. 42510)

**for microscopy**

Indicator pH 1,0-3,1

Basic violet, Magenta

$C_{20}H_{20}N_3Cl$

M 337,85 g/mol

**Warning** H351

Soluble in ethanol and water. Multiple use in histology, e.g. carbolic fuchsine solution in Gram staining oder resorcinol fuchsine solution in elastica staining.

| | | | |
|---|---|---|---|
| **3256.2** | 25 g | glass | 33,25 € |
| **3256.1** | 50 g | glass | 60,10 € |
| **3256.3** | 100 g | glass | 80,10 € |

## Giemsa stain

**for microscopy**

**Warning** H319

Mixture of Azure and Eosin for preparing Giemsa solution. It is used for staining blood and bone marrow smears. Ingredient of the Giemsa stock solution (Art. No. T862).

| | | | |
|---|---|---|---|
| **7691.1** | 5 g | glass | 13,90 € |
| **7691.2** | 25 g | glass | 24,20 € |
| **7691.3** | 100 g | glass | 62,25 € |

## Hematoxylin (C.I. 75290)

**for microscopy**

Hydroxybrasilin

$C_{16}H_{14}O_6$

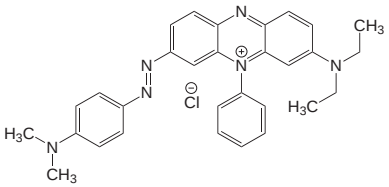
M 302,29 g/mol

A beige natural dye which achieves its active form, the hemalum, by oxidation (e.g. with sodium iodate) and treating with a metallic mordant (e.g. alum). Hemalum lakes stain cell nuclei blue.

| | | | |
|---|---|---|---|
| **3816.1** | 10 g | glass | 40,75 € |
| **3816.3** | 50 g | glass | 161,15 € |
| **3816.2** | 100 g | glass | 284,90 € |

## Indigo carmine (C.I. 73015)

**for microscopy**



Indicator pH 11,5-13,0

$C_{16}H_8N_2Na_2O_8S_2$

M 466,36 g/mol

**Warning** H302

| | | | |
|---|---|---|---|
| **5156.1** | 10 g | glass | 14,55 € |
| **5156.2** | 25 g | glass | 21,40 € |
| **5156.3** | 100 g | glass | 62,25 € |

## Janus green B (C.I. 11050)

**for microscopy**

Diazin Green S

$C_{30}H_{31}ClN_6$

M 511,07 g/mol

Vital dye for staining of leucocytes and for visualising mitochondria. Besides Janus green is used as counter stain during the modified Ziehl-Neelsen staining.

Oxidized indicator blue, reduced indicator pink

| | | | |
|---|---|---|---|
| **7697.1** | 5 g | glass | 24,65 € |
| **7697.2** | 25 g | glass | 60,10 € |
| **7697.3** | 100 g | glass | 198,90 € |

## Jenner Stain

**for microscopy**

Mixture of eosin, methylene blue, Azure A, B and C

Methylene blue eosinate (Romanowsky dye mixture) for staining blood smears, bone marrow smears et al. acc. to Jenner. Usually 1 g dye is dissolved in 400 ml methanol (stock solution). For use the solution is diluted 1:1 with aqua dest.

| | | | |
|---|---|---|---|
| **7698.1** | 5 g | glass | 13,90 € |
| **7698.2** | 25 g | glass | 24,65 € |
| **7698.3** | 100 g | glass | 60,10 € |

## Leishman stain

**for microscopy**

Mixture of methylen blue, Azure A, B and C

Eosin methylene blue acc. to Leishman

Eosin methylene blue mixture (Romanowsky dye) for staining blood smears, bone marrow smears et al. acc. to Leishman.

| | | | |
|---|---|---|---|
| **7702.1** | 5 g | glass | 14,20 € |
| **7702.2** | 25 g | glass | 24,20 € |
| **7702.3** | 100 g | glass | 60,10 € |

## Light green SF (C.I. 42095)

**for microscopy**

Acid green 5

$C_{37}H_{34}N_2Na_2O_9S_3$

M 792,86 g/mol

Water-soluble dye for visualising connective tissue during Masson-Goldner trichrome staining (ingredient of Goldner's stain III).

| | | | |
|---|---|---|---|
| **7706.1** | 5 g | glass | 19,25 € |
| **7706.2** | 25 g | glass | 43,55 € |
| **7706.3** | 100 g | glass | 134,95 € |

## Malachite green oxalate (C.I. 42000)

**for microscopy**

Indicator pH 0,0-2,0, for protein analysis.
Basic green 4
$C_{52}H_{54}N_4O_{12}$
M 927,02 g/mol

**Danger** H318-H361d-H400-H410-H301

Water soluble dye; in botany used for staining bacteria and fungal infected tissues and for detection of spores.

| | | | |
|---|---|---|---|
| **5895.2** | 25 g | glass | 16,05 € |
| **5895.1** | 100 g | glass | 32,15 € |
| **5895.3** | 250 g | glass | 46,15 € |

**Spore staining acc. to Wirtz**

Boil the heat fixed smear with malachite green, Art. No. 5895, (5 % solution in water) for 20 sec and allow to act for at least 30 sec. Rinse in running tap water, counterstain with safranin O, Art. No. T129, (0.5 % solution in water) for 30 sec, rinse again and dry.

**Result:** Spores green, other bacteria parts red

## Methylene blue (C.I. 52015)

For microscopy and staining of nucleic acids in polyacrylamide gels.
Basic blue 9
$C_{16}H_{18}ClN_3S$
M 319,9 g/mol

**Warning** H302-H412

Water-soluble nuclear dye, does not intercalate between base pair stacks of DNA. Especially used for staining of blood cells.

**Application note:**
**Staining of nucleic acids in PAA**

- Use a 0.2 % solution of methylene blue for staining
- Stain for 20 min.
- Wash for 15 min. in distilled water

Nucleic acids are visible as blue bands.
Detection limit: 20 ng/band.

| | | | |
|---|---|---|---|
| **A514.1** | 10 g | glass | 19,60 € |
| **A514.2** | 50 g | glass | 46,15 € |
| **A514.3** | 100 g | glass | 75,15 € |

## Methyl green (C.I. 42590)

**for microscopy**

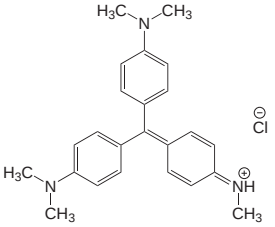
Indicator pH 0,1-2,3
Methyl green zinc chloride double salt, Ethyl green zinc chloride double salt
$C_{27}H_{35}Cl_2N_3 \cdot ZnCl_2$
M 608,78 g/mol

**Danger** H314-H351-H411

Acid nitroso dye, staining reagent for visualising nuclei, water soluble (1 %).

| | | | |
|---|---|---|---|
| **5159.1** | 5 g | glass | 21,40 € |
| **5159.2** | 10 g | glass | 34,30 € |
| **5159.3** | 25 g | glass | 67,65 € |

## Methyl orange (C.I. 13025)



**ACS, for microscopy**

Indicator pH 3,2-4,4
4-(Dimethylamino)-azobenzene -4'-sulphonic acid sodium salt, Orange III
$C_{14}H_{14}N_3NaO_3S$
M 327,4 g/mol

**Danger** H301

Azo dye, low soluble in water (5 g/l).
Ingredient of trichrom stains used for detection of connective tissue.

| | | | |
|---|---|---|---|
| **T118.1** | 50 g | glass | 25,70 € |
| **T118.2** | 100 g | glass | 39,25 € |
| **T118.3** | 250 g | glass | 57,95 € |

## Methyl violet 2B (C.I. 42535)

**for microscopy**

Basic violet
$C_{24}H_{28}N_3Cl$
M 393,96 g/mol

**Warning** H302-H410

Water-soluble dye (30 g/l), closely related to crystal violet, used e.g. for fibrin staining acc. to Weigert.

| | | | |
|---|---|---|---|
| **7715.1** | 5 g | glass | 14,20 € |
| **7715.2** | 25 g | glass | 24,65 € |
| **7715.3** | 100 g | glass | 47,85 € |

## Naphthol green B (C.I. 10020)

**for microscopy**

Acid green 1
$(C_{10}H_5NNaO_5S)_3Fe$
M 878,47 g/mol
Acid nitroso dye, soluble in water (1 %).

| | | | |
|---|---|---|---|
| **5161.1** | 25 g | glass | 19,25 € |
| **5161.2** | 100 g | glass | 46,15 € |

## Neutral red (C.I. 50040)

**p.a.**

Indicator pH 6,8-8,0
Toluylene red
$C_{15}H_{17}ClN_4$
M 288,78 g/mol
Water-soluble vital staining dye.

| | | | |
|---|---|---|---|
| **T122.2** | 1 g | glass | 21,40 € |
| **T122.1** | 10 g | glass | 54,75 € |
| **T122.3** | 25 g | glass | 107,40 € |

▶ Ready-made staining solutions
see from page 1452

## Nigrosin, water soluble (C.I. 50420)

**for microscopy**

Acid black 2

Water-soluble dye (10 g/l), is used in bacteriology.

| | | | |
|---|---|---|---|
| **7718.1** | 25 g | glass | 13,90 € |
| **7718.2** | 100 g | glass | 35,40 € |

## Nile blue A (C.I. 51180)

**~80 %**

Nile blue sulphate

$C_{40}H_{40}N_6O_6S$

M 732,84 g/mol

Lipid staining dye, soluble in water (acidulated with $H_2SO_4$). It stains neutral lipids pink and acid lipids blue.

| | | | |
|---|---|---|---|
| **4377.2** | 5 g | glass | 17,10 € |
| **4377.1** | 10 g | glass | 28,95 € |
| **4377.3** | 25 g | glass | 46,15 € |

## Nuclear fast red (C.I. 60760)

**for microscopy**

$C_{14}H_8NNaO_7S$

M 357,28 g/mol

Nucleic acid dye, ingredient of the nuclear fast red aluminium sulphate solution (Art. No. N069).

| | | | |
|---|---|---|---|
| **7728.1** | 1 g | glass | 24,20 € |
| **7728.2** | 5 g | glass | 71,50 € |
| **7728.3** | 10 g | glass | 118,15 € |

## Orange II sodium salt (C.I. 15510)

**for microscopy**

Indicator pH 7,4-8,6 and pH 10,2-11,8

Acid orange 7

$C_{16}H_{11}N_2NaO_4S$

M 350,33 g/mol

Water-soluble dye, is used in cytology, e.g. as ingredient of Papanicolaou solution 2b.

| | | | |
|---|---|---|---|
| **7729.1** | 5 g | glass | 14,20 € |
| **7729.2** | 25 g | glass | 24,65 € |
| **7729.3** | 100 g | glass | 59,05 € |

## Orange IV sodium salt (C.I. 13080)

**for microscopy**

Indicator pH 1,2-2,7

Tropaeolin OO

$C_{18}H_{14}N_3NaO_3S$

M 375,39 g/mol

Water-soluble dye.

| | | | |
|---|---|---|---|
| **7731.1** | 5 g | glass | 14,20 € |
| **7731.2** | 25 g | glass | 24,65 € |
| **7731.3** | 100 g | glass | 59,05 € |

## Orange G (C.I. 16230)

**for microscopy and electrophoresis**

Acid orange 10

$C_{16}H_{10}N_2Na_2O_7S_2$

M 452,37 g/mol

Azo dye, soluble in ethanol. Ingredient of Papanicolaou solutions used for staining of cytological material.

| | | | |
|---|---|---|---|
| **0318.1** | 10 g | glass | 13,45 € |
| **0318.2** | 25 g | glass | 19,25 € |
| **0318.3** | 100 g | glass | 45,70 € |

## Orcein

**for microscopy**

Natural red 28

Organic plant pigment, extracted from lichen. Soluble in alcohol (red) or diluted alkaline solutions (blue). Used for detection of elastic fibres.

| | | | |
|---|---|---|---|
| **0320.1** | 25 g | plastic | 353,70 € |

## Ponceau S (C.I. 27195)

**for histology and electrophoresis**

For reversible protein staining on membranes and for microscopy.

Scarlet red

$C_{22}H_{12}N_4Na_4O_{13}S_4$

M 760,56 g/mol

**Warning** H315-H319-H335

| | | | |
|---|---|---|---|
| **5938.2** | 10 g | glass | 25,70 € |
| **5938.1** | 25 g | glass | 52,15 € |

## Safranin O (C.I. 50240)

**for microscopy**

Safranin T

$C_{20}H_{19}ClN_4$

M 350,85 g/mol

**Warning** H315-H319

Basic azin dye, soluble in water and ethanol, well adapted to visualise chromosomes. Safranin is used for bacteria staining, e.g. during Gram-staining or spore staining acc. to Wirtz.

| | | | |
|---|---|---|---|
| **T129.1** | 10 g | glass | 40,75 € |

▶ Papanicolaou solutions see from page 1455

## Silver nitrate

**≥99 %, Ph.Eur., extra pure**

$AgNO_3$

M 169,88 g/mol

**Danger** H272-H314-H400-H410

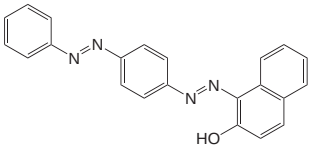
In histology silver nitrate is used for silver impregnation. It results a fine precipitation of silver visualising different structures in specimens, e.g. reticular fibres of connective tissue, fine neurocytes.

| | | | |
|---|---|---|---|
| **9370.4** | 10 g | plastic | 27,45 € |
| **9370.1** | 50 g | plastic | 96,65 € |
| **9370.2** | 250 g | plastic | 396,70 € |
| **9370.3** | 1 kg | plastic | 1483,50 € |
| Original pack 6 x 1 kg | | | 1409,33/1 kg |

## Sudan II (C.I. 12140)

**for microscopy**

Solvent Orange 7



$C_{18}H_{16}N_2O$

M 276,34 g/mol

**Warning** H315-H319-H335

Orange, lipo-soluble azo dye, used for detection of lipids in tissue sections.

| | | | |
|---|---|---|---|
| **7732.1** | 5 g | glass | 11,75 € |
| **7732.2** | 25 g | glass | 24,65 € |
| **7732.3** | 100 g | glass | 57,95 € |

## Sudan III (C.I. 26100)

**for microscopy**

Sudan Red B

$C_{22}H_{16}N_4O$

M 352,39 g/mol

Fat-soluble dye used for staining of lipoids and lipids.

| | | | |
|---|---|---|---|
| **4711.2** | 50 g | glass | 23,15 € |
| **4711.1** | 100 g | plastic | 44,00 € |

## Sudan IV (C.I. 26105)

**for microscopy**

Scarlet red, Fatty ponceau

$C_{24}H_{20}N_4O$

M 380,45 g/mol

**Warning** H315-H319-H341

Fat-soluble azo dye, used for staining of neutral triglycerides and lipids.

| | | | |
|---|---|---|---|
| **0327.1** | 25 g | glass | 22,50 € |
| **0327.2** | 50 g | glass | 32,15 € |

▶ For more details on specifications, see chapter Chemicals A-Z.

## Sudan black B (C.I. 26150)

**for microscopy**

Neptune black, Rich black

$C_{29}H_{24}N_6$

M 456,55 g/mol

Fat-soluble azo dye, used for detection of neutral triglycerides and lipids.

| | | | |
|---|---|---|---|
| **0292.1** | 10 g | glass | 22,50 € |
| **0292.2** | 25 g | glass | 32,15 € |
| **0292.3** | 50 g | glass | 50,45 € |

## Sudan orange G (C.I. 11920)

**for microscopy**

Solvent Orange 1

$C_{12}H_{10}N_2O_2$

M 214,22 g/mol

Lipo-soluble azo dye for staining of triglycerides in tissue sections.

| | | | |
|---|---|---|---|
| **7733.1** | 5 g | glass | 11,75 € |
| **7733.2** | 25 g | glass | 24,65 € |
| **7733.3** | 100 g | glass | 57,95 € |

## Sulfobromophthalein disodium salt

**≥95 %, for biochemistry**

Organic dye for microscopy.

Bromosulfalein, Phenoltetrabromophthalein disulfonic acid disodium salt

$C_{20}H_8Br_4O_{10}S_2Na_2$

M 838 g/mol

**Danger** H334-H317

| | | | |
|---|---|---|---|
| **4033.1** | 1 g | glass | 38,60 € |
| **4033.2** | 5 g | glass | 145,15 € |

## Tetrazolium blue chloride

**≥95 %, for biochemistry**

For vital staining of cells.

Blue tetrazolium chloride, BTC, 3,3'-Dianisole-4,4'-bis(3,5-diphenyltetrazolium chloride), 3,3'-(3,3'-Dimethoxy[1,1'biphenyl]-4,4'diyl)-bis(2,5-diphenyl-2H-tetrazolium) dichloride

$C_{40}H_{32}Cl_2N_8O_2$

M 727,64 g/mol

**Danger** H350

Application of tetrazolium blue chloride: histochemical detection of succinate dehydrogenase and NAD-linked enzymes, vital staining for detection of living cells through the reduction of tetrazolium to formazan, biochemical assays of glucose oxidase, analysis of various corticosteroids.

| | | | |
|---|---|---|---|
| **4176.1** | 1 g | glass | 55,40 € |
| **4176.2** | 5 g | glass | 209,65 € |

## Tetrazolium violet

**for microscopy**

$C_{23}H_{17}ClN_4$

M 384,86 g/mol

Redox indicator for detection of living cells.

| | | | |
|---|---|---|---|
| **7736.1** | 1 g | glass | 40,35 € |
| **7736.2** | 5 g | glass | 154,30 € |
| **7736.3** | 10 g | glass | 289,20 € |

## Thiazolyl blue

**≥98 %, for biochemistry**

3-(4,5-Dimethylthiazole-2-yl)-2,5-diphenyl-2H-tetrazolium bromide, MTT

$C_{18}H_{16}BrN_5S$

M 414,33 g/mol

**Danger** H315-H319-H335-H341

MTT-reagent, used for detection of apoptosis.
Stock solution: 5 mg/ml in PBS buffer solution, sterile filtrated (pH <5)
Stability of stock solution: approx. 1 month at +4 °C, protected from light
Working concentration: 1 mg/ml

| | | | |
|---|---|---|---|
| **4022.1** | 1 g | glass | 30,00 € |
| **4022.3** | 5 g | glass | 126,35 € |
| **4022.2** | 10 g | glass | 198,90 € |
| **4022.4** | 25 g | glass | 403,15 € |

## Thionine (acetate) (C.I. 52000)

**for microscopy**

Nuclear dye

3,7-Diaminophenothiazin-5-ium acetate, Lauth's violet

$C_{14}H_{13}N_3O_2S$

M 287,34 g/mol

Blue nuclear dye, used e.g. for Nissl staining for detection of neutrocytes.

| | | | |
|---|---|---|---|
| **9937.1** | 5 g | plastic | 84,95 € |
| **9937.2** | 10 g | plastic | 149,45 € |

## Toluidine blue O (C.I. 52040)

**for microscopy**

Basic blue 17

$C_{15}H_{16}Cl\,N_3S$

M 305,83 g/mol

Basic water-soluble nuclear dye, used in solutions of 0.03 % - 0.1 %.
In histology e.g. used for staining of neurohistological specimens,
in botany for detection of plant cells (solutions of 0.03 % - 0.1 %).

| | | | |
|---|---|---|---|
| **0300.1** | 5 g | glass | 18,20 € |
| **0300.2** | 10 g | glass | 27,85 € |
| **0300.3** | 25 g | glass | 52,60 € |
| **0300.4** | 100 g | glass | 149,45 € |

## 2,3,5-Triphenyltetrazolium chloride

**≥98,5 %, p.a.**

For microbiology and histochemistry.
For vital staining of cells.

Tetrazolium red, TTC, TTZ, TPTZ

$C_{19}H_{15}ClN_4$

M 334,79 g/mol

Storage temp.: +4 °C

**Warning** H315-H319-H335

Used in biochemistry to measure the activity of dehydrogenases and in vital staining to detect living cells through the reduction of tetrazolium to formazan via the dehydrogenases of the respiratory chain. Triphenyltetrazolium chloride can be used to measure the bacterial content of liquids in food analysis and/or to determine seed vitality. In microbiology it is used to distinguish between coliform and noncoliform bacteria, whereas in thin layer chromatography it is ideal as a spray reagent on reducing sugar, corticosteroids and other reducing agents.

| | | | |
|---|---|---|---|
| **KK13.1** | 10 g | glass | 51,50 € |
| **KK13.2** | 50 g | glass | 212,85 € |

## Trypan blue (C.I. 23850)

**for microscopy and cell staining**

For vital and histological staining.

Benzamine blue, Tolidin-diazo-bis-8-amino-1-naphthol-3,6-disulphonic acid tetrasodium salt

$C_{34}H_{24}N_6Na_4O_{14}S_4$

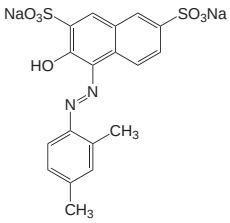
M 960,82 g/mol

**Danger** H350

Trypan blue is a protein staining azo dye used for vital staining (vitality test of cells), based on its selective ability to pass membranes of damaged cells. Used for polychromatic staining, e.g. to visualise collagen fibres in connective tissue.

**Application:**
Stock solution: 0.5 % in PBS or in NaCl solution (0.9 %).
Stabile for several months when sterile filtrated and stored at room temperature.
Working concentration: 0.1-0.2 % in PBS
**Note:**
Always keep bottles tightly closed.

| | | | |
|---|---|---|---|
| **CN76.1** | 10 g | glass | 23,15 € |
| **CN76.2** | 25 g | glass | 41,85 € |
| **CN76.3** | 50 g | glass | 75,15 € |



## Wright's stain

**for microscopy**

Eosin methylene blue

Eosin methylene blue mixture (Romanowsky dye) for staining blood smears, bone marrow smears et al. acc. to Wright. Ingredient of Wright's eosin methylene blue solution (Art. No. CN05).

| | | | |
|---|---|---|---|
| **7744.1** | 5 g | glass | 13,90 € |
| **7744.2** | 25 g | glass | 24,65 € |
| **7744.3** | 100 g | glass | 60,10 € |

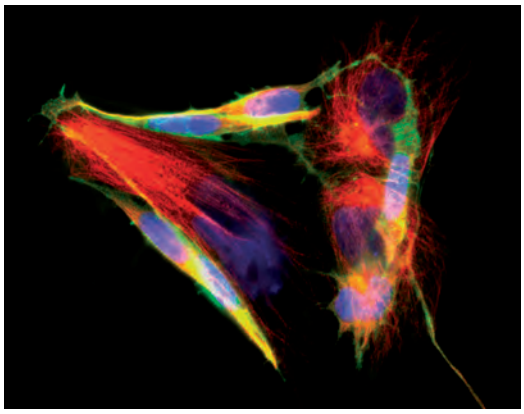
## Xylidine Ponceau 2R (C.I. 16150)

**for microscopy**

Xylidine red, Ponceau de Xylidine

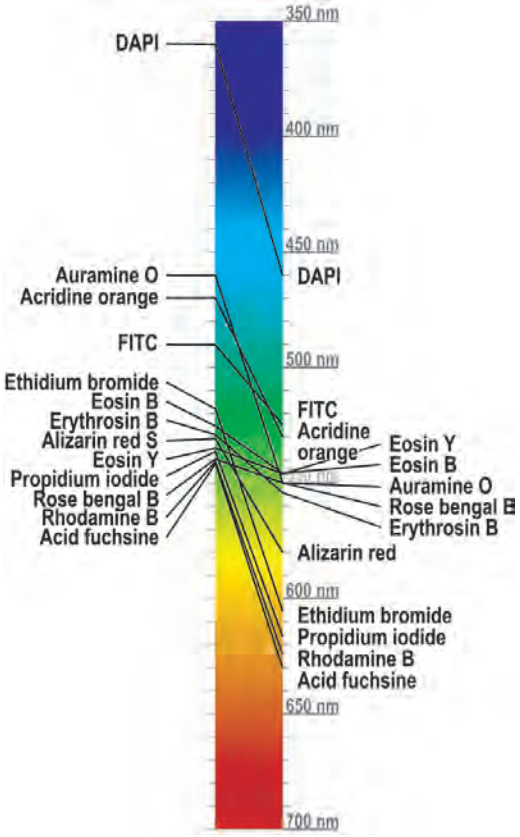
$C_{18}H_{14}N_2Na_2O_7S_2$

M 480,40 g/mol



**Warning** H351

Water-soluble dye, used e.g. for Masson-Goldner trichrome staining (ingredient of Goldner's stain I, Art. No. 3469).



| | | | |
|---|---|---|---|
| **7747.1** | 5 g | glass | 14,55 € |
| **7747.2** | 25 g | glass | 24,20 € |
| **7747.3** | 100 g | glass | 60,10 € |

**Safety data sheets**
can be found on the Internet next to the product description.

# Fluorescent Dyes

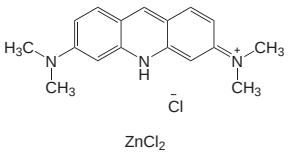
With kind permission of M. Köster, H. Kleinholz, G. E. Pollenberg, University of Heidelberg.

Fluorescent dyes are suitable for various applications in microscopy, e.g. in order to tag antibodies used in immunohistochemical assays or for counter-staining of nuclei.
Fluorescent dyes are sensitive to light, therefore they are to be **stored in the dark**.

## Acid fuchsin (C.I. 42685)

**for microscopy**

Fuchsine acidic



$C_{20}H_{17}N_3Na_2O_9S_3$

M 585,54 g/mol

Used as plasma stain in 0.5-1.0 % watery solution.

Excitation maximum: 540 nm
Emission maximum: 630 nm

| | | | |
|---|---|---|---|
| **T128.1** | 10 g | glass | 57,95 € |

$ZnCl_2$

## Acridine orange (C.I. 46005)

**for microscopy**

Fluorescence indicator

Acridine orange zinc chloride double salt, Basic orange 14

$C_{17}H_{20}Cl_3N_3Zn$ • M 438,09 g/mol

**Warning** H341

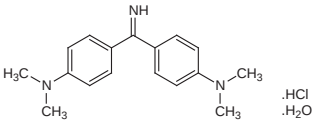
Fluorescent dye with DNA intercalating properties. Application range: Differentiation of dsDNA (green fluorescence) and ssDNA/RNA (red fluorescence), vitality test for determination of living cells. Soluble in water and ethanol.

Excitation maximum: 470 nm
Emission maximum: 526 nm (green)
Emission maximum: 650 nm (red)

| | | | |
|---|---|---|---|
| **0249.1** | 10 g | glass | 22,05 € |
| **0249.2** | 25 g | glass | 41,85 € |

## Alizarin red S (C.I. 58005)

Indicator pH 4,3-6,3 and pH 9,4-12,0



Alizarin sulphonic acid sodium salt, Alizarin carmine

$C_{14}H_7NaO_7S$ • M 342,26 g/mol

Dye for vital staining, e.g. staining of mineralized sites in bone tissue. Soluble in water and ethanol (0.1-1.0 %).

Excitation maximum: 530-560 nm
Emission maximum: 580 nm

| | | | |
|---|---|---|---|
| **0348.1** | 10 g | glass | 19,25 € |
| **0348.2** | 25 g | glass | 30,00 € |
| **0348.3** | 100 g | glass | 92,35 € |

## Auramine O (C.I. 41000)

**for microscopy**

4,4'-Bis-(dimethylamino)-benzophenonimide-hydrochloride, Basic yellow 2

$C_{17}H_{22}ClN_3$

M 303,84 g/mol

**Warning** H351-H302-H319-H411

Used for detection of acid-fast bacteria (e.g. Mycobacteria) in histological sections, 1 % in ethanol 95 %.
Excitation maximum: 460 nm
Emission maximum: 550 nm

| | | | |
|---|---|---|---|
| **0319.1** | 25 g | glass | 16,05 € |
| **0319.2** | 50 g | glass | 26,80 € |

## DAPI

**≥98 %, p.a.**

For DNA-staining.

4',6-Diamidino-2-phenylindole dihydrochloride

$C_{16}H_{17}Cl_2N_5$

M 350,3 g/mol

Storage temp.: -20 °C • Transport temp.: room temp.

Fluorescent dye with specific DNA-binding capacity. For detection of mycoplasms in cell culture, for quantitative DNA measurement, and for chromosome counter staining. Store in the dark! Stabile for one year when solubilised, stored at -20 °C, and protected from light
Stock solution: 1 to 10 mg/ml in sterile water

**Working concentration:**
Nucleus staining in living cells: approx. 1 µg/ml in medium
Nucleus staining in fixed cells or fixed tissue sections: approx. 0.2 µg/ml in PBS, TBS or another incubation buffer
Detection of mycoplasms: 1 µg/ml in methanol
Excitation maximum: 359 nm
Emission maximum: 461 nm

| | | | |
|---|---|---|---|
| **6335.1** | 25 mg | glass | 90,20 € |
| **6335.2** | 100 mg | glass | 252,65 € |

## Eosin B (C.I. 45400)

**for microscopy**

Eosin scarlet, Eosin bluish, 4',5'-Dibromo-2',7'-dinitrofluoroesceine disodium salt.

$C_{20}H_6Br_2N_2Na_2O_9$

M 624,09 g/mol

Like eosin Y used as a plasma stain, e.g. for hematoxylin-eosin (H&E) staining. Soluble in water and ethanol, usual concentration 0.5 - 2.0 %.

Excitation maximum: 525 nm
Emission maximum: 545 nm

| | | | |
|---|---|---|---|
| **0306.1** | 10 g | glass | 17,10 € |
| **0306.2** | 25 g | glass | 27,45 € |
| **0306.3** | 50 g | glass | 42,90 € |

▶ Accessories for staining see chapter Labware - Laboratory Glass, Vessels & Consumables / Microbiology, Histology & Instruments.

## Eosin Y (C.I. 45380)

**for microscopy**

Eosin yellowish

$C_{20}H_6Br_4Na_2O_5$

M 691,86 g/mol

**Warning** H319

Eosin Y is a slightly acid fluorescent dye, which stains cytoplasm red. It is soluble in alcohol and water (usual concentrations: 0.5 - 2.0 %). Manifold use, e.g. for hematoxylin-eosin (H&E) staining, spore staining etc.

Excitation maximum: 534 nm
Emission maximum: 544 nm

| | | | |
|---|---|---|---|
| **7089.1** | 50 g | glass | 32,80 € |
| **7089.2** | 100 g | glass | 55,40 € |
| **7089.3** | 500 g | glass | 177,40 € |
| Original pack 6 x 500 g | | | 168,53/500 g |

**Spore staining acc. to Rakette**

Boil the heat fixed smear with malachite green, Art. No. 5895, (5 % solution in water) for 20 sec and allow to act for at least 30 sec. Rinse in running tap water, counterstain with Eosin Y, Art. No. 7089, (2.5 % solution in water) for 1 min, rinse again and dry.

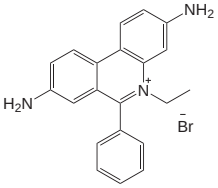
**Result:** Spores green, other bacteria parts red.

Acc. to Dieter Gerlach: Bot. Mikrotechnik, 2. Auflage, Thieme (1977)

## Erythrosine B (C.I. 45430)

**for microscopy**

Tetraiodine fluorescein disodium salt, Iodine eosin, Erythrosine bluish, Acid red 51



$C_{20}H_6I_4Na_2O_5$

M 879,84 g/mol

**Warning** H302

Water-soluble plasma stain (0.5-2.0 %), used like eosin Y, e.g. for hematoxylin-eosin (H&E) staining.
Excitation maximum: 529 nm
Emission maximum: 554 nm

| | | | |
|---|---|---|---|
| **0331.1** | 25 g | plastic | 45,05 € |

## Ethidium bromide

**≥98 %**

For DNA-staining.

Homidium bromide, 3,8-Diamino-5-ethyl-6-phenylphenanthridinium bromide

$C_{21}H_{20}BrN_3$

M 394,33 g/mol

Storage temp.: +20 °C

**Danger** H330-H341-H302

Fluorescent dye with specific DNA binding capacity. Intercalates between base pair stacks of dsDNA, causing weaker staining of ssDNA or RNA. For staining of DNA/RNA in gels and for counterstaining of nuclei in histological and cytological analyses. Store in the dark!

Excitation maximum: 518 nm
Emission maximum: 605 nm

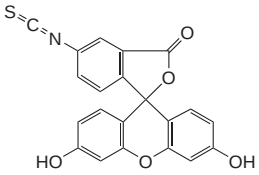
| | | | |
|---|---|---|---|
| **7870.1** | 1 g | glass | 23,15 € |
| **7870.2** | 5 g | glass | 90,85 € |

## Ethidium bromide solution 0,5 % in dropper bottle

**aqueous solution (5 mg/ml)**

For counterstaining of nuclei in histology and cytology.
For staining of DNA/RNA after electrophoresis.

**Warning** H332



In spite of newly developed fluorescent staining reagents ethidium bromide remains the standard staining technic for nucleic acid in electrophoresis. Ethidium bromide is a carcinogenic substance which shouldn't come in contact with skin. In order to minimise this danger we offer ready-to-use ethidium bromide solution in dropper bottles for easy handling and maximum safety.
**Application:**
In order to prepare a staining solution add 5 drops of ethidium bromide solution to 500 ml water, buffer, or electrophoresis running buffer, respectively.
Nuclei / nucleic acids are stained red.

Excitation maxima (unbound): 210 nm, 285 nm, 470 nm
Excitation maxima (bound to DNA): 330 nm, 500 nm
Excitation possible via DNA at 254 nm

Emission maximum: 605 nm.

**Please store in the dark!**

| | | | |
|---|---|---|---|
| **HP46.1** | 15 ml | plastic | 29,60 € |
| **HP46.2** | 5 x 15 ml | plastic | 104,20 € |

## Fluorescein isothiocyanate Isomer I

**≥90 %, p.a.**

For the study of antigen and antibody reactions.
FITC
$C_{21}H_{11}NO_5S$
M 389,39 g/mol
Storage temp.: -20 °C • Transport temp.: room temp.

**Danger** H334-H317

Used for labeling of different biomolecules in immunohistology and immunocytology.

Excitation maximum: 490 nm
Emission maximum: 525 nm

| | | | |
|---|---|---|---|
| **3745.2** | 100 mg | glass | 36,45 € |
| **3745.1** | 250 mg | glass | 69,80 € |

## Propidiumiodide

**≥95 %, p.a.**

For fluorescence staining of DNA.
3,8-Diamino-5-(3-diethylaminopropyl)-6-phenyl-phenanthridinium iodide methiodide
$C_{27}H_{34}I_2N_4$
M 668,4 g/mol
Storage temp.: +4 °C

**Warning** H315-H319-H335-H341

Fluorescent dye with specific DNA-binding capacity. Like ethidium bromide it intercalates between base pair stacks of DNA.
Used for detection of mycoplasms in cell cultures, for quantitative DNA measurement and for chromosome counter staining. In Annexin staining it is used for counter staining of the nuclei (detection of apoptotic cells).
**Application:**
Living cells: approx. 1-5 mg/ml in medium
Fixed cells: approx. 1-50 µg/ml in PBS

Excitation maximum: 535 nm
Emission maximum: 617 nm

**Note:**
Store solution and powder at +4 °C protected from light
(stabile for approx. 6 months)

| | | | |
|---|---|---|---|
| **CN74.1** | 25 mg | glass | 67,20 € |
| **CN74.2** | 50 mg | glass | 117,20 € |
| **CN74.3** | 100 mg | glass | 209,65 € |

## Rhodamine B (C.I. 45170)

**for microscopy**

Oil-soluble red A, Safraniline, Rosaceine
$C_{28}H_{31}ClN_2O_3$
M 479,02 g/mol

**Danger** H318-H412

Water-soluble fluorescent dye for detection of acid-fast bacteria (e.g. Mycobacteria) in histological sections, usually in combination with auramine O.

Excitation maximum: 540 nm
Emission maximum: 625 nm

| | | | |
|---|---|---|---|
| **T130.1** | 25 g | glass | 32,80 € |

## Rose Bengale B (C.I. 45440)

**for microscopy**

4,5,6,7-Tetrachloro-2',4',5',7'-tetraiodofluorescein-dipotassium salt
$C_{20}H_2Cl_4I_4Na_2O_5$ • M 1017,65 g/mol
Water-soluble fluorescent dye, e.g. for use in bacteriological assays.
Excitation maximum: 540 nm
Emission maximum: 550-600 nm

| | | | |
|---|---|---|---|
| **3162.1** | 50 g | plastic | 93,00 € |

## Lipid Staining Dyes

| Product | Solution | Staining | Art. No. | Pack Qty | € |
|---|---|---|---|---|---|
| **Nile blue A (C.I. 51180)** | saturated aqueous solution (acidulated with $H_2SO_4$) | neutral lipids pink, acid lipids blue | **4377.2** | 5 g | 17,10 |
| | | | **4377.1** | 10 g | 28,95 |

| | | | **CN76.2** | 25 g | 41,85 |
| | | | **CN76.3** | 50 g | 75,15 |

For additional product data and safety information, see chapter Chemicals A-Z.

# Substrates

Carl Roth offers you a wide range of substrates for biochemistry, cellular biology and microbiology. The key substrates for Western Blot and *in situ*-hybridisation are summarised here.

For detailed information regarding usage, chemical details, safety instructions and further package sizes for these and many other substrates, refer to chapter **"Substrates"** in chapter Biochemistry or to Chemicals A-Z.

### For Alkaline Phosphatase (AP)

| Substrate | Application | Detection | Art. No. | Pack Qty. | € |
|---|---|---|---|---|---|
| **BCIP-Natrium salt** | western, *in situ*, histochemistry | colour (brown-violet) | **A155.1** | 100 mg | 27,45 |
| | | | **A155.2** | 500 mg | 115,60 |
| | | | **A155.3** | 1 g | 198,90 |
| | | | **A155.4** | 5 g | 665,45 |
| **BCIP-Toluidin salt*** | western, *in situ*, histochemistry | colour (brown) | **6368.1** | 500 mg | 35,40 |
| | | | **6368.2** | 1 g | 68,30 |

Protocols

# Hydrophobic Mounting Media

The classical mounting media for producing durable sections in microscopy.

ready-to-use

ROTH offers **synthetic mounting media** like the proved Roti®-Histokitt and **natural balsams** like the classic Canada balsam.

## Roti®-Histokitt

**mounting medium, for histology**
**Compatible with Roti®-Histol (Art. No. 6640).**

**Danger** H225-H304-H361d-H373-H315-H336

**Synthetic, quick-drying mountant for producing durable sections.**
- Results in permanent specimens with neutral pH
- Protects against bleaching
- Not suitable for aqueous samples!

**Type analysis:**

| | |
|---|---|
| Appearance. | clear, viscous liquid |
| Identity. | complies |
| Refractive index $n_D^{20}$. | 1,4930-1,4960 |

| | | | |
|---|---|---|---|
| **6638.1** | 100 ml | glass | 12,80 € |
| **6638.2** | 500 ml | glass | 35,40 € |

## Roti®-Histokitt II

**mounting medium, for histology**
**Compatible with xylene (e.g. Art. No. 9713).**

**Danger** H226-H302+H332-H304-H315-H319-H335-H373-EUH208

**Synthetic, xylene-soluble mountant for producing durable sections.**
- Results in permanent specimens with neutral pH
- Protects against bleaching
- Not suitable for aqueous samples!
- Adapted for embedding machines!
- Typical refractive index: 1.4930-1.4960

**Type analysis:**

| | |
|---|---|
| Appearance. | clear, viscous liquid |
| Density (d 20 °C/4 °C). | 0,95 |
| Viscosity (20 °C). | 250-450 mPa s |

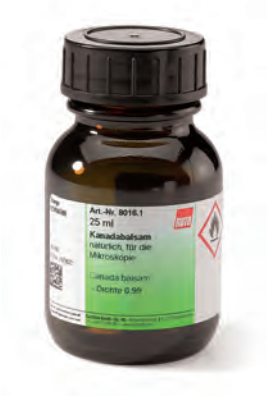
| | | | |
|---|---|---|---|
| **T160.1** | 100 ml | glass | 13,15 € |
| **T160.2** | 500 ml | glass | 36,05 € |

▶ Immersion oil & Oil of cedar wood
see page 1474

**Safety data sheets**
can be found on the Internet next to the product description.

## Roti®-Mount

**Mountant for microscopy, free from xylene and toluene.**
**Compatible with Roticlear® (Art. No. A538) and n-Butyl acetate (Art. No. P036).**



**Danger** H225-H304-H372-H411-EUH066

Synthetic mountant for producing durable specimens in histology and cytology, free from xylene and toluene. Not suitable for aqueous samples!
**Storage:**
For long-term storage we recommend a storage temperature of 4 °C in the dark. For use the product should have room temperature to ensure an ideal consistence.

**Type analysis:**

| | |
|---|---|
| Appearance. | colourless to light yellowish, viscous liquid |
| Viscosity (20 °C). | 1000-1200 mPas |
| Refractive index (20 °C). | 1,43-1,46 |
| Density (20 °C). | 0,850-900 |

| | | | |
|---|---|---|---|
| **HP68.1** | 100 ml | glass | 20,35 € |
| **HP68.2** | 500 ml | glass | 61,85 € |

## Canada balsam

**natural, for microscopy**
Balsamum Canadense

**Warning** H226

**Type analysis:**

| | |
|---|---|
| Appearance. | yellowish translucent, highly viscous |
| Odour. | characteristic (like conifers) |
| Density (20 °C). | 0,980-0,998 |
| Refractive index $n_D^{20}$. | 1,520-1,530 |
| Flash point. | 43 °C |
| Solubility in: | |
| Ether. | 1:1 |
| Toluene. | 1:1 |
| Chloroform. | 1:1 |

| | | | |
|---|---|---|---|
| **8016.1** | 25 ml | glass | 19,60 € |
| **8016.2** | 100 ml | glass | 48,30 € |

# Mounting with Euparal

## Euparal
**for microscopy**
Mounting agent

**Warning** H226-H315-H319

**Euparal is an alternative to Canada balsam for mounting microscopic specimens and is used in the same way.** Unlike Canada balsam, which is very sensitive to water and can only be used after specimens have been dehydrated with high-percentage alcohol and xylene, mounting in Euparal with 80 % alcohol is possible without any cloudiness occuring. Euparal solidifies slower than balsam.

Refractive index for liquid Euparal: 1.483
Refractive index for completely solidified Euparal: 1.535

**The duration of the solidifying process depends on the mounted object and temperature. Euparal solidifies faster when warm.**

**Euparal-essence (Art. No. A145) serves as a diluent and solvent for euparal. Euparal and Euparal essence are not compatible with organic solvents.**

As it is a natural resin and there is no polymerisation, permanent Euparal preparations can be dissolved later under gentle heating with Euparal essence.
Euparal contains Sandarac resin, camphor and salol. Paraldehyde and eucalyptol serve as a solvent.

**Type analysis:**

| | |
|---|---|
| Appearance | yellowish solution |
| Solubility (EtOH) | soluble |
| Refractive index (20 °C) | 1,480-1,510 |

| | | | |
|---|---|---|---|
| **7356.1** | 100 g | glass | 50,45 € |
| **7356.2** | 5 x 100 g | glass | 206,95 € |

## Euparal essence
**for microscopy**
Diluent and solvent for Euparal (Art. No. 7356).

**Warning** H226-H315-H319-H335

**Type analysis:**

| | |
|---|---|
| Appearance | yellowish solution |
| Refractive index (20 °C) | 1,450-1,500 |

| | | | |
|---|---|---|---|
| **A145.1** | 100 ml | glass | 43,55 € |

# Hydrophilic Mounting Media

These mounting media allow embedding without previous dehydration. Thus shrinking of specimens caused by organic solvents can be avoided. Additionally the hydrophilic milieu prevents washing out of cell ingredients like lipids, an important requirement for use in histochemistry.

## Roti®-Mount Aqua
**for microscopy**
Aqueous mounting medium
Storage temp.: +4 °C

Roti®-Mount Aqua is an aqueous solution of polyacrylate resin used for mounting of paraffin sections and cryostat sections directly after staining. The solution is ready to use. Colours and tissue structures are preserved in an optimal way. For long-term preserving of fluorescent dyes we recommend Roti®-Mount FluorCare (Art. No. HP19).
**Application:**
Residues of staining solution are removed by rinsing with buffer or destilled water. Afterwards the specimens are mounted with Roti®-Mount Aqua.
**Storage:**
Store at +4 °C in the dark, shelf life minimum 2 years.

**Type analysis:**

| | |
|---|---|
| Appearance | colourless, viscous liquid |
| Viscosity (20 °C) | 170-220 mPas |
| Refractive index (20 °C) | 1,440-1,465 |
| Density (20 °C) | 1,05-1,18 g/cm³ |

| | | | |
|---|---|---|---|
| **2848.1** | 15 ml | dropp. bottle | 21,40 € |
| **2848.2** | 50 ml | glass | 39,25 € |

## Roti®-Mount FluorCare
**for fluorescence microscopy**
Aqueous mounting medium with antifading effect.
Storage temp.: +4 °C

Roti®-Mount FluorCare has been developed especially for fluorescene microscopy and is compatible with all current fluorescent dyes. It is an aqueous mountant with an additional antifading reagent which reduces photobleaching drastically. Fluorescence will remain for many weeks. In contrast to other mounting media Roti®-Mount FluorCare does not show autofluorescence at any common wavelength.
Roti®-Mount FluorCare is also available with the dyes DAPI (HP20.1) and propidiumiodide (HP21.1) for simultaneous counter staining of nuclei.
**Storage:**
The solution should be stored at +4 °C in the dark.
Shelf life: minimum 1 year.

**Type analysis:**

| | |
|---|---|
| Appearance | clear, viscous liquid |
| Viscosity (20 °C) | 170-220 mPas |
| Refractive index (20 °C) | 1,44-1,465 |
| Density (20 °C) | 1,05-1,18 |

| | | | |
|---|---|---|---|
| **HP19.1** | 15 ml | dropp. bottle | 55,40 € |

## Roti®-Mount FluorCare DAPI

ready-to-use

**for fluorescence microscopy**

Aqueous mounting medium with antifading effect.
Contains DAPI for counterstaining.

Storage temp.: +4 °C

Roti®-Mount FluorCare DAPI is an aqueous mounting medium with antifading effect. Additional it contains ready-to-use DAPI allowing counterstaining of nuclei and mounting at the same time. DAPI has an excitation maximum at 359 nm and an emission maximum at 461 nm. Roti®-Mount FluorCare is also available with the dye propidiumiodide (HP21.1) and without dye (HP19.1).

**Storage:**
The solution should be stored at +4 °C in the dark. Shelf life: minimum 1 year.

**Type analysis:**

| | |
|---|---|
| Appearance | clear, viscous liquid |
| Viscosity (20 °C) | 170-220 mPas |
| Refractive index (20 °C) | 1,44-1,465 |
| Density (20 °C) | 1,05-1,18 |

| | | | |
|---|---|---|---|
| **HP20.1** | 15 ml | dropp. bottle | 67,65 € |

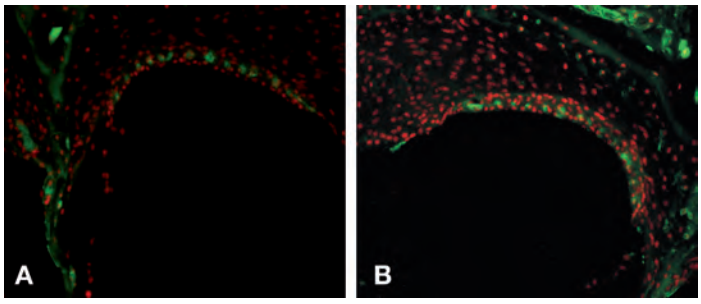
## Roti®-Mount FluorCare PI

ready-to-use

**for fluorescence microscopy**

Aqueous mounting medium with antifading effect.
Contains propidiumiodide (PI) for counterstaining.

Storage temp.: +4 °C



Roti®-Mount FluorCare PI is an aqueous mounting medium with antifading effect. Additional it contains ready-to-use propidiumiodide allowing counterstaining of nuclei and mounting at the same time. Propidiumiodide has an emission maximum of 535 nm and an emission maximum of 617 nm.
Roti®-Mount FluorCare is also available with the dye DAPI (Art. No. HP20.1) and without dye (Art. No. HP19.1).

**Storage:**
The solution should be stored at +4 °C in the dark. Shelf life: minimum 1 year.

**Type analysis:**

| | |
|---|---|
| Appearance | viscous, slightly reddish liquid |
| Viscosity (20 °C) | 170-220 mPas |
| Refractive index (20 °C) | 1,44-1,465 |
| Density (20 °C) | 1,05-1,18 |

| | | | |
|---|---|---|---|
| **HP21.1** | 15 ml | dropp. bottle | 67,65 € |

## Example of Use

**Figure:**
Immunostaining of DNA adducts (red) and CNPase (green) in cryosections of the inner ear (stria vascularis) from mice
a) mounted in glycerol
b) mounted in Roti®-Mount FluorCare

With kind assistance of laboratory Dr. J. Thomale, DNA-Repair Group, Institute of Cell Biology, West German Cancer Centre Essen

## Mowiol®4-88

**granulated**

Aqueous mounting medium in histology.
Polyvinyl alcohol
$(-CH_2CHOH-)_n$
M ~31,000 g/mol

**For durable preparations.**
Mowiol 4-88 is used as hydrophilic mounting medium, particularly for immune histochemical applications. Usually it is applied in combination with the antibleaching reagent DABCO (1.4-Diazabicyclo-(2.2.2)octan), Art. No. 0718, which conserves the colours and the fluorescence of durable samples.

**Type analysis:**

| | |
|---|---|
| Appearance | colourless to light yellow granules |
| Viscosity (4 %, $H_2O$, 20 °C) | 3,0-5,0 mPas |
| Degree of hydrolysis, Mol.- % | 86,7-88,7 |
| Ester value (mg KOH/g) | 130-150 |
| Residual acetate | 10,0-11,6 % |
| Ash content (as $Na_2O$) | ≤0,5 % |

| | | | |
|---|---|---|---|
| **0713.1** | 50 g | plastic | 11,75 € |
| **0713.2** | 100 g | plastic | 17,10 € |

## DABCO®

**≥99 %**

Anti-bleaching reagent in histology.
Triethylendiamine, 1,4-Diazabicyclo[2.2.2]octane
$C_6H_{12}N_2$
M 112,18 g/mol

**Danger** H228-H302-H315-H318-H335

DABCO is an anti-bleaching reagent. It is combined with hydrophilic mounting media as Mowiol 4-88, Art. No. 0713, or glycerol in order to conserve the colours and the fluorescence of durable samples. Solubility may change depending on the batch. If required stir solution constantly overnight at a temperature of 40-60 °C.

**Type analysis:**

| | |
|---|---|
| Appearance | white to off-white crystals |
| Assay | ≥99,0 % |
| Water | ≤0,5 % |

| | | | |
|---|---|---|---|
| **0718.1** | 25 g | glass | 19,90 € |
| **0718.2** | 50 g | glass | 35,40 € |

## Alginic acid sodium salt

**for biochemistry**

From brown algae.
Sodium alginate

| | | | |
|---|---|---|---|
| **9180.1** | 250 g | plastic | 28,95 € |
| **9180.2** | 1 kg | plastic | 78,40 € |
| Original pack 6 x 1 kg | | | 74,48/1 kg |

**Instructions for use**
can be found on the Internet next to the product description.

## Kaiser's glycerol gelatine phenol-free

**for microscopy**

Aqueous mounting medium

- Non-hazardous ingredients
- Neutral pH (6-7)
- Convenient also for sensitive stainings

It is an aqueous mounting medium which is solid at room temperature. Composition and application are according to the classical Kaiser's glycerol gelatine; however, it does not contain phenol. The added preserving agent is classified as non-hazardous. The pH value of the product is 6-7. Therefore, it is suitable also for stainings which are sensitive against acids (e.g. hematoxylin). Prior to use the glycerol gelatine is melted on a water bath (max. 50-55 °C) and then dropped onto the slide by using a pipette or a glass rod.

**Type analysis:**

Appearance. ..... light yellowish coloured, solid medium
Glycerol. ..... ~40 %
Gelatine. ..... 7-12 %
Refractive index (20 °C) ..... 1,44-1,47
Density (20 °C). ..... 1,02

| | | | |
|---|---|---|---|
| **6474.1** | 50 ml | glass | 17,75 € |

**Glycerol-gelatine (acc. to Kaiser)**

**Preparation:**

Dissolve 10 g gelatine gold in 60 ml water and add 70 ml glycerol.

Add 0.1 g phenol to 100 g mixture, heat 10-25 minutes in the water bath while stirring until purification, then filter hot over glass wool or paper.

**Avoid heating much beyond 60 °C, because overheated gelatine loses its ability to solidify.**

## Glycerols - Summary

| Product | Purity | Art. No. | Pack Qty. | € |
|---|---|---|---|---|
| **Glycerol** | ≥99,5 %, p.a., anhydrous | **3783.1** | 1 l | 52,15 |
| | | **3783.3** | 1 l | 56,45 |
| | | **3783.2** | 2,5 l | 94,10 |
| | | **3783.4** | 2,5 l | 99,90 |
| | | **3783.5** | 5 l | 143,55 |
| | | **3783.6** | 10 l | 220,40 |
| **Glycerol** | ≥98 %, Ph.Eur., anhydrous | **7530.1** | 1 l | 36,45 |
| | | **7530.4** | 2,5 l | 59,70 |
| | | **7530.5** | 5 l | 107,40 |
| | | **7530.2** | 10 l | 198,90 |
| | | **7530.3** | 35 kg | 385,95 |
| **Glycerol 86 %** | ≥86 %, p.a. | **4043.1** | 1 l | 46,80 |
| | | **4043.3** | 2,5 l | 69,80 |
| | | **4043.2** | 5 l | 127,40 |
| **Glycerol 86 %** | ~86 %, Ph.Eur., extra pure | **7533.1** | 1 l | 33,25 |
| | | **7533.3** | 2,5 l | 60,10 |
| | | **7533.4** | 5 l | 102,05 |
| | | **7533.2** | 10 l | 180,10 |
| | | **7533.5** | 25 l | 349,40 |

For additional product data and safety information, see chapter Chemicals A-Z.

## Gelatine

**platinum, extra pure, 240 Bloom**

Storage temp.: +20 °C

**Type analysis:**

Gel strength. ..... 240 Bloom
Particle size. ..... ≤30 mesh
Water ..... <15 %
Ash. ..... <2 %
Peroxides (as $H_2O_2$). ..... <0,001 %
Sulphur dioxide ($SO_2$). ..... <0,005 %
Gelatine is produced from porcine skin.

| | | | |
|---|---|---|---|
| **4582.3** | 500 g | plastic | 31,10 € |
| Original pack 6 x 500 g | | | 29,55/500 g |
| **4582.1** | 1 kg | plastic | 50,00 € |
| Original pack 6 x 1 kg | | | 47,50/1 kg |
| **4582.2** | 5 kg | plastic | 180,10 € |

**Our tip:**

The Bloom grade declares the strength of the gelatine film. The higher the bloom grade the more rigid the gelatine film. Usually, a Bloom grade of 180 is sufficient for histological applications.

## Gelatine

**gold, extra pure, 180 Bloom**

Storage temp.: +20 °C

**Type analysis:**

Gel strength. ..... approx. 180 Bloom
Particle size. ..... ≤30 mesh
Water ..... <15 %
Ash. ..... <2 %
Peroxides (as $H_2O_2$). ..... <0,001 %
Sulphur dioxide ($SO_2$). ..... <0,005 %
Gelatine is produced from porcine skin.

| | | | |
|---|---|---|---|
| **4274.3** | 500 g | plastic | 29,60 € |
| Original pack 6 x 500 g | | | 28,12/500 g |
| **4274.1** | 1 kg | plastic | 42,50 € |
| Original pack 6 x 1 kg | | | 40,38/1 kg |
| **4274.2** | 5 kg | plastic | 174,70 € |

## Phytohistol® plus

ready-to-use

**for microscopy**

Botanical mounting medium based on sugar

- New compound
- High stability
- No hazardous ingredients
- Neutral pH 6-7

Phytohistol® plus is an aqueous mounting medium based on sugar with the consistency of liquid honey. It is especially suitable for plant materials. After evaporation of the water a rubber-like film remains. For producing durable specimens we recommend to seal the edges of the cover slip with our Roti®-Seal cover slip sealant (Art. No. 6473).
**Shelf life:** The solution contains a preserving agent and is stable for minimum 4 years after manufacture.
**Application:** Drop on slide, add specimen. When free from air bubbles place cover slip.

**Type analysis:**

Appearance. ..... yellow to brownish, viscous liquid
Refractive index (20 °C) ..... 1,51-1,53

| | | | |
|---|---|---|---|
| **6471.1** | 15 ml | dropp. bottle | 21,00 € |
| **6471.2** | 50 ml | plastic | 55,40 € |

# Immersion Oils

ready-to-use

## Immersion oil
**for microscopy, fluorescence tested**

**Warning** H41 0

An immersion oil with low viscosity and low background fluorescence, especially suitable for fluorescence microscopy.

**Guarantee analysis:**

Density (d 20 °C/4 °C). ..... 1,0245-1,0265
Refractive index (20 °C)..... 1,5150-1,5170
Viscosity (20 °C). ..... 100-120 mPas
UV-transmission
450 nm..... ≥90 %
400 nm..... ≥78 %
380 nm..... ≥65 %
Fluorescence (as quinine):
365 nm..... ≤1,5 ppm

| | | | |
|---|---|---|---|
| **X899.4** | 15 ml | dropp. bottle | 8,75 € |
| **X899.1** | 50 ml | glass | 14,55 € |
| **X899.2** | 100 ml | glass | 22,05 € |
| **X899.3** | 500 ml | glass | 77,30 € |

## Immersion oil
**for microscopy**

A viscous solution of natural oils based on oil of cedar wood.

**Danger** H304-H411

**Type analysis:**

Appearance. ..... clear, yellow-brownish, viscous oil
Density (20 °C). ..... 0,981-0,998
Refractive index (20 °C)..... 1,508-1,525

| | | | |
|---|---|---|---|
| **5789.1** | 50 ml | glass | 10,65 € |
| **5789.3** | 100 ml | glass | 13,90 € |
| **5789.2** | 500 ml | glass | 35,40 € |

## Oil of cedar wood
**for microscopy**

Oleum Ligni cedri

**Danger** H304-H410

**The classic medium for immersion microscopy**

**Type analysis:**

Appearance. ..... yellow to brownish, translucent, viscous
Odour. ..... characteristic
Refractive index $n_D^{20}$. ..... 1,51-1,525

| | | | |
|---|---|---|---|
| **5308.1** | 100 ml | glass | 15,60 € |
| **5308.2** | 250 ml | glass | 23,15 € |
| **5308.3** | 500 ml | glass | 40,75 € |

# Barrier Marker

ready-to-use

## Roti®-Liquid Barrier Marker, colourless

For immunology, histology and molecular biology. Glass bottle with brush.

**Danger** H225-H304-H315-H336-H411

The solution is applied to slides or other glass surfaces. After drying, a resistant hydrophobic film remains providing a barrier to aqueous liquids. Circles drawn with Roti®-Liquid Barrier Marker prevent aqueous solutions from spreading by increasing the surface tension of the water. Therefore expensive antibody solutions for example, can be used more effectively. The barrier film can be wiped off the glass surface with a dry cloth or a cloth impregnated with xylene.
**Areas of applications:** Ideal for immunological, histological and molecularbiological assays.

## Roti®-Liquid Barrier Marker, colourless

**For use** with aqueous liquids and solvents as ethanol or acetone.

| | | | |
|---|---|---|---|
| **AN91.1** | 10 ml | glass | 32,80 € |
| **AN91.2** | 5 x 10 ml | glass | 127,95 € |

## Roti®-Liquid Barrier Marker, red

**For use** with aqueous liquids only. The red dye is not solvent resistant.

| | | | |
|---|---|---|---|
| **AN92.1** | 10 ml | glass | 32,80 € |
| **AN92.2** | 5 x 10 ml | glass | 127,95 € |

▶ More slides and slide magazines see chapter Labware - Laboratory Glass, Vessels & Consumables / Microbiology, Histology & Instruments.

**Instructions for use**
can be found on the Internet next to the product description.

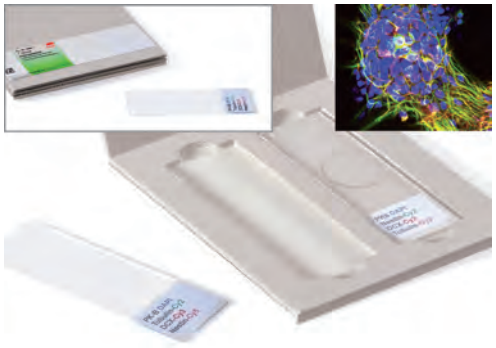
# Specimen Sealing

## Roti®-Seal

**for microscopy**

Aqueous cover slip sealant.

- Non-hazardous ingredients
- Solvent-free
- Solidification by light



Roti®-Seal is used to seal the edges of the coverslip. Therefore, it protects the mounted specimen reliably against damages caused by air humidity. Roti®-Seal is solid at room temperature. Prior to use it is melted on a water bath (max. 50-55 °C), then it is applied around the edges of the coverslip by using a pipette or a glass rod. Exposure to light (day-light is sufficient) allows the sealant to harden within a short time.
Melt on a water bath (50-55 °C) prior to use.

**Type analysis:**

Appearance. ..... light yellowish coloured, solid medium

| | | | |
|---|---|---|---|
| **6473.1** | 20 ml | glass | 11,75 € |

# Demoslides

## Demoslides Fluoro-4C

**Reference sample for fluorescent microscopy**

Glass slide with ready-to-use cell specimen.
For fine tuning of fluorescent microscopes.
Storage temp.: +4 °C

- Stained with 4 fluorochromes
- Planar and 3D cell structures
- Excellent signal output
- Good photo stability

**For detailed information see chapter Cell Biology / Cell Analysis.**

| | | |
|---|---|---|
| **8987.1** | 1 piece | 274,15 € |
| **8987.2** | 2 pieces | 521,40 € |

# Adhesion Slides

For sophisticated immunohistochemical assays.

## Roti®-Bond Adhesion Slides

**Fast and highly efficient immobilisation of cellular material with optimal structure conservation.**

The new adhesive coating of the Roti®-Bond adhesion slides reacts to natural surface structures of cells and tissues, anchoring them securely to the glass surface. Due to this procedure, based on different binding principles, the cells do not lose their antigenicity, their cell functionality and their three-dimensional structure.

- Assays using only several hundred cells possible
- No cell loss even during harsh incubation procedures
- Excellent recovery rate
- Compatible with all standard and modern assay systems and all fluorescent dyes
- Particularly adapted to assays using stem cells

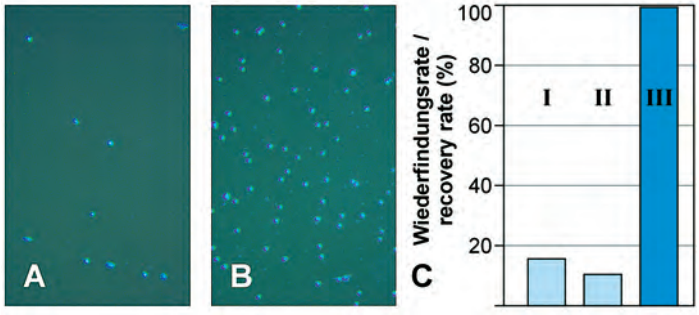


**Figure:**

Brand comparison of efficient cell immobilisation.
1800 murine myeloma cells in 30 µl PBS were applied to each slide. Cells were counted after full immunohistochemical assay including alkali treatment (70 mM NaOH, 150 mM NaCl, 40 % ethanol, 5 min, RT) and DAPI-counterstaining of the remaining nuclei.

**A:** Other adhesion slide,

**B:** Roti®-Bond Adhesion Slide,

**C:** Recovery rate in percent (I and II: other adhesion slides, III: Roti®-Bond)

**Application:**

Immobilisation of cells or tissue sections occurs immediately after contact to the glass surface. Drying of the samples is therefore not necessary. The cellular material can then be fixed with all common fixatives. Cell cultivation can be continued in appropriate culture medium after cell adhesion, allowing *in-vivo* live assays, e.g. with a multiphoton or laserscan microscope.

At present, there is no evidence of any preferential cell type binding in heterogenous cellular material.

Dimensions: L 75 mm x W 25 mm, thickness 1 mm

**Roti®-Bond adhesion slides 50 and 100 are delivered in Rotilabo®-slide boxes.**

| Art. No. | Pack Qty | € |
|---|---|---|
| **CL20.1** | 5 | 11,75 |
| **CL20.2** | 50 | 84,85 |
| **CL20.3** | 100 | 118,25 |

# Click Chemistry

The copper(I)-catalysed azide-alkyne cycloaddition (CuAAC) is the most prominent example of a group of reactions named click reactions. According to Sharpless' definition, these reactions are characterised by high yields, mild reaction conditions, and by their tolerance of a broad range of functional groups.[1-3] Typically, the reactions require simple or no workup or purification of the product. The most important characteristic of the CuAAC reaction is its unique bioorthogonality as neither azide nor terminal alkyne functional groups are generally present in natural systems.

Schematic illustration of the copper(I)-catalysed azide-alkyne cycloaddition (CuAAC)

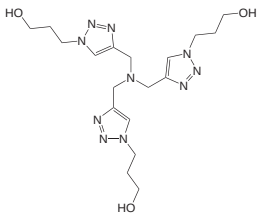
# Reagents for Click Chemistry

Starting from diverse copper catalyst sources, over Cu(I) stabilising ligands to buffer additives and solvents, you will find all necessary reagents in the special ROTI®click quality to perform your click reactions here.



## Catalysts, Ligands, Additives and Solvents

| Product | Purity | Art. No. | Pack Qty. | € |
|---|---|---|---|---|
| **L(+)-Ascorbic acid sodium salt** | ≥99 %, ROTI®click Grade | **7819.1** | 10 mg | 13,15 |
| | | **7819.2** | 5 x 10 mg | 39,25 |
| **Copper(I) bromide** | ≥99,999 %, ROTI®click Grade | **7813.1** | 5 mg | 13,90 |
| | | **7813.2** | 10 x 5 mg | 73,00 |
| **Copper(II) sulphate** | ≥98 %, anhydrous, ROTI®click Grade | **7816.1** | 10 mg | 14,55 |
| | | **7816.2** | 5 x 10 mg | 41,40 |
| **DMSO/t-Butanol Solvent** | ROTI®click Grade | **7815.1** | 1 ml | 14,55 |
| | | **7815.2** | 10 x 1 ml | 65,50 |
| **Tris[(1-benzyl-1*H*-1,2,3-triazol-4-yl)methyl]amine (TBTA)** | ≥97 %, ROTI®click Grade | **7814.1** | 5 mg | 33,25 |
| | | **7814.2** | 10 mg | 47,85 |
| | | **7814.3** | 50 mg | 82,70 |
| | | **7814.4** | 100 mg | 138,15 |
| **Tris(3-hydroxypropyltriazolylmethyl)amine (THPTA)** | ≥95 %, ROTI®click Grade | **7822.1** | 5 mg | 33,25 |
| | | **7822.2** | 10 mg | 47,85 |
| | | **7822.3** | 50 mg | 82,70 |
| | | **7822.4** | 100 mg | 138,15 |

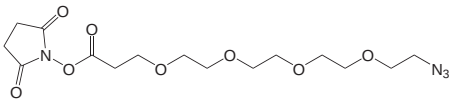
For additional product data and safety information, see chapter Chemicals A-Z.

Tris[(1-benzyl-1*H*-1,2,3-triazol-4-yl)methyl]amine (TBTA)

Tris(3-hydroxypropyltriazolyl-methyl)amine (THPTA)

**Tip:**
**TBTA (Art.No. 7814)** is suitable as copper-stabilising ligand for reactions in organic solvents. **THPTA (Art.No. 7822)** on the other hand is an optimal ligand for reactions in aqueous media.

# Azides & Alkynes



## PEGylation and Linker

Click chemistry opens the door to introduce polyethylene glycols (PEGs) or other linkers in very sophisticated manner into your sample, which are still active for following reaction by the means of amine, carboxyl, malemide or NHS-functional terminal groups. You can choose between alkyne and azide structured PEGs and linkers which you find in the table below.

### PEG and Linker Azides

| Product | Purity | Art. No. | Pack Qty. | € |
|---|---|---|---|---|
| **4-Azidobenzoic acid** | ≥97 % | **7835.1** | 10 mg | 38,60 |
| **5-Azidopentanoic acid** | ≥99 % | **7836.1** | 5 mg | 35,40 |
| | | **7836.2** | 10 mg | 46,80 |
| **HO-PEG2-Azide** | ≥90 % | **7828.1** | 5 mg | 41,85 |
| | | **7828.2** | 10 mg | 66,55 |
| **Aminooxy-PEG3-Azide** | ≥90 % | **7832.1** | 5 mg | 93,00 |
| | | **7832.2** | 10 mg | 140,30 |
| **$H_2N$-PEG3-Azide** | ≥90 % | **7830.1** | 5 mg | 41,85 |
| | | **7830.2** | 10 mg | 66,55 |
| **NHS-PEG4-Azide** | ≥90 % | **7823.1** | 5 mg | 64,00 |
| | | **7823.2** | 10 mg | 93,00 |
| | | **7823.3** | 50 mg | 321,45 |
| | | **7823.4** | 100 mg | 611,70 |
| **PEG8-Azide** | ≥95 % | **7826.1** | 5 mg | 61,85 |
| | | **7826.2** | 10 mg | 91,30 |
| **$H_2N$-PEG8-Azide** | ≥90 % | **7829.1** | 5 mg | 41,85 |
| | | **7829.2** | 10 mg | 66,55 |
| **PEG24-Azide** | ≥90 % | **7825.1** | 5 mg | 61,85 |
| | | **7825.2** | 10 mg | 91,30 |

For additional product data and safety information, see chapter Chemicals A-Z.

NHS-PEG4-Azide

### PEG and Linker Alkynes

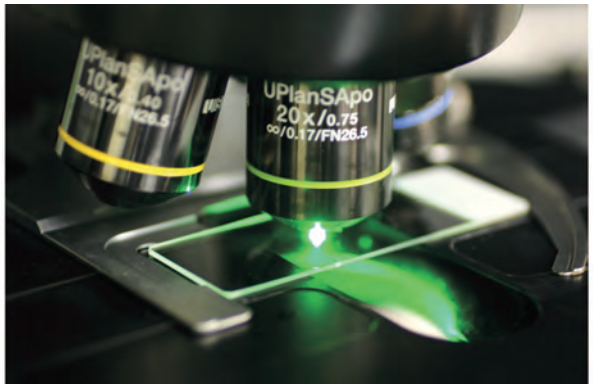
| Product | Purity | Art. No. | Pack Qty. | € |
|---|---|---|---|---|
| **NHS-PEG5-Alkyne** | ≥90 % | **7838.1** | 5 mg | 65,50 |
| | | **7838.2** | 10 mg | 116,65 |
| **$H_2N$-PEG4-Alkyne** | ≥90 % | **7840.1** | 5 mg | 67,20 |
| | | **7840.2** | 10 mg | 117,20 |

For additional product data and safety information, see chapter Chemicals A-Z.

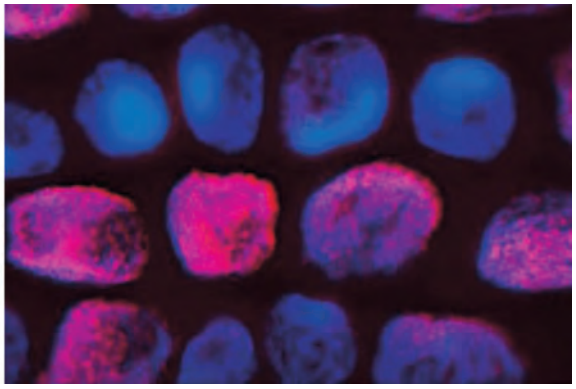
$H_2N$-PEG4-Alkyne

**Important information on refrigerated transports**

All products identified as being particularly temperature-sensitive are shipped in **special ice boxes with freezer packs or in dry ice.**
**Additional costs** resulting from such, **will be invoiced** (further information on request).

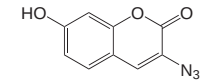


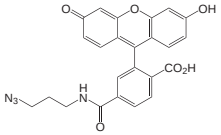
**Please note:**
In order to guarantee optimum product quality, the dispatch of refrigerated transport products will be carried out **on Mon and Tue only outside Germany!**
Slight delays in delivery are therefore possible.

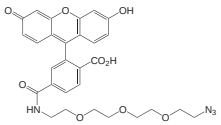


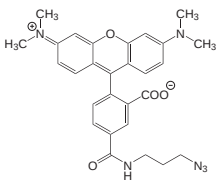
# Tags

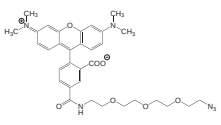
## Fluorescent Tags





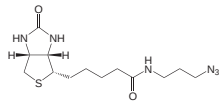


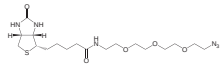


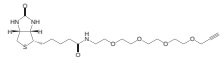


ROTH offers a selection of fluorescent tags for labelling of (bio-)molecules via click chemistry. All available tags are suitable for fluorescence spectroscopy applications due to their excellent absorption properties and good solubility. Tags with PEG-spacer are beneficial for applications with as little interaction between the analyte and the tag as possible. The coumarine derivative (Art No. **7811**) offers a unique feature: fluorescence is only detected after the coupling via click reaction.

### Fluorescent Tags with azide funtion







| Product | Structural formula | Purity | Absorption max. | Emission max. | Molar extinction coefficient ε | Art. No. | Pack Qty. | € |
|---|---|---|---|---|---|---|---|---|
| **3-Azido-7-hydroxycoumarin** |  | ≥98 % | 404 nm (after click reaction) | 480 nm (after click reaction) | n. d. | **7811.1** | 1 mg | 87,65 |
| | | | | | | **7811.2** | 5 mg | 292,95 |
| **6-Carboxyfluorescein Azide (6-FAM-Azide)** |  | ≥95 % | 496 nm | 516 nm | 83 000 $cm^{-1}M^{-1}$ | **7806.1** | 1 mg | 45,70 |
| | | | | | | **7806.2** | 5 mg | 78,40 |
| | | | | | | **7806.3** | 10 mg | 117,20 |
| | | | | | | **7806.4** | 100 mg | 461,20 |
| **6-Carboxyfluorescein-PEG3-Azide (6-FAM-PEG3-Azide)** |  | ≥96 % | 496 nm | 516 nm | 83 000 $cm^{-1}M^{-1}$ | **7812.1** | 1 mg | 133,20 |
| | | | | | | **7812.2** | 5 mg | 504,20 |
| **5-Carboxytetramethylrhodamine Azide (5-TAMRA-Azide)** |  | ≥95 % | 546 nm | 579 nm | 91 000 $cm^{-1}M^{-1}$ | **7807.1** | 1 mg | 45,70 |
| | | | | | | **7807.2** | 5 mg | 78,40 |
| | | | | | | **7807.3** | 10 mg | 117,20 |
| | | | | | | **7807.4** | 100 mg | 461,20 |
| **5-Carboxytetramethylrhodamine-PEG3-Azide (5-TAMRA-PEG3-Azide)** |  | ≥93 % | 546 nm | 579 nm | 91 000 $cm^{-1}M^{-1}$ | **7808.1** | 1 mg | 44,00 |
| | | | | | | **7808.2** | 5 mg | 76,90 |
| | | | | | | **7808.3** | 10 mg | 115,60 |
| | | | | | | **7808.4** | 100 mg | 456,90 |

For additional product data and safety information, see chapter Chemicals A-Z.

▶ Further Fluorescent Tags see chapter Histology/Microscopy

## Non-Fluorescent Tags

Besides fluorescent tags other non-fluorescent labels play an important role in biochemistry and microbiology. Incorporation of such functional groups into your sample with high yields and selectivity is easily possible by click chemistry. Further, the click reaction is compatible with or rather orthogonal to various other labelling methodologies. In order to enlarge the scope for your personalised application we offer these tags in azide and alkyne functional form.

| Product | Structural formula | Purity | Art. No. | Pack Qty. | € |
|---|---|---|---|---|---|
| **Biotin-Azide** |  | ≥95 % | **7803.1** | 1 mg | 45,70 |
| | | | **7803.2** | 5 mg | 78,40 |
| | | | **7803.3** | 10 mg | 117,20 |

# Azido Amino Acids

With the emergence of click chemistry the use of azide- and alkyne-derivatised α-amino acids has found high interest e.g. in the area of peptide synthesis as a powerful tool in the development of new therapeutics and biological chemistry fundamental research.
Peptide labelling mostly requires reactions which are running close to physiological conditions (neutral pH, aqueous solution, ambient temperature).
Cu(I)-catalysed alkyne-azide cycloaddition (CuAAC) is optimal for such biological compounds, here the advantages of click chemistry once again show their potential.
The low reactant concentrations, low background labelling, the quantitative and rapid labelling, plus the mild reaction conditions fit the necessary reactivity, selectivity and biocompatibility criteria for the peptide labelling and thus ensure the preservation of biological function.
ROTH provides high quality azido amino acids. In this form they can easily undergo click reaction when an alkyne functional reporter molecule is present.

# Nucleosides and Nucleotides

## Nucleosides

The detection of cell proliferation is of utmost importance for monitoring cell vitality, determining genotoxicity or evaluating anticancer drugs. The feeding of cells with EdU (5-ethynyl-2'-deoxyuridine) or EU (5-ethynyl uridine) can be used in cell proliferation studies.

5-Ethinyl-2'-desoxyuridine (EdU)

5-Ethinyl uridine (EU)

| Product | Purity | Art. No. | Pack Qty | € |
|---|---|---|---|---|
| **5-Ethynyl-2'-deoxyuridine (EdU)** | ≥99 % | **7845.1** | 5 mg | 27,45 |
| | | **7845.2** | 10 mg | 41,85 |
| | | **7845.3** | 50 mg | 96,65 |
| | | **7845.4** | 100 mg | 155,90 |
| | | **7845.5** | 500 mg | 536,45 |
| | | **7845.6** | 1 g | 987,95 |
| **5-Ethynyl uridine (EU)** | ≥97 % | **7848.1** | 5 mg | 55,80 |
| | | **7848.2** | 10 mg | 95,60 |

▶ Further nucleosides and nucleotides see page 1491

## Nucleotides

Our modified nucleotides for click chemistry complement our range of unmodified standard nucleotides. You can use our alkyne-triphosphates in your nucleotide mixture to incorporate alkyne groups into your PCR fragment. These alkyne groups can be used to label the PCR fragment in a subsequent click reaction.

| Product | Purity | Art. No. | Pack Qty | € |
|---|---|---|---|---|
| **C8-Alkyne-dCTP** | ≥99 %, 100 mM in water | **7801.1** | 0,5 µmol | 78,40 |
| | | **7801.2** | 2,5 µmol | 111,70 |
| | | **7801.3** | 5,0 µmol | 207,40 |
| **C8-Alkyne-dUTP** | ≥99 %, 100 mM in water | **7799.1** | 0,5 µmol | 78,40 |
| | | **7799.2** | 2,5 µmol | 111,70 |
| | | **7799.3** | 5,0 µmol | 207,40 |
| **5-Ethynyl-dUTP** | ≥98 %, 100 mM in water | **7802.1** | 0,5 µmol | 91,30 |
| | | **7802.2** | 2,5 µmol | 349,40 |
| | | **7802.3** | 5,0 µmol | 532,15 |

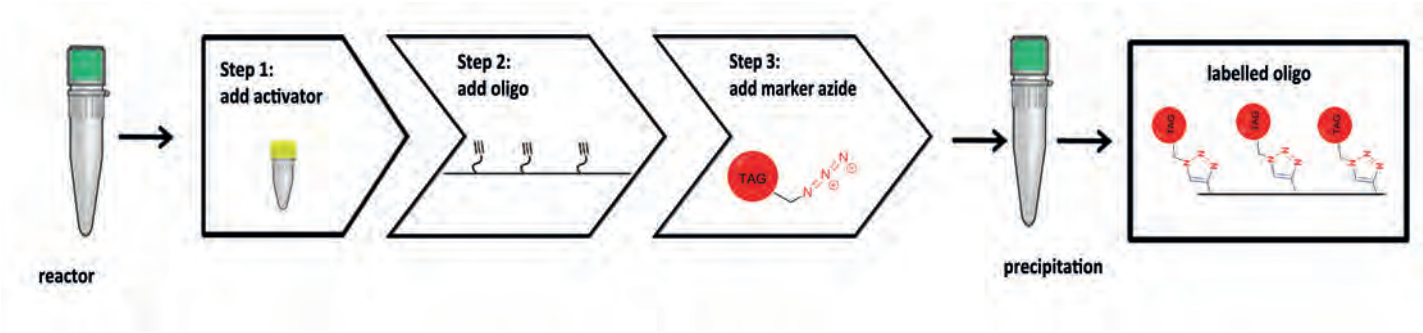
### Important information on refrigerated transports

All products identified as being particularly temperature-sensitive are shipped in **special ice boxes with freezer packs or in dry ice.**
**Additional costs** resulting from such, **will be invoiced** (further information on request).



**Please note:**
In order to guarantee optimum product quality, the dispatch of refrigerated transport products will be carried out **on Mon and Tue only outside Germany!**
Slight delays in delivery are therefore possible.

# Applications

## Labelling of Oligos with Roti®kits for DNA Labelling

The ROTI®kits for DNA Labelling are optimized for the labelling of up to 100 nmol of a single or double alkyne-modified oligonucleotide via copper(I)-catalyzed azide-alkyne cycloaddition (CuAAC; click chemistry). These kits provide all reagents needed to perform your click reaction on alkyne bearing oligonucleotides using a fast, simple and straight forward protocol.

The Oligo Click kits are based on a new solid heterogeneous catalyst. This air-stable, insoluble Cu(I) source provided in a ready-to-use vial (reactor) along with an activator allows efficient click reactions in both aqueous and organic solvents. Both catalyst and activator result in a much easier and faster handling including only three steps:

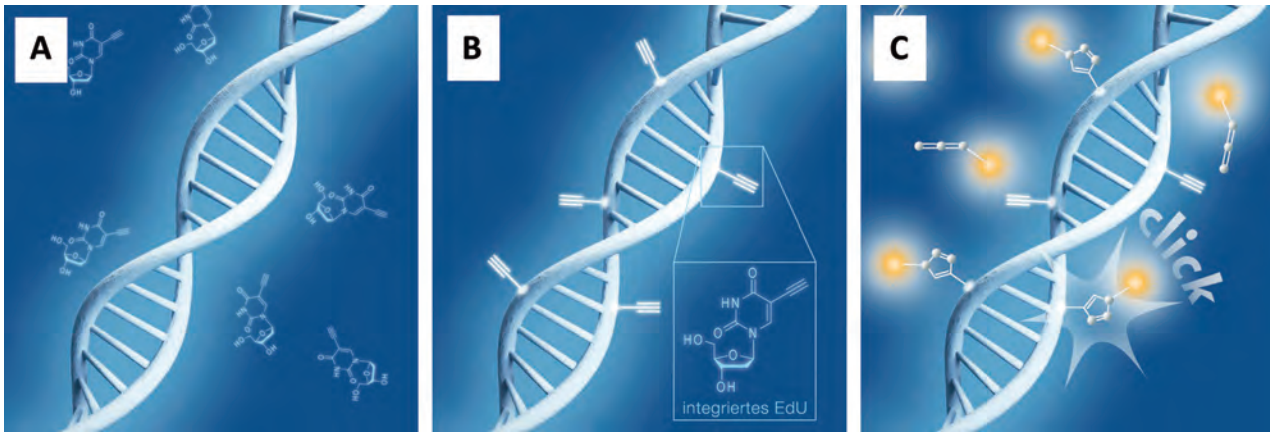
More than 100 azides are compatible with these kits.

### ROTI®kits for DNA Labelling

| Product | Marker | λ (nm) | Activator | Reactor S | Reactor M | Art. No. | Pack Qty | € |
|---|---|---|---|---|---|---|---|---|
| **Oligo Click S-488** | 6-FAM | 488 | 10 µl | 7 x 2,5 mg | - | **7766.1** | 1 kit | 134,30 |
| **Oligo Click M-488** | 6-FAM | 488 | 20 µl | - | 7 x 5 mg | **7767.1** | 1 kit | 138,70 |
| **Oligo Click S-555** | 5-TAMRA | 555 | 10 µl | 7 x 2,5 mg | - | **7769.1** | 1 kit | 149,45 |
| **Oligo Click M-555** | 5-TAMRA | 555 | 20 µl | - | 7 x 5 mg | **7770.1** | 1 kit | 155,90 |
| **Oligo Click S-Biotin** | Biotin Azide | - | 10 µl | 7 x 2,5 mg | - | **7771.1** | 1 kit | 111,30 |
| **Oligo Click M-Biotin** | Biotin Azide | - | 20 µl | - | 7 x 5 mg | **7772.1** | 1 kit | 116,00 |
| **Oligo Click S Reload** | - | - | 35 µl | 9 x 2,5 mg | - | **7764.1** | 1 kit | 61,85 |
| **Oligo Click M Reload** | - | - | 50 µl | - | 9 x 5 mg | **7765.1** | 1 kit | 76,90 |

For additional product data and safety information, see chapter Chemicals A-Z.

**Tip:**
The ending of the product name specifies the included marker:



- 488: 6-FAM-Azide
- 555: 5-TAMRA-Azide
- Biotin: Biotin Azide
- Reload: no marker included

**Instructions for use**
can be found on the Internet next to the product description.

# Cell Proliferation Assays

Our ROTI®Kits for EdU mediated detection of cell proliferation provide a superior alternative to time-consuming and less sensitive bromodeoxyuridine (BrdU) assays. Similar to BrdU assays, our assays utilise a uracil derivative (in this case ethynyldeoxyuridine, EdU) which is incorporated into the replicating DNA. EdU is not detected via antibodies; instead fluorescent dyes are coupled directly via click reaction.
This fast and elegant approach allows direct labelling of replicating DNA with the desired fluorescent dye. Thus, the assay is perfectly adaptable to the present facilities and to the assay situation (e.g. for double or triple detection). Furthermore, the click reaction is highly selective and therefore prevents any unspecific labelling. The protocol includes only few steps and decreases the total amount of time.

Advantages of the click chemistry based approach:

Schematic illustration of the click chemistry based EdU cell proliferation assay. A) Incubation of cells with EdU. EdU is a thymidine analogue and is incorporated in DNA during active DNA synthesis. B) After DNA synthesis, EdU was incorporated in the DNA strands. C) Detection of proliferating cells via click chemistry. This reaction is finished within 30 minutes, whereby a variety of different fluorescent dye azides can be used.

## Benefits of the Click Assay:

- Highly reliable
- Easy handling
- Fast detection procedure (only 30 min)
- Mild conditions, no DNA denaturation required
- Compatible with various dyes
- Modular system in click chemistry
- Compatible with multiplexing

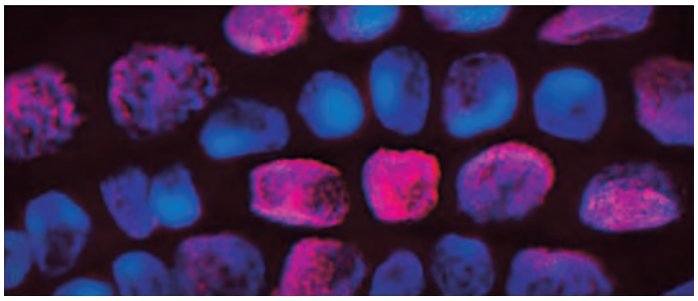
## Kits available for:

- **Fluorescence microscopy (ROTI®kits for Imaging)**
- **Flow Cytometry (ROTI®kits for Flow Cytometry)**
- **High Throughput Screening (ROTI®kits for High Throughput Screening)**

| Code in product name | Markers | Absorption (nm) | Emission (nm) | Filter configuration |
|---|---|---|---|---|
| -488 | **6-FAM azide** | 496 | 516 | FITC |
| -555 | **5-TAMRA azide** | 546 | 579 | Cy3™ |
| -594 | **5/6 Sulforhodamine** | 584 | 603 | Texas Red® |
| -647 | **Eterneon red** | 643 | 662 | Cy5™ |

**Tip:**
The number at the end of the product name specifies the excitation wavelength of the included fluorescent marker. Suitable excitation source are:

- 488 nm (blue-green argon laser 488 nm, blue diode laser 473 nm)
- 555 nm (green Nd:YAG laser 532 nm, green helium-neon-laser 543 nm)
- 594 nm (yellow helium-neon-laser 594 nm, yellow diode laser 594 nm)
- 647 nm (red krypton laser 647 nm, red helium-neon-laser 633 nm, red diode laser 635 or 650 nm)



### Important information on refrigerated transports

All products identified as being particularly temperature-sensitive are shipped in **special ice boxes with freezer packs or in dry ice.**
**Additional costs** resulting from such, **will be invoiced** (further information on request).

**Please note:**
In order to guarantee optimum product quality, the dispatch of refrigerated transport products will be carried out **on Mon and Tue only outside Germany!**
Slight delays in delivery are therefore possible.

# ROTI®kits for Imaging

The detection of cell proliferation is of utmost importance for monitoring of cell vitality, determining genotoxicity or evaluating anticancer drugs. ROTH's cell proliferation assays based on EdU (5-ethynyl-2'-deoxyuridine) provide a superior alternative to BrdU (bromodeoxyuridine) assays. ROTH's EdU Click assays are not antibody based and therefore do not require DNA denaturation for detection of the incorporated nucleoside. Instead, the EdU Click assay utilizes click chemistry for detection in a variety of dye fluorescent readouts. Furthermore, the streamlined detection protocol both reduces the total number of steps and significantly decreases the total amount of time.

Proliferating tissue of barley meristem labeled via EdU Click-555 kit (Art. Nr. 7775.1). Dividing cells incorporated EdU and were labeled via click reaction with TAMRA (pink stained cells). Nuclei were counterstained with DAPI (blue). Magnification: 100x; Filterset: Sp. Aqua HC mFISH; Sp. Green HC mFISH

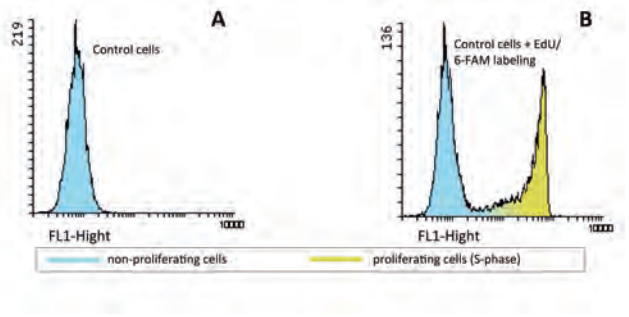
# ROTI®kits for Flow Cytometry (FC)

The ROTI®kits for Flow Cytometry by ROTH use click chemistry to detect cell proliferation by means of a large number of fluorescent stain read-outs. In the detection procedure both, the total number of steps and the processing time are significantly reduced. The simple click chemistry detection procedure is complete within 30 minutes.

## ROTI®kits for Flow Cytometry (FC)



ready-to-use

| Product | Marker | λ (nm) | Application | Art. No. | Pack Qty | € |
|---|---|---|---|---|---|---|
| **EdU Click FC-488** | 6-FAM | 488 | For 50 assays. | **7779.1** | 1 kit | 375,20 |

HeLa cells treated without (A) and with (B) 10µM EdU for 2 h. Click reaction was performed using 6-FAM-Azide.
A: negative control, cells without EdU incorporation.
B: non-proliferating cells without EdU incorporation (blue coloured left peak) and proliferating cells (S-phase) having incorporated EdU and are labeled with 6-FAM Azide (green coloured right peak).

Density blots of PI (propidium iodide) stained samples without (C) and with (D) EdU incubation and followed click reaction. The y-axis presents the FL1-Fluorescence intensity and the x-axis the content of DNA measured with FL3-area. Cell cycle phases are indicated as G1, S and G2/M phase.

### Important information on refrigerated transports

# ROTI®kits for High Throughput Screening (HTS)

The ROTI®kits for High Troughput Screening measures DNA synthesis of adherent cells in 96 well plates. By utilizing click chemistry, detection of a variety of fluorescent dyes is highly specific and very fast. The kits are available in different sizes. The size (2, 4 or 20) refers to the number of 96 well plates for which the kit is designed.

HeLa cells incubated without and with 10 µM EdU for 2, 4 or 6 h in 96 well plate. EdU incorporation was detected over time and for different cell numbers using a fluorescence plate reader. Control: Without EdU no fluorescence was detected after 6 h incubation time.

Fluorescence imaging of 2 wells:
Well C9: incubated for 6 h with EdU;
Well G9: incubation without EdU.

# CPG/Supports

## Support material for DNA-Synthesis

Derivated Controlled Pore Glass (CPG) is used as support material for DNA-synthesis. The 500 Å supports are ideal for virtually all applications. In order to avoid steric hindrance between the growing oligonucleotide chains and to gain a maximum yield of full-length chains, a long-chained alkylamine "spacer arm" is used.

**500 Å supports are loaded with 30-40 µmol/g**

### Adenosine-CPG-Support

| **2256.1** | 200 ml | glass | 35,40 € |
| **2256.2** | 450 ml | glass | 74,10 € |
| **2256.3** | 2,5 l | glass | 196,65 € |
| Original pack 4 x 2,5 l | | | 186,82/2,5 l |

## DMT removal DCE

**for DNA-synthesis with PolyGen® Synthesizer**

3 % Trichloro acetic acid in 1,2-dichloroethane

**Danger** H225-H302-H315-H318-H335-H350-H411

| | | | |
|---|---|---|---|
| **K060.1** | 450 ml | glass | 36,45 € |
| **K060.2** | 2,5 l | glass | 117,20 € |
| Original pack 4 x 2,5 l | | | 111,34/2,5 l |

## DMT removal reagent

**for DNA synthesis with ABI™ Synthesizer**

3 % Trichloro acetic acid in dichloromethane

**Danger** H315-H318-H335-H336-H351-H373-H411

| | | | |
|---|---|---|---|
| **2257.1** | 450 ml | glass | 36,45 € |
| **2257.2** | 2,5 l | glass | 117,75 € |
| Original pack 4 x 2,5 l | | | 111,86/2,5 l |

## Oxidation reagent

**for DNA-Synthesis with ABI™ and PolyGen® Synthesizer**

Iodine/water/pyridine/tetrahydrofuran-mixture. 0,05 M iodine.

**Danger** H225-H315-H319-H335-H351-H373-EUH019

| | | | |
|---|---|---|---|
| **2254.1** | 200 ml | glass | 27,45 € |
| **2254.2** | 450 ml | glass | 50,45 € |
| **2254.3** | 2,5 l | glass | 213,95 € |
| Original pack 4 x 2,5 l | | | 203,25/2,5 l |

## Fast Oxidation reagent

**for DNA-Synthesis with ABI™ and PolyGen® Synthesizer**

For quick separating phosphoramidites.

Iodine/water/pyridine/tetrahydrofuran-mixture. 0,02 M iodine.

Storage temp.: +20 °C

**Danger** H225-H315-H319-H335-H351-H373-EUH019

| | | | |
|---|---|---|---|
| **A133.2** | 450 ml | glass | 50,00 € |

## 4,4'-Dimethoxytrityl chloride (DMT-Cl)

**≥98 %, for synthesis**

Protective group reagent

| | | | |
|---|---|---|---|
| **9671.1** | 5 g | glass | 23,15 € |
| **9671.2** | 25 g | glass | 69,80 € |
| **9671.3** | 50 g | glass | 115,60 € |
| **9671.4** | 100 g | glass | 181,70 € |

## Starter Kit DNA Synthesis for approx. 100 x 30mers

| Product | Art. No. | Pack Qty. | € | Recommended order amount |
|---|---|---|---|---|
| Adenosine-CPG-support (500 Å) | **2318.3** | 1 g | 56,90 | 1 |
| Cytidine-CPG-support (500 Å) | **2319.3** | 1 g | 56,90 | 1 |
| Guanosine-CPG-supports (500 Å) | **2320.3** | 1 g | 56,45 | 1 |
| Thymidine-CPG-support (500 Å) | **2321.3** | 1 g | 56,45 | 1 |
| Adenosine-BCE-phosphoramidite | **K921.1** | 1 g | 34,30 | 5 |
| Cytidine-BCE-phosphoramidite | **K922.1** | 1 g | 34,30 | 5 |
| Guanosine-BCE-phosphoramidite | **K923.1** | 1 g | 34,30 | 5 |
| Thymidine-BCE-phosphoramidite | **K924.1** | 1 g | 33,25 | 5 |
| Activation reagent | **2253.2** | 450 ml | 203,20 | 1 |
| Oxidation reagent | **2254.2** | 450 ml | 50,45 | 1 |
| Capping reagent I | **2255.2** | 450 ml | 77,30 | 2 |
| Capping reagent II | **2256.2** | 450 ml | 74,10 | 1 |
| DMT removal DCE | **K060.1** | 450 ml | 36,45 | 1 |
| Acetonitrile (water content ≤10 ppm) | **8824.2** | 2,5 l | 103,10 | 2 |
| Molecular sieve 3 Å | **N893.1** | 100 ml | 12,40 | 5 |
| Ammonia solution 32 % | **A990.1** | 200 ml | 17,10 | 1 |
| Acetonitrile (water content ≤30 ppm) | **3620.1** | 100 ml | 26,80 | 5 |
| Disposable syringes, Luer-fitting | **0059.1** | 100 pieces | 20,10 | 1 |
| Disposable needles Sterican®, long edge | **C721.1** | 100 pieces | 6,85 | 1 |
| PCR-reaction vials (0,2 ml) | **XT87.1** | 1000 pieces | 50,50 | 1 |

For additional product data and safety information, see chapter Chemicals A-Z.

# Solvents for DNA Synthesis

- Each reagent is specially purified for DNA synthesis
- Each batch is tested on a synthesizer to determine maximum yield
- Extremely careful manufacturing, testing and packing guarantee a new standard of quality - the DNA Synthesis Grade

## Acetonitrile

**ROTISOLV® ≥99,9 %, for DNA synthesis**

Water content ≤10 ppm

**Danger** H225-H302+H312+H332-H319

For solubilisation of phosphoamidites during synthesis of oligonucleotides >20mer.

**Guarantee analysis:**

Assay (GC).....≥99,9 %
Water (KF).....≤0,001 %
Non volatile matter.....≤0,0001 %

| | | | |
|---|---|---|---|
| **8824.2** | 2,5 l | glass | 103,10 € |
| Original pack 4 x 2,5 l | | | 97,95/2,5 l |

## Acetonitrile

**ROTISOLV® ≥99,9 %, for DNA synthesis**

Water content ≤30 ppm

**Danger** H225-H302+H312+H332-H319

For solubilisation of phosphoamidites during synthesis of oligonucleotides ≤20mer.

**Guarantee analysis:**

Assay (GC).....≥99,9 %
Water (KF).....≤0,003 %
Free acid.....≤0,002 %
Non volatile matter.....≤0,0003 %

| | | | |
|---|---|---|---|
| **2216.2** | 2,5 l | glass | 81,60 € |
| Original pack 4 x 2,5 l | | | 77,52/2,5 l |

## Acetonitrile

**ROTISOLV® ≥99,9 %, for DNA synthesis**

Water content ≤30 ppm

**Danger** H225-H302+H312+H332-H319

For solubilisation of phosphoamidites during synthesis of oligonucleotides ≤20mer. Sealed with septum cap.

**Guarantee analysis:**

Assay (GC).....≥99,9 %
Water (KF).....≤0,003 %
Packed for Applied Biosystems and Biosearch DNA-Synthesizer.

| | | | |
|---|---|---|---|
| **3620.1** | 100 ml | septum bottle | 26,80 € |

## Ammonia solution 32 %

**30-33 %, for DNA synthesis.**

Storage temp.: +4 °C

**Danger** H290-H314-H400-H335

For oligo separation from supports and for neutralising protective groups. Comes in bottle to fit ABI 391/392/394.

**Type analysis:**

Assay ($NH_3$).....≥30 %

| | | | |
|---|---|---|---|
| **A990.1** | 200 ml | glass | 17,10 € |

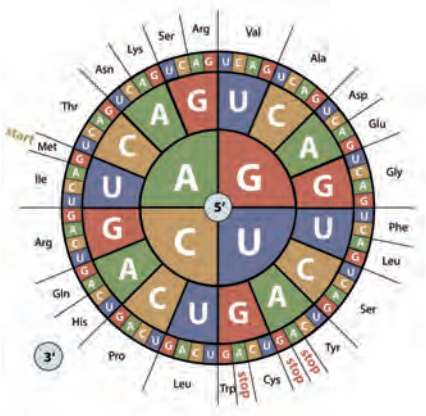
## Acetonitrile

**ROTIDRY® ≥99,9 % (≤10 ppm $H_2O$)**

Dried; for DNA synthesis and analysis.

**Danger** H225-H302+H312+H332-H319

**Guarantee analysis:**



Assay (GC).....≥99,9 %
Colour (Hazen).....≤10
Water (KF).....≤0,001 %
Acidity.....≤0,0005 meq/g
Evaporation residue.....≤0,0005 %
Filtered through a membrane and filled under protective gas.

| | | | |
|---|---|---|---|
| **AE00.1** | 1 l | glass | 35,40 € |
| Original pack 6 x 1 l | | | 33,63/1 l |
| **AE00.2** | 2,5 l | glass | 72,60 € |
| Original pack 4 x 2,5 l | | | 68,97/2,5 l |
| **AE00.3** | 4 l | glass | 107,40 € |

▶ Further dried solvents see page 1529

# Amino acids

Our amino acids are of the highest purity and suitable for a broad range of applications in biochemistry. Besides the natural occurring L-amino acids, we offer a selection of unnatural D-amino acids and DL-amino acids.

Ala

## Alanine

| Product | Purity | Art. No. | Pack Qty. | Pack. | € |
|---|---|---|---|---|---|
| **D-Alanine** | ≥99 %, for biochemistry | **7866.1** | 5 g | plastic | 21,00 |
| | | **7866.2** | 25 g | plastic | 64,00 |
| | | **7866.3** | 100 g | plastic | 192,45 |
| **DL-Alanine** | ≥99 %, for biochemistry | **9798.2** | 25 g | plastic | 11,00 |
| | | **9798.1** | 100 g | plastic | 22,05 |
| | | **9798.3** | 250 g | plastic | 42,50 |
| **L-Alanine** | ≥99 %, for biochemistry | **3076.1** | 25 g | plastic | 19,90 |
| | | **3076.2** | 250 g | plastic | 100,55 |

Arg

## Arginine

| Product | Purity | Art. No. | Pack Qty. | Pack. | € |
|---|---|---|---|---|---|
| **DL-Arginine** | ≥98,5 %, for biochemistry | **8592.1** | 5 g | plastic | 20,35 |
| | | **8592.2** | 25 g | plastic | 60,10 |
| | | **8592.3** | 100 g | plastic | 198,90 |
| **L-Arginine** | ≥99 % CELLPURE® | **1655.1** | 25 g | plastic | 10,25 |
| | | **1655.2** | 100 g | plastic | 25,70 |
| | | **1655.3** | 500 g | plastic | 83,75 |
| | ≥98,5 %, USP, for biochemistry | **3144.1** | 50 g | plastic | 17,10 |
| | | **3144.3** | 250 g | plastic | 41,85 |
| | | **3144.2** | 1 kg | plastic | 135,35 |
| **D-Arginine monohydrochloride** | ≥99 %, for biochemistry | **7868.1** | 5 g | plastic | 24,20 |
| | | **7868.2** | 25 g | plastic | 72,60 |
| | | **7868.3** | 100 g | plastic | 213,95 |
| **DL-Arginine monohydrochloride** | ≥98 %, for biochemistry | **4925.1** | 5 g | plastic | 79,45 |
| **L-Arginine monohydrochloride** | ≥98,5 % CELLPURE® | **1689.1** | 25 g | plastic | 14,95 |
| | | **1689.2** | 100 g | plastic | 26,35 |
| | | **1689.3** | 500 g | plastic | 87,00 |
| | ≥98,5 %, Ph.Eur., USP | **3145.1** | 50 g | plastic | 17,10 |
| | | **3145.2** | 250 g | plastic | 45,70 |

Asn

## Asparagine

| Product | Purity | Art. No. | Pack Qty. | Pack. | € |
|---|---|---|---|---|---|
| **D-Asparagine monohydrate** | ≥98 %, for biochemistry | **7872.1** | 5 g | plastic | 24,20 |
| | | **7872.2** | 25 g | plastic | 72,60 |
| **DL-Asparagine monohydrate** | ≥98 %, for biochemistry | **5495.1** | 100 g | plastic | 39,70 |
| | | **5495.2** | 250 g | plastic | 85,90 |
| **L-Asparagine monohydrate** | ≥99 % CELLPURE® | **KK37.1** | 50 g | plastic | 26,35 |
| | | **KK37.2** | 250 g | plastic | 90,85 |
| | | **KK37.3** | 500 g | plastic | 167,60 |
| | ≥99 %, Ph.Eur., for biochemistry | **HN23.1** | 100 g | plastic | 36,45 |
| | | **HN23.2** | 500 g | plastic | 156,45 |
| | | **HN23.3** | 1 kg | plastic | 256,95 |

Asp

## Aspartic acid

| Product | Purity | Art. No. | Pack Qty. | Pack. | € |
|---|---|---|---|---|---|
| **D-Aspartic acid** | ≥98 %, for biochemistry | **7873.1** | 5 g | plastic | 20,35 |
| | | **7873.2** | 25 g | plastic | 60,10 |
| | | **7873.3** | 100 g | plastic | 149,45 |
| **DL-Aspartic acid** | ≥98 %, for biochemistry | **8593.1** | 100 g | plastic | 31,10 |
| | | **8593.2** | 500 g | plastic | 133,20 |
| **L-Aspartic acid** | ≥99 % CELLPURE® | **1690.1** | 25 g | plasitc | 14,55 |
| | | **1690.2** | 100 g | plasitc | 25,70 |
| | | **1690.3** | 500 g | plasitc | 84,85 |
| | ≥98,5 %, Ph.Eur., for biochemistry | **T202.1** | 100 g | plastic | 16,70 |
| | | **T202.2** | 500 g | plastic | 71,50 |
| | | **T202.3** | 1 kg | plastic | 119,25 |

Cys

## Cysteine

| Product | Purity | Art. No. | Pack Qty. | Pack. | € |
|---|---|---|---|---|---|
| **DL-Cysteine** | ≥98 %, for biochemistry | **8594.1** | 5 g | plastic | 48,30 |
| | | **8594.2** | 25 g | plastic | 117,20 |
| | | **8594.3** | 100 g | plastic | 342,95 |
| **L-Cysteine** | ≥99 % CELLPURE® | **1693.1** | 25 g | plastic | 26,35 |
| | | **1693.2** | 100 g | plastic | 65,05 |
| | | **1693.3** | 500 g | plastic | 277,90 |
| | ≥98 %, DAB, for biochemistry | **3467.1** | 10 g | glass | 14,95 |
| | | **3467.2** | 50 g | glass | 29,60 |
| | | **3467.3** | 250 g | plastic | 110,65 |
| **L-Cysteine hydrochloride** | ≥99 %, p.a., anhydrous | **3468.1** | 10 g | plastic | 14,95 |
| | | **3468.2** | 50 g | plastic | 26,80 |
| | | **3468.3** | 250 g | plastic | 76,90 |
| **D-Cysteine hydrochloride monohydrate** | ≥98,5 %, for biochemistry | **7874.1** | 1 g | glass | 24,65 |
| | | **7874.2** | 5 g | plastic | 73,00 |
| **L-Cysteine hydrochloride monohydrate** | ≥99 % CELLPURE® | **1694.1** | 25 g | plastic | 18,85 |
| | | **1694.2** | 100 g | plastic | 42,50 |
| | | **1694.3** | 500 g | plastic | 175,80 |
| | ≥98,5 %, for biochemistry | **T203.1** | 50 g | plastic | 26,35 |
| | | **T203.2** | 100 g | plastic | 40,75 |
| | | **T203.3** | 500 g | plastic | 166,65 |

## Cystine

| Product | Purity | Art. No. | Pack Qty. | Pack. | € |
|---|---|---|---|---|---|
| **DL-Cystine** | ≥98,5 % | **5565.1** | 1 g | glass | 47,85 |
| **L-Cystine** | ≥98,5 % CELLPURE® | **1695.1** | 25 g | plastic | 24,65 |
| | | **1695.2** | 100 g | plastic | 60,75 |
| | | **1695.3** | 500 g | plastic | 252,65 |
| | ≥98,5 %, for biochemistry | **3471.1** | 100 g | plastic | 56,90 |
| | | **3471.2** | 500 g | plastic | 246,20 |

## Glutamine

| Product | Purity | Art. No. | Pack Qty. | Pack. | € |
|---|---|---|---|---|---|
| **D-Glutamine** | ≥98,5 %, for biochemistry | **7876.1** | 1 g | glass | 24,65 |
| | | **7876.2** | 5 g | plastic | 73,00 |
| | | **7876.3** | 25 g | plastic | 213,95 |
| **DL-Glutamine** | ≥98,5 %, for biochemistry | **8595.1** | 1 g | glass | 46,80 |
| | | **8595.2** | 5 g | plastic | 88,05 |
| | | **8595.3** | 25 g | plastic | 284,90 |
| **L-Glutamine** | ≥99 % CELLPURE® | **HN08.1** | 25 g | plastic | 19,25 |
| | | **HN08.2** | 100 g | plastic | 36,45 |
| | | **HN08.3** | 500 g | plastic | 126,35 |
| | ≥99 %, USP, for biochemistry | **3772.1** | 100 g | plastic | 31,10 |
| | | **3772.2** | 500 g | plastic | 99,90 |

## Glutamic acid

| Product | Purity | Art. No. | Pack Qty. | Pack. | € |
|---|---|---|---|---|---|
| **D-Glutamic acid** | ≥99 %, for biochemistry | **7879.1** | 5 g | plastic | 24,65 |
| | | **7879.2** | 25 g | plastic | 73,00 |
| | | **7879.3** | 100 g | plastic | 177,40 |
| **DL-Glutamic acid** | ≥98,5 %, for biochemistry | **8596.1** | 25 g | plastic | 60,10 |
| | | **8596.2** | 100 g | plastic | 192,45 |
| **L-Glutamic acid** | ≥99 % CELLPURE® | **1743.1** | 25 g | plastic | 14,55 |
| | | **1743.2** | 100 g | plastic | 22,50 |
| | | **1743.3** | 500 g | plastic | 71,95 |
| | ≥98,5 %, Ph.Eur., for biochemistry | **3774.1** | 250 g | plastic | 31,75 |
| | | **3774.2** | 1 kg | plastic | 88,70 |

## Glycine

| Product | Purity | Art. No. | Pack Qty. | Pack. | € |
|---|---|---|---|---|---|
| **Glycine** | ≥99 %, Blotting-Grade | **0079.1** | 250 g | plastic | 25,30 |
| | | **0079.2** | 500 g | plastic | 47,20 |
| | | **0079.3** | 1 kg | plastic | 75,15 |
| | | **0079.4** | 2,5 kg | plastic | 149,45 |
| | ≥99 %, p.a. PUFFERAN® | **3908.1** | 250 g | plastic | 22,05 |
| | | **3908.2** | 1 kg | plastic | 71,95 |
| | | **3908.3** | 5 kg | plastic | 200,50 |
| | | **3908.5** | 25 kg | plastic | 708,45 |
| | ≥99 % CELLPURE® | **HN07.1** | 100 g | plastic | 16,70 |
| | | **HN07.2** | 500 g | plastic | 45,70 |
| | | **HN07.3** | 1 kg | plastic | 83,35 |
| | ≥98,5 %, Ph.Eur., USP, JP | **T873.1** | 250 g | plastic | 25,30 |
| | | **T873.3** | 500 g | plastic | 46,15 |
| | | **T873.2** | 1 kg | plastic | 79,05 |
| | | **T873.4** | 2,5 kg | plastic | 170,95 |
| | ≥99 %, for biochemistry | **3187.1** | 250 g | plastic | 19,25 |
| | | **3187.2** | 500 g | plastic | 25,30 |
| | | **3187.3** | 1 kg | plastic | 38,60 |
| | | **3187.4** | 5 kg | plastic | 161,25 |
| | ≥99 %, for synthesis | **3790.1** | 250 g | plastic | 17,75 |
| | | **3790.2** | 1 kg | plastic | 35,40 |
| | | **3790.3** | 5 kg | plastic | 126,35 |

## Histidine

| Product | Purity | Art. No. | Pack Qty. | Pack. | € |
|---|---|---|---|---|---|
| **D-Histidine** | ≥98 %, for biochemistry | **7880.1** | 5 g | plastic | 46,15 |
| | | **7880.2** | 25 g | plastic | 138,70 |
| **DL-Histidine** | ≥98,5 %, for biochemistry | **8597.1** | 5 g | plastic | 31,10 |
| | | **8597.2** | 25 g | plastic | 91,30 |
| | | **8597.3** | 100 g | plastic | 295,65 |
| **L-Histidine** | ≥99 % CELLPURE® | **1696.1** | 25 g | plastic | 26,35 |
| | | **1696.2** | 100 g | plastic | 56,90 |
| | | **1696.3** | 500 g | plastic | 233,85 |
| | ≥98,5 %, Ph.Eur., for biochemistry | **3852.1** | 25 g | plastic | 17,10 |
| | | **3852.3** | 100 g | plastic | 46,80 |
| | | **3852.2** | 1 kg | plastic | 352,10 |
| **L-Histidine hydrochloride monohydrate** | ≥99 % CELLPURE® | **1697.1** | 25 g | plastic | 22,50 |
| | | **1697.2** | 100 g | plastic | 53,65 |
| | | **1697.3** | 500 g | plastic | 214,90 |
| | ≥98,5 %, Ph.Eur., for biochemistry | **9455.1** | 100 g | plastic | 42,90 |
| | | **9455.3** | 250 g | plastic | 90,20 |
| | | **9455.2** | 500 g | plastic | 165,05 |

For additional product data and safety information, see chapter Chemicals A-Z.

## Isoleucine

| Product | Purity | Art. No. | Pack Qty. | Pack. | € |
|---|---|---|---|---|---|
| **DL-Isoleucine** | ≥98,5 %, for biochemistry | **8598.1** | 10 g | plastic | 24,65 |
| | | **8598.2** | 50 g | plastic | 91,30 |
| | | **8598.3** | 100 g | plastic | 163,95 |
| **L-Isoleucine** | ≥99 % CELLPURE® | **1698.1** | 25 g | plastic | 23,15 |
| | | **1698.2** | 100 g | plastic | 56,90 |
| | | **1698.3** | 500 g | plastic | 228,45 |
| | ≥98,5 %, USP, for biochemistry | **3922.1** | 10 g | glass | 13,90 |
| | | **3922.2** | 100 g | plastic | 44,00 |
| | | **3922.3** | 1 kg | plastic | 349,40 |

## Leucine

| Product | Purity | Art. No. | Pack Qty. | Pack. | € |
|---|---|---|---|---|---|
| **D-Leucine** | ≥99 %, for biochemistry | **7882.1** | 5 g | plastic | 30,00 |
| | | **7882.2** | 25 g | plastic | 90,20 |
| | | **7882.3** | 100 g | plastic | 271,45 |
| **DL-Leucine** | ≥98,5 %, for biochemistry | **8599.1** | 25 g | plastic | 22,50 |
| | | **8599.2** | 50 g | plastic | 38,60 |
| | | **8599.3** | 250 g | plastic | 154,30 |
| **L-Leucine** | ≥99 % CELLPURE® | **1699.1** | 25 g | plastic | 19,25 |
| | | **1699.2** | 100 g | plastic | 42,90 |
| | | **1699.3** | 500 g | plastic | 147,85 |
| | ≥98,5 %, Ph.Eur., USP, for biochemistry | **3984.1** | 100 g | plastic | 34,30 |
| | | **3984.3** | 250 g | plastic | 63,35 |
| | | **3984.4** | 500 g | plastic | 110,65 |
| | | **3984.2** | 1 kg | plastic | 209,10 |

## Lysine

| Product | Purity | Art. No. | Pack Qty. | Pack. | € |
|---|---|---|---|---|---|
| **L-Lysine monohydrate** | ≥98,5 % CELLPURE® | **6829.1** | 25 g | plastic | 48,30 |
| | | **6829.2** | 100 g | plastic | 88,05 |
| | | **6829.3** | 500 g | plastic | 321,45 |
| | ≥98,5 %, for biochemistry | **4207.1** | 25 g | plastic | 45,05 |
| | | **4207.2** | 100 g | plastic | 84,85 |
| **D-Lysine hydrochloride** | ≥99 %, for biochemistry | **7883.1** | 1 g | glass | 24,65 |
| | | **7883.2** | 5 g | plastic | 54,75 |
| | | **7883.3** | 25 g | plastic | 133,20 |
| **DL-Lysine hydrochloride** | ≥98 %, for biochemistry | **8600.1** | 500 mg | glass | 20,35 |
| | | **8600.2** | 1 g | glass | 31,75 |
| | | **8600.3** | 5 g | plastic | 55,80 |
| **L-Lysine hydrochloride** | ≥99 % CELLPURE® | **1700.1** | 25 g | plastic | 15,60 |
| | | **1700.2** | 100 g | plastic | 28,50 |
| | | **1700.3** | 500 g | plastic | 95,60 |
| | ≥98,5 %, Ph.Eur., USP, JP, for biochemistry | **9357.1** | 100 g | plastic | 17,75 |
| | | **9357.3** | 250 g | plastic | 36,45 |
| | | **9357.4** | 500 g | plastic | 63,35 |
| | | **9357.2** | 1 kg | plastic | 111,70 |

## Methionine

| Product | Purity | Art. No. | Pack Qty. | Pack. | € |
|---|---|---|---|---|---|
| **D-Methionine** | ≥98 %, for biochemistry | **7885.1** | 5 g | plastic | 19,25 |
| | | **7885.2** | 25 g | plastic | 57,95 |
| | | **7885.3** | 100 g | plastic | 145,15 |
| **DL-Methionine** | ≥98 %, for biochemistry | **8602.1** | 100 g | plastic | 28,95 |
| | | **8602.2** | 500 g | plastic | 116,00 |
| **L-Methionine** | ≥99 % CELLPURE® | **1702.1** | 25 g | plastic | 17,10 |
| | | **1702.2** | 100 g | plastic | 35,40 |
| | | **1702.3** | 500 g | plastic | 138,70 |
| | ≥99 %, for biochemistry | **9359.1** | 100 g | plastic | 28,95 |
| | | **9359.3** | 250 g | plastic | 59,05 |
| | | **9359.4** | 500 g | plastic | 107,40 |
| | | **9359.2** | 1 kg | plastic | 203,20 |

## Ornithine

| Product | Purity | Art. No. | Pack Qty. | Pack. | € |
|---|---|---|---|---|---|
| **L-Ornithine monohydrochloride** | ≥99 % CELLPURE® | **1703.1** | 25 g | plastic | 23,15 |
| | | **1703.2** | 100 g | plastic | 53,65 |
| | | **1703.3** | 500 g | plastic | 209,65 |
| | ≥99 %, for biochemistry | **T204.1** | 25 g | plastic | 14,55 |
| | | **T204.2** | 100 g | plastic | 37,55 |
| | | **T204.3** | 500 g | plastic | 134,40 |

## Phenylalanine

| Product | Purity | Art. No. | Pack Qty. | Pack. | € |
|---|---|---|---|---|---|
| **D-Phenylalanine** | ≥98,5 %, for biochemistry | **7886.1** | 5 g | plastic | 21,40 |
| | | **7886.2** | 25 g | plastic | 65,05 |
| | | **7886.3** | 100 g | plastic | 160,20 |
| **DL-Phenylalanine** | ≥98,5 %, for biochemistry | **8603.1** | 25 g | plastic | 21,40 |
| | | **8603.2** | 100 g | plastic | 59,05 |
| | | **8603.3** | 250 g | plastic | 123,65 |
| **L-Phenylalanine** | ≥99 % CELLPURE® | **1709.1** | 25 g | plastic | 19,60 |
| | | **1709.2** | 100 g | plastic | 44,00 |
| | | **1709.3** | 500 g | plastic | 170,95 |
| | ≥98,5 %, Ph.Eur., for biochemistry | **4491.3** | 25 g | plastic | 13,90 |
| | | **4491.1** | 100 g | plastic | 38,60 |
| | | **4491.4** | 250 g | plastic | 77,30 |
| | | **4491.2** | 1 kg | plastic | 274,15 |

For additional product data and safety information, see chapter Chemicals A-Z.

## Proline

| Product | Purity | Art. No. | Pack Qty. | Pack. | € |
|---|---|---|---|---|---|
| **D-Proline** | ≥98,5 %, for biochemistry | **7888.1** | 1 g | glass | 24,65 |
| | | **7888.2** | 5 g | plastic | 72,60 |
| | | **7888.3** | 25 g | plastic | 192,45 |
| **DL-Proline** | ≥99 %, for biochemistry | **5267.1** | 5 g | plastic | 25,30 |
| | | **5267.2** | 10 g | plastic | 45,05 |
| | | **5267.3** | 25 g | plastic | 88,05 |
| **L-Proline** | ≥98,5 % CELLPURE® | **1713.1** | 25 g | plastic | 20,65 |
| | | **1713.2** | 100 g | plastic | 44,00 |
| | | **1713.3** | 500 g | plastic | 165,05 |
| | ≥98,5 %, Ph.Eur., for biochemistry | **T205.1** * | 25 g | plastic | 16,05 |
| | | **T205.2** | 100 g | plastic | 31,75 |
| | | **T205.3** | 500 g | plastic | 122,05 |

## Serine

| Product | Purity | Art. No. | Pack Qty. | Pack. | € |
|---|---|---|---|---|---|
| **D-Serine** | ≥99 %, for biochemistry | **7531.2** | 1 g | glass | 17,75 |
| | | **7531.1** | 5 g | plastic | 24,65 |
| | | **7531.3** | 25 g | plastic | 95,60 |
| **DL-Serine** | ≥99 %, for biochemistry | **8606.1** | 100 g | plastic | 45,05 |
| | | **8606.2** | 500 g | plastic | 192,45 |
| **L-Serine** | ≥99 % CELLPURE® | **1714.1** | 25 g | plastic | 25,30 |
| | | **1714.2** | 100 g | plastic | 61,20 |
| | | **1714.3** | 500 g | plastic | 246,20 |
| | ≥98,5 %, Ph.Eur. | **4682.1** | 100 g | plastic | 45,05 |
| | | **4682.3** | 250 g | plastic | 85,90 |
| | | **4682.4** | 500 g | plastic | 160,20 |
| | | **4682.2** | 1 kg | plastic | 278,45 |

## Threonine

| Product | Purity | Art. No. | Pack Qty. | Pack. | € |
|---|---|---|---|---|---|
| **D-Threonine** | ≥98,5 % for biochemistry | **7889.1** | 5 g | plastic | 24,65 |
| | | **7889.2** | 25 g | plastic | 72,60 |
| | | **7889.3** | 100 g | plastic | 231,15 |
| **DL-Threonine** | ≥98 %, for biochemistry | **7532.1** | 10 g | plastic | 21,40 |
| | | **7532.4** | 50 g | plastic | 47,85 |
| | | **7532.2** | 100 g | plastic | 75,15 |
| | | **7532.3** | 500 g | plastic | 321,45 |
| **L-Threonine** | ≥99 % CELLPURE® | **1738.1** | 25 g | plastic | 19,25 |
| | | **1738.2** | 100 g | plastic | 38,60 |
| | | **1738.3** | 500 g | plastic | 155,90 |
| | ≥99 %, Ph.Eur., for biochemistry | **T206.1** | 25 g | plastic | 15,60 |
| | | **T206.2** | 100 g | plastic | 31,10 |
| | | **T206.4** | 250 g | plastic | 59,70 |
| | | **T206.3** | 500 g | plastic | 110,65 |

## Tryptophan

| Product | Purity | Art. No. | Pack Qty. | Pack. | € |
|---|---|---|---|---|---|
| **D-Tryptophan** | ≥98,5 %, for biochemistry | **7700.1** | 5 g | plastic | 47,85 |
| | | **7700.2** | 25 g | plastic | 138,70 |
| **DL-Tryptophan** | ≥98 %, for biochemistry | **5236.1** | 10 g | plastic | 14,95 |
| | | **5236.2** | 25 g | plastic | 28,95 |
| | | **5236.3** | 100 g | plastic | 93,00 |
| **L-Tryptophan** | ≥99 % CELLPURE® | **1739.1** | 25 g | plastic | 28,95 |
| | | **1739.2** | 100 g | plastic | 85,50 |
| | | **1739.3** | 500 g | plastic | 353,70 |
| | ≥98,5 %, Ph.Eur., for biochemistry | **4858.1** | 10 g | glass | 14,55 |
| | | **4858.2** | 100 g | plastic | 70,45 |
| | | **4858.4** | 250 g | plastic | 147,85 |
| | | **4858.3** | 1 kg | plastic | 525,70 |

## Tyrosine

| Product | Purity | Art. No. | Pack Qty. | Pack. | € |
|---|---|---|---|---|---|
| **D-Tyrosine** | ≥98 %, for biochemistry | **7890.1** | 1 g | glass | 21,40 |
| | | **7890.2** | 5 g | plastic | 64,40 |
| | | **7890.3** | 25 g | plastic | 192,45 |
| **DL-Tyrosine** | ≥98,5 %, for biochemistry | **8608.1** | 10 g | plastic | 24,20 |
| | | **8608.2** | 50 g | plastic | 70,45 |
| | | **8608.3** | 250 g | plastic | 267,70 |
| **L-Tyrosine** | ≥99 % CELLPURE® | **1741.1** | 25 g | plastic | 23,15 |
| | | **1741.2** | 100 g | plastic | 61,20 |
| | | **1741.3** | 500 g | plastic | 241,90 |
| | ≥99 %, Ph.Eur., for biochemistry | **T207.1** | 25 g | plastic | 15,60 |
| | | **T207.2** | 100 g | plastic | 38,60 |
| | | **T207.3** | 500 g | plastic | 153,20 |

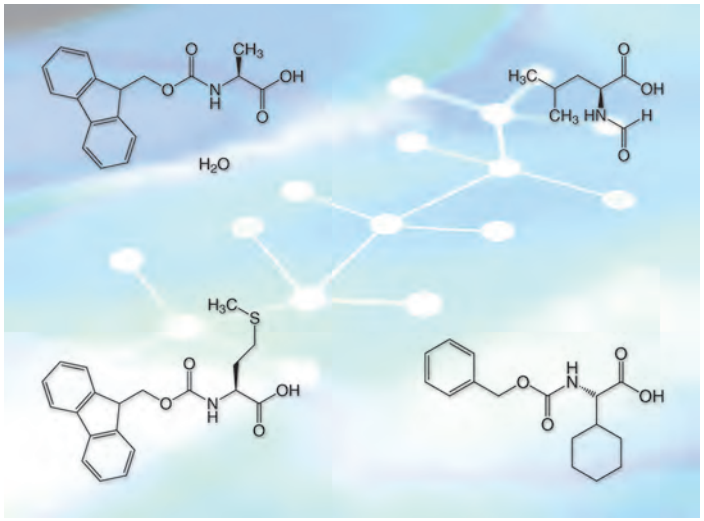
## Valine

| Product | Purity | Art. No. | Pack Qty. | Pack. | € |
|---|---|---|---|---|---|
| **D-Valine** | ≥98,5 %, for biochemistry | **7891.1** | 5 g | plastic | 24,65 |
| | | **7891.2** | 25 g | plastic | 73,00 |
| | | **7891.3** | 100 g | plastic | 231,15 |
| **DL-Valine** | ≥99 %, for biochemistry | **7540.1** | 50 g | plastic | 28,50 |
| | | **7540.2** | 100 g | plastic | 49,35 |
| | | **7540.3** | 250 g | plastic | 96,65 |
| **L-Valine** | ≥99 % CELLPURE® | **1742.1** | 25 g | plastic | 20,35 |
| | | **1742.2** | 100 g | plastic | 40,35 |
| | | **1742.3** | 500 g | plastic | 149,45 |
| | ≥98,5 %, USP, for biochemistry | **4879.1** | 25 g | plastic | 16,70 |
| | | **4879.3** | 100 g | plastic | 38,60 |
| | | **4879.4** | 250 g | plastic | 73,00 |
| | | **4879.5** * | 500 g | plastic | 117,20 |
| | | **4879.2** | 1 kg | plastic | 213,95 |

For additional product data and safety information, see chapter Chemicals A-Z.

## Amino Acid Derivatives

| Product | Purity | Art. No. | Pack Qty. | € |
|---|---|---|---|---|
| **N-Acetyl-L-cysteine** | ≥98 %, for biochemistry | **4126.1** | 25 g | 23,55 |
| | | **4126.2** | 100 g | 75,15 |
| **N-Acetylglycine** | ≥99 %, for biochemistry | **5526.1** | 25 g | 16,70 |
| | | **5526.2** | 100 g | 30,00 |
| | | **5526.3** | 500 g | 111,70 |
| **β-Alanine** | ≥99 %, for biochemistry | **3078.2** | 50 g | 24,65 |
| | | **3078.1** | 250 g | 70,85 |
| **L-Alaninol** | ≥98 %, for biochemistry | **5521.1** | 1 g | 24,65 |
| | | **5521.2** | 5 g | 91,30 |
| | | **5521.3** | 10 g | 145,70 |
| **L-Alanyl-L-glutamine** | ≥99 %, CELLPURE® | **6831.1** | 5 g | 31,75 |
| | | **6831.2** | 10 g | 44,00 |
| | | **6831.3** | 25 g | 88,05 |
| | | **6831.4** | 100 g | 299,95 |
| | ≥98 %, for biochemistry | **6830.1** | 10 g | 37,55 |
| | | **6830.2** | 50 g | 132,15 |
| **Alliin** | ROTICHROM® HPLC | **K031.1** | 10 mg | 274,15 |
| **2-Amino-5-bromobenzoic acid** | ≥95 %, for biochemistry | **5519.1** | 5 g | 23,45 |
| | | **5519.2** | 25 g | 77,30 |
| **DL-2-Aminobutyric acid** | ≥98 %, for biochemistry | **5518.1** | 25 g | 45,70 |
| | | **5518.2** | 100 g | 134,40 |
| **2-Amino-4-chlorobenzoic acid** | ≥98 %, for biochemistry | **5516.1** | 10 g | 18,20 |
| | | **5516.2** | 25 g | 29,60 |
| | | **5516.3** | 100 g | 89,15 |
| **6-Aminohexanoic acid** | ≥99 %, for biochemistry | **3113.1** | 100 g | 25,70 |
| | | **3113.3** | 250 g | 51,50 |
| | | **3113.2** | 500 g | 92,35 |
| **4-Aminohippuric acid** | ≥98 %, for biochemistry | **6187.1** | 10 g | 35,40 |
| | | **6187.2** | 100 g | 256,95 |
| **2-Aminoisobutyric acid** | ≥97 %, for biochemistry | **5514.1** | 50 g | 38,60 |
| | | **5514.2** | 100 g | 65,05 |
| **5-Aminolevulinic acid hydrochloride** | ≥98 %, for biochemistry | **8451.1** | 500 mg | 24,65 |
| | | **8451.2** | 1 g | 36,45 |
| | | **8451.3** | 5 g | 107,40 |
| **DL-Carnitinchloride** | ≥98 %, for biochemistry | **7212.1** | 25 g | 59,05 |
| **L-Carnosine** | ≥98 %, for biochemistry | **4148.1** | 1 g | 26,35 |
| | | **4148.2** | 5 g | 85,90 |
| **Cysteamine hydrochloride** | ≥99 %, for biochemistry | **7625.1** | 25 g | 27,85 |
| | | **7625.2** | 100 g | 73,00 |
| | | **7625.3** | 250 g | 127,95 |
| **DL-2,3-Diaminopropionic acid hydrochloride** | ≥99 %, for biochemistry | **5431.1** | 1 g | 23,55 |
| | | **5431.2** | 5 g | 82,70 |



| Product | Purity | Art. No. | Pack Qty. | € |
|---|---|---|---|---|
| **Glutathione oxidized** | ≥98 %, for biochemistry | **6378.1** | 1 g | 34,95 |
| | | **6378.2** | 5 g | 145,15 |
| **L-Glutathione reduced** | >98 %, for biochemistry | **6382.1** | 5 g | 27,45 |
| | | **6382.2** | 25 g | 91,30 |
| **Glycinamide hydrochloride** | ≥95 %, for biochemistry | **5543.1** | 10 g | 23,15 |
| | | **5543.2** | 25 g | 42,50 |
| | | **5543.3** | 50 g | 67,65 |
| **Glycine anhydride** | extra pure | **5542.1** | 25 g | 42,90 |
| **Glycylglycine** | ≥99 %, ultra quality PUFFERAN® | **3794.1** | 10 g | 16,70 |
| | | **3794.2** | 100 g | 83,75 |
| | | **3794.3** | 250 g | 180,10 |
| | | **3794.4** | 500 g | 327,90 |
| | ≥98,5 %, Buffer Grade PUFFERAN® | **HN74.1** | 50 g | 33,25 |
| | | **HN74.2** | 100 g | 53,25 |
| | | **HN74.3** | 250 g | 115,60 |
| | | **HN74.4** | 500 g | 206,95 |
| **Hippuric acid sodium salt hydrate** | ≥99 %, cryst. | **7507.1** | 25 g | 93,00 |
| **o-Hydroxyhippuric acid** | ≥95 %, for biochemistry | **7511.1** | 1 g | 57,95 |
| **L-4-Hydroxyproline** | ≥98 %, for biochemistry | **3893.1** | 5 g | 42,90 |
| **L-Kynurenine** | ≥98 %, for biochemistry | **8456.1** | 100 mg | 57,55 |
| | | **8456.2** | 250 mg | 107,40 |
| | | **8456.3** | 500 mg | 192,45 |
| **3-Nitro-L-tyrosine** | ≥98 %, for biochemistry | **5275.1** | 5 g | 57,95 |
| | | **5275.2** | 10 g | 103,10 |
| **L-Norvalinol** | ≥98 %, for biochemistry | **6663.1** | 500 mg | 32,15 |
| | | **6663.2** | 1 g | 49,35 |
| **N-Phenylglycine** | ≥97 %, for biochemistry | **5939.1** | 10 g | 57,95 |
| **Serotonin creatinine sulphate monohydrate** | ≥99 %, for biochemistry | **8385.1** | 1 g | 121,40 |
| **Serotonin hydrochloride** | ≥98 %, for biochemistry | **8367.1** | 100 mg | 19,25 |
| | | **8367.2** | 1 g | 35,40 |
| | | **8367.3** | 5 g | 138,70 |
| **Taurine** | ≥99 %, for biochemistry | **4721.1** | 100 g | 19,25 |
| | | **4721.2** | 500 g | 52,15 |
| **Tyramine** | ≥98 %, for biochemistry | **4862.2** | 1 g | 14,95 |
| | | **4862.1** | 5 g | 23,15 |
| | | **4862.3** | 25 g | 57,95 |

For additional product data and safety information, see chapter Chemicals A-Z.

# Peptide Synthesis

## Protected Amino Acids

We supply protected amino acids of the highest quality and purity for standard applications in biochemistry and specifically for peptide synthesis.

Ala

### Alanine

| Product | Purity | Synonym | Art. No. | Pack Qty | € |
|---|---|---|---|---|---|
| **Boc-L-Alanine** | ≥98,5 %, for biochemistry | Boc-L-Ala-OH | **6907.1** | 5 g | 15,60 |
| | | | **6907.2** | 25 g | 38,60 |
| | | | **6907.3** | 100 g | 113,45 |
| **Fmoc-L-Alanine monohydrate** | ≥98 %, for biochemistry | Fmoc-L-Ala-OH | **6646.1** | 10 g | 15,60 |
| | | | **6646.2** | 50 g | 36,05 |
| | | | **6646.3** | 250 g | 137,10 |
| | | | **6646.4** | 500 g | 246,20 |
| | | | **6646.5** | 1 kg | 461,20 |
| **Fmoc-L-β-Azido-alanine** | ≥98 %, for biochemistry | Fmoc-L-Aza-OH | **7369.1** | 250 mg | 106,45 |
| | | | **7369.2** | 1 g | 353,70 |
| **Fmoc-L-γ-Azido-homoalanine** | ≥99 %, for biochemistry | Fmoc-L-Aha-OH | **7363.1** | 250 mg | 85,90 |
| | | | **7363.2** | 1 g | 295,65 |

Arg

### Arginine

| Product | Purity | Synonym | Art. No. | Pack Qty. | € |
|---|---|---|---|---|---|
| **Boc-L-Arginine hydrochloride monohydrate** | ≥98 %, for biochemistry | Boc-L-Arg-OH | **6914.1** | 5 g | 28,95 |
| | | | **6914.2** | 25 g | 76,25 |
| | | | **6914.3** | 100 g | 224,70 |
| **Fmoc-L-Arginine** | ≥98 %, for biochemistry | Fmoc-L-Arg-OH | **6896.1** | 5 g | 31,75 |
| | | | **6896.2** | 25 g | 122,45 |
| **Fmoc-L-Arginine-(Pbf)** | ≥85 %, for biochemistry | Fmoc-L-Arg(Pbf)-OH | **8833.1** | 5 g | 38,60 |
| | | | **8833.2** | 25 g | 141,40 |
| | | | **8833.3** | 100 g | 456,90 |
| **Z-L-Arginine** NEW | ≥98,5 %, for biochemistry | Cbz-L-Arginine | **1914.1** | 5 g | 16,05 |
| | | | **1914.2** | 25 g | 42,90 |
| | | | **1914.3** | 100 g | 107,40 |

Asn

### Asparagine

| Product | Purity | Synonym | Art. No. | Pack Qty. | € |
|---|---|---|---|---|---|
| **Boc-L-Asparagine** | ≥98 %, for biochemistry | Boc-L-Asn-OH | **6915.1** | 5 g | 11,75 |
| | | | **6915.2** | 25 g | 31,10 |
| | | | **6915.3** | 100 g | 96,65 |
| **Fmoc-L-Asparagine** | ≥98,5 %, for biochemistry | Fmoc-L-Asn-OH | **6897.1** | 5 g | 18,20 |
| | | | **6897.2** | 25 g | 51,50 |
| | | | **6897.3** | 100 g | 162,90 |
| **Fmoc-L-Asparagine-(Trityl)** | ≥98 %, for biochemistry | Fmoc-L-Asn(Trt)-OH | **9652.1** | 5 g | 20,65 |
| | | | **9652.2** | 25 g | 62,90 |
| | | | **9652.3** | 100 g | 209,65 |

Asp

### Aspartic acid

| Product | Purity | Synonym | Art. No. | Pack Qty. | € |
|---|---|---|---|---|---|
| **Boc-L-Aspartic acid-(OBenzyl)** | ≥98,5 %, for biochemistry | Boc-L-Asp (OBzl)-OH | **8846.1** | 5 g | 18,85 |
| | | | **8846.2** | 25 g | 55,80 |
| | | | **8846.3** | 100 g | 177,40 |
| **Fmoc-L-Aspartic acid-(OAllyl)** | ≥98,5 %, for biochemistry | Fmoc-L-Asp(OAll)-OH | **6641.1** | 500 mg | 18,85 |
| | | | **6641.2** | 1 g | 28,95 |
| | | | **6641.3** | 5 g | 111,30 |
| **Fmoc-L-Aspartic acid-(OtBu)** | ≥99 %, for biochemistry | Fmoc-L-Asp (OtBu)-OH | **9654.1** | 5 g | 23,15 |
| | | | **9654.2** | 25 g | 69,80 |
| | | | **9654.3** | 100 g | 228,45 |
| **Z-L-Aspartic acid** NEW | ≥98,5 %, for biochemistry | Z-L-Asp-OH | **1894.1** | 5 g | 18,20 |
| | | | **1894.2** | 25 g | 52,60 |
| | | | **1894.3** | 100 g | 138,70 |

For additional product data and safety information, see chapter Chemicals A-Z.

## Cysteine

| Product | Purity | Synonym | Art. No. | Pack Qty. | € |
|---|---|---|---|---|---|
| **Boc-L-Cysteine-(4-Mbzl)** NEW | ≥98,5 %, for biochemistry | Boc-Cys (4-Mbzl)-OH | **2042.1** | 5 g | 21,40 |
| | | | **2042.2** | 10 g | 37,55 |
| | | | **2042.3** | 25 g | 69,80 |
| **Fmoc-L-Cysteine-(Acetamido-methyl)** | ≥99 %, for biochemistry | Fmoc-L-Cys(Acm)-OH | **8842.1** | 5 g | 34,30 |
| | | | **8842.2** | 25 g | 100,55 |
| | | | **8842.3** | 100 g | 310,70 |
| **Fmoc-L-Cysteine-(Trityl)** | ≥98,5 %, for biochemistry | Fmoc-L-Cys(Trt)-OH | **8841.1** | 5 g | 19,25 |
| | | | **8841.2** | 25 g | 57,95 |
| | | | **8841.3** | 100 g | 175,80 |

## Glutamine

| Product | Purity | Synonym | Art. No. | Pack Qty | € |
|---|---|---|---|---|---|
| **Boc-L-Glutamine** | ≥99 %, for biochemistry | Boc-L-Gln-OH | **6916.1** | 5 g | 11,75 |
| | | | **6916.2** | 25 g | 31,10 |
| | | | **6916.3** | 100 g | 96,65 |
| **Fmoc-L-Glutamine** | ≥98 %, for biochemistry | Fmoc-L-Gln-OH | **6898.1** | 5 g | 18,20 |
| | | | **6898.2** | 25 g | 51,50 |
| | | | **6898.3** | 100 g | 162,90 |
| **Fmoc-L-Glutamine-(Trityl)** | ≥98 %, for biochemistry | Fmoc-L-Gln (Trt)-OH | **9653.1** | 5 g | 24,65 |
| | | | **9653.2** | 25 g | 80,55 |
| | | | **9653.3** | 100 g | 267,70 |

## Glutamic acid

| Product | Purity | Synonym | Art. No. | Pack Qty. | € |
|---|---|---|---|---|---|
| **Boc-L-Glutamic acid** | ≥99 %, for biochemistry | Boc-L-Glu-OH | **6917.1** | 5 g | 19,25 |
| | | | **6917.2** | 25 g | 60,75 |
| | | | **6917.3** | 100 g | 209,65 |
| **Fmoc-L-Glutamic acid-(OtBu) monohydrate** | ≥99 %, for biochemistry | Fmoc-L-Glu (OtBu)-OH | **9655.1** | 5 g | 22,05 |
| | | | **9655.2** | 25 g | 67,65 |
| | | | **9655.3** | 100 g | 220,40 |
| **Z-L-Glutamic acid** NEW | ≥98,5 %, for biochemistry | Z-L-Glu-OH | **1885.1** | 5 g | 16,05 |
| | | | **1885.2** | 25 g | 42,90 |
| | | | **1885.3** | 100 g | 127,95 |

## Glycine

| Product | Purity | Synonym | Art. No. | Pack Qty. | € |
|---|---|---|---|---|---|
| **Boc-Glycine** | ≥98 %, for biochemistry | Boc-Gly-OH | **6918.1** | 5 g | 11,75 |
| | | | **6918.2** | 25 g | 31,10 |
| | | | **6918.3** | 100 g | 96,65 |
| **Fmoc-Glycine** | ≥99 %, for biochemistry | Fmoc-Gly-OH | **6899.1** | 5 g | 11,75 |
| | | | **6899.2** | 25 g | 34,30 |
| | | | **6899.3** | 100 g | 117,20 |
| **Cbz-Cyclohexyl-L-Glycine** | ≥98 %, for biochemistry | Cbz-L-Chg-OH | **6636.1** | 500 mg | 21,00 |
| | | | **6636.2** | 1 g | 33,25 |
| | | | **6636.3** | 5 g | 139,75 |

## Histidine

| Product | Purity | Synonym | Art. No. | Pack Qty. | € |
|---|---|---|---|---|---|
| **Boc-L-Histidine** | ≥98 %, for biochemistry | Boc-L-His-OH | **6920.1** | 5 g | 26,80 |
| | | | **6920.2** | 25 g | 103,75 |
| **Boc-L-Histidine-(Dnp)** | ≥97,5 %, for biochemistry | Boc-L-His(Dnp)-OH | **1994.1** | 1 g | 21,40 |
| | | | **1994.2** | 5 g | 48,30 |
| | | | **1994.3** | 10 g | 85,90 |
| **Fmoc-L-Histidine-(Trityl)** | ≥97 %, for biochemistry | Fmoc-L-His(Trt)-OH | **8843.1** | 5 g | 22,05 |
| | | | **8843.2** | 25 g | 67,65 |
| | | | **8843.3** | 100 g | 203,20 |

## Hydroxyproline

| Product | Purity | Synonym | Art. No. | Pack Qty. | € |
|---|---|---|---|---|---|
| **Boc-L-Hydroxyproline** | ≥98 %, for biochemistry | Boc-L-Hyp-OH | **6921.1** | 5 g | 48,30 |
| | | | **6921.2** | 25 g | 166,65 |
| **L-Hydroxyproline methylester hydrochloride** | ≥98 %, for biochemistry | H-Hyp-OMe · HCl | **6662.1** | 500 mg | 12,80 |
| | | | **6662.2** | 1 g | 18,20 |
| | | | **6662.3** | 5 g | 38,60 |

## Isoleucine

| Product | Purity | Synonym | Art. No. | Pack Qty. | € |
|---|---|---|---|---|---|
| **Boc-L-Isoleucine hemihydrate** | ≥98 %, for biochemistry | Boc-L-Ile-OH | **6923.1** | 5 g | 11,75 |
| | | | **6923.2** | 25 g | 31,10 |
| | | | **6923.3** | 100 g | 96,65 |
| **Fmoc-L-Isoleucine** | ≥98,5 %, for biochemistry | Fmoc-L-Ile-OH | **6647.1** | 10 g | 15,60 |
| | | | **6647.2** | 50 g | 36,05 |
| | | | **6647.3** | 250 g | 137,10 |

For additional product data and safety information, see chapter Chemicals A-Z.

## Leucine

| Product | Purity | Synonym | Art. No. | Pack Qty. | € |
|---|---|---|---|---|---|
| **Boc-L-Leucine monohydrate** | ≥98 %, for biochemistry | Boc-L-Leu-OH | **6924.1** | 5 g | 11,75 |
| | | | **6924.2** | 25 g | 31,10 |
| | | | **6924.3** | 100 g | 96,65 |
| **Fmoc-L-Leucine** | ≥95 %, for biochemistry | Fmoc-L-Leu-OH | **6654.1** | 10 g | 15,60 |
| | | | **6654.2** | 50 g | 36,05 |
| | | | **6654.3** | 250 g | 137,10 |
| | | | **6654.4** | 500 g | 246,20 |
| **N-Formyl-L-Leucine** | ≥98 %, for biochemistry | N-Formyl-L-Leu | **6665.1** | 500 mg | 26,35 |
| | | | **6665.2** | 1 g | 42,50 |
| | | | **6665.3** | 5 g | 177,40 |
| **Boc-L-tert-Leucine** | ≥98,5 %, for biochemistry | Boc-L-Tle-OH | **6942.1** | 1 g | 24,65 |
| | | | **6942.2** | 5 g | 97,75 |
| | | | **6942.3** | 10 g | 170,95 |
| **L-tert-Leucine methylester hydrochloride** | ≥98 %, for biochemistry | H-L-Tle-OMe · HCl | **6664.1** | 500 mg | 32,15 |
| | | | **6664.2** | 1 g | 48,95 |
| **Z-L-Leucine** NEW | ≥94 %, for biochemistry | Z-L-Leu-OH | **1859.1** | 5 g | 16,05 |
| | | | **1859.2** | 25 g | 38,60 |
| | | | **1859.3** | 100 g | 107,40 |

## Lysine

| Product | Purity | Synonym | Art. No. | Pack Qty. | € |
|---|---|---|---|---|---|
| **Boc-L-Lysine** | ≥98 %, for biochemistry | Boc-L-Lys-OH | **6926.1** | 1 g | 19,25 |
| | | | **6926.2** | 5 g | 60,10 |
| | | | **6926.3** | 10 g | 109,15 |
| **Fmoc-L-Lysine** | ≥98 %, for biochemistry | Fmoc-L-Lys-OH | **6900.1** | 1 g | 17,10 |
| | | | **6900.2** | 5 g | 52,60 |
| | | | **6900.3** | 10 g | 93,45 |
| **Fmoc-L-Lysine-(Boc)** | ≥98,5 %, for biochemistry | Fmoc-L-Lys(Boc)-OH | **8840.1** | 5 g | 19,25 |
| | | | **8840.2** | 25 g | 57,95 |
| | | | **8840.3** | 100 g | 175,80 |
| **Fmoc-L-Azidolysine** | ≥98 %, for biochemistry | Fmoc-L-Lys($N_3$)-OH | **7357.1** | 250 mg | 102,05 |
| | | | **7357.2** | 1 g | 332,20 |
| **Z-L-Lysine** NEW | ≥98 %, for biochemistry | Z-L-Lys-OH | **1907.1** | 1 g | 21,40 |
| | | | **1907.2** | 5 g | 64,40 |
| | | | **1907.3** | 10 g | 107,40 |

## Methionine

| Product | Purity | Synonym | Art. No. | Pack Qty. | € |
|---|---|---|---|---|---|
| **Boc-L-Methionine** | ≥99 %, for biochemistry | Boc-L-Met-OH | **6928.1** | 5 g | 15,60 |
| | | | **6928.2** | 25 g | 38,20 |
| | | | **6928.3** | 100 g | 113,85 |
| **Fmoc-L-Methionine** | ≥98,5 %, for biochemistry | Fmoc-L-Met-OH | **6656.1** | 10 g | 15,60 |
| | | | **6656.2** | 50 g | 36,05 |
| | | | **6656.3** | 250 g | 137,10 |

## Ornithine

| Product | Purity | Synonym | Art. No. | Pack Qty. | € |
|---|---|---|---|---|---|
| **Fmoc-L-Ornithine-(Boc)** NEW | ≥98 %, for biochemistry | Fmoc-L-Orn(Boc)-OH | **1932.1** | 1 g | 21,40 |
| | | | **1932.2** | 5 g | 53,65 |
| | | | **1932.3** | 10 g | 96,65 |
| **Fmoc-L-Azidoornithine** | ≥98 %, for biochemistry | Fmoc-L-Orn($N_3$)-OH | **7362.1** | 250 mg | 107,40 |
| | | | **7362.2** | 1 g | 353,70 |

## Dioxaoctanioc acid

| Product | Purity | Synonym | Art. No. | Pack Qty. | € |
|---|---|---|---|---|---|
| **Fmoc-8-Amino-3,6-dioxa-octanoic acid** | ≥99 %, for biochemistry | Fmoc-$O_2$Oc-OH | **7400.1** | 500 mg | 72,60 |
| | | | **7400.2** | 1 g | 117,20 |

## Phenylalanine

| Product | Purity | Synonym | Art. No. | Pack Qty. | € |
|---|---|---|---|---|---|
| **Boc-L-Phenylalanine** | ≥99 %, for biochemistry | Boc-L-Phe-OH | **6931.1** | 5 g | 11,75 |
| | | | **6931.2** | 25 g | 31,10 |
| | | | **6931.3** | 100 g | 96,65 |
| **Fmoc-L-Phenylalanine** | ≥99 %, for biochemistry | Fmoc-L-Phe-OH | **6658.1** | 10 g | 17,10 |
| | | | **6658.2** | 50 g | 42,90 |
| | | | **6658.3** | 250 g | 162,90 |
| **Fmoc-L-4-Azido-phenylalanine** | ≥98 %, for biochemistry | Fmoc-L-Phe (4-$N_3$)-OH | **7485.1** | 100 mg | 52,70 |
| | | | **7485.2** | 250 mg | 112,35 |
| **Z-L-Phenylalanine** NEW | ≥98 %, for biochemistry | Z-L-Phe-OH | **1865.1** | 5 g | 21,40 |
| | | | **1865.2** | 25 g | 53,65 |
| | | | **1865.3** | 100 g | 138,70 |

## Proline

| Product | Purity | Synonym | Art. No. | Pack Qty. | € |
|---|---|---|---|---|---|
| **Boc-L-Proline** | ≥99 %, for biochemistry | Boc-L-Pro-OH | **6932.1** | 5 g | 11,75 |
| | | | **6932.2** | 25 g | 31,10 |
| | | | **6932.3** | 100 g | 96,65 |
| **Fmoc-L-Proline** | ≥99 %, for biochemistry | Fmoc-L-Pro-OH | **6659.1** | 10 g | 17,10 |
| | | | **6659.2** | 50 g | 42,90 |
| | | | **6659.3** | 250 g | 162,90 |
| **Fmoc-L-4-Azido-proline (2S,4R)** | ≥98 %, for biochemistry | Fmoc-L-Pro (4-N3)-OH | **7367.1** | 100 mg | 96,65 |
| | | | **7367.2** | 250 mg | 192,45 |
| | | | **7367.3** | 1 g | 633,20 |

## Propargylglycine

| Product | Purity | Synonym | Art. No. | Pack Qty. | € |
|---|---|---|---|---|---|
| **Fmoc-L-Propargyl-glycine** | ≥99 %, for biochemistry | Fmoc-L-Pra-OH | **7491.1** | 100 mg | 48,95 |
| | | | **7491.2** | 250 mg | 90,20 |

## Serine

| Product | Purity | Synonym | Art. No. | Pack Qty. | € |
|---|---|---|---|---|---|
| **Boc-L-Serine** | ≥99 %, for biochemistry | Boc-L-Ser-OH | **6933.1** | 5 g | 18,85 |
| | | | **6933.2** | 25 g | 55,80 |
| | | | **6933.3** | 100 g | 177,40 |
| **Fmoc-L-Serine monohydrate** | ≥98 %, for biochemistry | Fmoc-L-Ser-OH | **6901.1** | 5 g | 51,50 |
| | | | **6901.2** | 25 g | 162,90 |
| **Fmoc-L-Serine-(tBu)** | ≥99 %, for biochemistry | Fmoc-L-Ser(tBu)-OH | **9666.1** | 5 g | 23,15 |
| | | | **9666.2** | 25 g | 69,80 |
| | | | **9666.3** | 100 g | 228,45 |

## Threonine

| Product | Purity | Synonym | Art. No. | Pack Qty. | € |
|---|---|---|---|---|---|
| **Boc-L-Threonine** | ≥98 %, for biochemistry | Boc-L-Thr-OH | **6935.1** | 5 g | 26,80 |
| | | | **6935.2** | 25 g | 100,95 |
| **Fmoc-L-Threonine-(tBu)** | ≥99 %, for biochemistry | Fmoc-L-Thr(tBu)-OH | **9659.1** | 5 g | 23,15 |
| | | | **9659.2** | 25 g | 69,80 |
| | | | **9659.3** | 100 g | 228,45 |

## Tryptophan

| Product | Purity | Synonym | Art. No. | Pack Qty. | € |
|---|---|---|---|---|---|
| **Boc-L-Tryptophan** | ≥95 %, for biochemistry | Boc-L-Trp-OH | **6945.1** | 5 g | 11,75 |
| | | | **6945.2** | 25 g | 31,10 |
| | | | **6945.3** | 100 g | 96,65 |
| **Fmoc-L-Tryptophan** | ≥98 %, for biochemistry | Fmoc-L-Trp-OH | **6903.1** | 5 g | 11,75 |
| | | | **6903.2** | 25 g | 34,30 |
| | | | **6903.3** | 100 g | 117,20 |
| **Fmoc-L-Tryptophan-(Boc)** | ≥97 %, for biochemistry | Fmoc-L-Trp(Boc)-OH | **9668.1** | 5 g | 28,95 |
| | | | **9668.2** | 25 g | 96,65 |
| | | | **9668.3** | 100 g | 303,70 |

## Tyrosine

| Product | Purity | Synonym | Art. No. | Pack Qty. | € |
|---|---|---|---|---|---|
| **Boc-L-Tyrosine** | ≥98 %, for biochemistry | Boc-L-Tyr-OH | **6949.1** | 5 g | 25,70 |
| | | | **6949.2** | 25 g | 72,60 |
| **Fmoc-L-Tyrosine** | ≥98 %, for biochemistry | Fmoc-L-Tyr-OH | **6906.1** | 1 g | 34,30 |
| | | | **6906.2** | 5 g | 81,60 |
| | | | **6906.3** | 10 g | 138,70 |
| **Fmoc-L-Tyrosine-(tBu)** | ≥99 %, for biochemistry | Fmoc-L-Tyr(tBu)-OH | **9669.1** | 5 g | 23,15 |
| | | | **9669.2** | 25 g | 69,80 |
| | | | **9669.3** | 100 g | 228,45 |

## Valine

| Product | Purity | Synonym | Art. No. | Pack Qty. | € |
|---|---|---|---|---|---|
| **Boc-L-Valine** | ≥98 %, for biochemistry | Boc-L-Val-OH | **6950.1** | 5 g | 11,75 |
| | | | **6950.2** | 25 g | 31,10 |
| | | | **6950.3** | 100 g | 96,65 |
| **Fmoc-L-Valine** | ≥98,5 %, for biochemistry | Fmoc-L-Val-OH | **6660.1** | 10 g | 15,60 |
| | | | **6660.2** | 50 g | 36,05 |
| | | | **6660.3** | 250 g | 137,10 |
| | | | **6660.4** | 500 g | 246,20 |

For additional product data and safety information, see chapter Chemicals A-Z.

# Coupling reagents

Our range of traditional and innovative coupling reagents is suited for standard coupling reactions.
We offer premium quality products and excellent value for money.

| Product | Purity | Art. No. | Pack Qty. | € |
|---|---|---|---|---|
| **BOP** | ≥99 % | **2168.1** | 5 g | 20,35 |

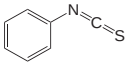
For additional product data and safety information, see chapter Chemicals A-Z.



**Tip:**

- There is no single coupling reagent that is suitable for every coupling reaction. Therefore, ROTH offers a broad range of established and reactive coupling reagents.
- Besides the "gold standard" **HATU (Art. No. 2131),** we also offer the greener alternative **COMU® (Art. No. 2100),** which is known to mediate the coupling in most cases at least as efficient as HATU.
- **Oxyma Pure (Art. No. 2118)** and **K-Oxyma (Art. No. 6891)** were developed as less hazardous alternatives for HOBt and HOAt, thus being a perfect one-to-one replacement in most syntheses.

## Resins for Peptide Synthesis

| Product | Purity | Art. No. | Pack Qty. | € |
|---|---|---|---|---|
| **2-Chlorotrityl chloride resin** | 100-200 mesh, 1 % DVB | **7405.1** | 5 g | 77,30 |

## Phenyl isothiocyanate

**≥99 %, for biochemistry**

$C_7H_5NS$

M 135,17 g/mol

**Danger** H301+H311+H331-H314

**Type analysis:**

Appearance. ..... colourless to pale yellow liquid
Assay (GC). ..... ≥99 %

| | | | |
|---|---|---|---|
| **7296.1** | 25 ml | glass | 21,40 € |
| **7296.2** | 100 ml | glass | 46,80 € |
| **7296.3** | 500 ml | glass | 192,45 € |

**Tip:**
A well-known method for protein sequencing is the Edman degradation. Herein, the peptide is degraded using **phenylisothiocyanate (Art.No. 7296)** starting from the N-terminus. Phenylisothiocyanate reacts with the N-terminal amino acid resulting in cleavage from the peptide and formation of a phenylthiohydantoin derivative. Subsequently, the phenylthiohydantoin derivative is identified by chromatographic methods through comparison with standards and the next amino acid can be addressed. Through repetition of this procedure stepwise degradation of the peptide is achieved, thus enabling sequencing of peptides with up to 50 residues.

## Reactors for Peptide Synthesis

Made of **PP**, with plunger and frit.
Frit made of **PE**, pore size 25 µm, temperature resistant until +90 °C.
Column outlet: luer (male).

| Type | Art. No. | Pack Qty. | € |
|---|---|---|---|
| 2 ml | **7926.1** | 100 | 77,30 |
| 5 ml | **7927.1** | 100 | 91,95 |
| 10 ml | **7944.1** | 100 | 104,20 |
| 20 ml | **9261.1** | 100 | 127,95 |
| 50 ml | **9636.1** | 25 | 61,85 |

## Frits for Reactors

Material **PTFE**.

| Type | Art. No. | Pack Qty. | € |
|---|---|---|---|
| ∅ 9.1 mm, for 2 ml reactors | **7946.1** | 100 | 68,30 |
| ∅ 12.3 mm, for 5 ml reactors | **7960.1** | 100 | 77,30 |
| ∅ 14.6 mm, for 10 ml reactors | **7962.1** | 100 | 88,05 |

## Accessories: Luer caps

Made of **PP**. To fit standard Luer (male) outlets, and for all column and cartridge sizes.

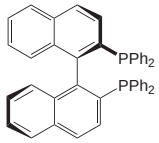
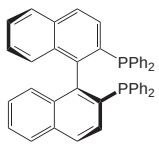
## Phosphine Ligands





NEW at Roth

Transition metal-catalysed cross-couping reactions are an efficient method for building new C-C, C-N and C-O bonds in the organic synthesis. Ligands, particularly phosphine ligands, play a key role in the stabilisation and activation of metal ions in the transition metal complexes. By selection of the correct phosphine ligands important factors can be influenced: for example the reactivity and lifetime of the catalyst, the electron density at the metal atom and sterical properties of the catalyst. When using chiral phosphine ligands, it is also possible to achieve enantioselectivity of a reaction.

For additional product data and safety information, see chapter Chemicals A-Z.

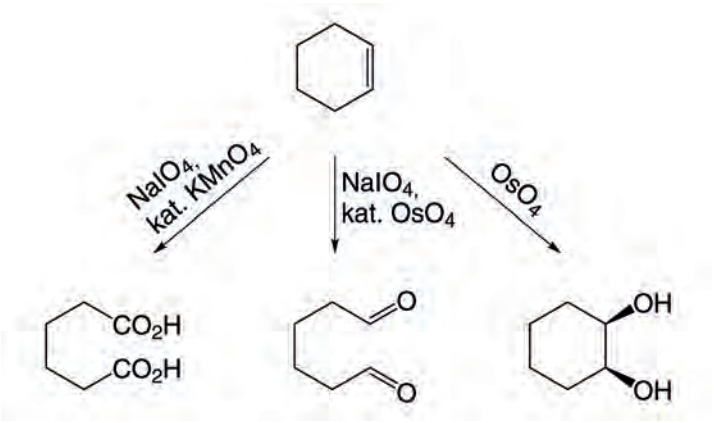
# Synthesis Reagents

## Protecting Groups



Today, protecting groups have become an important tool in the multistep, organic synthesis of complex compounds. The task of a protecting group is to protect a functional group from undesirable reactions with other functional groups. Then the protecting group should be cleaved under as mild conditions as possible.
Good protecting groups should be specific, highly selective and both introduceable and cleavable in high yields, and stable under as many reaction conditions as possible.

| Structural formula | Product | Protecting group (short name) | Purity | Removal | Art. No. | Pack Qty. | € |
|---|---|---|---|---|---|---|---|
|  | **Benzoyl chloride** | - | ≥99 %, for synthesis | hydrogenolytic | **7456.1** | 100 ml | 13,15 |
| | | | | | **7456.2** | 500 ml | 28,95 |

| | | | | | **1444.2** | 5 ml | 96,65 |

For additional product data and safety information, see chapter Chemicals A-Z.

# Oxidising Agents

Oxidation reactions play an important role - not only in inorganic chemistry but also in many organic synthesis processes. Several examples are shown here: Lemieux-von Rudloff oxidation, Lemieux Johnson oxidation and dihydroxylation. ROTH offers a selection of well-known and commonly available oxidants in this area.

| | | **9524.1** | 2,5 kg | glass | 71,95 |

For additional product data and safety information, see chapter Chemicals A-Z.

# (Lewis) Acids

Acids are commonly used in synthesis protocols for processing reactions. In addition, acids (usually Lewis acids) can also serve as catalysts for various reactions. The removal of the Boc protecting group shown here is formally catalysed by the acids used (in this case, trifluoroacetic acid). In addition to conventional inorganic acids, ROTH can supply other acids and Lewis acids commonly used in organic synthesis.

For additional product data and safety information, see chapter Chemicals A-Z.

# Bases

Many reaction mechanisms require deprotonation so that the desired reaction can take place. The strength of the required bases depends entirely on the application. ROTH supplies a wide selection of bases which play an important role in organic synthesis.

# Quaternary Ammonium Compounds

Quaternary ammonium compounds are organic ammonium compounds, for which all four valences of a nitrogen atom are bonded organically. These ammonium compounds are often used as phase-transfer catalysts and ion pair reagents.

| Structural formula | Product | Purity | Empirical formula | CAS-Nr. | Art. No. | Pack Qty. | € |

For additional product data and safety information, see chapter Chemicals A-Z.

# Solvents

## ROTIDRY® Dried solvents

The ROTIDRY® solvents have a low water content and high product purity. Therefore, these solvents are excellent for use in organic synthesis, DNA synthesis and analysis.

ROTIDRY® dried solvents are applicable where it is necessary to have low water content e.g. chromatographic purification methods.

**Properties:**
- Very low water content
- Extremely high product purity
- Low evaporation residue
- Filled under inert gas
- Particle filtration

## ROTIDRY® Sept Dried solvents in septum bottle

**Advantages of the septum bottle:**
- Additional product quality assurance
- No ingress of water during removal
- Ideal for small quantities
- Removable septum for removal of large quantities
- Special cap permits multiple puncture points

**Example specification:**

### Acetonitrile

**ROTIDRY® ≥99,9 % (≤10 ppm $H_2O$)**

Dried; for DNA synthesis and analysis.

**Danger** H225-H302+H312+H332-H319

**Guarantee analysis:**

Assay (GC).....≥99,9 %
Colour (Hazen).....≤10
Water (KF).....≤0,001 %
Acidity.....≤0,0005 meq/g
Evaporation residue.....≤0,0005 %
Filtered through a membrane and filled under protective gas.

**Example specification:**

### Acetonitrile

**ROTIDRY®Sept ≥99,9 % (≤10 ppm $H_2O$)**

Dried; in a septum bottle

**Danger** H225-H302+H312+H332-H319

**Guarantee analysis:**

Assay (GC).....≥99,9 %
Colour (APHA).....≤10
Water (KF).....≤0,001 %
Acidity (as $CH_3COOH$).....≤0,002 %
Evaporation residue.....≤0,0003 %

# Ionic Liquids

Ionic liquids are salts which are available in a liquid state over a wide temperature range. They constitute a new generation of solvents with considerable potential for being able to replace classic organic solvents. Ionic liquids are composed of organic cations and organic or anorganic anions. Due to their fully ionized composition they exhibit no vapor pressure over the entire liquid range.

- Low-melting with melting point under 100 °C
- Thermally, mechanically and electrochemically stable
- Neither volatile nor combustible
- Negligible vapor pressure
- High solubility of many different kinds of chemicals

# Green Solvents

The listed sustainable solvents - Green Solvents - serve as substitutes for environmentally hazardous and harmful reagents and help minimize risk. Sustainability is also achieved through the use of renewable resources or environmentally compatible manufacturing and recycling processes.

## Bioethanol

Our bioethanol is manufactured by fermentation of organic wheat followed by distillation and rectification.

Advantages:
- Made from wheat grown in a controlled organic environment in accordance with EU organic farming regulation 834/2007
- Non-synthetically manufactured ethanol
- Low toxicity thanks to safe production methods
- Suitable for synthesis and other laboratory applications
- Denaturated using a non-organic denaturant **(Art. No. 6726)**

# NMR-Spectroscopy

# Deuterated Compounds

Deuterated reagents are used primarily in NMR spectroscopy.
Examples of application: Routine tasks such as structure determination and identity verfication in research and development laboratories.

- High degree of deuteration
- Defined water content
- Extremely cost effective

## Deuterated Solvents

# Reagent for NMR Calibration

### Tetramethylsilane

**≥99,9 %, for NMR-spectroscopy**

For the calibration of NMR spectra; calibration substance.

TMS

Storage temp.: +4 °C

**Danger** H224

**Type analysis:**

Assay (GC).....≥99,9 %

Aptitude for NMR-spectroscopy.....complies

| | | | |
|---|---|---|---|
| **CP18.1** | 25 ml | glass | 28,95 € |
| **CP18.2** | 100 ml | glass | 81,60 € |

▶ NMR-Vials and scintillation tubes see page 72

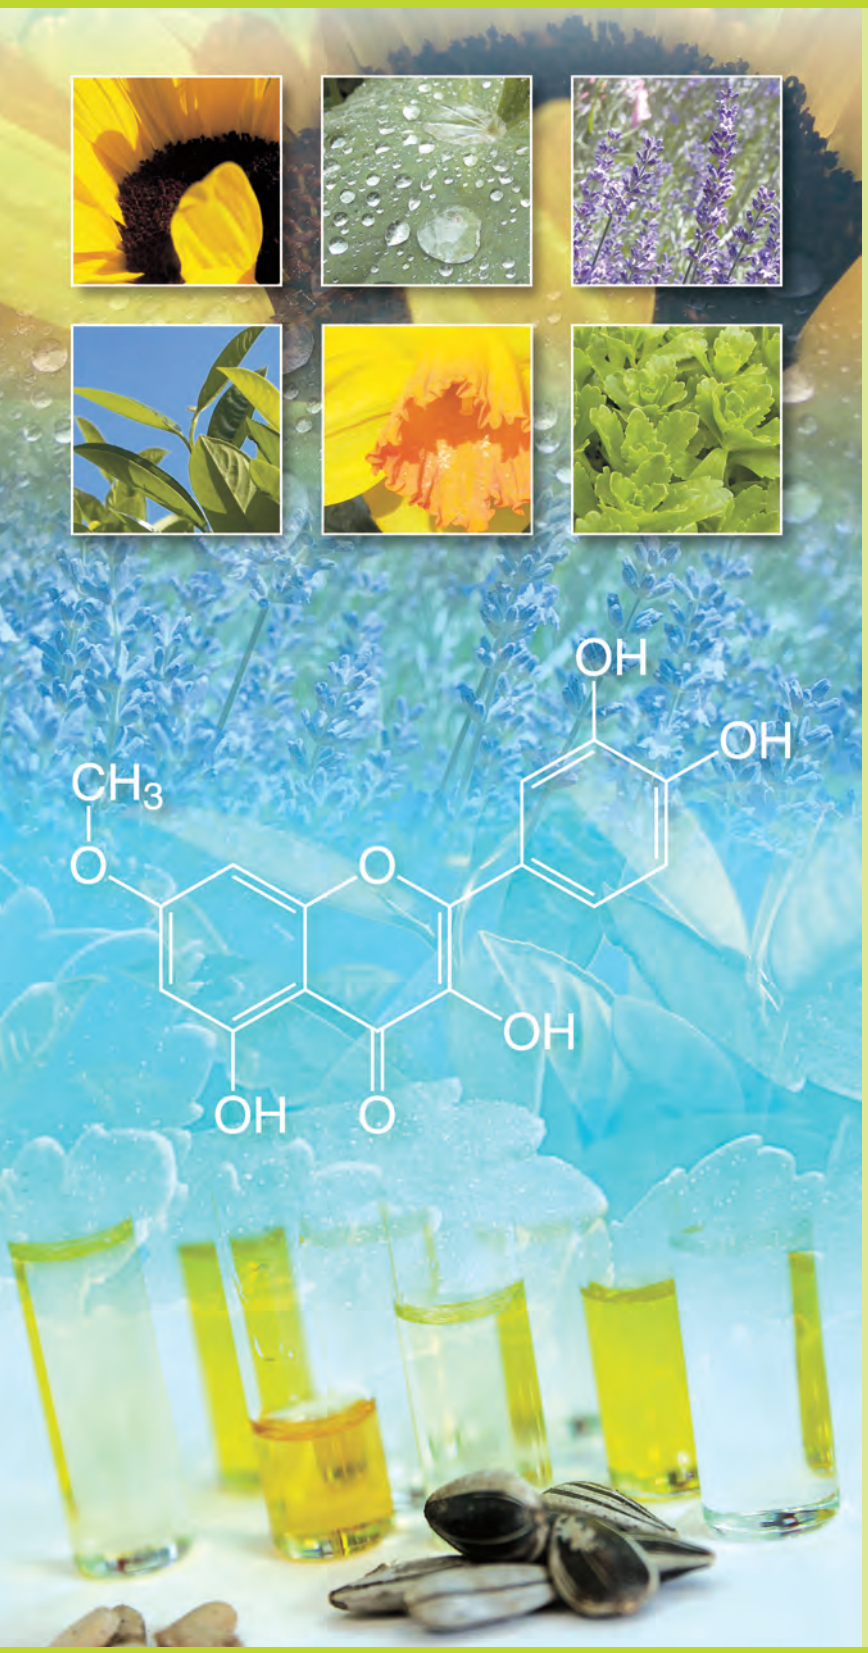
### Rotilabo®-NMR-vials

Made of borosilicate glass 3.3. With lenticular-shaped based. Ideal for applications with high operational capacity.

**Delivery without** cap, please order separately.

| Type | Art. No. | Pack Qty | € |
|---|---|---|---|
| Rotilabo®-NMR-vials | **HX58.1** | 50 | 78,35 |

**Accessories:**



| | | | |
|---|---|---|---|
| Caps made of EVA | **HX59.1** | 1000 | 94,10 |

### Rack for NMR-test tubes

Made of **PP**. With 72 slots and 2 side handles for easy transportation. Stability is provided by hemispherical holes in the lower level. For NMR test tubes L 178 mm, outer ∅ 5 mm. Dimensions: L 210 x W 110 x H 220 mm. Autoclavable.

| Art. No. | Pack Qty | € |

# Natural & Reference Materials

**Phytochemicals**
- Primary Standards 1538
- Working Standards 1540
- Reference Substances
  - with Analytical Documentation 1542
  - for HPLC 1542
  - for TLC 1545
  - for GC 1547
  - More Reference Substances 1546

**Fatty Acid References** 1548

**Oils and Greases**
- Oils and Greases 1550
- Fatty Acids and Derivatives 1550

**Essential Oils** 1552

**Carbohydrates**
- Monosaccharides 1555
- Disaccharides 1556
- Oligosaccharides and polysaccharides 1557
- Dextrans 1558

**Vitamins** 1559

# Reference Standards

The reference standards are offered as powders with good flowability and crystallinity to guarantee efficient handling in the laboratory. All products of this product line are filled in brown glass vials with screw caps and are packed in foil bags. This packaging offers safe storage for a long term as well as proctection of the product against external influences. Storage is carried out in a controlled environment.

## Primary Standards

### ROTI®STAR Primary Standards for pharmaceutical and food analysis

**ROTI®STAR Primary Standards** are extensively characterised by the analytical methods listed below. They come with a certificate which contains:

- Proof of identity with spectra, e.g. $^{1}H$ NMR, $^{13}C$ NMR, MS, UV
- Content determined with two independent validated methods, e.g. chromatographic purity and quantitative NMR
- Content of residual solvent determined with two different validated GC methods
- Water determination by Karl Fischer titration

#### Herbal standards

For additional product data and safety information, see chapter Chemicals A-Z.

***User information:**
These products are shipped cooled.
**Please note:**
to ensure optimal product quality, these products are shipped only from Monday until Wednesday inside Germany and only on Mondays and Tuesdays outside Germany.
This may lead to minor delays in delivery.
The delivery time of the primary standards is approx. 2-4 weeks.

# Working Standards

## ROTICHROM® Working Standards for Analysis

The **ROTICHROM® Working Standards** are traceable to established primary standards which are characterised extensively concerning identity and content.
Therefore they can be used in all areas of analytics and they are a cost-saving alternative to primary standards.
The standard comes with a certificate of analysis which includes proof of identity and defined assay.
The substances are protected optimally against external influences with a high-quality glass and foil bag packaging.

# Reference substances ROTICHROM® HPLC/TLC/GC

## for Chromatography

Pure reference substances are essential for precise analysis. They are used for identifying compounds by retention time, for calibrating detectors, and for eliminating errors in quantification of the sample compounds.

Peak areas are proportional to sample quantity in all chromatographic methods. For precise quantitative analysis, however, it is necessary to calibrate the detector as the signal may significantly vary with different substances.

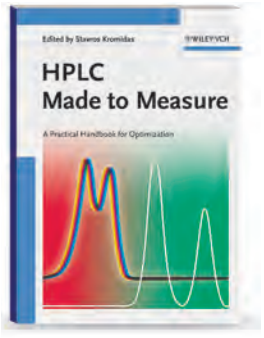
To avoid errors during sample preparation and injection, an internal standard should be used in any case. The standard must not be present in the sample, however, its chemical and physical properties ought to be the closest possible to the analytical targets. It must be well resolved in the chromatogram within the same range of retention time as the sample. Before sample analysis, a given volume of standard is added, and all clean-up procedures are made with the sample containing the standard. Quantitative errors may be compensated by comparing the peak-areas of the sample with that of the internal standard.

Attention:

Reference substances

- ROTICHROM® HPLC
- ROTICHROM® TLC
- ROTICHROM® GC

are supplied with an HPLC-chromatogram, TLC-chromatogram and GC-chromatogram respectively, which is enclosed in the covering box.



### Reference substances with analytical documentation

**TLC, HPLC, $^{1}$H NMR, $^{13}$C NMR, UV, IR, MS**

The high-purity substances from this product line are supplied with extensive analytical documentation. This documentation extends to approx. 20 pages and contains all key data on the analytical methods used. Our results are generally confirmed using at least one additional method. This ensures maximum reliability in assay and identity testing.

### HPLC Made to Messure

A Practical Handbook for Optimization.
Kromidas, Stavros (Ed.)
1st Edition - May 2006, 753 pages, hard cover
ISBN 978-3-527-31377-8

**Short description:**
The only topical book to focus on optimization, this volume addresses the needs of users wishing to improve their methods in particular in terms of throughput, accuracy and cost-effectiveness. Written by bestseller authors and scientists working for major international companies.

## Reference substances for HPLC

### ROTICHROM® HPLC

ROTH offers a broad range of reference substances for HPLC. These highly pure substances predominantly have a HPLC purity level of >98 %, which is sufficient for meaningful analysis. You will find the certificate of analysis with HPLC chromatogram in the outer packaging.

**ROTICHROM® HPLC** - first choice for refence substances for chromtaography.

## Reference Substances for TLC

### ROTICHROM® TLC

ROTICHROM®TLC comparison substances are supplied with a certificate of analysis and a description of the chromatography method with which they can be used, enclosed in the outer package.

| Product | Art. No. | Pack Qty. | € |
|---|---|---|---|
| Aloe-emodin | 3524.1 | 100 mg | 375,20 |
| Aloin | 5555.1 | 50 mg | 59,05 |
| Apigenin | 5611.1 | 25 mg | 42,90 |
| Apigenin-7-glucoside | 5557.1 | 100 mg | 142,45 |
| Bergamottin | 1217.1 | 50 mg | 299,95 |
| Capsanthin | 5674.1 | 1 mg | 278,45 |
| Chelidonine | 6235.1 | 25 mg | 155,90 |
| Chlorogenic acid | 5558.1 | 50 mg | 40,75 |
| β-Cryptoxanthin | 5675.1 | 1 mg | 306,40 |
| Cyanin chloride | 5568.1 | 25 mg | 54,75 |
| Cytisine | 5615.1 | 25 mg | 110,20 |
| (-)-Epicatechin | 5798.1 | 50 mg | 52,70 |

## Reference Substances for GC

### ROTICHROM® GC

Roth offers an extensive range of reference substances for gaschromatography from the substance groups of alkanes, alcohols, ketones, esters, aromatic compounds, and much more. Their GC purity is generally between ≥98 %, which allows for accurate analysis.

The **ROTICHROM® GC** substances come with a certificate of analysis and a GC chromatogram enclosed in the outer packaging.

| Product | Purity (GC) | Art. No. | Pack Qty. | € |
|---|---|---|---|---|
| Acetic acid L-bornyl ester | ≥98 % | 9009.2 | 100 mg | 96,65 |

For additional product data and safety information, see chapter Chemicals A-Z.

# Fatty Acid References

In the field of lipid analysis we put an extensive collection of reference substances and reference mixtures at the analyst's disposal.

All reference mixtures are prepared from pure components which are carefully tested for purity by TLC and GC.

Precise weighing and a final check guarantee the precision of the mixture. A certificatecomes with each product.

## Free Fatty Acids

| Product | Purity (GC) | Art. No. | Pack Qty. | € |
|---|---|---|---|---|
| **Capric acid** | ≥99 % | **3164.1** | 1 g | 26,35 |
| **Caprylic acid** | ≥99 % | **3168.1** | 1 g | 40,35 |
| **Linoleic acid** | ≥99 % | **5315.1** | 1 g | 61,20 |
| **Linolenic acid** | ≥99 % | **5320.1** | 1 g | 192,45 |
| **Oleic acid** | ≥99 % | **5362.1** | 1 g | 36,45 |

For additional product data and safety information, see chapter Chemicals A-Z.

## Fatty Acid Methyl Ester Mixtures

| Product | Purity (GC) | Art. No. | Pack Qty. | € |
|---|---|---|---|---|
| **Acetic acid methyl ester** | ≥99 % | **5187.1** | 1 g | 25,30 |
| **Butyric acid methyl ester** | ≥96 % | **5186.1** | 1 g | 80,55 |
| **Lauric acid methyl ester** | ≥98,5 % | **6787.1** | 1 g | 81,20 |
| **Linoleic acid methyl ester** | ≥99 % | **3199.1** | 1 g | 35,40 |
| **Oleic acid methyl ester** | ≥99 % | **3186.1** | 1 g | 32,80 |

## Fatty Acid Methyl Ester Mixtures

**ROTICHROM®**

**Advantages:**
- High purity
- Content of components >99 %
- Documentation via GC/TLC

| Purity | Mixture | Art. No. | Pack Qty. | € |

# Oils and Greases

Roth oils and greases are carefully manufactured from selected raw materials. They are of high purity and extensively specified. Therefore, they are suitable for a broad range of applications.

## Oils and Greases

| Product | Purity | Synonym | Art. No. | Pack Qty. | € |
|---|---|---|---|---|---|
| **Avocado oil** | refined, DAC | Oleum Perseae | **9341.1** | 1 l | 62,90 |
| **Castor oil** | Ph.Eur., nativ, extra pure | Oleum Ricini | **4702.1** | 1 l | 28,95 |
| | | | **4702.3** | 2,5 l | 51,50 |
| | | | **4702.4** | 5 l | 84,85 |
| | | | **4702.2** | 10 l | 160,20 |
| **Colza oil** | crude oil | Oleum Rapae | **6964.1** | 1 l | 34,30 |
| | | | **6964.2** | 2,5 l | 67,20 |
| | | | **6964.3** | 5 l | 115,60 |
| **Jojoba oil** | virgin | - | **7526.1** | 100 ml | 23,15 |
| | | | **7526.2** | 1 l | 142,45 |
| **Lanolin** | Ph.Eur., low in pesticides | Adeps Lanae anhydricum | **5314.2** | 500 g | 31,10 |
| | | | **5314.1** | 1 kg | 49,35 |
| | techn. | Adeps Lanae anhydricum | **5313.2** | 500 g | 19,60 |
| | | | **5313.1** | 1 kg | 31,10 |
| **Linseed oil** | native, cold pressed | - | **9338.2** | 500 ml | 26,80 |
| | | | **9338.1** | 1 l | 40,75 |
| | | | **9338.3** | 2,5 l | 75,15 |
| **Maize oil** | Ph.Eur., refined | Oleum Maydis | **6212.1** | 1 l | 34,95 |
| | | | **6212.2** | 2,5 l | 56,90 |
| | | | **6212.3** | 5 l | 87,00 |
| | | | **6212.4** | 10 l | 146,10 |
| **Oil of sweet almond** | refined | Oleum Amygdalae dulcis | **9342.1** | 1 l | 39,70 |
| | | | **9342.3** | 2,5 l | 81,60 |
| | | | **9342.2** | 10 l | 246,20 |
| **Oil of evening primrose** | refined | Oleum Oenotherae | **3691.1** | 50 ml | 14,95 |
| | | | **3691.2** | 500 ml | 67,20 |
| **Olive oil** | Ph.Eur., virgin | Oleum Olivarum | **8873.1** | 500 ml | 24,65 |
| | | | **8873.2** | 2,5 l | 83,35 |
| **Oil of theobroma** | pure, filtered twice | Oleum Cacao | **3515.2** | 100 g | 17,10 |
| | | | **3515.1** | 500 g | 44,65 |
| **Peanut oil** | refined | - | **9332.2** | 500 ml | 17,10 |
| | | | **9332.1** | 1 l | 25,70 |
| | | | **9332.3** | 2,5 l | 44,00 |
| **Soybean oil** | refined, extra pure | Oleum Sojae | **3686.1** | 1 l | 22,50 |
| | | | **3686.3** | 2,5 l | 38,60 |
| | | | **3686.4** | 5 l | 57,95 |
| | | | **3686.2** | 10 l | 104,85 |
| **Stearic oil** | techn. | - | **9460.1** | 1 l | 29,60 |
| **Vaseline** | Ph.Eur. | - | **5775.2** | 500 g | 17,75 |
| | | | **5775.1** | 1 kg | 24,65 |
| | | | **5775.4** | 10 kg | 122,05 |
| **Vaseline oil** | techn., white | - | **9336.1** | 1 l | 23,15 |
| | | | **9336.2** | 2,5 l | 40,35 |
| | | | **9336.3** | 5 l | 64,40 |
| **Wheat germ oil** | Ph.Eur., refined | - | **4242.1** | 1 l | 59,05 |

## Fatty Acids and Derivatives

| Product | Purity | Synonym | Art. No. | Pack Qty. | € |
|---|---|---|---|---|---|
| **Arachidonic acid** | >99 % | - | **4717.2** | 10 mg | 48,95 |
| | | | **4717.1** | 100 mg | 110,65 |
| | | | **4717.3** | 1 g | 719,20 |
| **Arachidic acid** | ≥99 %, synth. | n-Eicosanoic acid | **8736.1** | 1 g | 51,50 |
| **Arachidic acid calcium salt** | DAB | Calcium arachinate/ -behenate | **9264.1** | 500 g | 31,10 |
| | | | **9264.2** | 1 kg | 51,10 |
| **Azelaic acid** | ≥80 % | Nonanedioic acid | **5487.1** | 25 g | 21,40 |
| | | | **5487.2** | 100 g | 53,25 |
| **5-Bromo-valeric acid** | ≥96 % | 5-Bromo-pentanoic acid | **5466.1** | 10 g | 22,05 |
| | | | **5466.2** | 50 g | 67,20 |
| **Butyric acid** | ≥99 %, for synthesis | Butanoic acide | **3277.1** | 100 ml | 16,05 |
| | | | **3277.2** | 1 l | 62,90 |
| **Butyric acid ethyl ester** | ROTICHROM® GC | Ethyl butyrate | **5572.1** | 1 g | 81,20 |
| **Butyric acid methyl ester** | ROTICHROM® GC | Methyl butyrate | **5186.1** | 1 g | 80,55 |
| **Capric aldehyde** | ≥97 %, for synthesis | Decanal | **7547.1** | 100 ml | 112,80 |
| **Capric acid** | >99 %, for synthesis | Decanoic acid | **8797.1** | 100 g | 19,90 |
| | | | **8797.3** | 500 g | 48,30 |
| | | | **8797.2** | 1 kg | 82,70 |
| | ROTICHROM® GC | Decanoic acid | **3164.1** | 1 g | 26,35 |
| **Capric acid isoamyl ester** | ROTICHROM® GC | Isoamyl caprate | **4420.1** | 1 g | 81,20 |
| **Capric acid methyl ester** | ≥98 %, for synthesis | Decanoic acid methyl ester, Methyldecanoate | **3325.1** | 100 ml | 64,40 |
| | ROTICHROM® GC | - | **6709.1** | 1 g | 85,90 |
| **Caproic aldehyde** | ≥98 %, for synthesis | Hexanal | **3327.1** | 100 ml | 38,60 |
| **Caproic acid** | ≥98 %, for synthesis | Hexanoic acid | **8799.1** | 100 ml | 18,20 |
| | | | **8799.3** | 500 ml | 31,10 |
| | | | **8799.2** | 1 l | 52,60 |
| | | | **8799.4** | 2,5 l | 106,35 |
| **Caprylic acid** | ROTICHROM® GC | n-Octanoic acid | **3168.1** | 1 g | 40,35 |
| **Caprylic acid methyl ester** | ≥99 %, for synthesis | Methyl caprylate, Octanoic acid methyl ester, Methyloctanoate | **3331.1** | 10 ml | 25,70 |
| **Cetyl alcohol** | ≥95 % | 1-Hexadecanol, Alcohol C 16 | **5762.1** | 1 kg | 50,00 |
| **Cetyl palmitate** | synthetic | Spermaceti, Cetaceum | **9229.2** | 100 g | 17,75 |
| | | | **9229.1** | 1 kg | 116,00 |
| **Cholesterol palmitate** | ≥97 %, pure | - | **3404.1** | 5 g | 47,85 |
| **Cholesterol stearate** | ≥97 %, pure | - | **3405.1** | 5 g | 33,25 |
| **Dodecyl aldehyde** | ≥98 %, for synthesis | Dodecanal, Lauraldehyde | **3754.1** | 50 ml | 48,30 |
| **Erucic acid** | ≥99 % | cis-13-Docosenoic acid | **7065.2** | 250 mg | 78,40 |
| | | | **7065.1** | 1 g | 246,20 |
| **Erucic acid methyl ester** | ≥90 % | cis-13-Docosenoic acid methyl ester | **9431.1** | 10 ml | 66,55 |
| | | | **9431.2** | 50 ml | 256,95 |
| **Glyceryl monostearate** | pure | - | **3787.1** | 500 g | 20,65 |
| **Lanolin alcohols** | Ph.Eur. | Lanae alcoholes | **5085.2** | 500 g | 89,15 |
| | | | **5085.1** | 1 kg | 158,60 |
| **Lauric acid methyl ester** | ROTICHROM® GC | Methyl laurate, Dodecanoic acid methyl ester | **6787.1** | 1 g | 81,20 |

| Product | Purity | Synonym | Art. No. | Pack Qty. | € |
|---|---|---|---|---|---|
| **Lecithin** | ≥97 %, made from soybeans, GMO-free, for biochemistry | Phosphatidyl-choline | **AE81.1** | 100 g | 14,95 |
| | | | **AE81.2** | 250 g | 24,65 |
| | | | **AE81.3** | 1 kg | 64,00 |
| | ≥97 %, made from soybeans, for biochemistry | Phosphatidyl-choline | **9812.1** | 250 g | 20,65 |
| | | | **9812.3** | 1 kg | 51,50 |
| | | | **9812.2** | 2,5 kg | 115,60 |
| | from eggs, for biochemistry | Phosphatidyl-choline | **7514.1** | 25 g | 41,40 |
| | | | **7514.2** | 100 g | 115,60 |
| **Levulinic acid** | ≥98 %, for synthesis | 4-Oxopentanoic acid, 3-Aceto-propionic acid | **3976.1** | 50 g | 14,55 |
| | | | **3976.2** | 500 g | 55,80 |
| **Linolenic acid** | ~94 % | 9,12,15-Octa-decatrienoic acid | **6039.1** | 5 ml | 92,35 |
| | ROTICHROM® GC | 9,12,15-Octa-decatrienoic acid | **5320.1** | 1 g | 192,45 |
| **Linoleic acid** | ROTICHROM® GC | - | **5315.1** | 1 g | 61,20 |
| **Linoleic acid ethyl ester** | ROTICHROM® GC | - | **3198.1** | 1 g | 32,15 |
| **Linoleic acid methyl ester** | ≥99 % | - | **7217.1** | 5 ml | 48,30 |
| | | | **7217.2** | 50 ml | 403,15 |
| | ROTICHROM® GC | - | **3199.1** | 1 g | 35,40 |
| **Myristic acid** | ≥98 %, for biochemistry | Tetradecanoic acid | **6469.2** | 100 g | 12,40 |
| | | | **6469.3** | 500 g | 32,15 |
| | | | **6469.1** | 1 kg | 48,30 |
| **Myristic acid isopropyl ester** | ≥92 %, extra pure | Isopropyl myristate, IPM | **5527.1** | 500 ml | 34,30 |
| **Myristic acid methyl ester** | ≥99 % | Methyl myristate, Methyl tetra-decanoate | **3753.1** | 50 ml | 35,40 |
| **Oleic acid** | ≥99%, natural | cis-9-Octadece-noic acid | **7213.1** | 5 ml | 33,25 |
| | | | **7213.2** | 50 ml | 229,95 |
| | ROTICHROM® GC | cis-9-Octadece-noic acid | **5362.1** | 1 g | 36,45 |
| **Oleic acid methyl ester** | ROTICHROM® GC | Methyl oleate | **3186.1** | 1 g | 32,80 |
| **Oleic acid sodium salt** | ~90 % | Sodium oleate | **8856.1** | 500 g | 35,40 |
| **Palmitic acid** | ≥98 %, extra pure | Hexadecanoic acid | **5907.3** | 500 g | 20,35 |
| | | | **5907.1** | 1 kg | 28,50 |
| | | | **5907.2** | 5 kg | 99,90 |
| **Palmitic acid methyl ester** | ≥97 % | Methyl palmitate | **4459.1** | 25 g | 19,25 |
| | | | **4459.2** | 100 g | 34,30 |
| | | | **4459.3** | 500 g | 94,10 |
| **Pelargonic acid** | ≥97 % | Nonanoic acid | **7015.1** | 50 ml | 34,30 |
| **Pelargonic acid vanillyl-amide** | ≥97 % | Nonylvanyl-amide, Noniv-amide, so called synth. Capsaicin | **4462.1** | 10 g | 33,25 |
| | | | **4462.2** | 50 g | 126,35 |
| **Pimelic acid** | ≥99 % | Heptanedioic acid | **5270.1** | 25 g | 30,00 |
| | | | **5270.2** | 50 g | 44,00 |
| **Stearic acid** | ≥98 % | Octadecanoic acid | **9459.1** | 1 kg | 21,40 |
| | | | **9459.2** | 5 kg | 84,85 |
| **Stearic acid butyl ester** | for synthesis | Butyl stearate, Butyl octa-decanoate | **8150.2** | 100 ml | 13,45 |
| | | | **8150.1** | 1 l | 39,25 |
| | | | **8150.3** | 2,5 l | 75,15 |
| **Stearic acid lithium salt** | pure | Lithium stearate, Lithium octa-decanoate | **8238.1** | 500 g | 23,15 |
| **Stearic acid methyl ester** | for synthesis | Methyl stearate, Methyl octa-decanoate | **4704.1** | 5 g | 35,40 |
| | | | **4704.2** | 25 g | 70,45 |
| | | | **4704.3** | 50 g | 104,20 |
| **Stearic acid sodium salt** | 88-92 % | Sodium stearate, Sodium octa-decanoate | **8628.1** | 1 kg | 35,40 |
| **Stearyl alcohol** | ≥95 % | 1-Octadecanol | **8663.2** | 500 g | 17,75 |
| | | | **8663.1** | 1 kg | 25,70 |
| **Tributyrin** | ≥97,5 %, for biochemistry | Glyceryl tributyrate | **4813.1** | 100 ml | 79,05 |

| Product | Purity | Synonym | Art. No. | Pack Qty. | € |
|---|---|---|---|---|---|
| **Tricaprin** | ≥98 % | Glyceryl tricaproate | **7252.1** | 10 g | 124,20 |
| **Undecanoic acid methyl ester** | ≥98 % | - | **4866.1** | 10 ml | 64,40 |
| **n-Valeric acid** | ≥98 % | Pentanoic acid | **4874.1** | 250 ml | 30,65 |
| **n-Valeric acid methyl ester** | ≥98 % | Methyl-valerate | **4876.1** | 100 ml | 53,65 |
| **Zinc stearate** | powder | Stearic acid zinc salt | **9295.1** | 1 kg | 40,35 |
| | | | **9295.5** | 25 kg | 385,95 |

ROTH BUCH

## Atlas of oil plants and vegetable oils

L. Roth, K. Kormann
Edition 2005, 196 pp., hardcover
ISBN-10: 3-86037-290-4

This is a unique source of information on the world's over 50 individual oilseeds including major, minor, unexploited and non-edible oilcrops. Each crop is clearly presented in a portrait of the plant (botany, distribution, cultivation) including colour pictures, tabular data on nutritional composition and oil characteristics. The book discusses the composition, processing technologies and utilization in the processing of oilseeds into oil, protein products and other by-products.

# Essential oils

Essential oils form in the oil glands of plants and are stored in the plant tissue. They can be found in blossoms, leaves, seeds, husks, roots, resins and bark or in the wood of a plant. Essential oils are generally extracted from plant components by steam distillation.

Our essential oils are carefully manufactured from selected raw materials. Our **Natural oils** are composed of 80 % mother plant extracts. **Artificial oils** are manufactured from synthetic aromatic substances. The origin of the plant is specified via the country code.

## Essential Oils

| Product | Synonym | Purity | Art. No. | Pack Qty. | € |
|---|---|---|---|---|---|
| **Oil of angelica roots** | Oleum Angelicae e seminis | hungarian, natural | **6587.1** | 10 ml | 67,20 |
| **Oil of anise** | Oleum Anisi | natural | **7036.1** | 100 ml | 32,15 |
| | | artificial | **3278.2** | 100 ml | 14,95 |
| | | | **3278.1** | 500 ml | 44,65 |
| **Oil of balm** | Oleum Melissae indicum | natural | **6507.1** | 100 ml | 18,20 |
| **Oil of basil** | Oleum Basilici | natural | **7039.1** | 25 ml | 46,15 |
| **Oil of bergamot** | Oleum Bergamottae | natural | **6501.1** | 50 ml | 33,25 |
| **Oil of bergamot** | Oleum Bergamottae | artificial | **3282.2** | 100 ml | 23,15 |
| | | | **3282.1** | 250 ml | 38,60 |
| **Oil of cajeput** | Oleum Cajeput | natural | **6105.1** | 100 ml | 26,35 |
| | | | **6105.2** | 500 ml | 65,50 |
| **Oil of camphor** | Oleum Camphorae | light | **3357.1** | 1 l | 55,80 |
| **Oil of caraway** | Oleum Carvil | natural | **7050.1** | 25 ml | 20,35 |
| | | artificial | **3307.1** | 250 ml | 36,05 |
| **Oil of cassia** | Oleum Cassiae | natural, chinese | **6593.1** | 100 ml | 39,70 |
| **Oil of cedar leaf** | Oleum Foliorum cedri | pure | **6594.1** | 100 ml | 79,05 |
| | | artificial | **3291.2** | 50 ml | 19,90 |
| | | | **3291.1** | 250 ml | 57,95 |
| **Oil of cedar wood** | Oleum Ligni cedri | for microscopy | **5308.1** | 100 ml | 15,60 |
| | | | **5308.2** | 250 ml | 23,15 |
| | | | **5308.3** | 500 ml | 40,75 |
| **Oil of celery** | Apium graveoleus oil | | **7040.2** | 5 ml | 23,15 |
| | | | **7040.1** | 25 ml | 57,95 |
| **Oil of cembra pine** | Oleum Cembrae | pure | **4208.2** | 25 ml | 17,10 |
| | | | **4208.1** | 100 ml | 44,00 |
| **Oil of chamomile** | Oleum Chamomillae | blue | **6504.1** | 10 ml | 67,20 |
| | Oleum Chamomillae romanae | roman, natural | **3354.1** | 5 ml | 39,25 |
| | Oleum Chamomillae | artificial | **3305.1** | 50 ml | 54,75 |
| **Oil of cinnamon** | Oleum Cinnamomi ceylanici | natural | **A432.2** | 10 ml | 17,10 |
| | | | **A432.1** | 50 ml | 57,55 |
| | | artificial | **6512.1** | 50 ml | 28,95 |
| **Oil of citronella** | Oleum Citronellae | natural | **6502.1** | 250 ml | 39,70 |
| | | artificial | **3292.1** | 500 ml | 33,25 |
| **Oil of clary-sage** | Oleum Salviae sclareae | natural | **3355.1** | 25 ml | 43,55 |
| **Oil of cloves** | Oleum Caryophyllorum | ≥80 %, DAB, natural | **8662.1** | 250 ml | 37,10 |
| | | | **8662.2** | 1 l | 117,20 |
| **Oil of coriander** | Oleum Coriandri | natural | **7052.1** | 25 ml | 22,05 |
| **Oil of cubeb** | Litsea, Oleum Cubebarum | natural | **6608.1** | 100 ml | 26,35 |
| **Oil of cypress** | Oleum Cupressi | french, natural | **6596.1** | 100 ml | 44,65 |
| **Oil of dill herb** | Oleum Anethi e herba | natural purity | **6597.1** | 100 ml | 46,15 |
| **Oil of dill seed** | Oleum Anethi e seminis | extra pure | **3352.1** | 100 ml | 43,55 |
| **Oil of estragon** | Oleum Dracunculi | pure | **6602.1** | 50 ml | 75,15 |

| Product | Synonym | Purity | Art. No. | Pack Qty. | € |

For additional product data and safety information, see chapter Chemicals A-Z.

# Sugar (Carbohydrates)

**Carbohydrates** or **Saccharides** make up 50 % of the dry biomass of the earth and are therefore the most frequent class of biomolecules. Besides at least two hydroxy groups, they also have an aldehyde or a ketone group and can be subdivided according to the number of monomeric components in mono-, di-, oligo and polysaccharides.

Whereas mono-, di- and oligosaccharides are soluble in water, taste sweet and are therefore called as sugar, polysaccharides are hardly, or not at all, soluble in water and have a neutral taste.

Carbohydrates, together with fats and proteins make up a large percentage of nutrition. In addition to their central role as an energy source, they are also an important structural component especially in plants (e.g. Cellulose). Ribose, a monosaccaride with five carbons ($C_5H_{10}O_5$) is an essential element of coenzymes (such as ATP, FAD and NAD) and a structural component of RNA. Desoxyribose (a ribose derivative) is a structural component of DNA.

## Monosaccharides

Monosaccharides are the simplest carbohydrates that cannot be hydrolysed further. They consist of one sugar unit (monosaccharide). The general formula for unmodified monosaccharides is Cn(H2O)m. The most important representatives of monosaccharides are glucose and fructose.

For additional product data and safety information, see chapter Chemicals A-Z.

## Disaccharides

Disaccharides consist of two monosaccharide units. These are interlinked covalently via a glycocide bond. The most familiar representatives are saccharose, lactose and maltose.

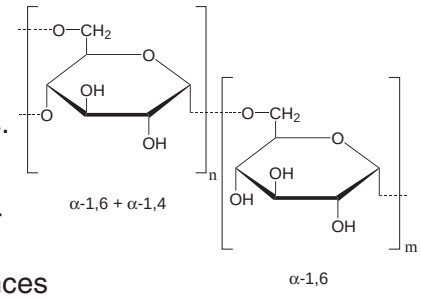
## Oligo- and polysaccharides



Oligosaccharides consist of three to nine monosaccharide units.
Polysaccharides are macromolecular substances that consist of ≥10 monosaccharide units. A distinction is made between homoglycans, which are made up of only one type of monosaccharides (e.g. starch) and heteroglycans, which consist of at least two different monomeric components (e.g. xanthan).

# Dextrans

α-1,6 + α-1,4

α-1,6

Dextrans are highly branched macromolecular biopolysaccharides.
They consist exclusively of glucose monomers and belong to the homoglycans.
Natural dextrans have molecular masses between 10 and 50000 kg/mol.

Dextrans are soluble in water, whereby the solubility depends on the molecular mass. Here, highly viscous, gel-like liquids are formed. Due to the very broad molecular mass distribution of the various dextrans and the associated differences in terms of solubility in water, dextrans have numerous applications.

Thanks to their special properties, dextrans play an important role in many areas.
For e.g. dextrans are used in chromatography, both as a carrier in affinity chromatography and (in modified form) for Gel Permeation Chromatography (GPC). Furthermore, they are used as a measurement standard in membrane technology and in adhesives as well as coatings, or as an auxiliary material for paper and textile manufacture.

# ROTI®CAP High Performance Capillary Columns

The proved ROTH series of high performance capillary columns for gas chromatography.

**ROTI®CAP** capillary columns set standards:

**Low column bleed**
Modern manufacturing processes offer capillaries with lower bleed levels, which are especially suitable for GC-MS.
Less column bleed yields increased sensitivity and accuracy through a better signal to noise ratio for any kind of detector. Further reduced column bleed improves detectability of solutes in qualitative and quantitative GC-MS analyses.

**High thermal stability**
Due to high temperature stability ROTI®CAP capillary columns can be operated at about 40 °C higher temperatures compared to standard phases. Thanks to these elevated working temperatures, high-boiling components, which exhibit very long retention times and wide peaks on standard phases, elute earlier and with a more well-formed peak.

**High inert columns due to optimised deactivation**
Polar compounds are frequently difficult to analyse, because they often give broad tailing peaks. Advances in deactivation technology for the ROTI®CAP capillaries result in an excellent chromatographic performance yielding improved peak shapes of polar compounds combined with improved efficiency and sensitivity.

In order to guarantee best industry standard capillaries with highest reproducibility from column to column ROTI®CAP capillary columns have to meet high specifications.
Within the **quality control** the following parameters are determined:
- **Separation Efficiency** by measuring the separation number (acc. to Kaiser) in a temperature programme
- **Polarity** by measuring retention indices
- **Bleeding** in a temperature programme with a test mixture including high-boiling hydrocarbons
- **Inertness** by measuring the peak height ratio for decylamine/C-12 (for non-polar to medium polar phases)

## Overview ROTI®CAP capillary columns:

| GC capillary columns by ROTH | Configuration of the column | USP phase | Similar phases | Polarity |
|---|---|---|---|---|
| ROTI®CAP-1 | 100 % dimethylpolysiloxane | G1/G2/G38 | OV-1, DB-1, SE-30, HP-1, SPB™-1, CP-Sil 5 CB, Rtx®-1, 007-1, BP1, MDN-1, AT™-1, ZB 1, OV 101 | lowest |
| ROTI®CAP-1 MS | 100 % dimethylpolysiloxane | G1/G2/G38 | Ultra 1, DB-1 MS, Rtx®-1 MS, HP-1 MS, Equity™-1, AT™-1 MS, VF-1 MS, CP-Sil 5 CBMS | |
| ROTI®CAP-5 | 5 % phenyl - 95 % dimethylpolysiloxane | G27/G36 | SE-54, SE-52, HP-5, SPB™-5, CP-Sil 8, Rtx®-5, 007-5, BP5, MDN-5, AT™-5, ZB-5 | |
| ROTI®CAP-5 MS | 5 % phenyl - 95 % dimethylpolysiloxane | | DB-5,DB-5 MS, HP-5 MS, Ultra-2, Equity™-5, CP-Sil 8CB low bleed/MS, Rtx®-5SIL-MS, Rtx®-5 MS, 007-5 MS, BPXTM5, MDN-5S, AT™-5 MS, VF-5MS | |
| ROTI®CAP-5 MS Ultra | silarylene phase with selectivity similar to 5 % phenyl - 95 % methylpolysiloxane | G27/G36 | | |
| ROTI®CAP-5 HT | silarylene phase with selectivity similar to 5 % phenyl - 95 % methylpolysiloxane | G27/G36 | DB-5 HT, VF-5 HT, HT-5, XTI-5HT, ZB-5HT | |
| ROTI®CAP-624 | 6 % cyanopropyl-phenyl - 94 % dimethylpolysiloxane | G43 | HP-624, HP-VOC, DB-624, DB-VRX, SPB™-624, CP-624, Rtx®-624, Rtx®-Volatiles, 007-624, BP624, VOCOL | |
| ROTI®CAP-1701 | 14 % cyanopropyl-phenyl - 86 % dimethylpolysiloxane | G46 | OV-1701, DB-1701, CP Sil 19 CB, HP-1701, Rtx®-1701, SPB™-1701, 007-1701, BP10, ZB-1701 | |
| ROTI®CAP-1701 MS | silylarylene phase with selectivity similar to 14 % cyanopropyl-phenyl - 86 % dimethylpolysiloxane | G46 | VF-1701ms, TG-1701MS, OV-1701, DB-1701, HP-1701, Rtx®-1701, SPB™-1701, CP-Sil 19 CB, 007-1701, BP10, ZB-1701 | |
| ROTI®CAP-35 MS | silylarylene phase with selectivity similar to 35 % phenyl - 65 % methylpolysiloxane | G42/G28/G32 | DB-35 MS, HP-35, SPB™-35, Rtx-35, 007-35, BPX™-35, MDN-35, AT™-35 MS, ZB-35, OV-11, VF-35 MS | |
| ROTI®CAP-WAX | polyethylene glycol (PEG) 20000 dalton | G16 | DB-Wax, Supelcowax™, HP-Wax, HP-INNOWax, Rtx®-Wax, Stabilwax, CP-Wax 52 CB, 007-CW, BP20, AT™-Wax, ZB-Wax | |
| ROTI®CAP-FFAP | polyethylene glycol-2-nitroterephthalate | G35/G25 | DB-FFAP, HP-FFAP, CP-Wax 58 FFAP CB, 007-FAP, CP-FFAP CB, Nukol, AT 1000, SPB-1000, BP 21, OV-351 | highest |

## GC capillary column ROTI®CAP-1

**100 % Dimethylpolysiloxane**

- **Non-polar**
- Low column bleed
- Solvent rinsing applicable
- **Working temperature limits:**
  **for columns with 0,25 - 0,32 mm inner diameter and films <3 µm:**
  340 °C for isothermal operation
  360 °C for short isotherms in a temperatur programme
  **for columns with 0,53 mm inner diameter and films <3 µm:**
  320 °C for isothermal operation
  340 °C for short isotherms in a temperature programme
  **for thick film columns with films ≥3 µm:**
  300 °C for isothermal operation
  320 °C for short isotherms in a temperature programme
- **Application areas:** Excellent column for routine applications.

- **Similar phases:** OV-1, DB-1, SE-30, HP-1, SPB™-1, CP-SIL 5 CB, Rtx®-1, 007-1, BP1, MDN-1, AT™-1, ZB-1, OV-101
- Equivalent to USP phases G1/G2/G38

## GC capillary column ROTI®CAP-1 MS

**100 % Dimethylpolysiloxane**

- **Non-polar**
- Very low column bleed
- Selectivity identical to ROTI®CAP 1
- **Working temperature limits:**
  340 °C for isothermic operation
  360 °C for short isothermes in a temperature programme
- **Application areas:** Ideal for GC/MS- and ECD-applications and general analysis at trace level

- **Similar phases:** Ultra 1, DB-1 MS, Rtx®-1 MS, HP-1 MS, Equity™-1, AT™-1 MS, VF-1 MS, CP-Sil 5 CB MS
- Equivalent to USP phases G1/G2/G38

| Length (m) | Inner ∅ (mm) | Film thickness (µm) | Art. No. | Pack Qty. | € |
|---|---|---|---|---|---|
| 12 | 0,20 | 0,35 | **6242.1** | 1 | 299,00 |
| 15 | 0,25 | 0,25 | **6243.1** | 1 | 359,00 |
| 25 | 0,20 | 0,20 | **6244.1** | 1 | 579,00 |

| 60 | 0,32 | 0,25 | **6250.1** | 1 | 1099,00 |

Each column is individually tested and supplied with test certificate and test chromatogramm. Columns have fused ends or are sealed with septa, to protect them from atmospheric oxygen. Ferrules or fittings are not included.

## GC capillary column ROTI®CAP-5

**5 % Phenyl - 95 % Dimethylpolysiloxane**

- **Non-polar**
- Low column bleed
- Solvent rinsing applicable
- **Working temperature limits:**
  **for columns with 0,25 - 0,32 mm inner diameter and films <3 µm:**
  340 °C for isothermal operation
  360 °C for short isotherms in a temperatur programme
  **for columns with 0,53 mm inner diameter and films <3 µm:**
  320 °C for isothermal operation
  340 °C for short isotherms in a temperature programme
  **for thick film columns with films ≥3 µm:**
  300 °C for isothermal operation
  320 °C for short isotherms in a temperature programme
- **Application areas:** standard phase with large range of applications

- **Similar phases:** SE-54, SE-52, HP-5, SPB™-5, CP-SIL 8, Rtx-5, 007-5, BP5, MDN-5, AT™-5, ZB-5
- Equivalent to USP phases G27/G36

## GC capillary column ROTI®CAP-5 MS

**5 % Diphenyl - 95 % Dimethylpolysiloxane**

- **Non-polar**
- Very low column bleed
- Selectivity identical to ROTI®CAP 5
- **Working temperature limits:**
  340 °C for isothermal operation
  360 °C for short isothermes in a temperature programme
- **Application areas:** ideal for GC/MS- and ECD-applications and general analysis at trace level

- **Similar phases:** DB-5, DB-5 MS, HP-5 MS, Ultra-2, Equity™-5, CP-SIL 8 CB low bleed/MS, Rtx®-5SIL-MS, Rtx®-5 MS, Rxi®-5 MS, 007-5 MS, BPX™5, MDN-5S, AT™-5 MS, VF-5 MS
- Equivalent to USP phases G27/G36

## GC capillary column ROTI®CAP-5 MS Ultra

**Silarylene Phase**

- **Non-polar**
- Polarity similar to a **5 % diphenyl - 95 % dimethylpolypropylene phase**
- **Extremely low column bleed**
- Solvent rinsing applicable
- **Working temperature limits:**
  340 °C for isothermal runs
  360 °C for short isothermal runs in a temperature programm
  **for columns with film thickness >0,5 µm:**
  320 °C for isothermal runs
  340 °C for short isothermal runs in a temerature programm
- **Application areas:** all-round phase for environmental analyses, trace analyses, EPA methods, pesticides, PCBs, food and drug analyses. Ideal for ion-trap and quadrupol MS detectors

- **Similar phases:** DB-5 MS, HP-5 MS, Ultra-2, Equity™-5, CP-SIL 8 CB low bleed/MS, Rtx®-5SIL-MS, Rtx®-5 MS, Rxi®-5 MS, 007-5 MS, BPX™5, MDN-5S, AT™-5 MS, VF-5 MS
- Equivalent to USP phases G27/G36

The bleed comparison test of the **ROTI®CAP-5 MS Ultra** with a conventional 5 phase and 5-MS phase shows the outstanding performance of the silarylene phase.

## GC capillary column ROTI®CAP-5 HT

**Silarylene Phase**

- **Non-polar**
- Selectivity similar to a **5 % phenyl - 95 % methylpolysiloxane phase**
- Very low column bleed
- Solvent rinsing applicable
- **Working temperature limits:**
  380 °C for isothermal operation
  400 °C for short isothermal operation in a temperature programme
- **Application areas:** simulated distillation; hydrocarbon, fuel, oil analysis; high boiling analytes; ideal for MS detectors

- **Similar phases:** DB-5HT, VF-5HT, HT-5, XTI-5HT, ZB-5HT
- Equivalent to USP phases G27/G36

Pre-columns available on request

## GC capillary column ROTI®CAP-624

**6 % Cyanopropyl-phenyl - 94 % Dimethylpolysiloxane**

- **Medium polar**
- **Working temperature limits:**
  280 °C for isothermal operations
  300 °C for short isotherms in a temperature programme
- **Application areas:** recommended for environmental analyses

- **Similar phases:** HP-624, HP-VOC, DB-624, DB-VRX, SBP™-624, CP-624, Rtx®-624, Rtx®-Volatiles, 007-624, BP624, VOCOL
- Equivalent to USP phase G43

| Length (m) | Inner ∅ (mm) | Film thickness (µm) | Art. No. | Pack Qty. | € |
|---|---|---|---|---|---|
| 25 | 0,20 | 1,10 | **6393.1** | 1 | 509,00 |
| 25 | 0,25 | 1,40 | **6398.1** | 1 | 509,00 |

| 60 | 0,32 | 1,80 | **1876.1** | 1 | 969,00 |

Each column is individually tested and supplied with test certificate and test chromatogramm. Columns have fused ends or are sealed with septa, to protect them from atmospheric oxygen. Ferrules or fittings are not included.

## GC capillary column ROTI®CAP-1701

**14 % Cyanopropyl-phenyl - 86 % Dimethylpolysiloxane**

- **Medium-polar**
- **Working temperature limits:**
  **for columns with inner diameter <0,53 mm:**
  300 °C for isothermal runs
  320 °C for short isothermal runs in a temperature programme
  **for columns with inner diameter 0,53 mm:**
  280 °C for isothermal runs
  300 °C for short isothermal runs in a temperature programme
- **Application areas:** reference column for structure clarification, e.g. in combination with ROTI®CAP-5; columns with film thickness ≥1 µm are used for solvent analyses

- **Similar phases:** OV-1701, DB-1701, CP Sil 19 CB, HP-1701, Rtx®-1701, SPB™-1701, 007-1701, BP10, ZB-1701
- Equivalent to USP phase G46

## GC capillary column ROTI®CAP-1701 MS

**Silarylene Phase**

- **Medium polar**
- Silarylene phase with selectivity analogue to a **14 % cyanopropyl-phenyl - 86 % dimethyl polysiloxane**
- **Very low column bleed**
- **Working temperature limits:**
  280 °C for isothermal runs
  300 °C for short isothermal runs in a temperature programme
- **Application areas:** Reference column for structure identification, e.g., in combination with ROTI®CAP-5 MS; suitable for environmental analysis (e.g., PAHs, PCBs, pesticides)

- **Similar phases:** VF-1701ms, TG-1701MS, OV-1701, DB-1701, HP-1701, Rtx®-1701, SPB™-1701, CP-Sil 19 CB, 007-1701, BP10, ZB-1701
  Equivalent to USP phase G46

| Length (m) | Inner ∅ (mm) | Film thickness (µm) | Art. No. | Pack Qty. | € |
|---|---|---|---|---|---|
| 30 | 0,25 | 0,25 | **8047.1** | 1 | 589,00 |

| 60 | 0,32 | 0,50 | **8080.1** | 1 | 1129,00 |

## GC capillary column ROTI®CAP-35 MS

**Silarylene Phase**

- **Medium polar**
- Selectivity analogue to **35 % phenyl - 65 % methylpolysiloxane**
- **Very low column bleeding**
- **Working temperature limits:**
  360 °C for isothermal runs
  370 °C for short isothermal runs in a temperature programm
- **Application areas:** Reference column in combination with a 1 MS or 5 MS (e.g. ROTI®CAP-1 MS or ROTI®CAP-5 MS) column; all-round phase for environmental analyses, ultra-trace analyses, EPA methods, pesticides, PCBs, food and drug analyses

- **Similar Phases:** DB-35 MS, HP-35, SPB™-35, Rtx®-35, 007-35, BPX™-35, MDN-35, AT™-35 MS, ZB-35, OV-11, VF-35 MS
- Equivalent to USP phase G42, close equivalent to USP phases G28/G32

| Length (m) | Inner ∅ (mm) | Film thickness (µm) | Art. No. | Pack Qty. | € |
|---|---|---|---|---|---|
| 30 | 0,25 | 0,25 | **4794.1** | 1 | 589,00 |
| 30 | 0,32 | 0,25 | **4800.1** | 1 | 619,00 |
| 60 | 0,25 | 0,25 | **4801.1** | 1 | 1009,00 |
| 60 | 0,32 | 0,25 | **4802.1** | 1 | 1159,00 |

Each column is individually tested and supplied with test certificate and test chromatogramm. Columns have fused ends or are sealed with septa, to protect them from atmospheric oxygen. Ferrules or fittings are not included.

## GC capillary column ROTI®CAP-WAX

**Polyethylene glycol (PEG) 20000 dalton**

- **Polar**
- Suitable for aqueous solutions, high temperature stability
- **Working temperature limits:**
  **for columns with 0,25 - 0,32 mm inner diameter:**
  250 °C for isothermal operation
  260 °C for short isotherms in a temperatur programme
  **for columns with 0,53 mm inner diameter:**
  220 °C for isothermal operation
  240 °C for short isotherms in a temperature programme
- **Application areas:** recommended for solvent analysis and alcohols suitable for aqueous solutions

- **Similar phases:** DB-Wax, Supelcowax, HP-Wax, HP-INNOWAX, Rtx®-Wax, CP-Wax 52 CB, Stabilwax, 007-CW, BP20, AT-Wax, ZB-Wax
- Equivalent to USP phase G16

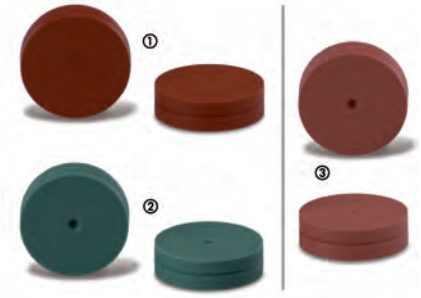
## GC capillary column ROTI®CAP-FFAP



**Polyethylene glycol 2-nitroterephthalate**

- **Polar**
- High temperature stability
- **Working temperature limits:**
  **for columns with 0,25 - 0,32 mm inner diameter:**
  250 °C for isothermal operation
  260 °C for short isotherms in a temperatur programme
  **for columns with 0,53 mm inner diameter:**
  220 °C for isothermal operation
  240 °C for short isotherms in a temperature programme
- **Application areas:** recommended for FAMEs, free carboxylic acids

- **Similar phases:** DB-FFAP, HP-FFAP, CP-Wax 58 FFAP CB, 007-FFAP, CP-FFAP CB, Nukol™,AT 1000, SPB-1000, BP 21, OV-351
- Equivalent to USP phase G35, close equivalent to G25

# Injection Port Septa

Advantages:
- Produced individually using injection moulding procedure
- CenterGuideTM for centred needle guidance and thus perfect fit
- Temperature stability up to 400 °C, Shimadzu plug septa up to 300 °C
- Precision indentations for perfect seat
- Special coating for easy replacement without fixed jaw on the injector
- Septa thickness: 3 mm
- Blister pack for clean and immediately usable septa

### Features

| BTO Septa ① | AG3 Septa ② | Marathon Septa ③ |
|---|---|---|
| for hightest demand in GC and GC-MS | with higher durability than BTO | with extreme durability for >400 injections |
| soft | pierced, hard | pierced |
| CenterGuide™ | CenterGuide™ | CenterGuide™ |

### Selection guide for CenterGuide™ Septa

| Manufacturer | GC instrument | Injector Type | Diameter of Septa |
|---|---|---|---|
| Agilent (HP) | 5850, 5880A, 5890, 6850, 6890, 7890, PTV | | 11 mm |
| Thermo Scientific | TRACE GC Ultra and Focus, 8000 series | Large Volum Splitless Injector | 11 mm |
| | | Purged Packed Column Injector | 11 mm |
| | | Packed Column Onjector | 11 mm |
| Shimadzu | all instruments | | Shimadzu Plug |
| Tracor | 540 | | 11,5 mm |
| Bruker, Varian | 1177 | | 9 mm |

# Derivatization Reagents for GC

Derivatization reagents are used mainly in gas chromatography when adequate volatility or stability of the substances to be separated is required. Detection sensitivity can also be increased through derivatization.

Our range of derivatization reagents is ideal for acylation, alkylation and silylation of reagents.

## Reagents for Silylation

| Product | Purity | Art. No. | Pack Qty. | € |
|---|---|---|---|---|
| **3-Aminopropyltriethoxysilane / APES** | ≥98 %, for GC | **2328.1** | 25 g | 21,00 |
| | | **2328.2** | 100 g | 60,10 |
| **N,O-Bis(trimethylsilyl) acetamide / BSA** | ≥98 %, for GC | **2330.1** | 25 g | 65,50 |
| **N,O-Bis(trimethylsilyl)-trifluoroacetamide / BSTFA** | ≥98 %, for GC | **2331.1** | 10 g | 37,55 |
| **N,O-Bis(trimethylsilyl)-trifluoroacetamide with 1 % trimethylchlorosilane / Silyl 991** | for GC | **9935.1** | 10 ml (Septum bottle) | 76,90 |
| **1,1,1,3,3,3-Hexamethyldisilazane / HMDS** TIP | ≥98 %, for GC | **3840.3** | 10 ml | 13,45 |
| | | **3840.1** | 50 ml | 17,75 |
| | | **3840.2** | 250 ml | 36,05 |
| | | **3840.5** | 500 ml | 48,95 |
| | | **3840.4** | 1 l | 85,90 |
| **N-Methyl-N-(trimethylsilyl)-trifluoroacetamide / MSTFA** | ≥99 %, for GC | **9933.1** | 10 ml (Septum bottle) | 93,90 |
| | ≥97 %, for GC | **8007.1** | 5 g | 53,65 |
| **Trimethylchlorosilane / TMCS** | ≥99 %, for GC | **2338.1** | 25 g | 47,20 |
| **N-(Trimethylsilyl)-diethylamine / TMSDEA** | ≥98 %, for GC | **0013.1** | 25 g | 131,05 |
| **N-(Trimethylsilyl)-imidazole / TSIM** | ≥97 %, for GC | **0012.1** | 10 g | 41,85 |

## Reagents for Acylation

| Product | Purity | Art. No. | Pack Qty. | € |
|---|---|---|---|---|
| **Heptafluorobutyric acid anhydride** | ≥98 %, for GC | **0026.1** | 5 g | 89,80 |
| **Trifluoroacetic anhydride** | ≥99 %, for GC | **0027.1** | 100 g | 93,45 |

## Reagents for Alkylation/Methylation

| Product | Purity | Art. No. | Pack Qty. | € |
|---|---|---|---|---|
| **N,N-Dimethylformamide dimethyl acetal/DMF-DMA** | ≥98 % | **6870.1** | 5 ml | 24,20 |
| | | **6870.2** | 25 ml | 35,40 |
| | | **6870.3** | 100 ml | 117,20 |
| | | **6870.4** | 500 ml | 439,70 |
| **Trimethylsulfonium hydroxide in methanol** | ~0,2 M, for GC | **9934.1** | 10 ml (Septum bottle) | 119,90 |

For additional product data and safety information, see chapter Chemicals A-Z.

Septum bottle: Aluminium seal with PTFE-lined rubber disc (septum). The pierced septum is no longer absolutely air-tight, therefore we suggest to use up the content as quickly as possible and keep the vial standing upright. Otherwise the reagents come in contact with the rubber which results in their contamination to the point of making them useless.

# ROTISOLV® GC Ultra Grade Solvents

## for gaschromatographic and residue analysis

In order to monitor and analyse environmentally relevant substances such as pesticides, dioxins, furans, PAH, PCB etc. in trace analysis, solvents with exceedingly high purity specifications are required. ROTH's ROTISOLV® GC Ultra Grade solvents have been developed specially for this application area and are produced with the most sophisticated production processes. Extensive quality checks guarantee the same high-grade quality from batch to batch.

### Features:

- Highest purity
- Very low water content
- Non-volatile matter less than 2 ppm
- Quality control by means of ECD and NPD
- PAH-test
- Filtered through 0,2 µm membrane
- Bottled under protective gas

### Acetic acid ethyl ester

**ROTISOLV® ≥99,9 %, GC Ultra Grade**
For gaschromatographic residue analysis.
Ethyl acetate, Acetic ester
$C_4H_8O_2$
M 88,11 g/mol

**Danger** H225-H319-H336-EUH066

| | | | |
|---|---|---|---|
| **KK42.1** | 2,5 l | glass | 68,70 € |
| Original pack 4 x 2,5 l | | | 65,27/2,5 l |

### Acetone

**ROTISOLV® ≥99,9 %, GC Ultra Grade**
For gaschromatographic residue analysis.
2-Propanone, Dimethyl ketone
$C_3H_6O$
M 58,08 g/mol

**Danger** H225-H319-H336-EUH066

| | | | |

| **KK46.1** | 2,5 l | glass | 73,65 € |
| Original pack 4 x 2,5 l | | | 69,97/2,5 l |

▶ Detailed specifications see chapter Chemicals AZ.

# ROTISOLV®
# Pestilyse® plus Solvents

## for determination of dioxines, furanes, PCBs, pesticides, hydrocarbons and further pollutants

ROTH created this product line (ROTISOLV® Pestilyse® plus) especially to address the growing requirements in residue analysis. Several relevant parameters are specified for these solvents which allow the use in various applications. With this product line, ROTH sets the benchmark for residue analysis solvents in terms of purity and quality.

**Features:**
- Highest purity
- Controlled by FID, ECD and NPD
- PAH tested
- Tested for hydrocarbons ($C_{14}$-$C_{40}$)
- Tested for fluorescence
- Volatile impurities: max. 5 ppm
- Non-volatile impurities: max. 5 ppm

**Example specification:**

### 2-Propanol
**ROTISOLV® ≥99,9 %, Pestilyse® plus**
For determination of dioxins, furans, PCBs, pesticides, hydrocarbons etc.
Isopropanol, Isopropyl alcohol, Dimethyl carbinol, IPA, 2-Hydroxypropane
$C_3H_8O$
M 60,10 g/mol
**Danger** H225-H319-H336

**Guarantee analysis:**

| | |
|---|---|
| Assay (GC) | ≥99,9 % |
| Colour (APHA) | ≤10 |
| Water (KF) | ≤0,03 % |
| Free acid (as $CH_3COOH$) | ≤0,001 % |
| Free alkali (as $NH_3$) | ≤0,0001 % |
| Evaporation residue | ≤0,0003 % |
| GC/ECD suitability (as heptachloro epoxide) | ≤10 ng/l |
| GC/ECD dioxins, furans and PCBs (as lindane) | ≤5 ng/l |
| GC/ECD pesticides (as lindane) | ≤5 ng/l |
| GC/NPD pesticides (as parathion) | ≤10 ng/l |
| PAH-test (less than 2 ppb, HPLC) | complies |
| Oil index (any hydrocarbon $C_{10}$-$C_{40}$) | ≤0,1 mg/l |
| Fluorescence (as quinine): | |
| 254 nm | ≤1 ppb |
| 365 nm | ≤1 ppb |
| Transmission: | |
| 220 nm | ≥80 % |

## ROTISOLV® Pestilyse® plus Solvents

| Product | Purity | Art. No. | Pack Qty. | Pack. | € |
|---|---|---|---|---|---|
| **Acetic acid ethyl ester** | ≥99,9 %, Pestilyse® plus | **7565.1** | 2,5 l | glass | 65,50 |

| **Trichloromethane/ Chloroform** | ≥99,9 %, Pestilyse® plus | **7554.1** | 2,5 l | glass | 72,60 |

For additional product data and safety information, see chapter Chemicals A-Z.

# ROTISOLV®
# Pestilyse® Solvents

## for residue and environmental analysis

Field of application: 'pesticide residue analysis' (via ECD, PND detection) in sectors environment, foodstuffs, water, etc.
ROTISOLV® Pestilyse® solvents are ideal as extraction agents and for sample preparation.

**Advantage:**
- Highest purity
- Quality control via ECD and PND
- Non-volatile parts: 5 ppm or less
- Specially purified for application in pesticide residue analysis

### ROTISOLV® Pestilyse® Solvents

| Product | Purity | Art. No. | Pack Qty. | Pack. | € |

can be found on the Internet next to the product description.

# ROTISOLV® Headspace Grade Solvents

## for analyses of organic volatile impurities (O.V.I.)

Headspace gas chromatography is a major quality control procedure particularly in the pharmaceutical and food industry. The regulations for this method can be found both in the European as well as the American Pharmacopoeia.
**High-boiling solvents of excellent purity**, which show no background due to organic volatile impurities on the GC-columns, are required for determining solvent residue.

**Advantage:**
- Highest purity (mostly ≥99,99 %)
- High boiling point
- Non volatile matter: ≤0,001 %
- Tested for headspace suitability
- Bottled under protective gas
- Microfiltered

**Example specification:**

### Dimethyl sulphoxide (DMSO)
**ROTISOLV® ≥99,99 %, Headspace Grade**
For determination of solvent residues (O.V.I.)
DMSO
$C_2H_6OS$
M 78,13 g/mol

**Guarantee analysis:**

| | |
|---|---|
| Assay (GC) | ≥99,99 % |
| Colour (APHA) | ≤5 |
| Water (KF) | ≤0,03 % |
| Free acid (as $CH_3COOH$) | ≤0,002 % |
| Free alkali (as $NH_3$) | ≤0,0005 % |
| Refractive index (20 °C) | 1,477-1,480 |
| Non volatile matter | ≤0,001 % |
| Melting point | ≥18 °C |
| UV-Cutoff | 190-265 nm |
| Transmission: | |
| 400 nm | ≥98 % |
| 350 nm | ≥95 % |
| 300 nm | ≥85 % |
| 275 nm | ≥60 % |
| 268 nm | ≥30 % |
| Headspace suitability test for O.V.I. | complies |

### N,N-Dimethylacetamide (DMA)
**ROTISOLV® ≥99,99 %, Headspace Grade**
For determination of solvent residues (O.V.I.)
DMA, Acetic acid dimethylamide
$C_4H_9NO$
M 87,12 g/mol

**Danger** H360D-H312+H332-H319

| | | | |
|---|---|---|---|
| **HN45.1** | 1 l | glass | 244,60 € |
| Original pack 6 x 1 l | | | 232,37/1 l |

### N,N-Dimethylformamide (DMF)
**ROTISOLV® ≥99,99 %, Headspace Grade**
For determination of solvent residues (O.V.I.)
DMF
$C_3H_7NO$
M 73,10 g/mol

**Danger** H226-H360D-H312+H332-H319

| | | | |
|---|---|---|---|
| **HN46.1** | 1 l | glass | 225,65 € |
| Original pack 6 x 1 l | | | 214,37/1 l |

### 1,3-Dimethyl-2-imidazolidinone (DMI)
**ROTISOLV® ≥99,5 %, Headspace Grade**
For determination of solvent residues (O.V.I.)
DMEU, N,N'-Dimethylethylene urea, DMI
$C_5H_{10}N_2O$
M 114,15 g/mol

**Danger** H302-H318-H373

| | | | |
|---|---|---|---|
| **HN48.1** | 500 ml | glass | 901,95 € |

### Dimethyl sulphoxide (DMSO)
**ROTISOLV® ≥99,99 %, Headspace Grade**
For determination of solvent residues (O.V.I.)
DMSO
$C_2H_6OS$
M 78,13 g/mol

| | | | |
|---|---|---|---|
| **HN47.1** | 1 l | glass | 234,25 € |
| Original pack 6 x 1 l | | | 222,54/1 l |

# Thin Layer Chromatography

Although the principle of thin-layer chromatography (TLC) is more than a century old, it did not make its breakthrough as an analytical method until about 50 years ago.
Thanks to the development of new sorbents and supports, as well as increasing instrumentation and automation, TLC has become a versatile separation method. It is used both in qualitative analysis and in quantitative analysis.
Applications range from simple manual separation processes in classic TLC to automated processes in HPTLC (high performance thin layer chromatography).

**Advantages of thin layer chromatography:**
- Higher sample throughput in less time
- Suitable for screening tests
- The ready-to-use TLC layer functions as a data storage device for separation results
- Pilot process for HPLC
- The separated substances can be used later for further analysis (e.g. IR, MS)
- By switching the mobile and the stationary phases, the separation process can be optimised quickly and cost-efficient

## Ready-to-use layers for TLC at a glance

| Code | Layer |
|---|---|
| **Standard silica** | |
| ADAMANT | silica 60 with improved binder system and optimized particle size distribution |
| SIL G | silica 60, standard grade |
| **Unmodified silica for HPTLC** | |
| Nano-SIL | nano silica 60, particle size 2-10 µm, standard grade |
| **Modified silica for TLC/HPTLC** | |
| Nano-SIL DIOL | diol-modified nano silica |
| Nano-SIL $NH_2$ | amino-modified nano silica |
| Nano-SIL CN | cyano-modified nano silica |
| RP-2 / $UV_{254}$ | silanised silica = dimethyl-modified silica 60 |
| R-18 W/$UV_{254}$ | nano silica with partial octadecyl modification, wetable with water |
| **Aluminium oxide** | |
| ALOX N | aluminium oxide |
| **Cellulose** | |
| CEL 300 | native fibrous cellulose MN 300 |
| CEL 400 | microcrystalline cellulose MN 400 (AVICEL®) |

## Supports for ready-to-use TLC layers:

| Physical/chemical properties | Glass plates | POLYGRAM® Polyester foils | ALUGRAM®/ALUGRAM® XTRA Aluminium foils |
|---|---|---|---|
| Thickness | ~1,3 mm | ~0,2 mm | ~0,15 mm |
| Torsional stability | ideal | low | relatively high |
| Temperature stability | high | max. 185 °C | high |
| Can be cut with scissors | no | yes | yes |
| Resistance to solvents | high | high | high |
| Resistance to mineral acids and concentrated ammonia | high | high | low |
| Suitable for aqueous tracing reagents | depending on phase | ideally suited | ALUGRAM®: limited<br>ALUGRAM®Xtra: ideally suited |

# ADAMANT TLC Plates with Standard Silica Gel

**Silica gel 60**
With improved binder system and optimized grain distribution.

- Spec. surface: approx. 500 $m^2/g$
- Medium pore width: 60 Å
- Spec. pore volume: 0,75 ml/g
- Particle size: 5-17 µm

**Adamant TLC plates are unique for their:**
- Outstanding hardness and abrasion resistance due to an optimized binder system
- Increased separation efficiency due to an optimized particle size distribution
- High suitability for trace analysis resulting from a UV indicator with increased brilliance and a low-noise background of the layer

## TLC-ready-to-use layers, ADAMANT

Glass plate, silica gel 60 layer

| Plate format | Layer thickness | Art. No. | Pack Qty. | € |
|---|---|---|---|---|
| 5 x 10 cm | 0,25 mm | **N086.1** | 50 | 119,50 |
| 10 x 10 cm | 0,25 mm | **N087.1** | 25 | 66,90 |
| 20 x 20 cm | 0,25 mm | **N088.1** | 25 | 155,00 |

## TLC-ready-to-use layers, ADAMANT $UV_{254}$

Glass plate, silica gel 60 layer, with fluorescence indicator

| Plate format | Layer thickness | Art. No. | Pack Qty. | € |
|---|---|---|---|---|
| 5 x 10 cm | 0,25 mm | **N089.1** | 50 | 119,50 |
| 5 x 10 cm | 0,25 mm BIG PACK | **N089.2** | 200 (4 x 50) | 259,00 |
| 5 x 20 cm | 0,25 mm | **N090.1** | 100 | 199,00 |
| 10 x 10 cm | 0,25 mm | **N091.1** | 25 | 66,90 |
| 10 x 20 cm | 0,25 mm | **N092.1** | 50 | 179,00 |
| 20 x 20 cm | 0,25 mm | **N093.1** | 25 | 155,00 |

# TLC Plates with Standard Silica Gel

- Spec. surface: approx. 500 $m^2/g$
- Medium pore width: 60 Å
- Spec. pore volume: 0,75 ml/g
- Particle size: 5-17 µm

### TLC-ready-to-use layers SIL G-25
Glass plate, silica gel 60 layer

| Plate format | Layer thickness | Art. No. | Pack Qty. | € |
|---|---|---|---|---|
| 5 x 10 cm | 0,25 mm | **K795.1** | 50 | 109,00 |
| 5 x 20 cm | 0,25 mm | **K796.1** | 100 | 199,00 |
| 10 x 20 cm | 0,25 mm | **K797.1** | 50 | 179,00 |
| 20 x 20 cm | 0,25 mm | **K798.1** | 25 | 150,00 |

### TLC-ready-to-use layers SIL G-25 / $UV_{254}$
Glass plate, silica gel 60 layer, with fluorescence indicator

| Plate format | Layer thickness | Art. No. | Pack Qty. | € |
|---|---|---|---|---|
| 5 x 10 cm | 0,25 mm | **K799.1** | 50 | 119,50 |
| 5 x 20 cm | 0,25 mm | **K800.1** | 100 | 199,00 |
| 10 x 10 cm | 0,25 mm | **K801.1** | 25 | 53,90 |
| 10 x 20 cm | 0,25 mm | **K802.1** | 50 | 179,00 |
| 20 x 20 cm | 0,25 mm | **K803.1** | 25 | 137,50 |

### TLC-ready-to-use foil ALUGRAM® SIL G
Aluminium foil, silica gel 60 layer

| Plate format | Layer thickness | Art. No. | Pack Qty. | € |
|---|---|---|---|---|
| 5 x 10 cm | 0,2 mm | **N726.1** | 50 | 52,90 |
| 5 x 20 cm | 0,2 mm | **N727.1** | 50 | 66,90 |
| 20 x 20 cm | 0,2 mm | **N728.1** | 25 | 117,50 |

### TLC-ready-to-use foil ALUGRAM® SIL G / $UV_{254}$
Aluminium foil, silica gel 60 layer, with fluorescence indicator

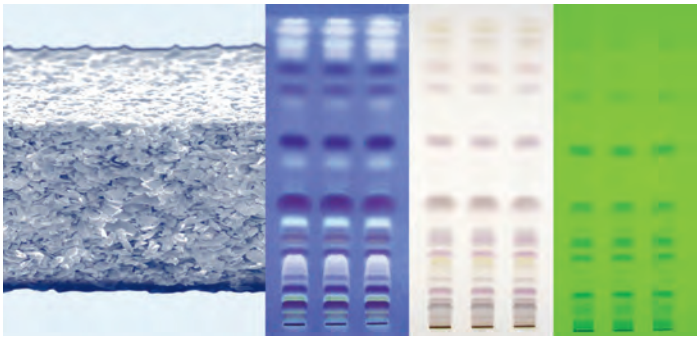
| Plate format | Layer thickness | Art. No. | Pack Qty. | € |
|---|---|---|---|---|
| 4 x 8 cm | 0,2 mm | **N729.1** | 50 | 34,90 |
| | BIG PACK | **N729.2** | 200 (4 x 50) | 129,00 |
| 5 x 7,5 cm | 0,2 mm | **1334.1** | 20 | 22,50 |
| 5 x 10 cm | 0,2 mm | **N730.1** | 50 | 52,90 |
| 10 x 20 cm | 0,2 mm | **N731.1** | 20 | 59,90 |
| 20 x 20 cm | 0,2 mm | **N732.1** | 25 | 105,50 |

### TLC-ready-to-use foil POLYGRAM® SIL G
Polyester foil, silica gel 60 layer

| Plate format | Layer thickness | Art. No. | Pack Qty. | € |
|---|---|---|---|---|
| 4 x 8 cm | 0,2 mm | **N733.1** | 50 | 34,90 |
| 5 x 20 cm | 0,2 mm | **N734.1** | 50 | 66,90 |
| 20 x 20 cm | 0,2 mm | **N735.1** | 25 | 117,50 |

### TLC-ready-to-use foil POLYGRAM® SIL G / $UV_{254}$
Polyester foil, silica gel 60 layer, with fluorescence indicator

| Plate format | Layer thickness | Art. No. | Pack Qty. | € |
|---|---|---|---|---|
| 4 x 8 cm | 0,2 mm | **0816.1** | 50 | 34,50 |
| 4 x 8 cm | 0,2 mm BIG PACK | **0816.2** | 200 (4 x 50) | 125,50 |
| 5 x 20 cm | 0,2 mm | **N736.1** | 50 | 66,50 |
| 20 x 20 cm | 0,2 mm | **N737.1** | 25 | 105,50 |



# ALUGRAM® Xtra SIL G TLC ready-to-use Foils with Standard Silica Gels

**Silica gel 60**
Improved binder system for enhanced cutting and wettability.

- Spec. surface: approx. 500 $m^2/g$
- Medium pore width: 60 Å
- Spec. pore volume: 0,75 ml/g
- Particle size: 5-17 µm

The ready-to-use foils are produced with a special, highly polymeric binder, which is resistant towards almost all organic solvents and aggressive visualisation reagents. It is also completely stable in pure aqueous eluents.

**Features:**
- Easy cutting of foils, **no flaking of silica**
- Outstanding wettability, precise colourisation even with 100 % aqueous eluents
- Excellent separation efficiency and reproducibility from lot to lot

### TLC ready-to-use Foil ALUGRAM® Xtra SIL G
Aluminium foil, silica gel 60 layer

| Plate format | Layer thickness | Art. No. | Pack Qty. | € |
|---|---|---|---|---|
| 5 x 7,5 cm | 0,2 mm | **3868.1** | 20 | 22,90 |
| 5 x 10 cm | 0,2 mm | **3869.1** | 50 | 53,90 |
| 5 x 20 cm | 0,2 mm | **3871.1** | 50 | 66,90 |
| 20 x 20 cm | 0,2 mm | **3873.1** | 25 | 117,50 |

### TLC ready-to-use Foil ALUGRAM® Xtra SIL G / $UV_{254}$
Aluminium foil, silica gel 60 layer, with fluorescence indicator

| Plate format | Layer thickness | Art. No. | Pack Qty. | € |
|---|---|---|---|---|
| 4 x 8 cm | 0,2 mm | **3874.1** | 50 | 34,50 |
| 5 x 7,5 cm | 0,2 mm | **3875.1** | 20 | 22,50 |
| 5 x 10 cm | 0,2 mm | **3876.1** | 50 | 53,90 |
| 5 x 20 cm | 0,2 mm | **3877.1** | 50 | 66,90 |
| 10 x 20 cm | 0,2 mm | **3878.1** | 20 | 59,90 |
| 20 x 20 cm | 0,2 mm | **3879.1** | 25 | 105,50 |

# TLC Plates for Preparative Applications

These TLC-plates are particularly suitable for separating larger sample amounts due to the layer thickness of 1 mm and 2 mm respectively.

**Standard Silica Gel:**
- Spec. surface: approx. 500 $m^2/g$
- Medium pore width: 60 Å
- Spec. pore volume: 0,75 ml/g
- Particle size: 5-17 µm

### TLC ready-to-use layers SIL G-100
Glass plates, silica gel layer 60

| Plate format | Layer thickness | Art. No. | Pack Qty. | € |
|---|---|---|---|---|
| 20 x 20 cm | 1,00 mm | **3375.1** | 15 | 215,00 |

### TLC ready-to-use layers SIL G-100 / $UV_{254}$
Glass plates, silica gel layer 60, with fluorescence indicator

| Plate format | Layer thickness | Art. No. | Pack Qty. | € |
|---|---|---|---|---|
| 20 x 20 cm | 1,00 mm | **3377.1** | 15 | 215,00 |

### TLC ready-to-use layers SIL G-200
Glass plates, silica gel layer 60

| Plate format | Layer thickness | Art. No. | Pack Qty. | € |
|---|---|---|---|---|
| 20 x 20 cm | 2,00 mm | **CN40.1** | 12 | 225,00 |

### TLC ready-to-use layers SIL G-200 / $UV_{254}$
Glass plates, silica gel layer 60, with fluorescence indicator

| Plate format | Layer thickness | Art. No. | Pack Qty. | € |
|---|---|---|---|---|
| 20 x 20 cm | 2,00 mm | **CN41.1** | 12 | 225,00 |

### HPTLC-ready-to-use layers RP-18 W / $UV_{254}$
Glass plate, modified silica gel 60 layer, with fluorescence indicator

| Plate format | Layer thickness | Art. No. | Pack Qty. | € |
|---|---|---|---|---|
| 20 x 20 cm | 1,00 mm | **1886.1** | 15 | 539,00 |

▶ Silica gel-60 - for preparing TLC-plates see page 1579

# HPTLC Plates with Nano Silica Gel

### High Performance Thin Layer Chromatography Plates

**Nano silica gel**
- Spec. surface: approx. 500 $m^2/g$
- Medium pore width: 60 Å
- Spec. pore volume: 0,75 ml/g
- Particle size: 2-10 µm

**Advantages compared to standard plates:**
- Higher separation effect
- Shorter separation times and distances
- Smaller sample amounts of 0,01-0,1 µl (10-100 nanolitre)
- Lower diffusion due to extremely small amounts
- Higher detection sensitivity

### HPTLC-ready-to-use layers Nano-SIL-20
Glass plate, nano silica gel 60 layer

| Plate format | Layer thickness | Art. No. | Pack Qty. | € |
|---|---|---|---|---|
| 5 x 5 cm | 0,2 mm | **N080.1** | 100 | 209,00 |
| 10 x 10 cm | 0,2 mm | **N081.1** | 25 | 159,00 |
| 10 x 20 cm | 0,2 mm | **N082.1** | 50 | 375,00 |

### HPTLC-ready-to-use layers Nano-SIL-20 / $UV_{254}$
Glass plate, nano silica gel 60 layer, with fluorescence indicator

| Plate format | Layer thickness | Art. No. | Pack Qty. | € |
|---|---|---|---|---|
| 5 x 5 cm | 0,2 mm | **N083.1** | 100 | 209,00 |
| 10 x 10 cm | 0,2 mm | **N084.1** | 25 | 139,00 |
| 10 x 20 cm | 0,2 mm | **N085.1** | 50 | 379,00 |

### HPTLC-ready-to-use foil ALUGRAM® Nano-SIL G
Aluminium foil, nano silica gel 60 layer

| Plate format | Layer thickness | Art. No. | Pack Qty. | € |
|---|---|---|---|---|
| 5 x 20 cm | 0,2 mm | **AE82.1** | 50 | 137,50 |
| 20 x 20 cm | 0,2 mm | **AE83.1** | 25 | 225,00 |

### HPTLC-ready-to-use foil ALUGRAM® Nano-SIL G / $UV_{254}$
Aluminium foil, nano silica gel 60 layer, with fluorescence indicator

| Plate format | Layer thickness | Art. No. | Pack Qty. | € |
|---|---|---|---|---|
| 5 x 20 cm | 0,2 mm | **AE84.1** | 50 | 137,50 |
| 20 x 20 cm | 0,2 mm | **AE85.1** | 25 | 225,00 |

### HPTLC-ready-to-use foil ALUGRAM® Xtra Nano-SIL G
Aluminium foil, nano silica gel 60 layer

| Plate format | Layer thickness | Art. No. | Pack Qty. | € |
|---|---|---|---|---|
| 5 x 20 cm | 0,2 mm | **3863.1** | 50 | 137,50 |
| 20 x 20 cm | 0,2 mm | **3895.1** | 25 | 225,00 |

### HPTLC-ready-to-use foil ALUGRAM® Xtra Nano-SIL G / $UV_{254}$
Aluminium foil, nano silica gel 60 layer, with fluorescence indicator

| Plate format | Layer thickness | Art. No. | Pack Qty. | € |
|---|---|---|---|---|
| 5 x 20 cm | 0,2 mm | **3952.1** | 50 | 137,50 |
| 20 x 20 cm | 0,2 mm | **3988.1** | 25 | 225,00 |

# Diol-modified HPTLC Silica Layers

**Diol modification,** carbon content 5,5 %
- pH stability 2-8
- Layer can be equally well wetted by pure water and organic solvents, respectively.

**Order of polarity:**
silica > **DIOL** > $NH_2$ > CN > RP-2 > RP-18 W

**Recommended application:** steroids, pesticides and plant constituents; for critical separations an alternative to silica, since it is less sensitive to the water content of the environment; leads to more reproducible results compared to silica.

### HPTLC-ready-to-use Nano-SIL DIOL / $UV_{254}$
Glass plate, diol modified silica gel 60 layer, with fluorescence indicator

| Plate format | Layer thickness | Art. No. | Pack Qty. | € |
|---|---|---|---|---|
| 10 x 10 cm | 0,20 mm | **4699.1** | 25 | 325,00 |

# Amino-modified HPTLC Silica Layers

**Aminopropyl modification,** carbon content 3,5 %
- pH stability: 2-8
- Layer can be equally well wetted by pure water and organic solvents, respectively.

**Order of polarity:**
silica > DIOL > **$NH_2$** > CN > RP-2 > RP-18 W

**Recommended application:** vitamins, sugars, steroids, purine derivatives, xanthines, phenols, nucleotides and pesticides.

### HPTLC-ready-to-use Nano-SIL $NH_2$
Glass plate, amino modified silica gel 60 layer

| Plate format | Layer thickness | Art. No. | Pack Qty. | € |
|---|---|---|---|---|
| 10 x 10 cm | 0,20 mm | **3500.1** | 25 | 325,00 |

### HPTLC-ready-to-use Nano-SIL $NH_2$ / $UV_{254}$
Glass plate, amino modified silica gel 60 layer, with fluorescence indicator

| Plate format | Layer thickness | Art. No. | Pack Qty. | € |
|---|---|---|---|---|
| 10 x 10 cm | 0,20 mm | **3652.1** | 25 | 325,00 |
| 10 x 20 cm | 0,20 mm | **3660.1** | 25 | 479,00 |

### HPTLC-ready-to-use foil ALUGRAM® Nano-SIL $NH_2$ / $UV_{254}$
Aluminium foil, amino modified silica gel 60 layer, with fluorescence indicator

| Plate format | Layer thickness | Art. No. | Pack Qty. | € |
|---|---|---|---|---|
| 4 x 8 cm | 0,15 mm | **3723.1** | 50 | 179,00 |
| 20 x 20 cm | 0,15 mm | **3767.1** | 25 | 489,00 |

# Cyano-modified HPTLC Silica Layers

**Cyanopropyl modification,** carbon content 5,5 %
- pH stability 2-8
- Normal phase or reversed phase separation modes depending on the polarity of the developing solvent

**Order of polarity:**
silica > DIOL > $NH_2$ > **CN** > RP-2 > RP-18 W

**Recommended application:** steroid hormones, phenols, preservatives

### HPTLC-ready-to-use Nano-SIL CN / $UV_{254}$
Glass plate, cyano modified silica gel 60 layer, with fluorescence indicator

| Plate format | Layer thickness | Art. No. | Pack Qty. | € |
|---|---|---|---|---|
| 10 x 10 cm | 0,20 mm | **4554.1** | 25 | 319,00 |
| 10 x 20 cm | 0,20 mm | **4569.1** | 25 | 489,00 |

### HPTLC-ready-to-use foil ALUGRAM® Nano-SIL CN / $UV_{254}$
Aluminium foil, cyano modified silica gel 60 layer, with fluorescence indicator

| Plate format | Layer thickness | Art. No. | Pack Qty. | € |
|---|---|---|---|---|
| 4 x 8 cm | 0,15 mm | **4598.1** | 50 | 179,00 |

# Dimethyl-modified TLC Silica Layers

**Silanized silica 60 with dimethylmodification**, carbon content 4 %

- specific surface (BET): ~500 $m^2/g$
- mean pore size: 60 Å
- specific pore volume: 0,75 ml/g
- particle size 5-17 µm
- pH stability: 2-10

**Order of polarity:**
silica > DIOL > $NH_2$ > CN > **RP-2** > RP-18 W

**Recommended application:**
active plant constituents, steroids

### TLC-ready-to-use layers RP-2 / $UV_{254}$
Glass plate, dimethyl modified silica gel 60 layer, with fluorescence indicator

| Plate format | Layer thickness | Art. No. | Pack Qty. | € |
|---|---|---|---|---|
| 10 x 10 cm | 0,25 mm | **3496.1** | 25 | 155,50 |
| 10 x 20 cm | 0,25 mm | **3498.1** | 50 | 339,00 |
| 20 x 20 cm | 0,25 mm | **3499.1** | 25 | 249,00 |

### TLC-ready-to-use foil ALUGRAM® RP-2 / $UV_{254}$
Aluminium foil, dimethyl modified silica gel 60 layer, with fluorescence indicator

| Plate format | Layer thickness | Art. No. | Pack Qty. | € |
|---|---|---|---|---|
| 4 x 8 cm | 0,15 mm | **3590.1** | 50 | 102,90 |
| 20 x 20 cm | 0,15 mm | **3591.1** | 25 | 239,00 |

# Octadecyl-modified HPTLC Silica Layers

**Reversed Phase (RP) plates**
- carbon content 14 %
- Partial octadecyl ($C_{18}$) modification
- wettable with water

**Order of polarity:**
silica > DIOL > $NH_2$ > CN > RP-2 > **RP-18 W**

**Recommended application:** aminophenols, barbiturates, preservatives, nucleobases, polycyclic aromatic hydrocarbons, steroids, tetracyclines, plasticizers (phthalates)

### HPTLC-ready-to-use layers RP-18 W / $UV_{254}$

Glass plate, modified silica gel 60 layer, with fluorescence indicator

| Plate format | Layer thickness | Art. No. | Pack Qty. | € |
|---|---|---|---|---|
| 5 x 20 cm | 0,25 mm | **CP23.1** | 50 | 305,00 |
| 10 x 10 cm | 0,25 mm | **3380.1** | 25 | 227,50 |
| 10 x 20 cm | 0,25 mm | **3383.1** | 50 | 519,00 |
| 20 x 20 cm | 0,25 mm | **3399.1** | 25 | 425,00 |
| 20 x 20 cm | 1,00 mm | **1886.1** | 15 | 539,00 |

### HPTLC-ready-to-use foil ALUGRAM® RP-18 W / $UV_{254}$

Aluminium foil, modified silica gel 60 layer, with fluorescence indicator

| Plate format | Layer thickness | Art. No. | Pack Qty. | € |
|---|---|---|---|---|
| 4 x 8 cm | 0,15 mm | **CP24.1** | 50 | 109,00 |
| 5 x 10 cm | 0,15 mm | **3434.1** | 50 | 131,50 |
| 5 x 20 cm | 0,15 mm | **CP25.1** | 50 | 245,00 |
| 10 x 10 cm | 0,15 mm | **3436.1** | 25 | 127,50 |
| 20 x 20 cm | 0,15 mm | **3487.1** | 25 | 329,00 |

# TLC Plates with Aluminium Oxide

**Aluminium oxide**
- Spec. surface: approx. 200 $m^2/g$
- Indicator: manganese-activated zinc silicate
- Mean pore width: 60 Å
- Inert organic binder
- **Tip:** We recommend to activate aluminium oxide layers before use by heating 10 minutes at 120 °C.

**Recommended application:** terpenes, alkaloids, steroids, aliphatic and aromatic compounds

### TLC-ready-to-use foil ALUGRAM® ALOX N / $UV_{254}$

Aluminium foil, aluminium oxide layer, with fluorescence indicator

| Plate format | Layer thickness | Art. No. | Pack Qty. | € |
|---|---|---|---|---|
| 5 x 20 cm | 0,2 mm | **N738.1** | 50 | 86,50 |
| 20 x 20 cm | 0,2 mm | **N739.1** | 25 | 127,50 |

### TLC-ready-to-use foil POLYGRAM® ALOX N / $UV_{254}$

Polyester foil, aluminium oxide layer, with fluorescence indicator

| Plate format | Layer thickness | Art. No. | Pack Qty. | € |
|---|---|---|---|---|
| 4 x 8 cm | 0,2 mm | **0817.1** | 50 | 38,90 |
| 5 x 20 cm | 0,2 mm | **N740.1** | 50 | 86,90 |
| 20 x 20 cm | 0,2 mm | **N741.1** | 25 | 127,50 |

▶ Reference substances for TLC see page 1545

# TLC Plates with Cellulose MN 300

## Native fibrous cellulose

- Fibre length (95 %): 2-20 µm
- Average degree of polymerisation: 400-500
- Specific surface acc. to Blaine: 15000 $cm^2/g$

**Recommended application:** partition chromatography of polar substances such as amino acids, carboxylic acids or carbohydrates

### TLC-ready-to-use layers CEL 300

Glass plate, cellulose MN 300 layer

| Plate format | Layer thickness | Art. No. | Pack Qty. | € |
|---|---|---|---|---|
| 5 x 20 cm | 0,1 mm | **1320.1** | 100 | 275,00 |
| 10 x 20 cm | 0,1 mm | **1321.1** | 50 | 225,00 |
| 20 x 20 cm | 0,1 mm | **1322.1** | 25 | 159,00 |

### TLC-ready-to-use layers CEL 300 / $UV_{254}$

Glass plate, cellulose MN 300 layer, with fluorescence indicator

| Plate format | Layer thickness | Art. No. | Pack Qty. | € |
|---|---|---|---|---|
| 5 x 20 cm | 0,1 mm | **1323.1** | 100 | 275,00 |
| 10 x 20 cm | 0,1 mm | **1324.1** | 50 | 225,00 |
| 20 x 20 cm | 0,1 mm | **1325.1** | 25 | 159,00 |

### TLC-ready-to-use foil POLYGRAM® CEL 300

Polyester foil, cellulose MN 300 layer

| Plate format | Layer thickness | Art. No. | Pack Qty. | € |
|---|---|---|---|---|
| 4 x 8 cm | 0,1 mm | **0818.1** | 50 | 38,50 |

### TLC-ready-to-use foil POLYGRAM® CEL 300 / $UV_{254}$

Polyester foil, cellulose MN 300 layer, with fluorescence indicator

| Plate format | Layer thickness | Art. No. | Pack Qty. | € |
|---|---|---|---|---|
| 5 x 20 cm | 0,1 mm | **N742.1** | 50 | 87,90 |
| 20 x 20 cm | 0,1 mm | **N743.1** | 25 | 139,00 |

# TLC Plates with Cellulose MN 400 (AVICEL®)

## Microcrystalline cellulose

- Prepared by hydrolysis of high puritiy cellulose with HCl
- Mean degree of polymerisation: 40-200

**Recommended application:** carboxylic acids, lower alcohols, urea and purine derivates

### TLC-ready-to-use layers CEL 400

Glass plate, cellulose MN 400 (AVICEL®) layer

| Plate format | Layer thickness | Art. No. | Pack Qty. | € |
|---|---|---|---|---|
| 10 x 20 cm | 0,1 mm | **1326.1** | 50 | 219,00 |
| 20 x 20 cm | 0,1 mm | **1327.1** | 25 | 159,00 |

### TLC-ready-to-use layers CEL 400 / $UV_{254}$

Glass plate, cellulose MN 400 (AVICEL®) layer, with fluorescence indicator

| Plate format | Layer thickness | Art. No. | Pack Qty. | € |
|---|---|---|---|---|
| 10 x 20 cm | 0,1 mm | **1328.1** | 50 | 225,00 |
| 20 x 20 cm | 0,1 mm | **1329.1** | 25 | 159,00 |

### TLC-ready-to-use foil POLYGRAM® CEL 400

Polyester foil, cellulose MN 400 (AVICEL®) layer

| Plate format | Layer thickness | Art. No. | Pack Qty. | € |
|---|---|---|---|---|
| 5 x 20 cm | 0,1 mm | **1330.1** | 50 | 89,50 |
| 20 x 20 cm | 0,1 mm | **1331.1** | 25 | 139,00 |

### TLC-ready-to-use foil POLYGRAM® CEL 400 / $UV_{254}$

Polyester foil, cellulose MN 400 (AVICEL®) layer, with fluorescence indicator

| Plate format | Layer thickness | Art. No. | Pack Qty. | € |
|---|---|---|---|---|
| 5 x 20 cm | 0,1 mm | **1332.1** | 50 | 89,50 |
| 20 x 20 cm | 0,1 mm | **1333.1** | 25 | 139,00 |

# Silica Gel 60 for TLC

Silica gels are the most important base material for thin layer chromatography. We therefore offer a range of specially selected silica gels 60 for preparing your own TLC-plates. Our program ranges from G-types (with gypsum) to a P-type (for preparative applications).

- Spec. surface: ~400-500 $m^2/g$
- Mean pore diameter: 60 Å
- Pore volume: ~0,8 ml/g
- Particle size: 0-20 µm or 0-40 µm (preparative)
- Loss on drying: <9 %
- pH-value (5 % suspension): ~7

## Silica Gel 60

| Product | Purity | Application | Art. No. | Pack Qty. | € |
|---|---|---|---|---|---|
| **Silica gel 60 G** | for TLC (with gypsum) | For preparation of TLC plates. | **CN44.3** | 250 g | 29,90 |
| | | | **CN44.1** | 500 g | 52,90 |
| | | | **CN44.2** | 1 kg | 88,90 |
| **Silica gel 60 G/$F_{254}$** | for TLC (with gypsum) | For preparation of TLC plates. | **CN45.3** | 250 g | 31,90 |
| | | | **CN45.1** | 500 g | 59,90 |
| | | | **CN45.2** | 1 kg | 109,50 |
| **Silica gel 60 P/$F_{254}$** | for preparative TLC | For preparation of TLC plates. | **CN47.3** | 250 g | 31,50 |
| | | | **CN47.1** | 500 g | 53,90 |
| | | | **CN47.2** | 1 kg | 90,50 |

For additional product data and safety information, see chapter Chemicals A-Z.

TIP

**Coating of DC-Plates with Silica Gel G:**

Suspend 25 g Silica Gel G in 50 ml of distilled water under frequent agitation. The fluid suspension will harden after a short time, due to the amount of gypsum, and can immediately be applied to a glass plate that is free of grease.
The plates should be rested for about 10 minutes until the surface is completely dim. Afterwards, preferably after predrying the plates exposed to air over night, the plates are dried (activated) for 30 minutes at 105 - 110 °C in a drying cabinet.

Until usage the plates should be stored in a desiccator above a desiccant like Silica Gel Orange (Art. No. P077).

# TLC Spray Solutions

ROTH's ready-to-use spray solutions make thin-layer chromatography operations considerably easier.
In case of these ready-to-use spray solutions the staining/derivative reagent was dissolved in ethanol, 2-propanol or in water.

### Aniline phthalate spray solution
**for TLC**

Ready-to-use spray solution for detection of reducing sugars.
0,9 ml Anilin and 1,66 g Phthalic acid dissolved in 100 ml ethanol / 2-propanol (1/1 v/v).

**Danger** H225-H373-H319-H336-EUH208

| | | | |
|---|---|---|---|
| **CP35.1** | 100 ml | glass | 38,90 € |

### 2',7'-Dichlorofluorescein spray solution
**for TLC**

Ready-to-use spray solution for detection of Lipids (saturated, unsaturated).
0,2 g 2',7'- Dichlorofluorescein dissolved in 100 ml 2-propanol.

**Danger** H225-H319-H336

| | | | |
|---|---|---|---|
| **CP36.1** | 100 ml | glass | 37,50 € |

### 4-(Dimethylamino) benzaldehyde spray solution
**for TLC**

Ready-to-use spray solution for detection of terpenes, sugars and steroids.
0,5 g 4-(Dimethylamino)-benzaldehyde dissolved in 100 ml 2-propanol.

**Danger**H225-H319-H336

| | | | |
|---|---|---|---|
| **CP38.1** | 100 ml | glass | 37,50 € |

### Dragendorff-Munier spray solution
**for TLC**

Ready-to-use spray solution for detection of nitrogen compounds and alkaloids.
1 % basic Bismuth nitrate, 16,5 % tartaric acid,
20 % potassium iodide dissolved in water.

**Warning** H319

| | | | |
|---|---|---|---|
| **CP33.1** | 100 ml | glass | 37,50 € |

## Iron(III) chloride spray solution
**for TLC**
Ready-to-use spray solution for detection of acetylsalicylic acid and paracetamol.
2 g Iron(III) chloride dissolved in 100 ml water.

**Warning** H290-H317-H319

**Type analysis:**
TLC-application. .....complies

| | | | |
|---|---|---|---|
| **CP34.1** | 100 ml | glass | 36,90 € |

## Molybdatophosphoric acid spray solution
**for TLC**
Ready-to-use spray solution for detection of reducing compound lipids, fatty acids and steroids.
4 g Molybdatophosphoric acid dissolved in 100 ml ethanol.

**Danger** H225-H315-H318

| | | | |
|---|---|---|---|
| **CP31.1** | 100 ml | glass | 37,50 € |

## Ninhydrin spray solution
**for TLC**
Ready-to-use spray solution for detection of amino acids, amines and amino sugars.
0,5 g Ninhydrin dissolved in 100 ml ethanol.

**Danger** H225

| | | | |
|---|---|---|---|
| **CP30.1** | 100 ml | glass | 36,90 € |

## Rhodamine B-spray solution
**for TLC**
Ready-to-use spray solution for detection of lipids.
0,1 g Rhodamine B dissolved in 100 ml ethanol.

**Danger** H225-H319

| | | | |
|---|---|---|---|
| **CP37.1** | 100 ml | glass | 36,90 € |

## Rubeanic acid spray solution
**for TLC**
Ready-to-use spray solution for detection of heavy metal ions.
0,2 g Rubeanic acid dissolved in 100 ml ethanol.

**Danger** H225

| | | | |
|---|---|---|---|
| **CP32.1** | 100 ml | glass | 36,90 € |

# Detection Reagents for TLC

Staining and derivatisation reagents for preparing your own spray solutions, e.g. for tracing organic acids, lipids, steroids, terpenes, flavonoids, amino acids, peptides.

## Detection reagents

| Product | Purity | Art. No. | Pack Qty. | € |
|---|---|---|---|---|
| **Ammonium heptamolybdate tetrahydrate** | ≥99 %, p.a. | **3666.1** | 250 g | 87,00 |
| | | **3666.2** | 500 g | 155,90 |
| | | **3666.3** | 1 kg | 278,45 |
| **Bismuth(III) nitrate** | ≥71 % Bi, p.a., alkaline | **4447.1** | 50 g | 43,55 |
| | | **4447.2** | 100 g | 69,35 |
| **Bromocresol Green** | ACS | **T115.1** | 1 g | 16,70 |
| | | **T115.2** | 5 g | 26,80 |
| | | **T115.3** | 10 g | 45,70 |
| | | **T115.4** | 25 g | 87,00 |
| **2',7'-Dichlorofluorescein** | p.a., ACS | **X866.2** | 1 g | 19,90 |
| | | **X866.1** | 5 g | 33,25 |
| | | **X866.3** | 25 g | 89,15 |
| | | **X866.4** | 50 g | 144,60 |
| **4-(Dimethylamino)-benzaldehyde** | ≥98 %, p.a., ACS | **X867.1** | 25 g | 43,55 |
| | | **X867.2** | 100 g | 109,55 |
| **Molybdatophosphoric acid hydrate** | ≥99,0 %, p.a., ACS | **4440.1** | 25 g | 37,55 |
| | | **4440.2** | 50 g | 57,95 |
| | | **4440.3** | 100 g | 103,10 |
| **Natural product reagent A** | ≥98 %, p.a. | **9920.1** | 5 g | 56,90 |
| | | **9920.2** | 25 g | 154,30 |
| | | **9920.3** | 50 g | 267,70 |
| **Ninhydrin** | ≥99 %, p.a., ACS | **4378.1** | 25 g | 38,60 |
| | | **4378.2** | 100 g | 99,90 |
| | | **4378.3** | 500 g | 364,45 |
| **Rhodamine B (C.I. 45170)** | for microscopy | **T130.1** | 25 g | 32,80 |
| **2,3,5-Triphenyltetrazolium chloride** | ≥98 %, p.a. | **KK13.1** | 10 g | 51,50 |
| | | **KK13.2** | 50 g | 212,85 |

For additional product data and safety information, see chapter Chemicals A-Z.

**Ammonium molybdate spray reagent:**
for detecting hydroxycarboxylic acids. Mix 2 ml **ammonium molybdate solution** 25 % + 2 ml ascorbic acid 10 % + 2 ml sulphuric acid 29,5 % and add 4 ml $H_2O$.

**Dragendorff's spray reagent:**
for detecting tertiary amines and nitrogen heterocycles. Mix 0,85 g **bismuth(III) nitrate basic** + 40 ml $H_2O$ + 10 ml acetic acid with 20 ml KI-solution (40 %).

**Bromcresol green spray reagent:**
for detecting hydroxycarboxylic acids. Dilute 25 mg **bromcresol green** + 0,36 ml 0,1 N NaOH + 10 ml ethanol 96 % to 50 ml with $H_2O$.

**Ehrlich's spray reagent:**
for detecting sulphonamides and primary aromatic amines. Mix 0,5 g **4-(dimethylamino)-benzaldehyde** + 25 ml hydrochloric acid 36 % + 25 ml ethanol 96 %.

**Natural substance reagent A as a spray reagent:**
According to Wagner natural substance A is an excellent reagent for fluorometry in quantitative analysis of thin layer chomatogrammes.
**Application:**
Natural substance-polyethylene glycol reagent (NST/PEG).
Spray a 1 % methanol solution of natural substance reagent A and a 5 % ethanol PEG 4000 solution, one after the other onto the TLC-plate (approx. 10 ml and 8 ml). Intensive fluorescent colours will appear immediately or after 15 min in UV-365 nm. Adding PEG will lead to an increase in detection sensitivity (from 10 µg to 2,5 µg). The fluorescence behaviour depends on the constitution. The reagent must be freshly prepared before use (1 % in methanol). Spray under the fume hood!

**Ninhydrin spray reagent:**
for detecting amino acids and primary aliphatic amines. 0,15 g **ninhydrin** + 47,5 ml 2-propanol + 2,5 ml acetic acid 96 %.

# Solvents for TLC

## ROTISOLV® UV/IR-Grade solvents

### for chromatography and spectroscopy

ROTISOLV® UV/IR-Grade solvents are specially adapted for spectrophotometric processes and other chromatographic applications which require high spectroscopic purity.

- High chemical purity
- Spectroscopically tested for UV and IR
- High UV-permeability
- Low fluorescence

**Example specification:**

**n-Hexane**
**ROTISOLV® ≥99 %, UV/IR-Grade**
For chromatography and spectroscopy.
1-Methylpentane
$C_6H_{14}$
M 86,18 g/mol
**Danger** H225-H304-H315-H336-H361f-H373-H411

**Guarantee analysis:**

| | |
|---|---|
| Assay (GC) | ≥99 % |
| Water (KF) | ≤0,005 % |
| Acidity | ≤0,005 meq/g |
| Evaporation residue | ≤0,005 % |
| Fluorescence (as quinine): | |
| 254 nm | ≤1,0 ppb |
| 365 nm | ≤1,0 ppb |
| Transmission: | |
| 245 nm | ≥98 % |
| 225 nm | ≥90 % |
| 217 nm | ≥80 % |
| 210 nm | ≥50 % |
| 195 nm | ≥10 % |

# Accessories for TLC

## Spotting guides for TLC plates

For the easy sample application. Size: 4 x 6 cm. Marks for 4 spots with a distance of 8 mm and 3 spots with a distance of 10 mm, respectively.

| Art. No. | Pack Qty. | € |
|---|---|---|
| **3661.1** | 2 | 23,50 |

## TLC sprayer

Versatile sprayer with gas cartridge for spraying reagents and other liquids. Spray pressure: constant 4,4 bar. Eco-friendly propellant mixture of dimethyl ether, propane and isobutane.
Sufficient for approx. 500 ml of liquid.
Easy to clean: unscrew cartridge, immerse uptake into vessel containing cleaning fluid and spray until the spray is free of residues.

Propellants: dimethyl ether, isobutane, propane.

**Delivery incl.** propellant cartridge (94 g), 170 ml glass reservoir bottle, suction tube and screw cap.

| Art. No. | Pack Qty. | € |
|---|---|---|
| **YC44.1** | 1 | 14,55 |

**Accessories:**

| | | | |
|---|---|---|---|
| Replacement cartridges with spray nozzle and suction tube | **YC45.1** | 5 | 45,50 |
| Replacement 170 ml glass bottle | **YC46.1** | 1 | 7,35 |

121°C

## TLC separation chamber

Made of borosilicate glass 3.3. For immersing pre-treated TLC ready-to-use 8 x 4 cm foils in solvents. Cylindrical glass beakers with loose glass lid. Inner height 100, ∅ 60 mm.

| Art. No. | Pack Qty. | € |
|---|---|---|
| **0823.1** | 1 | 39,25 |

## Developing chambers for TLC

Simultaneous developing chambers made of glass.

**Type 1:** for 5 plates up to size 20 x 20 cm
**Type 2:** for 2 plates up to size 10 x 10 cm

| Type | Art. No. | Pack Qty. | € |
|---|---|---|---|
| 1 | **3133.1** | 1 | 359,00 |
| 2 | **3134.1** | 1 | 165,00 |

Material DURAN®

121°C

## TLC atomizers

Made of DURAN®. NS 19/26, volume 100 ml. Overall height 160 mm. Autoclavable without rubber tube.
**Delivery incl.** Erlenmeyer flasks, wire joint clamps, rubber ball incl. rubber tube 25 cm.

| Type | Art. No. | Pack Qty. | € |
|---|---|---|---|
| TLC atomizers complete | **0707.1** | 1 | 63,35 |

**Accessories:**

| | | | |
|---|---|---|---|
| Spare spray nozzle | **H451.1** | 1 | 37,55 |
| Spare rubber bulb, incl. tube, length 20 cm | **5914.1** | 1 | 13,55 |

▶ UV lamps see page 771

# Paper Chromatography

Paper chromatography (PC) is the oldest chromatographic technique. Like other chromatographic applications, separation is based upon the partition of the material mixture, which is to be separated, between two immiscible phases.
While the chromatographic paper is, strictly speaking, only the carrier for the liquid mobile phase, the properties of the paper do, in fact, have considerable influence on the quality of the separation.
The most important characteristics of chromatographic papers are the **weight** (g/m²), the **thickness** (mm) and the **migration distance.**
When specifying the migration distance, it is common practice in the paper industry to apply the Klemm method. This method indicates the extent of dampness of a 15 cm wide paper strip (dipped in 20 °C dist. water) after 10 minutes. You will, however, frequently find the migration distance of chromatographic paper specified in mm/30 min.

## Smooth papers

| Model | Thickness (mm) | Weight (g/m²) | Flow rate (mm/min.) | Size (cm) | Art. No. | Pack Qty. (sheets) | € |

## Whatman® Chromatography Papers

Whatman® chromatography papers for blotting, chromatography and filtration. Made from specially selected cellulose.

**Thickness 0,18 mm** (Whatman® 1CHR), flow rate 130 mm/30 min.
**Also available in convenient rolls!**

| Dimensions | Art. No. | Pack Qty. | € |
|---|---|---|---|
| 100 x 300 mm | **CL37.1** | 100 | 44,50 |
| 200 x 200 mm | **CL38.1** | 100 | 50,80 |
| 250 x 250 mm | **CL39.1** | 100 | 79,00 |
| 460 x 570 mm | **CL40.1** | 100 | 171,00 |
| 580 x 680 mm | **CL41.1** | 100 | 268,00 |
| 20 mm x 100 m (roll) | **7606.1** | 1 | 27,95 |
| 30 mm x 100 m (roll) | **CL42.1** | 1 | 37,80 |
| 40 mm x 100 m (roll) | **CL43.1** | 1 | 42,65 |
| 50 mm x 100 m (roll) | **7607.1** | 1 | 51,00 |
| 100 mm x 100 m (roll) | **CL44.1** | 1 | 96,75 |
| 150 mm x 100 m (roll) | **7608.1** | 1 | 124,00 |

**Thickness 0,36 mm** (Whatman® 3CHR), flow rate 130 mm/30 min.
For general applications with medium/heavy solute loadings.

| Dimensions | Art. No. | Pack Qty. | € |
|---|---|---|---|
| 460 x 570 mm | **7604.1** | 100 | 343,00 |

**Thickness 0,92 mm** (Whatman® 17CHR), flow rate 190 mm/30 min.
For the heaviest solute loadings.

| Dimensions | Art. No. | Pack Qty. | € |
|---|---|---|---|
| 70 x 90 mm | **7600.1** | 100 | 66,50 |
| 25 x 220 mm | **7601.1** | 100 | 67,95 |
| 460 x 570 mm | **7602.1** | 25 | 256,00 |
| 460 x 570 mm | **7603.1** | 100 | 952,00 |

**Application instructions:**
Chromatography paper and cardboard must always be handled carefully. Your fingers should not touch the paper as the separation process will be disrupted by skin excretion, such as salt, grease and amino acids. Please avoid folding or creasing the paper as this will impair the capillary action.

# Ion Chromatography

## ROTI®STAR Standards for IC

ROTH has an extensive range of products which meets the highest standards of quality in the field of ion standards.

The solutions and mixtures are made using materials of the highest purity, and therefore meet the requirements for instrumental analysis by IC. All solutions are certified and can be traced to NIST or BAM standard reference solutions. Solutions are produced according to **ISO Guide 34** in an accredited environment. The solutions are tested in a laboratory accredited to **ISO/IEC 17025** and supplied with a detailed, batch-specific certificate of analysis.

## **Ion Standards for IC** (Ion Chromatography)

Each standard solution is made of high-purity starting materials, and its content is determined gravimetrically and by ion chromatography. They come with certificates of analysis and an ion chromatogram.

- Single and multi-element-standards
- Anion and cation multi-element-standards
- Container sizes: 100 ml and 500 ml

### Anionic Standards for IC 1000 mg/l (1 g/l) - ready to use

| Product | Ion | Matrix | Art. No. | Pack Qty. | € |
|---|---|---|---|---|---|
| **Acetate IC Standard Solution** | $CH_3COO^-$ | $H_2O$ | **1989.1** | 100 ml | 44,00 |
| | | | **1989.2** | 500 ml | 81,20 |
| **Benzoate IC Standard Solution** | $C_6H_5COO^-$ | $H_2O$ | **8168.1** | 100 ml | 39,70 |
| | | | **8168.2** | 500 ml | 82,70 |
| **Bromate IC Standard Solution** | $BrO_3^-$ | $H_2O$ | **8170.1** | 100 ml | 39,70 |
| | | | **8170.2** | 500 ml | 82,70 |
| **Bromide IC Standard Solution** | $Br^-$ | $H_2O$ | **2655.1** | 100 ml | 38,60 |
| | | | **2655.2** | 500 ml | 75,15 |
| **Chlorate IC Standard Solution** | $ClO_3^-$ | $H_2O$ | **8171.1** | 100 ml | 39,70 |
| | | | **8171.2** | 500 ml | 82,70 |

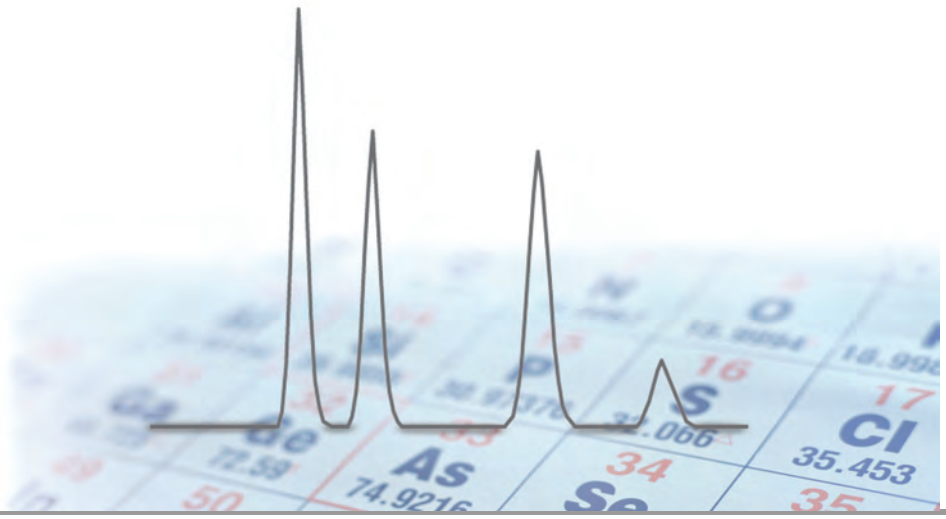
| | | | **1999.2** | 500 ml | 81,20 |
| **Iodate IC Standard Solution** | $IO_3^-$ | $H_2O$ | **8174.1** | 100 ml | 38,60 |
| | | | **8174.2** | 500 ml | 75,15 |
| **Iodide IC Standard Solution** | $I^-$ | $H_2O$ | **2660.1** | 100 ml | 38,60 |
| | | | **2660.2** | 500 ml | 75,15 |
| **Lactate IC Standard Solution** | $C_2H_4(OH)COO^-$ | $H_2O$ | **8176.1** | 100 ml | 39,70 |
| | | | **8176.2** | 500 ml | 82,70 |

| Product | Ion | Matrix | Art. No. | Pack Qty. | € |
|---|---|---|---|---|---|
| **Maleate IC Standard Solution** | $C_2H_2(COO)_2^{2-}$ | $H_2O$ | **8181.1** | 100 ml | 39,70 |
| | | | **8181.2** | 500 ml | 82,70 |
| **Nitrate IC Standard Solution** | $NO_3^-$ | $H_2O$ | **2661.1** | 100 ml | 38,60 |
| | | | **2661.2** | 500 ml | 75,15 |
| **Nitrite IC Standard Solution** | $NO_2^-$ | $H_2O$ | **2664.1** | 100 ml | 38,60 |
| | | | **2664.2** | 500 ml | 75,15 |
| **Oxalate IC Standard Solution** | $C_2O_4^{2-}$ | $H_2O$ | **2008.1** | 100 ml | 44,00 |
| | | | **2008.2** | 500 ml | 81,20 |
| **Perchlorate IC Standard Solution** | $ClO_4^-$ | $H_2O$ | **8186.1** | 100 ml | 39,70 |
| | | | **8186.2** | 500 ml | 82,70 |
| **Phosphate IC Standard Solution** | $PO_4^{3-}$ | $H_2O$ | **2665.1** | 100 ml | 38,60 |
| | | | **2665.2** | 500 ml | 75,15 |
| **Propionate IC Standard Solution** | $C_2H_5COO^-$ | $H_2O$ | **8183.1** | 100 ml | 39,70 |
| | | | **8183.2** | 500 ml | 82,70 |
| **Succinate IC Standard Solution** | $C_2H_4(COO)_2^{2-}$ | $H_2O$ | **8187.1** | 100 ml | 39,70 |
| | | | **8187.2** | 500 ml | 82,70 |
| **Sulphate IC Standard Solution** | $SO_4^{2-}$ | $H_2O$ | **2666.1** | 100 ml | 38,60 |
| | | | **2666.2** | 500 ml | 75,15 |
| **Sulphite IC Standard Solution** | $SO_3^{2-}$ | $H_2O$ | **8192.1** | 100 ml | 39,70 |
| | | | **8192.2** | 500 ml | 82,70 |
| **Tartrate IC Standard Solution** | $C_2H_4O_2(COO)_2^{2-}$ | $H_2O$ | **8201.1** | 100 ml | 39,70 |
| | | | **8201.2** | 500 ml | 82,70 |
| **Thiocyanate IC Standard Solution** | $SCN^-$ | $H_2O$ | **8205.1** | 100 ml | 39,70 |
| | | | **8205.2** | 500 ml | 82,70 |
| **Thiosulphate IC Standard Solution** | $S_2O_3^{2-}$ | 0,1 % Pentanol | **8207.1** | 100 ml | 39,70 |
| | | | **8207.2** | 500 ml | 82,70 |

## Cationic Standards for IC 1000 mg/l (1 g/l) - ready to use

| Product | Ion | Matrix | Art. No. | Pack Qty. | € |
|---|---|---|---|---|---|
| **Ammonium IC Standard Solution** | $NH_4^+$ | $H_2O$ | **2654.1** | 100 ml | 38,60 |
| | | | **2654.2** | 500 ml | 75,15 |
| **Barium IC Standard Solution** | $Ba^{2+}$ | $H_2O$ | **8167.1** | 100 ml | 38,60 |
| | | | **8167.2** | 500 ml | 75,15 |
| **Caesium IC Standard Solution** | $Cs^+$ | $H_2O$ | **8166.1** | 100 ml | 38,60 |
| **Calcium IC Standard Solution** | $Ca^{2+}$ | $H_2O$ | **1986.1** | 100 ml | 38,60 |
| | | | **1986.2** | 500 ml | 75,15 |
| **Lithium IC Standard Solution** | $Li^+$ | $H_2O$ | **8158.1** | 100 ml | 38,60 |
| | | | **8158.2** | 500 ml | 75,15 |
| **Magnesium IC Standard Solution** | $Mg^{2+}$ | $H_2O$ | **1987.1** | 100 ml | 38,60 |
| | | | **1987.2** | 500 ml | 75,15 |
| **Potassium IC Standard Solution** | $K^+$ | $H_2O$ | **1985.1** | 100 ml | 38,60 |
| | | | **1985.2** | 500 ml | 75,15 |
| **Sodium IC Standard Solution** | $Na^+$ | $H_2O$ | **1984.1** | 100 ml | 38,60 |
| | | | **1984.2** | 500 ml | 75,15 |
| **Strontium IC Standard Solution** | $Sr^{2+}$ | $H_2O$ | **1988.1** | 100 ml | 38,60 |
| | | | **1988.2** | 500 ml | 75,15 |



For additional product data and safety information, see chapter Chemicals A-Z.

## Ion Multi-Element Standards for IC - ready to use

| Designation | Elements | Composition | Matrix | Art. No. | Pack Qty. | € |
|---|---|---|---|---|---|---|
| **Anion Multi-Element Standard I, 1000 mg/l** | 3 | $Cl^-$, $NO_3^-$, $SO_4^{2-}$ | $H_2O$ | **2026.1** | 100 ml | 131,70 |
| | | | | **2026.2** | 500 ml | 252,65 |
| **Anion Multi-Element Standard II, 1000 mg/l** | 3 | $F^-$, $Br^-$, $PO_4^{3-}$ | $H_2O$ | **2029.1** | 100 ml | 138,70 |
| | | | | **2029.2** | 500 ml | 263,40 |
| **Anion Multi-Element Standard, 10 mg/l** | 6 | $F^-$, $Cl^-$, $Br^-$, $NO_3^-$, $PO_4^{3-}$, $SO_4^{2-}$ | $H_2O$ | **2030.1** | 100 ml | 89,80 |
| | | | | **2030.2** | 500 ml | 185,45 |
| **Anion Multi-Element Standard (concentration in mg/l)** | 7 | $F^-$ (5), $Cl^-$ (10), $NO_2^-$ (15), $Br^-$ (25), $NO_3^-$ (25), $PO_4^{3-}$ (40), $SO_4^{2-}$ (30) | $H_2O$ | **2668.1** | 100 ml | 77,30 |
| | | | | **2668.2** | 500 ml | 155,90 |
| **Cation Multi-Element Standard, 10 mg/l** | 4 | $Na^+$, $K^+$, $Mg^{2+}$, $Ca^{2+}$ | $H_2O$ | **2032.1** | 100 ml | 84,95 |
| | | | | **2032.2** | 500 ml | 166,65 |
| **Cation Multi-Element Standard (concentration in mg/l)** | 6 | $NH_4^+$ (40), $Ca^{2+}$ (40), $K^+$ (20), $Li^+$ (10), $Mg^{2+}$ (20), $Na^+$ (20) | 0,1 % $HNO_3$ | **2669.1** | 100 ml | 77,30 |
| | | | | **2669.2** | 500 ml | 155,90 |

For additional product data and safety information, see chapter Chemicals A-Z.

- Ultra pure acids, alkaline solutions and water for IC see page 1664
- High-purity salts for preparing eluent mixtures, see page 1612

# NUCLEODUR® Columns for HPLC

NUCLEODUR® as a state-of-the-art silica is the ideal base material for modern HPLC phases.
We offer you two phases **NUCLEODUR® C18 Gravitiy** which is ideal for sophisticated analytical separations and **NUCLEODUR® C18 ec** suitable for routine HPLC analysis.

## NUCLEODUR® $C_{18}$ Gravity

**The ideal phase for overall sophisticated analytical separations**

- Especially suitable for LC/MS applications due to low bleeding properties
- Ideal for method development
- Superior base deactivation

**Properties:**
Octadecyl phase, multi-endcapped
Carbon content: 18,0 %
Pore size: 110 Å
pH stability: 1-11
Eluent on column: acetonitrile/water

**Applications:**
Pharmaceuticals, e.g. analgesics, antiinflammatory drugs, antidepressants, herbicides, immunosuppressants

**Similar phases:**
Zorbax® Extend $C_{18}$, Synergi™ and Max RP, Phenomenex Luna® $C_{18}$ (2), Waters Xterra® $RP_{18}$ / MS $C_{18,}$ Inertsil® ODS III, Purospher® RP-18, Star RP-18, USP L1

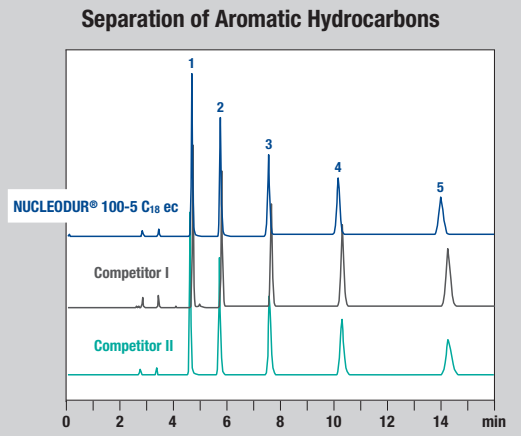
**NUCLEODUR® $C_{18}$ Gravity, particle size 3 µm**

| Inner ∅ (mm) | Length (mm) | Art. No. | Pack Qty. | € |
|---|---|---|---|---|
| 4 | 250 | **KK86.1** | 1 | 699,00 |
| 4,6 | 150 | **KK87.1** | 1 | 685,00 |
| 4,6 | 250 | **KK88.1** | 1 | 739,00 |

**NUCLEODUR® $C_{18}$ Gravity, particle size 5 µm**

| Inner ∅ (mm) | Length (mm) | Art. No. | Pack Qty. | € |
|---|---|---|---|---|
| 4 | 250 | **KK89.1** | 1 | 569,00 |
| 4,6 | 150 | **KK90.1** | 1 | 549,00 |
| 4,6 | 250 | **KK91.1** | 1 | 599,00 |

## NUCLEODUR® $C_{18}$ ec



**The ideal standard RP phase for routine HPLC analysis**

- Economic and reliable
- Long-life columns
- For all standard routine applications in modern RP-chromatography

**Properties:**
Octadecyl phase, endcapped
Carbon content: 17,5 %
Pore size: 110 Å
pH stability: 1-9
Eluent on column: acetonitrile/water

**Applications:**
Basic, neutral or acidic pharmaceuticals, derivatized amino acids, pesticides, aldehydes and ketones, fat-soluble vitamins, phenolic compounds, analytics acc. to USP L1

**Similar phases:**
For many applicatons the following phases can be replaced with identical or even better results: NUCLEOSIL® $C_{18}$, Spherisorb® ODS I and II, Hypersil® ODS, Waters Symmetry® $C_{18,}$ Inertsil® ODS II, Kromasil® $C_{18,}$ LiChrospher® $RP_{18}$ and RP $C_{18}$ ec.

**Conditions:**
Eluent: acetonitril/water (75/25, v/v)
Flow: 1,3 ml/min
Temperature: 30 °C
Detection: UV, 254 nm

**Legend:**
1. Toluene, 2. Ethylbenzene, 3. Propylbenzene, 4. Butylbenzene, 5. Pentylbenzene

**NUCLEODUR® 100-3 $C_{18}$ ec, particle size 3 µm**

| Inside ∅ (mm) | Length (mm) | Art. No. | Pack Qty. | € |
|---|---|---|---|---|
| 4 | 250 | **KK80.1** | 1 | 479,00 |
| 4,6 | 150 | **KK81.1** | 1 | 439,00 |
| 4,6 | 250 | **KK82.1** | 1 | 499,00 |

**NUCLEODUR® 100-5 $C_{18}$ ec, particle size 5 µm**

| Inside ∅ (mm) | Length (mm) | Art. No. | Pack Qty. | € |
|---|---|---|---|---|
| 4 | 250 | **KK83.1** | 1 | 355,00 |
| 4,6 | 150 | **KK84.1** | 1 | 309,00 |
| 4,6 | 250 | **KK85.1** | 1 | 379,00 |

▶ Guard columns UNIVERSAL see page 1587

# Guard Columns Systems

## Column Protection System

**Innovative and universal screw-on guard column holder system**
**Suitable for all analytical HPLC columns with 1/16" fittings**

**Features**
- Ideal protection for your analytical main column -> significant increase in column lifetime
- Minimized void volume -> suitable also for ultra fast HPLC
- Special ferrules -> pressure stability up to 1034 bar (15000 psi)
- Visual contamination check -> in-time changing of the guard column
- Guard column length 4 mm, ID 2 mm (for main columns with 2 mm ID) or ID 3 mm (for main columns with 3, 4 and 4,6 mm ID)
- UNIVERSAL RP guard columns suitable for all HPLC columns under RP conditions

**Content of the column protection system**
- Cartridge holder (1 piece)
- Capillaries (2 pieces)
- Ferrules (3 pieces)
- Wrenches (2 pieces)
- Manual

| Art. No. | Pack Qty. | € |
|---|---|---|
| **6041.1** | 1 Kit | 139,90 |

## Guard columns UNIVERSAL

| Designation | Art. No. | Pack Qty. | € |
|---|---|---|---|
| Guard column EC 4/2 UNIVERSAL RP for main columns with 2 mm ID | **6049.1** | 3 | 120,90 |
| Guard column EC 4/3 UNIVERSAL RP for main columns with 3, 4 and 4,6 mm ID | **6050.1** | 3 | 120,90 |

## Replacement parts for Protection System

| Designation | Art. No. | Pack Qty. | € |
|---|---|---|---|
| Replacement ferrules | **6042.1** | 5 | 39,50 |
| Replacement connector including O-ring | **6043.1** | 1 | 24,50 |
| Replacement capillary tubes, nuts and metal ferrules | **6045.1** | 3 | 53,90 |

# Ion Pair Reagents

Ion pair reagents are strongly hydrophobic ions which form neutral ion pairs with oppositely charched sample molecules. In this way, the simultaneous separation of charged and non-charged molecules is possible.

## Advantages:
- High purity
- High UV-permeability
- Broad range of products
- Excellent price/performance ratio

## Ion pair reagents

| Product | Purity | Art. No. | Pack Qty. | € |
|---|---|---|---|---|
| **Butane-1-sulphonic acid sodium salt** | ≥99 % | **KK50.1** | 10 g | 49,35 |
| | | **KK50.2** | 25 g | 93,45 |
| | | **KK50.3** | 100 g | 284,90 |
| **Decane-1-sulphonic acid sodium salt** | ≥99 % | **KK51.1** | 10 g | 51,10 |
| | | **KK51.2** | 25 g | 99,90 |
| | | **KK51.3** | 100 g | 309,10 |
| **Dodecane-1-sulphonic acid sodium salt** | ≥99 % | **KK52.1** | 10 g | 54,75 |
| | | **KK52.2** | 25 g | 107,40 |
| | | **KK52.3** | 100 g | 353,70 |

| | | **KK56.2** | 25 g | 89,15 |
| | | **KK56.3** | 100 g | 267,70 |
| **Propane-1-sulphonic acid sodium salt** | ≥98 % | **KK57.1** | 10 g | 53,65 |
| | | **KK57.2** | 25 g | 105,90 |
| | | **KK57.3** | 100 g | 327,90 |

For additional product data and safety information, see chapter Chemicals A-Z.

# ROTISOLV®
# Ultra LC-MS Solvents

Short analysis times in ultrafast HPLC as well as systems coupled to a mass spectrometer require solvents which offer utmost reliability, sensitivity and reproducibility. Our **ROTISOLV® Ultra LC-MS solvents** are specially suited for meeting these demands and have undergone extremely intensive production and quality controls.

- Filtered through **0,1 µm** membrane
- Extra high purity (≥99,98 %)
- Bottled under protective gas
- High UV-permeability
- Low fluorescence
- LC-MS suitability tested
- Solid residue from evaporation max. 1 ppm
- Metal trace impurities max. 100 ppb

## Example specification:

### Acetonitrile
**ROTISOLV® ≥99,98 %, Ultra LC-MS**
Methyl cyanide, Cyanomethane
$C_2H_3N$
M 41,05 g/mol

**Danger** H225-H302+H312+H332-H319

**Guarantee analysis:**

| | |

# ROTISOLV®
# LC-MS-Grade Solvents

Modern analysis methods such as LC-MS (combination of liquid chromatography and mass spectroscopy) call for a special solvent quality which has the required purity and which has been tested under application-oriented conditions.
Very high purity and very low metal concentrations are features of these products which allow exact interpretations of the mass spectra.

- High chemical purity (≥99,95 %)
- High UV-permeability
- Low fluorescence
- Superior gradient baseline
- Metal trace impurities (≤0,05 ppm)
- Test for LC-MS suitability
- Filtered through 0,2 µm membrane
- Bottled under inert gas

## Example specification:

### Acetonitrile
**ROTISOLV® ≥99,95 %, LC-MS Grade**
Methyl cyanide, Cyanomethane
$C_2H_3N$
M 41,05 g/mol

**Danger** H225-H302+H312+H332-H319

**Guarantee analysis:**

# Assortment ROTISOLV® HPLC Solvents

## for liquid chromatography

**Available in different quality grades:**
- **HPLC Grade**
- **HPLC Gradient Grade**
- **HPLC Ultra Gradient Grade**

ROTISOLV®-HPLC solvents meet all the requirements in high-performance liquid chromatography (HPLC). Their application ranges from routine applications (HPLC Grade) to specific analytic tasks (HPLC Ultra Gradient Grade).

- High chemical purity
- High UV-permeability
- Low fluorescence
- Low residue from evaporation
- Low water and acid content
- Filtered through 0,2 µm membrane
- Bottled under inert gas

### Example specification:

### Acetonitrile

**ROTISOLV® HPLC Gradient Grade**

Methyl cyanide, Cyanomethane

$C_2H_3N$

M 41,05 g/mol

**Danger** H225-H302+H312+H332-H319

## HPLC Made to Messure

A Practical Handbook for Optimization.
Kromidas, Stavros (Ed.)
1st Edition - May 2006, 753 pages, hard cover
ISBN 978-3-527-31377-8

**Short description:**
The only topical book to focus on optimization, this volume addresses the needs of users wishing to improve their methods in particular in terms of throughput, accuracy and cost-effectiveness. Written by bestseller authors and scientists working for major international companies.

# ROTISOLV®
# LC-MS-Eluent Mixtures

ready-to-use

## Features:

- Ready-to-use solvent blends for easy handling
- High chemical purity of the used raw material: HPLC solvents (≥99,9 %) and acids (≥99,9 %)
- High accuracy of the ratio of ingredients
- High UV-permeability
- Trace elements: ≤0,05 ppm per element
- LC-MS suitability tested
- Filtered through 0,2 µm membrane
- Bottled under inert gas

### Acetonitrile with 0,1 % acetic acid

**ROTISOLV® ≥99,9 %, LC-MS-Grade**

Eluent mixture for high performance liquid chromatography.
Acetonitrile mixture
$C_2H_3N$
M 41,05 g/mol

**Danger** H225-H302+H312+H332-H319

| | | | |

### Starting material for eluent mixtures

TIP

For the preperation of individual eluent mixtures we offer acids and salts of highest purity:

| Product | Purity | Art. No. | Pack Qty. | Packaging | € |
|---|---|---|---|---|---|
| **Acetic acid** | 100 %, p.a. | **3738.1** | 1 l | glass | 24,65 |
| | | **3738.4** | 1 l | plastic | 22,50 |
| | | **3738.2** | 2,5 l | glass | 52,60 |
| | | **3738.5** | 2,5 l | plastic | 50,00 |
| | | **3738.3** | 10 l | plastic | 125,25 |
| **Ammonium acetate** | ≥97 %, p.a., ACS | **7869.2** | 500 g | plastic | 27,85 |
| | | **7869.1** | 1 kg | plastic | 39,70 |
| | | **7869.3** | 2,5 kg | plastic | 67,65 |
| **Formic acid** | ≥98 %, p.a., ACS | **4724.3** | 500 ml | glass | 19,90 |
| | | **4724.1** | 1 l | glass | 33,90 |
| | | **4724.2** | 2,5 l | glass | 71,95 |
| **Trifluoroacetic acid (TFA)** | ≥99,9 %, for (peptide) synthesis | **P088.1** | 100 ml | glass | 61,85 |
| | | **P088.2** | 500 ml | glass | 177,40 |
| | | **P088.3** | 1 l | glass | 310,70 |

For additional product data and safety information, see chapter Chemicals A-Z.

# Sorbents for Column Chromatography

We offer a wide range of sorbents for conventional column chromatography. A variety of different particle sizes and modifications means that the right filling material is available for all your separation applications.

## Silica Gels

Silica gels are the most important sorbents in the purification and separation processes used in column chromatography. Our extensive range of silica gels with various different pore and particle sizes means that we always have the right material for any separation procedure. In addition to standard **60 Å** silica gel, our range includes silica gels with pore sizes between **150 Å** and **1000 Å,** as well **22 Å** and **35 Å** for separating particularly small molecules. A selection of modified silica gel 60 grades completes the range.

**Advantages:**

- Extensive range
- Stringent quality control of the source materials and the end products
- High purity; optimised to meet the needs of chromatography applications
- Large surface area for a high load-bearing capacity
- Tight particle size distribution for optimal efficiency and low pressure variations

### Applications

| Pore size | 35-150 Å | | | 250-4500 Å |
|---|---|---|---|---|
| **Fields** | Pharmacy | Foods and Cosmetics | Chemistry | Biotechnology |
| **Applications** | Vitamins<br>Antibiotics<br>Vaccines<br>Organic synthesis<br>Lubricants<br>Functional Food | Oils and Fats<br>Natural Products<br>Stripping Agents<br>Chemical Synthesis | Pesticides<br>Lipids | Vaccines<br>DNA<br>Enzymes<br>Carriers<br>Biomolecules |

### 3 Steps to the appropriate silica gel

Step 1: The pore size is selected based on the molar mass of the sample.

| Molar mass (g/mol) | Pore size (Å) |
|---|---|
| <350 | 35 |
| <800 | 60 |
| <15 000 | 150 |
| <100 000 | 250 |
| <250 000 | 500 |
| >250 000 | 1000-4500 |

Step 2: The grain size is selected with respect to the pressure within the system.

| Pressure (bar) | Grain size (mm) |
|---|---|
| 65 | 0,01 |
| 20 | 0,016-0,024 |
| 15 | 0,02-0,045 |
| 5 | 0,04-0,063 |
| 2 | 0,07-0,2 |
| <1 | >0,2 |

Step 3: The surface functionality is adapted to the solubility of the sample and the required degree of separation.
Polarity series: Silica gel > Diol > Amino > Cyano > C18.

| Mobile phase | Stationary phase |
|---|---|
| Nonpolar to medium polar solvents (normal phase) | Silica gel |
| Nonpolar to polar solvents (normal phase, reversed phase) | Diol |
| | Amino |
| | Cyano |
| Polar solvents (reversed phase) | C18 |

# Aluminium Oxide

Our range of aluminium oxides (neutral - alkaline - acidic) for conventional column chromatography most certainly includes the right one for you!

All aluminium oxides are available in activity grade I. Activity grades II to V can be set up by adding water:

- Activity grade I - 0 % water
- Activity grade II - 3 % water
- Activity grade III - 6 % water
- Activity grade IV - 10 % water
- Activity grade V - 15 % water

## Aluminium Oxide

| Product | Art. No. | Pack Qty. | € |
|---|---|---|---|
| **Aluminium oxide 90 neutral** | **P092.1** | 500 g | 63,35 |
| | **P092.2** | 1 kg | 112,90 |
| | **P092.3** | 2,5 kg | 244,60 |
| **Aluminium oxide 90 acidic** | **X909.1** | 500 g | 61,20 |
| | **X909.2** | 1 kg | 110,20 |
| | **X909.3** | 2,5 kg | 235,45 |
| **Aluminium oxide 90 basic** | **X908.1** | 500 g | 63,35 |
| | **X908.2** | 1 kg | 112,90 |
| | **X908.3** | 2,5 kg | 244,60 |

For additional product data and safety information, see chapter Chemicals A-Z.

## Cellulose

Cellulose powders are used mainly for qualitative and preparative separation and purification in column chromatography.

### Cellulose
**for column chromatography**
Fibre length 0,02-0,1 mm

## Celite® - Silicate Basis

Prepared and standardized celite is used as a filtering aid or as adsobent in column chromatography.

**Composition:**
approx. 90 % $SiO_2$, 2-5 % $Al_2O_3$, 1-4 % $Fe_2O_3$ and various other oxides in a low concentration, that is why the Celites® may be slightly tinted.

### The complete Celite® range at a glance

| Product | Permeability (Darcy) | Art. No. | Pack Qty. | € |
|---|---|---|---|---|
| **Celite® 503** | 1,27-2,4 | **0007.2** | 1 kg | 25,70 |
| | | **0007.1** | 2,5 kg | 52,60 |

| | | **0011.4** | 10 kg | 96,65 |
| | | **0011.5** | 25 kg | 181,70 |
| **Celite® Hyflo Super Cel®** | 0,73-1,64 | **0005.2** | 1 kg | 24,20 |
| | | **0005.1** | 2,5 kg | 44,65 |
| **Celite® Standard Super Cel®** | 0,16-0,36 | **0003.2** | 1 kg | 21,40 |
| | | **0003.1** | 2,5 kg | 40,75 |

For additional product data and safety information, see chapter Chemicals A-Z.

## Florisil®

Highly selective magnesium silicate adsorbent for preparative and analytical chromatography. Ideal for sample preparation, for column chromatography, for clean-up methods and for isolating, purifying and separating samples.

### Florisil®

| Product | Purity | Art. No. | Pack Qty. | € |
|---|---|---|---|---|
| **Florisil®** | for Hydrocarbon Index analysis, 60-100 mesh [according to EN ISO 9377-2 (H53)] | **CN39.1** | 100 g | 40,75 |
| | | **CN39.3** | 500 g | 137,10 |
| | | **CN39.2** | 1 kg | 216,65 |
| | | **CN39.4** | 2,5 kg | 428,40 |
| **Florisil® PR** | for (pesticides) residue analysis 60-100 mesh | **T201.1** | 100 g | 41,95 |
| | | **T201.2** | 500 g | 144,60 |
| | | **T201.3** | 1 kg | 249,95 |
| **Florisil®** | for chromatography 60-100 mesh | **0101.1** | 100 g | 40,75 |
| | | **0101.2** | 500 g | 137,10 |
| | for chromatography 100-200 mesh | **0102.1** | 100 g | 40,75 |

| **9620.1** | 250 g | plastic | 127,50 € |

# Flash Chromatography

Flash chromatography is, on account of its superior properties, replacing column chromatography in many laboratories for chemical synthesis, pharmacokinetics and combinatorial chemistry. Flash chromatography can be used to clean samples inexpensively and quickly on a preparative scale up to approximately 100 g. A key factor here is the automation capacity of flash chromatography and the reduced solvent consumption compared to column chromatography.
Thin-layer chromatography is often used for the development of a selective and reproducible method. In this way, it is possible to determine the optimal combination of various eluents and sorbents within a short space of time. The quality of the Roth product range is reflected in the fact that our TLC plates and foils are coated with the same basic silica gel as that used in CHROMABOND® flash columns. This enables the developed method to be perfectly applied to flash chromatography.

## CHROMABOND® Flash RS Cartridges

Heavy-duty polypropylene cartridges designed for ISCO® Companion® and other Teledyne Isco CombiFlash® systems.

**Increased analytical safety:** Organic solvent restistant, low bleed cartridges, thick column walls, one piece body, sophisticated length-to-diameter ratio for high plate numbers and excellent separation efficiencies. Distribution of eluent stream via highly porous frits.
**High pressure stability:** up to 15 bar (12 bar for cartridges >200 g)
**High quality standard:** All flash cartridges and adsorbents undergo comprehensive during- and after-production quality assurance measures to ensure that the products conform to the specification.
**Adsorbent weights:** 15 g to 330 g.

### Lodability:

| | Average loadability per cartridge (g) | |
|---|---|---|
| SiOH cartridge | Difficult separation | Easy separation |
| RS 15 | 0,15 | 1,5 |
| RS 25 | 0,25 | 2,5 |
| RS 40 | 0,4 | 4 |
| RS 80 | 0,8 | 8 |
| RS 120 | 1,2 | 12 |
| RS 200 | 2 | 20 |
| RS 330 | 3,3 | 33 |

### CHROMABOND® Flash RS cartridges SiOH

for Isco® Flash instruments
- Female Luer lock inlet and male Luer outlet
- Adsorbent: standard silica, unmodified (SiOH)
- Particle size 45 µm, specific surface 500 $m^2/g$
- pH stability 2-8

ready-to-use

| Product | Column length (cm) | Inside ∅ (mm) | Adsorbent weight (g) | Art. No. | Pack Qty. | € |
|---|---|---|---|---|---|---|
| **CHROMABOND® Flash RS 15 SiOH** | 11,6 | 21,2 | 15 | **8664.1** | 20 pieces | 172,90 |

# SPE (Solid Phase Extraction)

A fast, effective and inexpensive system
for sample preparation.
SPE-columns enable samples to be processed for HPLC, GC, TLC, UV/IR spectroscopy, etc.

**Field of application:**
- Food analysis
- Environmental analysis
- Organic chemistry
- Pharmaceutical analysis
- Biochemical analysis

## Our range of phases for SPE:

| Code | Matrix | Modification / Application | Similar phases ** |
|---|---|---|---|
| **Reversed phases** | | | |
| C18 ec | Silica | Octadecyl, endcapped | Strata™ C18-E, Sep-Pak® tC18, Bond Elut® C18, DSC-18(Lt); ENVI-18, LC-18, CLEAN-UP® C18, Bakerbond® Octadecyl, Isolute® C18(EC), LiChrolut® RP-18 E |
| C18 hydra | Silica | Octadecyl, not endcapped / for polar analytes | - |
| Easy | PS/DVB* | Polar, bifunctional | Strata™-X, Oasis® HLB, Porapak™ RDX, Nexus, Bond Elut® PPL, Focus™, Styre Screen® DVB, Bakerbond™ $H_2O$ philic DVB, Isolute® ENV+ |
| HR-P | PS/DVB* | | Strata™ SDB-L, Bond Elut® ENV, Bond Elut® LMS, DCS-PS/DVB, ENV PS-DVB, Bakerbond™ $H_2O$-phobic DVB, Isolute® 101, LiChrolut® EN |

## CHROMABOND® HR-X*pert*

The professional concept of innovative SPE phases

The CHROMABOND® HR-X*pert* concept comprises 5 polymer-based RP and mixed-mode ion exchange phases. Depending on the character of the analytes it offers suitable adsorbents and optimal methods for sample preparation, cleaning and concentration.

**State-of-the-art spherical polymer:**
- Particle size: 85 µm
- Broad spectrum of application with special suitability for enrichment of pharmaceuticals from biological matrices
- Ideal flow properties due to low content of particulate matter

**Optimized pore structure and high specific surface:**
- High loadability and outstanding elution properties in RP as well as mixed mode
- Low solvent consumption
- Rapid, economical analyses

**High purity adsorber material**
- Allows high reproducibility with extremely low blind values
- Reliable analyses at ultra trace level
- No method adaptation for new batches necessary

| HR-Xpert phase | Properties | Application areas |
|---|---|---|
| CHROMABOND® HR-X | hydrophobic PS/DVB copolymer | neutral and polar active ingredients and analytes such as pesticides, drugs, phenols, PAHs, PCBs |
| CHROMABOND® HR-XC | strong acidic mixed-mode benzenesulfonic acid cation exchanger | basic active ingredients and analytes such as amines (melamine), . . . bases with pKa 2-10 |
| CHROMABOND® HR-XA | strong basic mixed-mode quaternary ammonium anion exchanger | acidic active ingredients and analytes such as herbicides, . . . acids with pKa 2-8 |
| CHROMABOND® HR-XCW | weak acidic mixed-mode carboxylic acid cation exchanger | strongly basic active ingredients and analytes such as quaternary amines, . . . bases with pKa > 10 |
| CHROMABOND® HR-XAW | weak basic mixed-mode secondary/tertiary ammonium anion exchanger | strongly acidic active ingredients and analytes such as sulfonic acids, perfluorinated surfactants, . . . acids with pKa < 1 |

# CHROMABOND® HR-X*pert* phases

## SPE-polypropylene columns CHROMABOND® HR-X

**Spherical, hydrophobic polystyrene-divinylbenzene copolymer**

Pore size: 55-60 Å, particle size: 85 µm
Spec. surface: **1000 m²/g**, pH stability: 1-4
RP-capacity: 390 mg/g (caffeine in water)
**HR:** high-purity material with homogenous surface and optimised pore structure - due to optimised production process - enables lowest blanks, outstanding recovery rates and highest reproducibility. Especially for the enrichment of pharmaceuticals and active ingredients.

**Recommended application:** pharmaceuticals/active ingredients from tablets, creams and water/waste water, drugs and pharmaceuticals from urine, blood, serum and plasma, trace analysis of pesticides, herbicides, phenols, PAHs and PCBs from water

**Similar phases:** ENVI-Chrom P, Strata™-X, Oasis® HLB, Nexus

| Volume (ml) | Adsorbent weight (mg) | Art. No. | Pack Qty. | € |
|---|---|---|---|---|
| 1 | 30 | **3079.1** | 30 | 69,90 |
| 3 | 200 | **3081.1** | 30 | 112,90 |
| | | **3081.2** | 250 (5x50) | 625,00 |
| 6 | 200 | **3086.1** | 30 | 145,00 |
| | | **3086.2** | 250 (5x50) | 849,00 |
| | 500 | **3087.1** | 30 | 225,00 |

## SPE-polypropylene columns CHROMABOND® HR-XA

**Quat. ammonium modified spherical polystryrene-divinylbenzene copolymer, strong anion exchanger (mixed mode)**

Pore size: 55-65 Å, Particle size: 85 µm
Spec. surface: **850 m²/g**, pH-stability: 1-14
Pore volume: 1,4 cm³/g
Exchange capacity: approx. 0,25 meq/g
RP-capacity: 350 mg/g (caffeine in water)

**HR:** high-purity material with homogenous surface and optimised pore structure - due to optimised production process - enables lowest blanks, outstanding recovery rates and highest reproducibility. Especially for the enrichment of acidic analytes.

**Recommended application:** acidic active ingredients from strongly matrix-contaminated samples like e.g. urine, plasma, serum, phenolic acids, acidic herbicides

**Similar phases:** Oasis® MAX, HyperSep™, Retain™-AX, StyreScreen® QAX Strate™-X-A

| Volume (ml) | Adsorbent weight (mg) | Art. No. | Pack Qty. | € |
|---|---|---|---|---|
| 3 | 60 | **3069.1** | 30 | 102,90 |
| | 200 | **3071.1** | 30 | 116,50 |
| 6 | 500 | **3072.1** | 30 | 245,00 |

## SPE-polypropylene columns CHROMABOND® HR-XC

**Benzenesulphonic acid modified spherical polystyrene-divinylbenzene copolymer, cation exchanger (mixed mode)**

Pore size: 65-75 Å, particle size: 85 µm
Spec. surface: **800 m²/g**, pH-stability: 1-14
Pore volume: 1,4 cm³/g
Exchange capacity: 1,0 meq/g
RP-capacity: 300 mg/g (caffeine in water)
**HR:** high-purity material with homogenous surface and optimised pore structure - due to optimised production process - enables lowest blanks, outstanding recovery rates and highest reproducibility. Especially for the enrichment of basic analytes.

**Recommended application:** Basic active ingredients from strongly matrix-contaminated samples like urine, plasma, serum, fungicides from food, basic analytes like e.g. amines

**Similar phases:** Oasis® MCX, Strata® X-C, Styre Screen® DBX

| Volume (ml) | Adsorbent weight (mg) | Art. No. | Pack Qty. | € |
|---|---|---|---|---|
| 3 | 60 | **3090.1** | 30 | 102,90 |
| | 200 | **3092.1** | 30 | 116,50 |
| 6 | 500 | **3095.1** | 30 | 245,00 |

## SPE-polypropylene columns CHROMABOND® HR-XAW

**Sec./tert. ammonium modified spherical polystyrene-divinylbenzene copoloymer, weak basic anion exchanger (mixed mode)**

Pore size: 55-65 Å, particle size: 85 µm
Spec. surface: **850 m²/g**, pH stability: 1-14
Pore volume: 1,2-1,4 cm³/g
Exchange capacity: >0,5 meq/g
RP capacity: 350 mg/g (caffeine in water)
**HR:** high-purity material with homogenous surface and optimised pore structure - due to optimised production process - enables lowest blanks, outstanding recovery rates and highest reproducibility. Especially for the enrichment of strongly acidic analytes.

**Recommended application:** perfluorinated surfactants, acidic compounds like sulfonates, acidic active ingredients from strongly matrix-contaminated samples like e.g. urine, plasma, serum, strong acids with pKa <1

**Similar phases:** Oasis® WAX, Strata™-X-AW

| Volume (ml) | Adsorbent weight (mg) | Art. No. | Pack Qty. | € |
|---|---|---|---|---|
| 3 | 60 | **3905.1** | 30 | 102,90 |
| | 200 | **3911.1** | 30 | 116,50 |
| | 500 | **3912.1** | 30 | 169,00 |

## SPE-polypropylene columns CHROMABOND® HR-XCW

**Carboxylic acid modified spherical polystyrene-divinylbenzene copolymer, weak acidic cation exchanger (mixed mode)**

Pore size: 50-60 Å, particle size: 85 µm
Spec. surface: **850 m²/g**, pH stability: 1-14
Pore volume: 1,2-1,4 cm³/g
Exchange capacity: >0,7 meq/g
RP capacity: 350 mg/g (caffeine in water)
**HR:** high-purity material with homogenous surface and optimised pore structure - due to optimised production process - enables lowest blanks, outstanding recovery rates and highest reproducibility. Especially for the enrichment of strongly basic analytes

**Recommended application:** Basic active ingredients from strongly matrix-contaminated samples like e.g. urine, plasma, serum, strong bases with pKa >10

**Similar phases:** Oasis® WCX, Strata™-X-CW

| Volume (ml) | Adsorbent weight (mg) | Art. No. | Pack Qty. | € |
|---|---|---|---|---|
| 3 | 60 | **3917.1** | 30 | 102,90 |
| | 200 | **3919.1** | 30 | 116,50 |
| | 500 | **3924.1** | 30 | 169,00 |

## More polymer phases

### SPE-polypropylene columns CHROMABOND® Easy

**Polar modified polystyrene-divinylbenzene copolymer with a week ion exchanger**
Pore size: 50 Å, Particle size: 80 µm
Spec. surface: 650-700 $m^2/g$, pH-stability: 1-14

**Please note:** Due to its bifunctional modification it is much more hydrophilic than conventional polystyrene-divinylbenzene polymers and thus easily wettable with water.

**Recommended application:** Drug analysis from urine, blood, serum, plasma, pharmaceuticals/active ingredients from tablets, creams, polar herbicides/pesticides from water (acidic, neutral, basic), polar phenols from water, polyaromatic compounds, polychlorated biphenyls

**Similar phases:** Strata™-X, Oasis® HLB, Porapak™ RDX, Nexus, Bond Elut® PPL, Focus™, Styre Screen® DVB, Bakerbond™ $H_2O$ philic DVB, Isolute® ENV+

| Volume (ml) | Adsorbent weight (mg) | Art. No. | Pack Qty. | € |

| | 500 | **1339.1** | 30 | 225,00 |

### SPE-polypropylene columns CHROMABOND® HR-P

**Highly porous polystyrene-divinylbenezene copolymer**
Particle size: 50-100 µm
Spec. surface: **1200 $m^2/g$**

**Recommended application:** Aromatic compounds, phenols from water, nitroaromatic compounds from water, pesticides from water, PAHs from oil

**Similar phases:** Strata™ SDB-L, Bond Elut® ENV, Bond Elut® LMS, DCS-PS/DVB, ENV PS-DVB, Bakerbond™ $H_2O$-phobic DVB, Isolute® 101, LiChrolut® EN

| Volume (ml) | Adsorbent weight (mg) | Art. No. | Pack Qty. | € |
|---|---|---|---|---|
| 3 | 200 BIG PACK | **N760.1** | 30 | 112,90 |

| | 1000 | **N763.1** | 30 | 225,00 |

## RP Phases

### SPE-glass columns CHROMABOND® C18 ec Ideal for determining phthalate concentration

**Octadecyl-silica gel, endcapped**
Pore size: 60 Å, particle size: 45 µm
Spec. surface: 500 $m^2/g$, pH stability: 2-8

**Please note:** Extremely non-polar, hydrophobic interaction with many organic compounds.

**Recommended application: non-polar compounds**, preservatives, fatty acids, PAHs, pesticides, PCPs, heavy metals, vitamins, aflatoxins, amphetamines, antibiotics, antiepileptics, barbituates, caffeine, nicotine, drugs, etc. Ideal for the determination of phthalates. Also suitable for desalting samples.

**Similar phases:** Strata™ C18-E, Sep-Pak® tC18, Bond Elut® C18, DSC-18(Lt), ENVI-18, LC-18, CLEAN-UP® C18, Bakerbond® Octadecyl, Isolute® C18(EC), LiChrolut® RP-18 E

# Normal phases

## SPE-polypropylene columns CHROMABOND® SiOH

**Unmodified, slightly acidic silica gel**

Pore width: 60 Å, particle size: 45 µm
Spec. surface: 500 $m^2$/g, pH stability: 2-8

**Please note: Extremely polar!** Absorbs air humidity. Should be kept well closed and dried if necessary prior to use. Due to its high affinity for polar compounds it should not be conditioned with polar (e.g. methanol) or water containing solvents.

**Application:** aflatoxines, chloramphenicol, pesticides, steroides, vitamines

**Similar phases:** Strata™ Si-1, Bond Elut® silica, DSC-Si, LC-Si, CLEAN-UP® silica, Accubond® silica, Bakerbond® slica gel, Isolute® silica, LiChrolut® Si

| Volume (ml) | Adsorbent weight (mg) | Art. No. | Pack Qty. | € |

| | | **N759.2** | 250 (5x50) | 739,00 |

## SPE-polypropylene columns CHROMABOND® $NH_2$

**Aminopropyl modified silica gel**

Pore size: 60 Å, particle size: 45 µm
Spec. surface: 500 $m^2$/g, pH stability: 2-8
Aminopropyl phase, carbon content 3,5 %
Polar weak anion exchanger

**Recommended applications:** Trace elements, lipids

**Similar phases:** Strata™ $NH_2$, Sep-Pak® $NH_2$, Bond Elut® $NH_2$, DSC-$NH_2$, LC-$NH_2$, CLEAN-UP® aminopropyl, Accubond® $NH_2$, Bakerbond® amino, Isolute® $NH_2$, LiChrolut® $NH_2$

| Volume (ml) | Adsorbent weight (mg) | Art. No. | Pack Qty. | € |
|---|---|---|---|---|
| 1 | 100 | **1340.1** | 100 | 235,00 |
| 3 | 200 | **1341.1** | 50 | 179,00 |
| | 500 | **1342.1** | 50 | 203,50 |
| | | **1342.2** | 250 (5x50) | 999,00 |
| 6 | 500 | **1343.1** | 30 | 135,00 |
| | 1000 | **1344.1** | 30 | 199,00 |

## SPE-polypropylene columns CHROMABOND® Florisil®

**Magnesium silicate, high-purity**

MgO - SiOH (15:85)
Particle size: 150-250 µm

**Recommended application:** PCBs, PAHs, aliphatic carboxylic acids, organic tin compounds

**Similar phases:** Strata™ FL-PR, Sep-Pak® Florisil®, Bond Elut® Florisil®, ENVI-Florisil®, LC- Florisil®, CLEAN-UP® Florisil®, Accubond® Florisil®, Bakerbond™ Florisil®, Isolute® FL, LiChrolut® Florisil®

| Volume (ml) | Adsorbent weight (mg) | Art. No. | Pack Qty. | € |
|---|---|---|---|---|
| 3 | 200 | **N764.1** | 50 | 138,50 |
| | 500 | **N765.1** | 50 | 150,00 |
| 6 | 1000 | **1291.1** | 30 | 115,50 |
| | | **1291.2** | 250 (5x50) | 665,00 |

# Ion exchangers

## SPE-polypropylene columns CHROMABOND® SB (SAX)

**Quat. ammonium modified silica gel, strongly basic anion exchanger**

Pore size: 60 Å, particle size: 45 µm
Spec. surface: 500 $m^2$/g, pH-stability: 2-8
Exchange Capacity: approx. 0,3 meq/g

**Please note:** Not suited for very strong anions such as sulphonic acids, because these are difficult to elute.

**Recommended applications:** Organic acids, caffeine, saccharin

**Similar phases:** Strata™ SAX, Sep-Pak® SAX, Bond Elut® SAX, DSC-SAX, LC-SAX, CLEAN-UP® Quaternary Amine, Accubond® SAX, Bakerbond™ Quarternary Amine, Isolute® SAX, LiChrolut® SAX

| Volume (ml) | Adsorbent weight (mg) | Art. No. | Pack Qty. | € |
|---|---|---|---|---|
| 1 | 100 | **1346.1** | 100 | 235,00 |
| 3 | 200 | **1350.1** | 50 | 179,00 |
| | 500 | **1351.1** | 50 | 203,50 |
| | | **1351.2** | 250 (5x50) | 824,50 |
| 6 | 500 | **1352.1** | 30 | 135,00 |
| | 1000 | **1353.1** | 30 | 199,00 |

## SPE-polypropylene columns CHROMABOND® SA (SCX)

**Benzenesulphonic acid modified silica gel, strongly acidic cation exchanger**

Pore size: 60 Å, particle size: 45 µm
Spec. surface: 500 $m^2$/g, pH stability: 2-8
Exchange capacity: approx. 0,5 meq/g

**Please note:** Adsorbent with hydrophobic and π-π-interactions (benzene ring); Ion exchange of organic compounds from aqueous matrix; Elution of interesting compounds with solvent systemes, which compensate the ionic and nonpolar interactions, e.g. methanolic HCl.

**Recommended application:** Amino acids, chlorophyll, Amines, PCBs

**Similar phases:** Strata™ SCX, Bond Elut® SCX, DSC-SCX, LC-SCX, CLEAN-UP® Benzenesulfonic Acid, Accubond® SCX, Bakerbond™ Aromatic Sulfonic Acid, Isolute® SCX, LiChrolut® SCX

| Volume (ml) | Adsorbent weight (mg) | Art. No. | Pack Qty. | € |
|---|---|---|---|---|
| 1 | 100 | **1293.1** | 100 | 235,00 |
| 3 | 500 | **1295.1** | 50 | 203,50 |
| | | **1295.2** | 250 (5x50) | 825,00 |
| 6 | 1000 | **1297.1** | 30 | 199,00 |

# Phases for environmental analysis

## SPE-glass column CHROMABOND® $Na_2SO_4$/Florisil®

**Extraction of hydrocarbons from water according to DIN H53 / ISO DIS 9377-4**

Special combination phase of sodium sulphate and Florisil®

**Recommended appllication:**
Hydrocarbons from drinking, surface and waste water

| Volume (ml) | Adsorbent weight (mg) | Art. No. | Pack Qty. | € |
|---|---|---|---|---|
| 6 | 2000/2000 | **N744.1** | 30 | 222,00 |

| | | **8560.5** | 25 kg | plastic | 510,65 |

## SPE Polypropylene column CHROMABOND®HR-P-AOX

**AOX from water containing high salt loads**

Special PS-DVB (polystyrene-divinylbenzene) phase.
**Recommended application:** extraction of AOX from waters containing high salt loads / organic pollutants in accordance with DIN 38409 - H22.

| Volume (ml) | Adsorbent weight (mg) | Art. No. | Pack Qty. | € |
|---|---|---|---|---|
| 6 | 500 | **CN43.1** | 30 | 195,00 |

## SPE-polypropylene columns CHROMABOND® $C_{18}$ PAH

**Enrichment of PAHs from water**

Special octadecyl modified silica, not endcapped
Pore size: 60 Å, particle size: 45 µm,
specific surface: 500 $m^2/g$, pH stability: 2-8
carbon content: 14 %

**Recommended application:** PAHs from water

**Similar phases:** Bakerbond™ Octadecyl Lightload

| Volume (ml) | Adsorbent weight (mg) | Art. No. | Pack Qty. | € |
|---|---|---|---|---|
| 6 | 2000 | **4713.1** | 30 | 269,00 |

## SPE-polypropylene columns CHROMABOND® $NH_2/C_{18}$

**Enrichment of PAHs from water containing humic acid**

Special combination phase:
**$NH_2$:** aminopropyl phase for removal of interfering humic acids
**$C_{18}$:** octadecyl phase for enrichment of PAHs

**Recommended application:** PAHs from water containing humic acids

| Volume (ml) | Adsorbent weight (mg) | Art. No. | Pack Qty. | € |
|---|---|---|---|---|
| 6 | 500/500 | **4783.1** | 30 | 222,00 |
| | 500/1000 | **4785.1** | 30 | 265,00 |

## SPE-polypropylene columns CHROMABOND® CN/SiOH

**Enrichment of PAH from soil**

Special combination phase:
**CN:** Cyanopropyl phase for selective adsorption of polycyclic aromatics via π-π interactions
**SiOH:** Unmodified silica phase for removal of polar components

**Recommended application:** extraction of the 16 PAHs according to EPA from soil samples

| Volume (ml) | Adsorbent weight (mg) | Art. No. | Pack Qty. | € |
|---|---|---|---|---|
| 3 | 500/1000 | **2992.1** | 50 | 425,00 |
| 6 | 500/1000 | **2995.1** | 30 | 265,00 |
| | | **2995.2** | 250 (5x50) | 1550,00 |

## Recommended chemicals

**for analysis of PAH from soil samples with SPE-Polypropylen columns CHROMABOND® CN/SiOH.**

| Product | Purity | Art. No. | Pack Qty. | Pack. | € |

For additional product data and safety information, see chapter Chemicals A-Z.

## SPE-polypropylene columns CHROMABOND® SiOH-$H_2SO_4$/SA

**Enrichment of PCBs from oil**

Special combination phase:
**SA:** strongly acidic cation exchanger based on silica with benzenesulphonic acid modification for removal of ionic and sulphur-containing compounds
**SiOH-$H_2SO_4$:** $H_2SO_4$-impregnated silica phase for oxidation of accompanying compounds to ionic and/or polar compounds
**Recommended application:** extraction of PCBs from oil with reference to German industrial standard DIN 51527, part 1. This combination column is used together with a SiOH column.

| Volume (ml) | Adsorbent weight (mg) | Art. No. | Pack Qty. | € |
|---|---|---|---|---|
| 3 | 500/500 BIG PACK | **4792.1** | 50 | 309,00 |
| | | **4792.2** | 250 (5x50) | 1150,00 |

## Kombi-Kit

**For Extraction of PCB from oil with reference to DIN 51527, part 1**

| Content | Art. No. | Pack Qty. | € |
|---|---|---|---|
| **CHROMABOND® SiOH-$H_2SO_4$/SA / CHROMABOND® SiOH** | **4793.1** | 25 / 25 | 243,50 |

## SPE Polypropylene column CHROMABOND® SA/SiOH

**Extraction of PCBs from waste oil.**
Special combination phase:
**SA:** strongly acidic cation exchanger based on silica with benzenesulphonic acid modification
**SiOH:** unmodified silica for removal of polar compounds
**Recommended application:** extraction of PCBs from waste oil (hexane extract)
**Similar phases:** Bakerbond™ PCB-N

## SPE-polypropylene columns CHROMABOND® NAN

**Enrichment of PCBs from sludge**

Special combination phase:
**N:** sodium sulphate for removal of trace water
**A:** SiOH/$AgNO_3$ phase for removal of sulphur, sulphur-containing and polar compounds
**Recommended application:** extraction of PCBs from sludge

| Volume (ml) | Adsorbent weight (mg) | Art. No. | Pack Qty. | € |
|---|---|---|---|---|
| 3 | 400/1400/400 | **4786.1** | 50 | 445,00 |

# SPE phases for pharmaceutical applications

## SPE-polypropylene columns CHROMABOND® Drug

**Drug analysis**

Special silica gel phase:
Bifunctional modification - $C_8$ / SA
(strong cation exchanger - benzene sulphonic acid)
Pore size: 60 Å, particel size: 45 µm,
specific surface: 500 $m^2/g$, pH stability: 2-8
**Recommended applications:**
enrichment of acidic, neutral and basic drugs from urine or plasma.
**Similar phases:** Strata™ Screen-C, Bond Elut® Certify I, DSC-MCAX, Clean Screen® DAU, Accubond® Evidex, Bakerbond™ Narc-2, Isolute® HCX, LiChrolut® TSC, HyperSep™ Verify CX

| Volume (ml) | Adsorbent weight (mg) | Art. No. | Pack Qty. | € |
|---|---|---|---|---|
| 1 | 100 | **1354.1** | 100 | 225,00 |
| 3 | 200 BIG PACK | **1355.1** | 50 | 175,50 |
| | | **1355.2** | 250 (5x50) | 699,00 |
| 3 | 500 | **1356.1** | 50 | 199,00 |
| | | **1357.1** | 30 | 135,00 |

## SPE-polypropylene columns CHROMABOND® Drug II

**Extraction of THC and derivates, acidic analytes from biological fluid (urine, blood ...)**

Special silica gel phase:
Bifunctional modification - $C_8$ / SB
(strong anion exchanger - quaternary amine)
Pore size: 60 Å, particle size: 45 µm,
specific surface: 500 $m^2/g$, pH stability: 2-8
**Recommended application:**
extraction of THC and derivatives from urine, blood, serum, plasma. Acidic analytes from biological fluids
**Similar phases:** Strata™ Screen-A, Bond Elut® Certify II, Clean Screen® THC, Bakerbond™ Narc-1, Isolute® HAX, HyperSep™ Verify AX

| Volume (ml) | Adsorbent weight (mg) | Art. No. | Pack Qty. | € |
|---|---|---|---|---|
| 3 | 200 | **3063.1** | 50 | 175,50 |
| 6 | 500 | **3064.1** | 30 | 135,00 |

## SPE phase for food analysis

### SPE-polypropylene columns CHROMABOND® ABC18

**Acrylamide in food**

Special phase:

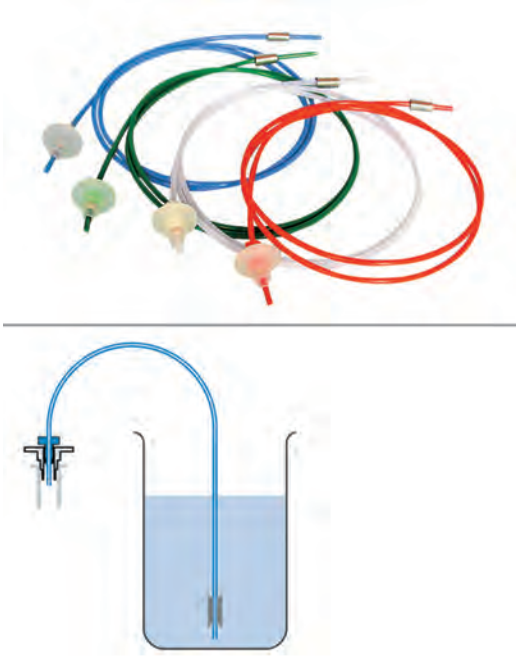
Octadecyl silica phase with ion exchange character for acrylamide analysis

**Recommended application:**

Clean-up of acrylamide from ultra-heated starch-containing food, such as potato chips, french fries, crispbread and cereals

**Important note:**

Minimum concentration of acrylamide should be 70 µg/kg.The procedure includes no concentration step.



**Similar phases:** Isolute® M-M (Multimode)

| Volume (ml) | Adsorbent weight (mg) | Art. No. | Pack Qty. | € |
|---|---|---|---|---|
| 6 | 500 | **2991.1** | 30 | 135,00 |

### Solvents ROTISOLV® GC Ultra Grade, Pestilyse® plus and Pestilyse® for SPE

| Polarity | Solvent | Art. No. | Water miscibility |
|---|---|---|---|
| **nonpolar** | n-Heptane | X878 | no |
| | n-Hexane | T165 | no |
| | n-Pentane | T903 | no |
| | Isooctane | T167 | no |
| | Petroleum ether 40-60 °C | T170 | no |
| | Cyclohexane | T163 | no |
| | Toluene | KK46 | no |
| | Diethyl ether | T900 | no |
| | 2-Propanol | T902 | yes |
| | Tetrahydrofuran | 6788 | yes |
| | Trichloromethane/ Chloroform | T901 | no |
| | Acetic acid ethyl ester | T164 | weak |
| | Methanol | KK44 | yes |
| | Acetone | T161 | yes |
| | Acetic acid | 3738 | yes |
| | Acetonitrile | T168 | yes |
| | Dichloromethane | 6053 | no |
| **polar** | Water | T905 | yes |

## Accessories for SPE

### Tube adapters

For feeding large sample volumes to **1, 3 ml and 6 ml columns**.
Figure: application of the CHROMABOND® tube adapter.

Material: PTFE, tube length: approx. 1 m

**For glass columns**

| Art. No. | Pack Qty. | € |
|---|---|---|
| **N866.1** | 4 | 225,00 |

**For polypropylene columns**

| Art. No. | Pack Qty. | € |
|---|---|---|
| **N867.1** | 4 | 145,00 |

### Adapter

For coupling of several CHROMABOND® columns of the same or different sizes or for coupling of dispoable syringes with CHROMABOND® columns.

| Art. No. | Pack Qty. | € |
|---|---|---|
| **2996.1** | 4 | 41,50 |
| **2996.2** | 10 | 94,50 |

## SPE columns

Made of **PP**. Can be used with vacuum block (H676.1ff) and other vacuum systems. Excellent chemical resistance.
Column outlet: Luer (male).
**Delivery without** PE frits (please order separately).

| Volume (ml) | Outside ∅ (mm) | Art. No. | Pack Qty. | € |
|---|---|---|---|---|
| 1 | 8 | **PX07.1** | 100 | 44,10 |
| 3 | 11 | **PX08.1** | 100 | 44,10 |

## Frits for SPE columns

Made of **PE**. Pore size 20 µm.

| Type | ∅ (mm) | Art. No. | Pack Qty. | € |
|---|---|---|---|---|
| For 1 ml PP column | 6 | **PX10.1** | 100 | 17,10 |
| For 3 ml PP column | 9 | **PX11.1** | 100 | 17,10 |

## Accessories: Luer caps

Made of **PP**. To fit standard Luer (male) outlets, and for all column and cartridge sizes.

| Art. No. | Pack Qty. | € |
|---|---|---|
| **PX15.1** | 100 | 17,10 |

▶ Empty columns and cartriges for protein isolation, page 1304

# Liquid-Liquid Extraction

## Polypropylene columns CHROMABOND® XTR

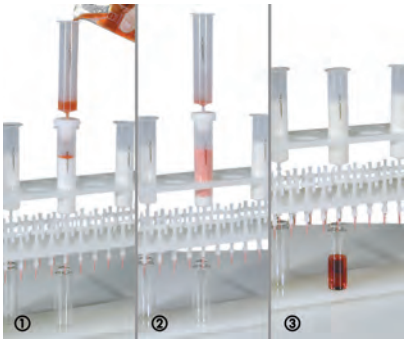
**Kieselguhr phase for liquid-liquid extraction**

**Features:**
- Base material coarse-grained kieselguhr (also known as diatomaceous earth, hydromatrix, celite)
- Large pore size, high pore volume, constantly high batch-to-batch quality
- pH working range 1-13

**Application:**
- Liquid-liquid extraction of highly viscous aqueous solutions such as physiological fluids (blood, plasma, and serum), dyes in textiles, environmental and food analysis without use of a separation funnel
- High water loadability without breakthrough of water during elution with organic solvents
- Also suitable for removing small amounts of water from solvents which are not miscible with water

**Advantages:**
- Fast, reproducible and economical
- Simultaneous preparation of several samples
- No problems with phase separation, no formation of emulsions
- High recovery rates
- Saves of time and solvents
- Organic solutions don't need to be dried after separation

**General column parameters:**



| Volume | Amount of absorbant | Max. volume capacity of aq. solution | Waiting period before elution | Elution volume |
|---|---|---|---|---|
| 6 ml | 1 g | 1 ml | 5-10 min | 8 ml |
| 30 ml | 4,5 g | 5 ml | 5-10 min | 16 ml |
| 70 ml | 14,5 g | 20 ml | 10-15 min | 40 ml |

Depending on the concentration of the analytes eluates can be analysed immediately, or the organic solvent is evaporated. The pH value of the aqueous solution can be altered on the column, which enables elution of different compounds of a sample under optimised conditions. Under certain circumstances, acidic, neutral, and basic compounds can be fractionated in this way.

**Solvents applicable for elution:**
Diethyl ether (T900)
tert-Butyl methyl ether (T175)
Ethyl acetate (T164)
n-Hexane (T165)
Cyclohexane (T163)
Toluene (T166)
Dichloromethane (T901)
Trichloromethane (chloroform) (T901)
Trichloromethane / methanol (90/10, v/v) (T901/T909)
Trichloromethane / methanol (85/15, v/v)
Diethyl ether / ethanol (90/10, v/v)
Diethyl ether / ethanol (80/20, v/v) (T900/9065)
Dichloromethane / 2-propanol (90/10, v/v)
Dichloromethane / 2-propanol (85/15, v/v) (T901/T902)

Eluents with higher alcohol contents cause an increase in volume of the aqueous phase on the CHROMABOND® XTR. In such case, the column might be overloaded which leads to a displacement of the aqueous phase from the column. Therefore a greater capacity column should be used.
**Similar phases:** EXtrelut®, Chem Elut™. Isolute® SLE+, Hydromatrix™

| Volume (ml) | Adsorbent weight (g) | Art. No. | Pack Qty. | € |
|---|---|---|---|---|
| 6 | 1 | **3677.1** | 30 | 69,90 |

| 70 | 14,5 BIG PACK | **3679.2** | 100 (5x20) | 469,00 |

① Sample application
② Spreading of the sample
③ Sample elution

TIP

**Extraction of analytes form an aqueous to an organic phase:**

**Column conditioning:** Not required

**Sample application:** Aqueous solutions are applied to the dry CHROMABOND® XTR adsorbent. They are soaked up by the solid within a few minutes and spread over the surface of the kieselguhr material as a thin film.

**Elution:** Lipophilic analytes are eluted with water-immiscible organic solvents; the aqueous phase remains on the CHROMABOND® XTR adsorbent.
Polar, water-soluble analytes, which remain in the aqueous phase on the XTR adsorbent, can be eluted e.g. with saturated NaCl.

**Warning:** Never exceed the volume capacities listed for each columns size!

# QuEChERS Products

## For pesticide residue analysis in food

Within a few years after its development the QuEChERS method has gained a leading position for determination of pesticide residues in food samples by GC-MS or LC-MS, allowing rapid and cheap clean-up of strongly matrix-contaminated samples.
For optimizing the extraction of pH-dependent compounds, for minimizing decomposition of sensitive substances, and for broadening the matrix spectrum,different modifications of the QuEChERS method have been elaborated.
In addition to the required adsorbent Silica gel 60 diamino a number of individually weighed and premixed buffer and extraction mixtures is offered, specially composed for different sample matrices.
For extraction, the European standard EN 15662 recommends a citrate extraction mix (Mix I), while AOAC standard 2007.1 uses an acetate extraction mix (Mix II).
For clean-up, the Diamino phase (PSA) removes, e.g., sugars and organic acids. Magnesium sulfate removes water, $C_{18}$ ec removes nonpolar interferences such as fats and the Carbon phase removes pigments, sterols, and nonpolar interferences.
For selection of the proper clean-up mix see table below.

**Standard clean-up in food samples:**
10 g sample are homogenised with 10 ml acetonitrile. After adding the internal standard the sample is shaken with 4 g magnesium sulphate and 1 g sodium chloride and afterwards centrifuged. 1 ml of the supernatant is spiked with 25 mg CHROMABOND® Diamino and 150 mg magnesium sulphate and shaken again. After centrifugation the supernatant is injected to GC/MS.

For selection of the proper clean-up mix see table below.

| Sample property | Low fat content (e.g., apples, strawberries) | Moderate content of chlorophyll and carotinoids (e.g., carrots, lettuce) | High content of chlorophyll and carotinoids (e.g., bell peppers, spinach | High fat content (e.g., avocado) |
|---|---|---|---|---|
| Extraction | **Mix I or Mix II** Citrate or acetate extraction | **Mix I or Mix II** Citrate or acetate extraction | **Mix I** Citrate extraction | **Mix I** Citrate extraction |
| Clean up | **Mix III** Diamino clean-up | **Mix IV** Diamino/Carbon clean-up | **Mix V** Diamino/Carbon clean-up (higher carbon content) | **Mix VI** Diamino/$C_{18}$ ec clean-up |

### Extraction mixes

| Product | Type | Composition | Art. No. | Pack Qty. | € |
|---|---|---|---|---|---|
| **QuEChERS Extraction Mix I** | CHROMABOND® Citrate mix | Magnesium sulphate, anhydrous 4 g / Sodium chloride 1 g / di-Sodium hydrogen citrate1,5-hydrate: 0,5 g / tri-Sodium citrate dihydrate 1 g | **4867.1** | 50 x 15 ml | 150,00 |
| **QuEChERS Extraction Mix II** | CHROMABOND® Acetate mix | Magnesium sulphate, anhydrous 6 g / Sodium acetate 1,5 g | **4868.1** | 50 x 15 ml | 150,00 |

### Clean-up mixes

| Product | Type | Composition | Art. No. | Pack Qty. | € |

# Salts for Analysis

Our salts for analysis are manufactured under strict production guidelines. Analytical purity and best quality reliably characterize each batch.
Salts in p.a. quality made by Roth meet the high requirements for reproducible results. Most of our salts are additionally specified according to international standards like ACS and ISO.

**Definition:**
**p.a.: pro analysi (for Analysis)**
**ACS: American Chemical Society**
**ISO: International Standard Organisation**

| | | **4477.2** | 250 g | plastic | 22,05 |
| | | **4477.3** | 500 g | plastic | 32,80 |
| | | **4477.4** | 1 kg | plastic | 52,60 |

For additional product data and safety information, see chapter Chemicals A-Z.

## Antimony salts, Sb

| Product | Purity | Art. No. | Pack Qty. | Pack. | € |
|---|---|---|---|---|---|
| **Antimony(III) chloride** | ≥99 %, p.a., ACS | **9819.1** | 100 g | plastic | 27,85 |
| | | **9819.2** | 500 g | plastic | 89,15 |
| | | **9819.3** | 1 kg | plastic | 152,55 |
| **Antimony(III) oxide** | ≥99 %, p.a. | **9826.1** | 100 g | plastic | 18,85 |
| | | **9826.2** | 500 g | plastic | 61,85 |
| | | **9826.3** | 1 kg | plastic | 110,65 |

## Barium salts, Ba

| Product | Purity | Art. No. | Pack Qty. | Pack. | € |
|---|---|---|---|---|---|
| **Barium acetate** | ≥99 %, p.a., ACS | **2553.1** | 250 g | plastic | 37,55 |
| | | **2553.2** | 500 g | plastic | 60,10 |
| | | **2553.3** | 1 kg | plastic | 100,55 |
| **Barium carbonate** | ≥99 %, p.a., ACS | **P008.2** | 25 g | plastic | 12,80 |
| | | **P008.3** | 100 g | plastic | 25,30 |
| | | **P008.1** | 500 g | plastic | 92,35 |
| **Barium chloride dihydrate** | ≥99 %, p.a., ACS, ISO | **4453.1** | 250 g | plastic | 15,60 |
| | | **4453.2** | 500 g | plastic | 23,15 |
| | | **4453.3** | 1 kg | plastic | 38,60 |
| | | **4453.4** | 2,5 kg | plastic | 82,25 |
| | | **4453.5** | 25 kg | plastic | 665,45 |
| **Barium hydroxide octahydrate** | ≥98 %, p.a., ISO | **P009.2** | 250 g | plastic | 26,35 |
| | | **P009.1** | 500 g | plastic | 39,70 |
| | | **P009.3** | 1 kg | plastic | 60,75 |
| **Barium nitrate** | ≥99 %, p.a., ACS | **4387.1** | 250 g | plastic | 26,35 |
| | | **4387.2** | 500 g | plastic | 41,85 |

## Bismuth salts, Bi

| Product | Purity | Art. No. | Pack Qty. | Pack. | € |
|---|---|---|---|---|---|
| **Bismuth(III) nitrate** | ≥71 % Bi, p.a., alkaline | **4447.1** | 50 g | plastic | 43,55 |
| | | **4447.2** | 100 g | plastic | 69,35 |
| **Bismuth(III) nitrate pentahydrate** | ≥98 %, p.a., ACS | **2554.1** | 250 g | plastic | 46,80 |
| | | **2554.2** | 500 g | plastic | 84,85 |
| | | **2554.3** | 1 kg | plastic | 149,45 |
| **Bismuth(III) oxide** | ≥99,5 %, p.a. | **6555.1** | 50 g | plastic | 36,45 |
| | | **6555.2** | 100 g | plastic | 50,00 |
| | | **6555.3** | 500 g | plastic | 155,90 |
| **Sodium bismuthate** | ≥85 %, p.a. | **4401.1** | 50 g | plastic | 46,15 |
| | | **4401.2** | 100 g | plastic | 85,50 |
| | | **4401.3** | 250 g | plastic | 185,45 |

## Bor salts, B

| Product | Purity | Art. No. | Pack Qty. | Pack. | € |
|---|---|---|---|---|---|
| **di-Sodium tetraborate decahydrate** | ≥99,5 %, p.a., ACS, ISO | **T880.1** | 500 g | plastic | 31,10 |
| | | **T880.2** | 1 kg | plastic | 46,15 |
| | | **T880.3** | 2,5 kg | plastic | 90,20 |
| **Sodium tetraphenyl borate** | ≥99,5 %, p.a., ACS | **4385.1** | 10 g | plastic | 40,75 |
| | | **4385.2** | 25 g | plastic | 89,15 |
| | | **4385.3** | 100 g | plastic | 278,45 |

## Cadmium salts, Cd

| Product | Purity | Art. No. | Pack Qty. | Pack. | € |
|---|---|---|---|---|---|
| **Cadmium acetate dihydrate** | ≥99 %, p.a. | **KK06.1** | 100 g | plastic | 31,75 |
| | | **KK06.2** | 250 g | plastic | 67,20 |
| **Cadmium sulphate hydrate** | ≥99 %, p.a., ACS | **4482.2** | 25 g | plastic | 18,20 |
| | | **4482.1** | 100 g | plastic | 55,80 |
| | | **4482.3** | 250 g | plastic | 94,50 |
| | | **4482.4** | 500 g | plastic | 142,90 |
| | | **4482.5** | 1 kg | plastic | 267,70 |

## Caesium salts, Cs

| Product | Purity | Art. No. | Pack Qty. | Pack. | € |
|---|---|---|---|---|---|
| **Caesium carbonate** | ≥99,9 %, p.a. | **6873.1** | 5 g | plastic | 16,70 |
| | | **6873.2** | 25 g | plastic | 36,45 |
| | | **6873.3** | 100 g | plastic | 117,20 |
| | | **6873.4** | 500 g | plastic | 347,15 |
| **Caesium chloride** | ≥99,999 %, p.a., ultra quality | **8627.3** | 50 g | plastic | 48,30 |
| | | **8627.1** | 100 g | plastic | 80,55 |
| | | **8627.2** | 1 kg | plastic | 532,15 |
| **Caesium sulphate** | ≥99,99 %, p.a. | **9355.3** | 25 g | plastic | 40,75 |
| | | **9355.1** | 100 g | plastic | 128,90 |
| | | **9355.2** | 1 kg | plastic | 880,45 |

## Calcium salts, Ca

| Product | Purity | Art. No. | Pack Qty. | Pack. | € |
|---|---|---|---|---|---|
| **Calcium acetate monohydrate** | ≥99 %, p.a., ACS | **P011.1** | 500 g | plastic | 35,40 |
| | | **P011.2** | 1 kg | plastic | 65,05 |
| **Calcium carbonate** | ≥99 %, p.a., precipitated | **P012.1** | 500 g | plastic | 68,70 |
| | | **P012.2** | 1 kg | plastic | 120,30 |
| | | **P012.3** | 2,5 kg | plastic | 235,45 |
| **Calcium chloride dihydrate** | ≥99 %, p.a., ACS | **5239.2** | 500 g | plastic | 17,45 |
| | | **5239.1** | 1 kg | plastic | 24,20 |
| | | **5239.3** | 2,5 kg | plastic | 52,60 |
| **Calcium chloride hexahydrate** | ≥98 %, p.a. | **T886.2** | 500 g | plastic | 30,00 |
| | | **T886.1** | 1 kg | plastic | 50,45 |
| | | **T886.3** | 2,5 kg | plastic | 99,45 |
| **Calcium hydroxide** | ≥96 %, p.a. | **CN87.1** | 500 g | plastic | 40,75 |
| | | **CN87.2** | 1 kg | plastic | 66,55 |
| | | **CN87.3** | 2,5 kg | plastic | 138,70 |
| **Calcium nitrate tetrahydrate** | ≥99 %, p.a., ACS | **P740.1** | 500 g | plastic | 23,55 |
| | | **P740.2** | 1 kg | plastic | 37,10 |
| | | **P740.3** | 2,5 kg | plastic | 81,60 |
| **Calcium sulphate dihydrate** | ≥98 %, p.a., ACS | **P741.1** | 500 g | plastic | 51,50 |
| | | **P741.2** | 1 kg | plastic | 89,80 |
| | | **P741.3** | 2,5 kg | plastic | 192,45 |

## Cerium salts, Ce

| Product | Purity | Art. No. | Pack Qty. | Pack. | € |
|---|---|---|---|---|---|
| **Ammonium cerium(IV) sulphate dihydrate** | ≥99 %, p.a. | **4386.1** | 100 g | plastic | 45,05 |
| | | **4386.2** | 250 g | plastic | 99,90 |
| | | **4386.3** | 500 g | plastic | 157,95 |
| **Cerium(IV) ammonium nitrate** | ≥99,5 %, p.a. | **HN28.1** | 50 g | plastic | 44,65 |
| | | **HN28.2** | 100 g | plastic | 81,60 |
| | | **HN28.3** | 250 g | plastic | 151,05 |
| **Cerium(III) nitrate hexahydrate** | ≥99,5 %, p.a. | **HN18.1** | 100 g | plastic | 75,15 |
| | | **HN18.2** | 500 g | plastic | 289,20 |
| **Cerium(IV) oxide** | ≥99,9 %, p.a. | **9837.1** | 100 g | plastic | 33,25 |
| | | **9837.2** | 500 g | plastic | 100,95 |
| | | **9837.3** | 1 kg | plastic | 155,90 |
| **Cerium(IV) sulphate tetrahydrate** | ≥98 %, p.a. | **P014.2** | 50 g | plastic | 65,05 |
| | | **P014.1** | 100 g | plastic | 111,70 |

For additional product data and safety information, see chapter Chemicals A-Z.

## Chromium salts, Cr

| Product | Purity | Art. No. | Pack Qty. | Pack. | € |
|---|---|---|---|---|---|
| Chromium(III) chloride hexahydrate | ≥97 %, p.a. | 9832.1 | 100 g | plastic | 16,70 |
| | | 9832.2 | 500 g | plastic | 44,65 |
| | | 9832.3 | 1 kg | plastic | 73,00 |
| Chromium(III) potassium sulphate dodecahydrate | ≥98 %, p.a., ACS | 4389.1 | 250 g | plastic | 27,85 |
| | | 4389.2 | 500 g | plastic | 42,90 |
| | | 4389.3 | 1 kg | plastic | 81,60 |
| Potassium chromate | ≥99 %, p.a., ACS | HN33.1 | 100 g | plastic | 36,45 |
| | | HN33.2 | 250 g | plastic | 68,70 |
| | | HN33.3 | 500 g | plastic | 119,90 |
| | | HN33.4 | 1 kg | plastic | 206,95 |
| Potassium dichromate | ≥99,5 %, p.a., ACS, ISO | P744.3 | 100 g | plastic | 26,35 |
| | | P744.1 | 500 g | plastic | 95,15 |
| | | P744.2 | 1 kg | plastic | 160,75 |
| Reinecke salt monohydrate | ≥93%, p.a., ACS | 6629.1 | 25 g | glass | 57,95 |
| | | 6629.2 | 100 g | glass | 169,35 |

## Cobalt salts, Co

| Product | Purity | Art. No. | Pack Qty. | Pack. | € |
|---|---|---|---|---|---|
| Cobalt(II) acetate tetrahydrate | ≥98 %, p.a., ACS | HN29.1 | 50 g | plastic | 26,35 |
| | | HN29.2 | 100 g | plastic | 40,75 |
| | | HN29.3 | 250 g | plastic | 85,90 |
| Cobalt(II) chloride hexahydrate | ≥99 %, p.a., ACS, ISO | T889.2 | 50 g | plastic | 60,10 |
| | | T889.3 | 100 g | plastic | 92,35 |
| | | T889.1 | 250 g | plastic | 177,40 |
| Cobalt(II) nitrate hexahydrate | ≥98 %, p.a., ACS | HN16.1 | 50 g | plastic | 28,50 |
| | | HN16.2 | 100 g | plastic | 46,80 |
| | | HN16.3 | 250 g | plastic | 96,65 |
| Cobalt(II,III) oxide | ≥71 % Co, p.a. | 9834.1 | 25 g | plastic | 16,70 |
| | | 9834.2 | 100 g | plastic | 44,65 |
| | | 9834.3 | 500 g | plastic | 188,15 |
| Cobalt(II) sulphate heptahydrate | ≥97 %, p.a. | 4390.1 | 100 g | plastic | 35,40 |
| | | 4390.2 | 250 g | plastic | 76,25 |
| | | 4390.3 | 500 g | plastic | 139,65 |
| Sodium hexanitro-cobaltate(III) | p.a., ACS | 4409.1 | 25 g | plastic | 19,25 |
| | | 4409.2 | 100 g | plastic | 52,60 |
| | | 4409.3 | 250 g | plastic | 107,40 |

## Copper salts, Cu

| Product | Purity | Art. No. | Pack Qty. | Pack. | € |
|---|---|---|---|---|---|
| Copper(II) acetate monohydrate | ≥99 %, p.a., ACS | HN30.1 | 50 g | plastic | 21,40 |
| | | HN30.2 | 100 g | plastic | 32,15 |
| | | HN30.3 | 250 g | plastic | 66,15 |
| Copper(I) chloride | ≥98 %, p.a., ACS | 4391.1 | 100 g | plastic | 19,25 |
| | | 4391.2 | 250 g | plastic | 37,55 |
| | | 4391.3 | 500 g | plastic | 66,15 |
| | | 4391.4 | 1 kg | plastic | 117,20 |
| Copper(II) chloride dihydrate | ≥99 %, p.a. | CN82.1 | 250 g | plastic | 26,80 |
| | | CN82.2 | 500 g | plastic | 42,90 |
| | | CN82.3 | 1 kg | plastic | 77,30 |
| Copper(II) nitrate trihydrate | ≥99,5 %, p.a., ACS | P754.1 | 500 g | plastic | 61,20 |
| | | P754.2 | 1 kg | plastic | 160,75 |
| Copper(II) oxide | p.a., ACS, as wire | 4467.2 | 25 g | plastic | 21,40 |
| | | 4467.1 | 100 g | plastic | 64,40 |
| | | 4467.3 | 250 g | plastic | 145,05 |
| Copper(II) sulphate | ≥98 %, p.a., anhydrous | P023.1 | 250 g | plastic | 34,30 |
| | | P023.2 | 1 kg | plastic | 102,05 |
| | | P023.3 | 2,5 kg | plastic | 220,40 |
| Copper(II) sulphate pentahydrate | ≥99,5 %, p.a., ACS, ISO | P024.1 | 500 g | plastic | 27,85 |
| | | P024.2 | 1 kg | plastic | 47,85 |
| | | P024.3 | 2,5 kg | plastic | 89,15 |

## Gold salts, Au

| Product | Purity | Art. No. | Pack Qty. | Pack. | € |
|---|---|---|---|---|---|
| Tetrachloroauric(III) acid trihydrate NEW | ≥99,9 %, p.a., ultra quality | 0689.1 | 500 mg | glass | 84,95 |
| | | 0689.2 | 1 g | glass | 138,70 |
| | | 0689.3 | 5 g | glass | 525,70 |
| Tetrachloroauric(III) acid trihydrate | ≥99,5 %, p.a. | 3867.1 | 1 g | glass | 134,40 |
| | | 3867.2 | 5 g | glass | 536,45 |

## Indium salts, In NEW

| Product | Purity | Art. No. | Pack Qty. | Pack. | € |
|---|---|---|---|---|---|
| Indium(III) chloride | ≥99,9 %, p.a. | 0307.1 | 5 g | plastic | 26,80 |
| | | 0307.2 | 10 g | plastic | 42,90 |
| | | 0307.3 | 25 g | plastic | 85,90 |
| | | 0307.4 | 50 g | plastic | 149,45 |
| Indium(III) sulphate | ≥99,99 %, p.a. | 0314.1 | 5 g | plastic | 26,80 |
| | | 0314.2 | 10 g | plastic | 42,90 |
| | | 0314.3 | 25 g | plastic | 75,15 |
| | | 0314.4 | 50 g | plastic | 138,70 |

## Iron salts, Fe

| Product | Purity | Art. No. | Pack Qty. | Pack. | € |
|---|---|---|---|---|---|
| Ammonium iron(II) sulphate hexahydrate | ≥99 %, p.a., ISO | P728.1 | 500 g | plastic | 27,45 |
| | | P728.2 | 1 kg | plastic | 46,15 |
| | | P728.3 | 2,5 kg | plastic | 103,75 |
| Ammonium iron(III) sulphate dodecahydrate | ≥98,5 %, p.a., ACS, ISO | P734.1 | 500 g | plastic | 30,00 |
| | | P734.2 | 1 kg | plastic | 51,50 |
| | | P734.3 | 2,5 kg | plastic | 107,40 |
| Iron(III) chloride hexahydrate | ≥99 %, p.a. | P742.1 | 250 g | plastic | 27,85 |
| | | P742.2 | 1 kg | plastic | 87,00 |
| | | P742.5 | 25 kg | plastic | 837,45 |
| Iron(II) sulphate heptahydrate | ≥99 %, p.a., ACS | P015.1 | 500 g | plastic | 24,20 |
| | | P015.2 | 1 kg | plastic | 35,40 |
| | | P015.3 | 2,5 kg | plastic | 76,25 |
| | | P015.5 | 25 kg | plastic | 493,45 |
| Potassium hexacyano-ferrate(II) trihydrate | ≥99 %, p.a., ACS, ISO | P745.1 | 500 g | plastic | 90,20 |
| | | P745.2 | 1 kg | plastic | 160,20 |
| | | P745.3 | 2,5 kg | plastic | 342,95 |
| Potassium hexacyano-ferrate(III) | ≥99 %, p.a., ACS | P746.3 | 100 g | plastic | 21,75 |
| | | P746.1 | 500 g | plastic | 69,80 |
| | | P746.2 | 1 kg | plastic | 126,35 |
| Sodium nitroprusside dihydrate | ≥99 %, p.a., ACS | HN34.1 | 25 g | plastic | 27,45 |
| | | HN34.2 | 100 g | plastic | 72,60 |
| | | HN34.3 | 500 g | plastic | 282,20 |

## Lanthanum salts, La

| Product | Purity | Art. No. | Pack Qty. | Pack. | € |
|---|---|---|---|---|---|
| Lanthanum(III) nitrate hexahydrate | ≥99,99 %, p.a. | 8358.1 | 100 g | plastic | 91,95 |
| Lanthanum(III) oxide | ≥99,99 %, p.a. | 8373.1 | 100 g | plastic | 52,15 |

## Lead salts, Pb

| Product | Purity | Art. No. | Pack Qty. | Pack. | € |
|---|---|---|---|---|---|
| Lead(II) acetate, basic | ≥33 % PbO, p.a., ACS | 2559.1 | 500 g | plastic | 37,55 |
| | | 2559.2 | 1 kg | plastic | 55,80 |
| Lead(II) acetate trihydrate | ≥99,5 %, p.a., ACS, ISO | P739.1 | 500 g | plastic | 79,05 |
| | | P739.2 | 1 kg | plastic | 134,40 |
| | | P739.3 | 2,5 kg | plastic | 282,20 |
| Lead(II) carbonate | ≥98 %, p.a., ACS | 2558.1 | 100 g | plastic | 38,20 |
| | | 2558.2 | 250 g | plastic | 57,95 |
| | | 2558.3 | 500 g | plastic | 92,35 |
| Lead(II) nitrate | ≥99 %, p.a., ACS | HN32.1 | 100 g | plastic | 18,20 |
| | | HN32.2 | 250 g | plastic | 35,40 |

For additional product data and safety information, see chapter Chemicals A-Z.

## Lithium salts, Li

| Product | Purity | Art. No. | Pack Qty. | Pack. | € |
|---|---|---|---|---|---|
| **Lithium carbonate** | ≥99 %, p.a., ACS | **3995.1** | 250 g | plastic | 66,15 |
| | | **3995.2** | 500 g | plastic | 117,20 |
| **Lithium chloride** | ≥99,5 %, p.a., ultra quality | **3739.1** | 250 g | plastic | 49,35 |
| | | **3739.2** | 1 kg | plastic | 142,45 |
| | ≥99 %, p.a., ACS | **6698.1** | 50 g | plastic | 16,05 |
| | | **6698.2** | 100 g | plastic | 22,05 |
| | | **6698.3** | 500 g | plastic | 69,35 |
| | | **6698.4** | 1 kg | plastic | 125,70 |
| **Lithium fluoride** | ≥99 %, p.a. | **6715.1** | 25 g | plastic | 19,25 |
| | | **6715.2** | 100 g | plastic | 34,30 |
| | | **6715.3** | 250 g | plastic | 65,50 |
| **Lithium metaborate** | ≥98 %, p.a., ACS, anhydrous | **9840.1** | 50 g | plastic | 46,15 |
| | | **9840.2** | 100 g | plastic | 80,55 |
| **Lithium sulphate monohydrate** | ≥99 %, p.a. | **4393.1** | 250 g | plastic | 42,50 |
| | | **4393.2** | 500 g | plastic | 74,10 |
| | | **4393.3** | 1 kg | plastic | 126,35 |

## Magnesium salts, Mg

| Product | Purity | Art. No. | Pack Qty. | Pack. | € |
|---|---|---|---|---|---|
| **Magnesium acetate tetrahydrate** | ≥99,5 %, p.a., ACS | **P026.1** | 500 g | plastic | 52,15 |
| | | **P026.2** | 1 kg | plastic | 87,65 |
| **Magnesium chloride hexahydrate** | ≥99 %, p.a., ACS | **2189.2** | 250 g | plastic | 15,60 |
| | | **2189.1** | 1 kg | plastic | 30,00 |
| | | **2189.3** | 2,5 kg | plastic | 55,40 |
| | | **2189.5** | 25 kg | plastic | 439,70 |
| **Magnesium nitrate hexahydrate** | ≥98 %, p.a., ACS | **HN31.1** | 500 g | plastic | 35,40 |
| | | **HN31.2** | 1 kg | plastic | 61,20 |
| | | **HN31.3** | 2,5 kg | plastic | 135,35 |
| **Magnesium sulphate** NEW | ≥99 %, p.a., anhydrous | **0682.1** | 100 g | plastic | 18,20 |
| | | **0682.2** | 500 g | plastic | 40,75 |
| | | **0682.3** | 1 kg | plastic | 69,80 |
| **Magnesium sulphate heptahydrate** | ≥99 %, p.a., ACS | **P027.1** | 500 g | plastic | 24,20 |
| | | **P027.2** | 1 kg | plastic | 38,60 |
| | | **P027.3** | 2,5 kg | plastic | 71,50 |

## Manganese salts, Mn

| Product | Purity | Art. No. | Pack Qty. | Pack. | € |
|---|---|---|---|---|---|
| **Potassium permanganate** | ≥99 %, p.a., ACS, max. 0,005 ppm Hg | **KK08.1** | 500 g | plastic | 42,50 |
| | | **KK08.2** | 1 kg | plastic | 64,40 |
| | ≥99 %, p.a., ACS | **P752.1** | 500 g | plastic | 39,25 |
| | | **P752.2** | 1 kg | plastic | 59,05 |
| | | **P752.3** | 2,5 kg | plastic | 105,25 |
| **Manganese(II) carbonate** | ≥44 % Mn, p.a. | **9927.1** | 250 g | plastic | 21,00 |
| | | **9927.2** | 500 g | plastic | 33,25 |
| | | **9927.3** | 1 kg | plastic | 55,80 |
| | | **9927.4** | 2,5 kg | plastic | 110,65 |
| **Manganese(II) chloride monohydrate** | ≥99 %, p.a | **4320.1** | 100 g | plastic | 13,90 |
| | | **4320.2** | 500 g | plastic | 28,50 |
| | | **4320.3** | 1 kg | plastic | 45,70 |
| | | **4320.4** | 2,5 kg | plastic | 90,20 |
| **Manganese(II) chloride tetrahydrate** | ≥99 %, p.a. | **T881.3** | 100 g | plastic | 16,05 |
| | | **T881.1** | 500 g | plastic | 38,60 |
| | | **T881.2** | 1 kg | plastic | 61,20 |
| **Manganese(II) nitrate tetrahydrate** | ≥98 %, p.a. | **HN26.1** | 250 g | plastic | 23,15 |
| | | **HN26.2** | 500 g | plastic | 39,25 |
| | | **HN26.3** | 1 kg | plastic | 67,65 |
| | | **HN26.4** | 2,5 kg | plastic | 144,60 |
| **Manganese(II) sulphate monohydrate** | ≥99 %, p.a., ACS | **4487.1** | 250 g | plastic | 28,95 |
| | | **4487.2** | 500 g | plastic | 50,45 |

## Mercury salts, Hg

| Product | Purity | Art. No. | Pack Qty. | Pack. | € |
|---|---|---|---|---|---|
| **Mercury(II) acetate** | ≥99 %, p.a., ACS | **KK05.1** | 50 g | glass | 56,90 |
| | | **KK05.2** | 100 g | glass | 101,60 |
| **Mercury(II) bromide** | ≥98 %, p.a., ACS | **6581.1** | 50 g | plastic | 52,60 |
| | | **6581.2** | 250 g | plastic | 203,20 |
| **Mercury(I) chloride** | ≥99,5 %, p.a., ACS | **6601.1** | 50 g | glass | 54,30 |
| | | **6601.2** | 100 g | glass | 88,70 |
| | | **6601.3** | 500 g | glass | 342,95 |
| **Mercury(II) chloride** | ≥99,5 %, p.a., ACS | **KK04.1** | 50 g | glass | 45,70 |
| | | **KK04.2** | 100 g | glass | 82,25 |
| **Mercury(II) iodide** | ≥99 %, p.a., ACS, red | **6590.1** | 50 g | plastic | 50,45 |
| | | **6590.2** | 100 g | plastic | 83,75 |
| | | **6590.3** | 500 g | plastic | 321,45 |
| **Mercury(I) nitrate dihydrate** | ≥97 %, p.a. | **6605.1** | 50 g | plastic | 39,25 |
| | | **6605.2** | 100 g | plastic | 64,40 |
| | | **6605.3** | 500 g | plastic | 284,90 |
| **Mercury(II) nitrate monohydrate** | ≥98 %, p.a., ACS | **6595.1** | 50 g | plastic | 39,70 |
| | | **6595.2** | 250 g | plastic | 138,70 |
| | | **6595.3** | 1 kg | plastic | 482,70 |
| **Mercury(II) oxide** | ≥99 %, p.a., red | **4470.2** | 25 g | plastic | 42,90 |
| | | **4470.1** | 50 g | plastic | 77,30 |
| **Mercury(II) sulphate** | ≥98 %, p.a., ACS | **T112.1** | 100 g | plastic | 74,10 |
| | | **T112.2** | 500 g | plastic | 263,40 |
| **Mercury(II) thiocyanate** | ≥99%, p.a. | **6600.1** | 25 g | plastic | 34,30 |
| | | **6600.2** | 100 g | plastic | 103,10 |
| | | **6600.3** | 500 g | plastic | 439,70 |

## Molybdenum salts, Mo

| Product | Purity | Art. No. | Pack Qty. | Pack. | € |
|---|---|---|---|---|---|
| **Ammonium hepta-molybdate tetrahydrate** | ≥99 %, p.a. | **3666.1** | 250 g | plastic | 87,00 |
| | | **3666.2** | 500 g | plastic | 155,90 |
| | | **3666.3** | 1 kg | plastic | 278,45 |
| **Molybdenum(VI) oxide** NEW | ≥99,5 %, p.a. | **0142.1** | 50 g | plastic | 17,10 |
| | | **0142.2** | 250 g | plastic | 42,90 |
| | | **0142.3** | 500 g | plastic | 75,15 |
| | | **0142.4** | 1 kg | plastic | 138,70 |
| **Sodium molybdate dihydrate** | ≥99,5 %, p.a. | **0274.1** | 50 g | plastic | 18,20 |
| | | **0274.2** | 100 g | plastic | 26,35 |
| | | **0274.3** | 250 g | plastic | 47,20 |
| | | **0274.4** | 1 kg | plastic | 170,95 |

## Nickel salts, Ni

| Product | Purity | Art. No. | Pack Qty. | Pack. | € |
|---|---|---|---|---|---|
| **Nickel(II) chloride hexahydrate** | ≥98 %, p.a. | **4489.1** | 100 g | plastic | 44,00 |
| | | **4489.2** | 250 g | plastic | 93,00 |
| **Nickel(II) nitrate hexahydrate** | ≥99 %, p.a. | **4395.1** | 100 g | plastic | 26,80 |
| | | **4395.2** | 250 g | plastic | 55,80 |
| | | **4395.3** | 500 g | plastic | 101,60 |
| **Nickel(II) oxide** | ≥78 % Ni, p.a., green, 325 mesh | **9996.1** | 100 g | plastic | 21,40 |
| | | **9996.2** | 500 g | plastic | 64,40 |
| | | **9996.3** | 1 kg | plastic | 106,45 |
| | ≥75 % Ni, p.a., black, 400 mesh | **9925.1** | 100 g | plastic | 21,40 |
| | | **9925.2** | 500 g | plastic | 64,40 |
| | | **9925.3** | 1 kg | plastic | 106,45 |
| **Nickel(II) sulphate hexahydrate** | ≥99 %, p.a., ACS | **T111.1** | 250 g | plastic | 66,55 |
| | | **T111.2** | 1 kg | plastic | 231,15 |

## Osmium salts, Os

| Product | Purity | Art. No. | Pack Qty. | Pack. | € |
|---|---|---|---|---|---|
| **Osmium tetraoxide** | ≥99,95 %, p.a., for electron microscopy | **8371.1** | 100 mg | glass | 40,75 |
| | | **8371.2** | 500 mg | glass | 98,80 |
| | | **8371.3** | 1 g | glass | 152,55 |

For additional product data and safety information, see chapter Chemicals A-Z.

## Potassium salts, K

| Product | Purity | Art. No. | Pack Qty. | Pack. | € |
|---|---|---|---|---|---|
| **Potassium acetate** | ≥99 %, p.a. | **T874.1** | 500 g | plastic | 34,30 |
| | | **T874.2** | 1 kg | plastic | 52,60 |
| | | **T874.3** | 2,5 kg | plastic | 101,60 |
| | | **T874.5** | 25 kg | plastic | 686,95 |
| **Potassium aluminium sulphate dodecahydrate** | ≥98 %, p.a., ACS | **P724.2** | 500 g | plastic | 25,70 |
| | | **P724.1** | 1 kg | plastic | 45,70 |
| | | **P724.3** | 2,5 kg | plastic | 96,25 |
| **Potassium bromate** | ≥99,8%, p.a., ACS, ISO | **4396.1** | 100 g | plastic | 46,15 |
| | | **4396.2** | 250 g | plastic | 103,75 |
| | | **4396.3** | 500 g | plastic | 186,55 |
| **Potassium bromide** | ≥99 %, p.a., ACS | **A137.1** | 100 g | plastic | 20,65 |
| | | **A137.2** | 500 g | plastic | 39,25 |
| | | **A137.3** | 1 kg | plastic | 69,35 |
| **Potassium carbonate** | ≥99 %, p.a., ACS | **P743.1** | 500 g | plastic | 26,35 |
| | | **P743.2** | 1 kg | plastic | 40,75 |
| | | **P743.3** | 2,5 kg | plastic | 88,70 |
| **Potassium chlorate** | ≥99 %, p.a., ACS | **HN27.1** | 100 g | plastic | 15,30 |
| | | **HN27.2** | 250 g | plastic | 23,15 |
| | | **HN27.3** | 500 g | plastic | 35,40 |
| **Potassium chloride** | ≥99,5 %, p.a., ACS, ISO | **6781.3** | 500 g | plastic | 18,20 |
| | | **6781.1** | 1 kg | plastic | 25,30 |
| | | **6781.2** | 5 kg | plastic | 100,95 |
| | | **6781.5** | 25 kg | plastic | 385,95 |
| **Potassium chromate** | ≥99 %, p.a., ACS | **HN33.1** | 100 g | plastic | 36,45 |
| | | **HN33.2** | 250 g | plastic | 68,70 |
| | | **HN33.3** | 500 g | plastic | 119,90 |
| | | **HN33.4** | 1 kg | plastic | 206,95 |
| **Potassium dichromate** | ≥99,5 %, p.a., ACS, ISO | **P744.3** | 100 g | plastic | 26,35 |
| | | **P744.1** | 500 g | plastic | 95,15 |
| | | **P744.2** | 1 kg | plastic | 160,75 |
| **Potassium dihydrogen phosphate** | ≥99 %, p.a., ACS | **3904.2** | 250 g | plastic | 18,20 |
| | | **3904.1** | 1 kg | plastic | 52,60 |
| | | **3904.3** | 5 kg | plastic | 209,65 |
| | | **3904.5** | 25 kg | plastic | 912,70 |
| **Potassium disulphite** | ≥96 %, p.a. | **P019.1** | 500 g | plastic | 24,20 |
| | | **P019.2** | 1 kg | plastic | 35,40 |
| | | **P019.3** | 5 kg | plastic | 139,25 |
| **Potassium fluoride** | ≥99 %, p.a. | **CN83.1** | 100 g | plastic | 17,10 |
| | | **CN83.2** | 250 g | plastic | 28,50 |
| | | **CN83.3** | 500 g | plastic | 52,15 |
| | | **CN83.4** | 1 kg | plastic | 88,70 |
| **Potassium hexacyano-ferrate(II) trihydrate** | ≥99 %, p.a., ACS, ISO | **P745.1** | 500 g | plastic | 90,20 |
| | | **P745.2** | 1 kg | plastic | 160,20 |
| | | **P745.3** | 2,5 kg | plastic | 342,95 |
| **Potassium hexacyano-ferrate(III)** | ≥99 %, p.a., ACS | **P746.3** | 100 g | plastic | 21,75 |
| | | **P746.1** | 500 g | plastic | 69,80 |
| | | **P746.2** | 1 kg | plastic | 126,35 |
| **Potassium hydrogen carbonate** | ≥99,5 %, p.a. | **P748.1** | 500 g | plastic | 28,95 |
| | | **P748.2** | 1 kg | plastic | 49,35 |
| | | **P748.3** | 2,5 kg | plastic | 110,65 |
| **di-Potassium hydrogen phosphate** | ≥99 %, p.a., anhydrous | **P749.1** | 500 g | plastic | 27,85 |
| | | **P749.2** | 1 kg | plastic | 50,45 |
| | | **P749.3** | 2,5 kg | plastic | 101,60 |
| | | **P749.5** | 25 kg | plastic | 815,95 |
| **di-Potassium hydrogen phosphate trihydrate** | ≥99 %, p.a. | **6878.2** | 250 g | plastic | 19,90 |
| | | **6878.1** | 1 kg | plastic | 46,80 |
| | | **6878.3** | 2,5 kg | plastic | 94,50 |
| **Potassium hydrogen phthalate** | ≥99,5 %, p.a., ISO | **P750.1** | 500 g | plastic | 50,00 |
| | | **P750.2** | 1 kg | plastic | 87,00 |
| | | **P750.3** | 2,5 kg | plastic | 185,45 |

| | | **P022.2** | 1 kg | plastic | 64,40 |
| | | **P022.3** | 2,5 kg | plastic | 145,15 |
| **Potassium thiocyanate** | ≥98,5 %,p.a., ACS | **P753.1** | 500 g | plastic | 76,90 |
| | | **P753.2** | 1 kg | plastic | 134,40 |
| | | **P753.3** | 2,5 kg | plastic | 309,10 |

## Rubidium salts, Rb

| Product | Purity | Art. No. | Pack Qty. | Pack. | € |
|---|---|---|---|---|---|
| **Rubidium chloride** | ≥99 %, p.a. | **4471.2** | 5 g | plastic | 36,05 |
| | | **4471.1** | 10 g | plastic | 62,25 |
| | | **4471.3** | 25 g | plastic | 131,70 |
| | | **4471.4** | 50 g | plastic | 241,90 |

## Silver salts, Ag

| Product | Purity | Art. No. | Pack Qty. | Pack. | € |
|---|---|---|---|---|---|
| **Silver nitrate** | ≥99,9 %, p.a., ultra quality | **6874.1** | 10 g | plastic | 37,10 |
| | | **6874.2** | 50 g | plastic | 141,80 |
| | | **6874.3** | 250 g | plastic | 514,95 |
| | ≥99,9 %, p.a. | **7908.1** | 50 g | plastic | 113,85 |
| | | **7908.2** | 250 g | plastic | 471,95 |
| | | **7908.3** | 1 kg | plastic | 1666,25 |
| **Silver oxide** | ≥99 %, p.a. | **5309.1** | 10 g | glass | 51,50 |
| | | **5309.2** | 50 g | glass | 177,40 |
| **Silver sulphate** | ≥99 %, p.a. | **6791.1** | 25 g | plastic | 115,60 |
| | | **6791.2** | 100 g | plastic | 407,45 |

## Sodium salts, Na

| Product | Purity | Art. No. | Pack Qty. | Pack. | € |
|---|---|---|---|---|---|
| **Potassium sodium tartrate tetrahydrate** | ≥99 %, p.a., ACS, ISO | **8087.2** | 500 g | plastic | 39,70 |
| | | **8087.1** | 1 kg | plastic | 65,05 |
| | | **8087.3** | 2,5 kg | plastic | 142,45 |
| **Sodium acetate** | ≥99 %, p.a., ACS, anhydrous | **6773.1** | 250 g | plastic | 24,65 |
| | | **6773.2** | 1 kg | plastic | 64,40 |
| | | **6773.3** | 2,5 kg | plastic | 134,95 |
| | | **6773.5** | 25 kg | plastic | 891,20 |
| **Sodium acetate trihydrate** | ≥99,5 %, p.a., ACS, ISO | **6779.2** | 500 g | plastic | 18,20 |
| | | **6779.1** | 1 kg | plastic | 33,25 |
| | | **6779.3** | 5 kg | plastic | 103,75 |
| | | **6779.5** | 25 kg | plastic | 413,90 |

For additional product data and safety information, see chapter Chemicals A-Z.

## Strontium salts, Sr

| Product | Purity | Art. No. | Pack Qty. | Pack. | € |
|---|---|---|---|---|---|
| **Strontium chloride hexahydrate** | ≥99 %, p.a. | **4473.1** | 100 g | plastic | 21,40 |
| | | **4473.2** | 500 g | plastic | 54,75 |
| | | **4473.3** | 1 kg | plastic | 91,95 |
| **Strontium nitrate** | ≥99 %, p.a., ACS | **4413.1** | 100 g | plastic | 24,65 |
| | | **4413.2** | 250 g | plastic | 46,15 |
| | | **4413.3** | 500 g | plastic | 87,00 |

## Tellurium, Te NEW

| Product | Purity | Art. No. | Pack Qty. | Pack. | € |
|---|---|---|---|---|---|
| **Tellurium(IV) oxide** | ≥99,9 %, p.a. | **0321.1** | 10 g | plastic | 32,15 |
| | | **0321.2** | 25 g | plastic | 64,40 |
| | | **0321.3** | 50 g | plastic | 117,20 |

## Tin salts, Sn

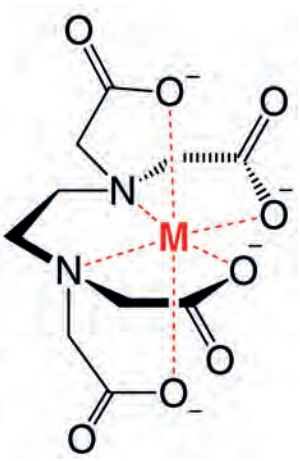
| Product | Purity | Art. No. | Pack Qty. | Pack. | € |
|---|---|---|---|---|---|
| **Tin(II) chloride dihydrate** | ≥98 %, p.a., max. 0,005 ppm Hg | **KK07.1** | 100 g | glass | 43,55 |
| | | **KK07.2** | 250 g | glass | 96,25 |
| | ≥98 %, p.a., ACS | **4977.3** | 100 g | glass | 30,00 |
| | | **4977.1** | 250 g | glass | 66,15 |
| | | **4977.2** | 1 kg | glass | 213,95 |
| **Tin(IV) oxide** | ≥99,5 %, p.a. | **9929.1** | 100 g | plastic | 21,40 |
| | | **9929.2** | 500 g | plastic | 61,20 |
| | | **9929.3** | 1 kg | plastic | 105,25 |
| **Tin(II) sulphate** | ≥99 %, p.a. | **4382.1** | 100 g | plastic | 33,25 |
| | | **4382.2** | 250 g | plastic | 61,20 |
| | | **4382.3** | 1 kg | plastic | 188,15 |

## Tungsten salts, W

| Product | Purity | Art. No. | Pack Qty. | Pack. | € |
|---|---|---|---|---|---|
| **Ammonium metatungstate hydrate** | ≥90 % $WO_3$, p.a. | **0742.1** | 25 g | plastic | 32,15 |
| | | **0742.2** | 100 g | plastic | 59,05 |
| | | **0742.3** | 500 g | plastic | 213,95 |
| **Sodium tungstate dihydrate** | ≥99 %, p.a., ACS | **2604.1** | 100 g | plastic | 39,70 |
| | | **2604.2** | 250 g | plastic | 77,30 |
| | | **2604.3** | 500 g | plastic | 138,70 |
| **Tungsten(VI) oxide** | ≥99,5 %, p.a. | **0760.1** | 50 g | plastic | 30,00 |
| | | **0760.2** | 100 g | plastic | 42,90 |
| | | **0760.3** | 500 g | plastic | 170,95 |
| **Tungstic acid** | ≥99 %, p.a. | **0747.1** | 25 g | plastic | 26,80 |
| | | **0747.2** | 100 g | plastic | 42,90 |
| | | **0747.3** | 500 g | plastic | 149,45 |

## Vanadium salts, V

| Product | Purity | Art. No. | Pack Qty. | Pack. | € |
|---|---|---|---|---|---|
| **Ammonium monovanadate** | ≥99,8 %, p.a. | **4232.1** | 50 g | plastic | 24,20 |
| | | **4232.2** | 100 g | plastic | 34,95 |
| | | **4232.3** | 250 g | plastic | 71,95 |
| | | **4232.4** | 1 kg | plastic | 231,15 |



## Zinc salts, Zn

| Product | Purity | Art. No. | Pack Qty. | Pack. | € |
|---|---|---|---|---|---|
| **Zinc acetate dihydrate** | ≥99,5 %, p.a., ACS | **P035.1** | 500 g | plastic | 44,00 |
| | | **P035.2** | 1 kg | plastic | 71,95 |
| **Zinc chloride** | ≥97 %, p.a. | **T887.1** | 500 g | plastic | 52,60 |
| | | **T887.2** | 1 kg | plastic | 79,45 |
| **Zinc iodide** | ≥99 %, p.a. | **9839.1** | 50 g | glass | 34,30 |
| | | **9839.2** | 100 g | glass | 64,40 |
| | | **9839.3** | 250 g | glass | 122,45 |
| **Zinc nitrate hexahydrate** | ≥99 %, p.a. | **6634.1** | 100 g | plastic | 19,60 |
| | | **6634.2** | 500 g | plastic | 40,75 |
| | | **6634.3** | 1 kg | plastic | 62,25 |
| **Zinc oxide** | ≥99 %, p.a., ACS | **T114.1** | 500 g | plastic | 64,40 |
| | | **T114.2** | 1 kg | plastic | 93,45 |
| **Zinc sulphate heptahydrate** | ≥99,5 %, p.a., ACS | **K301.1** | 500 g | plastic | 24,20 |
| | | **K301.2** | 1 kg | plastic | 42,50 |
| | | **K301.3** | 2,5 kg | plastic | 77,30 |
| | | **K301.5** | 25 kg | plastic | 643,95 |

For additional product data and safety information, see chapter Chemicals A-Z.

# Volumetric standard solutions

A standard solution is a solution containing a precisely known concentration of a substance. The concentration of a standard solution is determined using a primary standard, which is accurately weighed and dissolved to make a specific volume. Standard solutions are made using reagent-grade (p.a.) substances as source materials.

# Volumetric standard solutions, ready-to-use

ready-to-use

The advantages of this over making them yourself are:

- Manufactured and tested using modern manufacturing and analytical methods
- Available in a wide range of concentrations
- Ready-to-use solutions
- High accuracy for precise analyses
- Application of NIST-certified reference substances for checking
- Connection to standard titrators is possible

For additional product data and safety information, see chapter Chemicals A-Z.

Titer details:
Many of our standard solutions also provide the corresponding titer details on the certificate of analysis, in addition to the amount of substance concentrations. If this is not the case, you can assume that the titer is as follows: 1 ± variation from specification.
Example: Amount of substance concentration 0,1 mol/l ±0,2 %
It follows that the titer is 1 ±0,2 %, i.e. 0,998-1,002
We recommend the regular checking of the titer prior to application for opened products.

## Volumetric standard solutions, ready-to-use, Reag. Ph.Eur.

ready-to-use

Solutions are produced and tested according to chapter 4.2 of the european pharmacopoeia. Traceable to SRM from NIST.

## ROTI®VOLUM, volumetric solutions in ampoules

- Concentrated standard solutions packaged in practical and low-cost ampoules
- Designed for flexible and easy handling, and as a space-saving alternative to ready-to-use custom solutions
- Standard solutions are prepared through dilution to a final volume of exactly one litre.
- Exactly defined molar concentration (±0,2 %) according to the preparation
- High accuracy for precise analyses

# Indicators and Dyes

ready-to-use

Roth offers many indicators and dyes of high purity, which can be used in special applications.

## Indicator Solution – ready to use

| Product | Purity | Art. No. | Pack Qty. | € |
|---|---|---|---|---|
| **Bromocresol green indicator solution** | 0,1 % in ethanol denatured | **9949.1** | 100 ml | 22,05 |
| **Bromocresol purple indicator solution** | 0,1 % in water | **9955.1** | 100 ml | 41,85 |
| **Bromophenol blue indicator solution** | 0,1 % in ethanol denatured | **9952.1** | 100 ml | 22,50 |
| **Bromophenol red indicator solution** | 0,1 % in ethanol denatured | **9956.1** | 100 ml | 31,10 |
| **Bromothymol blue indicator solution** | 0,04 % in water | **9947.1** | 100 ml | 36,45 |
| **Ferroin indicator solution** | for sewage analysis, for determination of COD | **T131.1** | 100 ml | 31,10 |
| **Ferroin solution** | 1/40 mol/l (1/40 M) Redox indicator | **T132.1** | 100 ml | 39,25 |
| **Methylene blue indicator solution** | 0,01 mol/l in water | **9953.1** | 100 ml | 25,70 |
| **Methyl orange indicator solution** | 0,1 % in water | **T119.1** | 500 ml | 19,25 |
| **Methyl red indicator solution** | 0,1 % in ethanol, denatured | **T121.1** | 250 ml | 26,35 |
| **Mixed indicator 5** | for ammonia titration | **T125.1** | 250 ml | 55,80 |
| **Phenolphthalein indicator solution** | 0,1 % in ethanol 90 %, denatured | **8145.1** | 250 ml | 19,90 |
| | | **8145.2** | 500 ml | 26,35 |
| | 1 % in ethanol 90 %, denatured | **K034.1** | 250 ml | 21,00 |
| | | **K034.2** | 500 ml | 27,85 |
| | | **K034.3** | 1 l | 37,55 |
| **Starch 1 % indicator solution** | in water, stabilized | **T133.1** | 500 ml | 24,20 |
| **Tashiro's indicator solution** | in ethanol, denatured | **2624.1** | 250 ml | 17,10 |
| **Thymol blue indicator solution** | 0,1 % in ethanol denatured | **9954.1** | 250 ml | 42,50 |
| **Thymolphthalein indicator solution** | 0,1 % in ethanol denatured | **8152.1** | 500 ml | 34,30 |

Weitere Produktinformationen und Sicherheitshinweise siehe Kapitel Chemikalien A-Z.

## Unisol Indicator solutions

By Macherey-Nagel. For pH measurement in weak buffered solutions, in pure water, in surface water and in highly diluted acids or alkalis. Droplets of an indicator solution are added to the sample and the reaction colour is compared to a colour chart.

**Delivery incl.** 100 ml dropper bottle containing reagent (sufficient for approx. 500 pH measurements), colour chart and 1 type 13/72 measuring cuvette.

**Danger** H225

| Type | pH graduation | Art. No. | Pack Qty. | € |
|---|---|---|---|---|
| **UNISOL 410** | 4,0-4,5-5,0-5,5-6,0-6,5-7,0-7,5-8,0-8,5-9,0-9,5-10,0 | **TK45.1** | 1 | 27,80 |
| **UNISOL 113** | 1-2-3-4-5-6-7-8-9-10-11-12-13 | **TK46.1** | 1 | 28,30 |

**Accessories:**

| | | | |
|---|---|---|---|
| **Replacement rectangular measuring cuvettes, made of PMMA, type 13/72** | **TK47.1** | 5 | 31,50 |

## Indicator buffer tablets

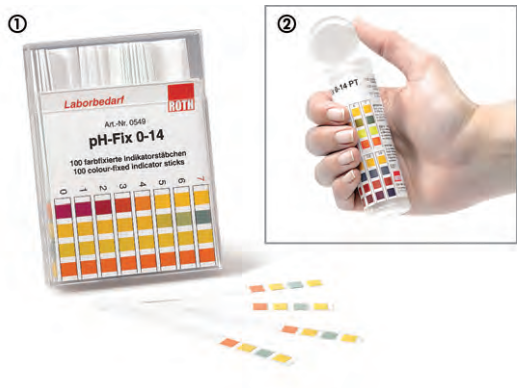
**for determination of water hardness with EDTA**

**Warning** H317

Dissolve one tablet in 100 ml water sample and bring to pH 11 with approx. 1 ml ammonia solution 30 % (art. CP17). Titrate with EDTA disodium salt volumetric solution (art. T136 or T137) from red to green.

**Type analysis:**

Suitability as indicator. ..... complies
Disintegration time (25 °C) ..... 100 s



| | | |
|---|---|---|
| **7649.1** | 100 pieces | 19,90 € |
| **7649.2** | 500 pieces | 47,20 € |

## Universal indicator paper pH 1-11 and pH 1-14

Plastic rotating container with colour scale. Contains 1 roll, 5 m long and 7 mm wide. 1,0 pH intervals. Rolls individually packaged in refill pack.

| Type | Art. No. | Pack Qty. | € |
|---|---|---|---|
| **Tin pH 1-11** (pH graduation 1-2-3-4-5-6-7-8-9-10-11) | **L861.1** | 1 | 11,60 |
| **Refill pack** pH 1-11 of 3 rolls | **L862.1** | 1 | 17,25 |
| **Tin pH 1-14** (pH graduation 1-2-3-5-6-7-8-9-10-12-14) | **N360.1** | 1 | 11,35 |
| **Refill pack** pH 1-14 of 3 rolls | **N361.1** | 1 | 16,50 |

## Universal indicator sticks pH-Fix

Test field made of colour-impregnated cellulose. Colour scale with colour grading included. Reliable, **non-bleeding**. Pack contains 100 sticks (L 85 x W 6 mm).

① **In square plastic box**

| pH-measuring range | pH graduation | Art. No. | Pack Qty. | € |

## Further detection reagents

| Product | Application | Purity | Art. No. | Pack Qty. | € |
|---|---|---|---|---|---|
| **Alizarin complexone dihydrate** | Detection reagent for fluoride | ≥97 %, p.a. | **7634.1** | 1 g | 31,10 |
| | | | **7634.2** | 5 g | 96,65 |
| | | | **7634.3** | 10 g | 160,20 |
| **4'-Aminoacetophenone** | For determination of nicotinic acid and vitamin B | ≥99 % | **3973.2** | 10 g | 13,45 |
| | | | **3973.1** | 25 g | 20,35 |
| **4-Aminoantipyrine** | Reagent for phenol detection | ≥98 %, p.a., ACS | **2671.1** | 10 g | 23,15 |
| | | | **2671.2** | 25 g | 34,95 |
| | | | **2671.3** | 100 g | 60,75 |
| **1-Amino-2-hydroxy-4-naphthalenesulfonic acid** | For determination of phosphate | ≥97 %, p.a., ACS | **2672.1** | 25 g | 39,70 |
| | | | **2672.2** | 100 g | 99,45 |
| **Ammonium benzoate** | For precipitation of aluminium and iron | ≥98 %, extra pure | **9836.1** | 100 g | 16,70 |
| | | | **9836.2** | 500 g | 44,65 |
| | | | **9836.3** | 1 kg | 78,40 |
| **Azomethine H hydrate** | Reagent for the determination of boron | ≥95 %, p.a. | **CP99.1** | 5 g | 98,80 |
| **Bathocuproine sulphonate disodium salt hydrate** | Reagent for copper | ≥98 % | **KK28.1** | 250 mg | 35,40 |
| | | | **KK28.2** | 1 g | 111,70 |
| **Bathophenanthroline** | Reagent for iron | ≥99 %, p.a. | **KK29.1** | 500 mg | 47,20 |
| | | | **KK29.2** | 1 g | 83,75 |
| **4-Chloro-7-nitro-benzofurazan** | For detection of amino acids, some alkaloids, sulphonamides | ≥99 %, p.a. | **KK31.1** | 1 g | 17,10 |
| | | | **KK31.2** | 5 g | 47,85 |
| **Chromotropic acid disodium salt dihydrate** | Reagents for silver, boron, chrome, mercury, titanium, chromate, formaldehyde, nitrile and nitrate | ≥98,5 %, p.a., ACS | **KK30.1** | 10 g | 34,95 |
| | | | **KK30.2** | 25 g | 75,15 |
| **2,6-Dichlorophenol-indophenol sodium salt hydrate** | For determination of ascorbic acid | p.a., ACS | **HN79.1** | 1 g | 16,70 |
| | | | **HN79.2** | 5 g | 36,45 |
| | | | **HN79.3** | 25 g | 149,45 |
| **1,8-Dihydroxy-2-(4-sulfophenylazo)-naphthalene-3,6-disulfonic acid trisodium salt** | Reagent for fluoride | p.a., ACS | **2605.1** | 10 g | 25,70 |
| | | | **2605.2** | 25 g | 45,05 |
| **4-(Dimethylamino)-benzaldehyde** | Reagent for the detection of nitrogen containing compounds | ≥98 %, p.a., ACS | **X867.1** | 25 g | 43,55 |
| | | | **X867.2** | 100 g | 109,55 |
| **5-(4-Dimethylaminobenzylidene)rhodanine** | Analytical reagent for silver | p.a. | **KK23.1** | 5 g | 25,30 |
| | | | **KK23.2** | 10 g | 39,70 |
| | | | **KK23.3** | 50 g | 155,90 |
| **5,5'-Dithio-bis-(2-nitrobenzoic acid)** | For determination of thiol groups | ≥98 %, p.a. | **6334.1** | 1 g | 19,90 |
| | | | **6334.2** | 5 g | 55,80 |
| | | | **6334.3** | 25 g | 203,20 |
| **Hydrazinium sulphate** | Reducing agent; reagent for separation of Po and Te | ≥99 %, p.a., ACS | **HN96.1** | 100 g | 19,25 |
| | | | **HN96.2** | 500 g | 52,60 |

For additional product data and safety information, see chapter Chemicals A-Z.

# Karl Fischer Reagents Roti®hydroquant

There are two established Karl Fischer methods of calculating the water content of a substance: Volumetric analysis and coulometric analysis.

Which method is chosen depends primarily on the water content that the sample is expected to have. Making the right choice is vital for obtaining reliable and reproducible results. ROTH offers compatible reagents for both of these methods.

## Volumetric reagents

Karl Fischer volumetric analysis is recommended if the water content of a sample ought to be between 0,1 % and 100 %. Volumetric analysis is performed by measuring the amount of Karl Fischer reagent that needs to be added to a substance until the end point of the titration has been reached. In alcoholic solutions, water reacts 1:1 with iodine in the presence of sulphur dioxide. Methanol and sulphur dioxide form an acid ester that is neutralised by the base (e.g. imidazole, hereafter referred to as "RN" for simplicity).

$CH_3OH + SO_2 + RN \rightarrow [RNH]SO_3CH_3$

In the titration process, iodine is added which reacts with water to be reduced to colourless iodide:

$[RNH]SO_3CH_3 + H_2O + I_2 + 2\ RN \rightarrow [RNH]SO_4CH_3 + 2\ [RNH]I$

This reaction continues until there is no water left. The end point is determined by a change in colour due to a surplus of iodine and measured using a potentiometer.

### Single-component reagents

Single-component reagents contain all the substances required for the Karl Fischer reaction in a single solution. They are easy to use and provide for a high level of flexibility when choosing a solvent for the sample type. The high reactivity of the components means that the titre for single-component reagents must always be determined before titration is carried out.
Reactions with standard reagents containing methanol are not possible for samples that contain aldehydes or ketones, as the methanol will react with them to produce extra water in a secondary reaction.
ROTH offers methanol-free reagents that are suitable for substances containing aldehydes and ketones.

| Product | Purity | Application | Art. No. | Pack Qty. | Packaging | € |
|---|---|---|---|---|---|---|
| **Karl Fischer Roti®hydroquant Working Medium K** | for KF titration for aldehydes and ketones | Solvent component | **5215.1** | 1 l | glass | 69,35 |
| **Karl Fischer Roti®hydroquant C2** | 2 mg $H_2O$/ml, free of pyridine | Single-component reagent | **T194.1** | 1 l | glass | 96,65 |
| **Karl Fischer Roti®hydroquant C5** | 5 mg $H_2O$/ml, free of pyridine | Single-component reagent | **T190.1** | 1 l | glass | 104,20 |
| **Karl Fischer Roti®hydroquant C5 K** | 5 mg $H_2O$/ml, for aldehydes and ketones | Single-component reagent | **5211.1** | 1 l | glass | 108,50 |
| **Karl Fischer methanol Roti®hydroquant D** | dry, for KF titration | Solvent component | **T193.1** | 1 l | glass | 25,30 |
| | | | **T193.2** | 2,5 l | glass | 48,95 |

### Two-components reagents

In two-component systems, the substances crucial for the reaction are separated, with some in the solvent component and some in the titration component. Separating the substances gives the system a longer shelf life and means that the titre needs to be determined less frequently.

| Product | Purity | Application | Art. No. | Pack Qty. | Packaging | € |
|---|---|---|---|---|---|---|
| **Karl Fischer Roti®hydroquant S** | for KF titration | Solvent component | **T192.1** | 1 l | glass | 44,65 |
| **Karl Fischer Roti®hydroquant S CM** | for KF titration | Solvent component | **5218.1** | 1 l | glass | 37,55 |
| **Karl Fischer Roti®hydroquant T2** | 2 mg $H_2O$/ml, free of pyridine | Titrant component Two-components reagent | **X947.1** | 1 l | glass | 51,50 |
| **Karl Fischer Roti®hydroquant T5** | 5 mg $H_2O$/ml, free of pyridine | Titrant component Two-components reagent | **T191.1** | 1 l | glass | 45,70 |

For additional product data and safety information, see chapter Chemicals A-Z.

The volumetric Karl Fischer reagents are suitable for water contents between 0,1 % and 100 %. Free water and water of hydration can be determined, respectively. Our solutions are based on methanol and free of pyridine.

**Using single-component reagents:**
Add methanol to the reaction vessel and titrate to dryness with the C-component. Then add the sample and titrate again to dryness.

**Using two-component reagents:**
Add solvent S to the reaction vessel and titrate to dryness with the T-component. Then add the sample and titrate again to dryness.

### Table illustrating the uses of Karl Fischer Roti®hydroquant volumetric reagents

| | | Solvent components | | | |
|---|---|---|---|---|---|
| | | Methanol (T193) | Working medium K (5215) | S (T192) | S CM (5218) |
| Titration components | C2 (T194) | X | | | |
| | C5 (T190) | X | | | |
| | C5 K (5211) | | X | | |
| | T2 (X947) | | | X | X |
| | T5 (T191) | | | X | X |

# Standards

Water standards with a defined water content are required to determine the titre for the reagents used (C or T components). Either a solid or a liquid standard can be chosen.

## Karl Fischer Roti®hydroquant standard sodium tartrate dihydrate

**≥99 %, for KF titration**

Primary standard substance for Karl Fischer titration
$C_4H_4Na_2O_6 \cdot 2\ H_2O$
M 230,08 g/mol

**Guarantee analysis:**
Assay (perchloric acidim). ..... 99,0-101,0 %
Loss on drying (150 °C). ..... 15,66 ±0,05 %

| | | | |
|---|---|---|---|
| **5229.1** | 100 g | glass | 37,55 € |

## Karl Fischer Roti®hydroquant water standard 10.0

**10 mg $H_2O$/g**

Water standard

**Danger** H226-H315-H318-H335-H336

**Guarantee analysis:**
Water content. ..... 10,0 ±0,1 mg $H_2O$/g

| | | | |

| **5219.1** | 10 x 10 ml | glass | 59,05 € |

## Karl Fischer Roti®hydroquant water standard 1.0

**1 mg $H_2O$/g**

Water standard for KF coulometry

**Warning** H226

**Guarantee analysis:**
Water content. ..... 1,0 ±0,03 mg $H_2O$/g

| | | | |
|---|---|---|---|
| **9971.1** | 10 x 4 ml | glass | 48,30 € |

# Coulometric reagents

Karl Fischer coulometric titration is suitable for substances with a low water content (i.e. <0,1 %) and, for example, for expensive substances that can only be examined in small quantities.

In the coulometric titration process, the iodine required is produced directly in situ at the electrode in the reaction vessel through the anodic oxidation of iodide. Hydrogen is produced at the cathode. The measuring cell contains an anode and cathode chamber, which can be separated by a diaphragm. This means that the titration cell can be equipped with diaphragms or be diaphragm-free.

ROTH offers suitable reagents for both models.

### For cells with diaphragms:

**Anolyte:**

| Product | Purity | Art. No. | Pack Qty. | Packaging | € |
|---|---|---|---|---|---|
| **Karl Fischer Roti®hydroquant coulo A** | for coulometric KF titration | **9957.1** | 500 ml | glass | 75,15 |
| **Karl Fischer Roti®hydroquant coulo Oil** | for coulometric KF titration | **9960.1** | 100 ml | glass | 26,80 |

**Catholyte:**

| Product | Purity | Art. No. | Pack Qty. | Packaging | € |
|---|---|---|---|---|---|
| **Karl Fischer Roti®hydroquant coulo CG** | for coulometric KF titration | **9861.1** | 100 ml | glass | 75,15 |

### For cells without diaphragms:

| Product | Purity | Art. No. | Pack Qty. | Packaging | € |
|---|---|---|---|---|---|
| **Karl Fischer Roti®hydroquant coulo AG** | for coulometric KF titration | **9854.1** | 500 ml | glass | 75,15 |

### Table illustrating the uses of Karl Fischer Roti®hydroquant coulometric reagents:

| | **coulo CG (9861)** |
|---|---|
| **coulo A (9957)** | ✔ for cells with diaphragms. |
| **coulo Oil (9960)** | ✔ for cells with diaphragms. |
| | |
| **coulo AG (9854)** | Can be used without additional reagents. For cells without diaphragms. |

# Water analysis

Roth offers the essential reagents for your water analysis.
On the following pages you find
- determination of water hardness
- determination of adsorbable organic halogen compounds (AOX)
- determination of chemical oxygen demand (COD)
- determination of biological oxygen demand (BOD)
- potassium permanganate index
- determination of surfactants
- hydrocarbon index

## Determination of water hardness

Water contains a whole host of salts and other compounds in addition to the gases dissolved in it (oxygen, nitrogen, carbon dioxide). Its most important constituents are magnesium and calcium in the form of their chlorides, sulphates and bicarbonates. These dissolved salts are known as hardeners. The bicarbonates precipitate in the heat (during boiling) as carbonates and are known as carbonate hardness or temporary hardness. The sulphate and chloride compounds are known as permanent hardness or non-carbonate hardness. Total hardness describes the concentration of alkaline earth metal ions in water. The unit of measurement for water hardness used to be 1 °dH (German degrees of hardness), which corresponds to 10,00 mg CaO or 7,19 mg MgO in one litre of water. Today we use millimoles per litre (mmol/l), whereby 1 °dH corresponds to 0,18 mmol/l of earth metal ions and 1 mmol/l corresponds to 5,6 °dH.

| Product | Purity | Art. No. | Pack Qty. | Packaging | € |

For additional product data and safety information, see chapter Chemicals A-Z.

### Indicator buffer tablets

**for determination of water hardness with EDTA**

**Warning** H317

Dissolve one tablet in 100 ml water sample and bring to pH 11 with approx. 1 ml ammonia solution 30 % (art. CP17). Titrate with EDTA disodium salt volumetric solution (art. T136 or T137) from red to green.

**Type analysis:**

Suitability as indicator. ..... complies
Disintegration time (25 °C) ..... 100 s

| | | |
|---|---|---|
| **7649.1** | 100 pieces | 19,90 € |
| **7649.2** | 500 pieces | 47,20 € |

### Water hardness kit

Testing reagent is added drop by drop to 5 ml water sample until colour changes. Each drop equals 1 °dH. Pack with 2 x 15 ml reagent. Test reagent in dropping bottle.

**Warning** H226-H319-H336

| | | |
|---|---|---|
| **0519.1** | 2 x 15 ml | 19,60 € |

# Determination of adsorbable organic halogen compounds (AOX)

AOX (adsorbable organic halogens, where X = Cl, Br, I) is a sum parameter that describes the amount of organic halogen compounds in substances such as water, soil and sewage sludge. This parameter is used primarily in waste water analysis. The method for calculating AOX levels is set out in DIN EN ISO 9562. The quantity of organically bound halogens in a water sample is measured using either the shaking method or the column method. In the shaking method, the AOX in a sample are bound to activated carbon by shaking. In the column method, the AOX in a sample are bound to activated carbon by the action of flushing the sample through a glass column filled with activated carbon. The quantity of activated carbon, which is defined precisely in each case, is then burned in an oxygen chamber and the hydrogen halide released is measured by means of argentometry. The amount of fluoroorganic compounds present cannot be measured argentometrically.

## Charcoal
**for the determination of AOX (column method)**

**Type analysis:**
Iodine value. .....≥1050 mg/g

# Determination of chemical oxygen demand (COD)

COD (chemical oxygen demand) is a measure of all the oxidisable components in water under specific conditions. The water sample is mixed with sulphuric acid and heated together with a defined quantity of potassium dichromate, with silver sulphate added as the catalyst. Chloride must be removed beforehand or masked with mercury sulphate. The remaining potassium dichromate is measured by means of titration, using an ammonium iron(II) sulphate solution and ferroin as the indicator. The equivalent amount of oxygen can then be calculated from the amount of potassium dichromate that is used up.

| Product | Purity | Art. No. | Pack Qty. | Packaging | € |
|---|---|---|---|---|---|
| **Ammonium iron(II) sulphate solution** | 0,12 mol/l - 0,12 N volumetric solution, for determination of COD | **KK60.1** | 1 l | plastic | 45,05 |
| **Ferroin indicator solution** | for sewage analysis, for determination of COD | **T131.1** | 100 ml | glass | 31,10 |
| **Mercury(II) sulphate solution** | 80 g/lin sulphuric acid potassium dichromate standard solution. 0,02 mol/l volumetric solution, for determination of COD | **X871.1** | 1 l | glass | 62,90 |
| **Potassium dichromate solution** | 0,02 mol/l - 0,12 N volumetric standard solution, for determination of COD | **P720.1** | 1 l | plastic | 25,30 |
| | 1/24 mol/l - 0,25 N volumetric standard solution for determination of COD | **P721.1** | 1 l | glass | 30,00 |
| **Silver sulphate solution** | 10 g/l in sulphuric acid, for determination of COD | **X870.1** | 1 l | glass | 64,40 |

# Determination of biological oxygen demand (BOD)

BOD (biochemical oxygen demand) is a measure of the amount of oxygen that microorganisms need to break down the organic material in a water sample over a specific period of time. It is important to calculate the oxygen concentration at the start and end of the measuring time, which is usually five days and is expressed as an index ($BOD_5$). Chemical, electrochemical or physical methods are used for this calculation.

# Determination of the hydrocarbon index

The hydrocarbon index is defined as the total of all organic substances that can be extracted with hexane, but cannot be adsorbed in Florisil® (magnesium sulphate). On a covalent GC column, these elute between n-decane and n-tetracontane and have a boiling range of 175-525 °C. These include heating oils, diesel fuels, kerosene, lubricants and transmission fluids. Benzines are not detected using this method. ROTH offers an extensive range of products for the determination of the hydrocarbon index in accordance with **EN ISO 9377-2-Mod. (DIN H53)**.

## Standards

Acc. to **ISO 9377-2-Mod. (DIN H53)**.

- Manufactured in accordance with **ISO Guide 34** in an accredited environment
- Tested in a laboratory accredited to **ISO/IEC 17025**
- Ideal for calibration of GC-FID, GC-TCD, GC-ECD, GC-MS, GC-MS-MS, LC-UV, LC-MS and LC-MS-MS

| Product | Purity | Art. No. | Pack Qty. | Packaging | € |
|---|---|---|---|---|---|
| **n-Alkane standard solution (C10-C40, all even)** | 16 components (each 50 mg/l) in n-hexane | **1772.1** | 1 ml | glass ampoule | 105,25 |
| | | **1772.2** | 5 ml | glass ampoule | 155,90 |
| **n-Alkane standard solution (C10-C40, all even)** | 16 components (each 100 mg/l) in n-hexane/petroleum ether (1/1) | **9331.1** | 5 ml | glass ampoule | 198,90 |
| **n-Alkane standard solution (C7, C8, C9, C10-C40, all even)** | 19 components (each 50 mg/l) in isooctane | **9629.1** | 5 ml | glass ampoule | 177,40 |
| **Extraction solvent stock solution** | 20 µl/l n-decane and 20 mg/l n-tetracontane in n-hexane | **1750.2** | 10 ml | glass ampoule | 87,65 |
| **Florisil® quality control standard** | 1000 mg/l mineral oil and 1000 mg/l diesel in n-hexane | **9334.1** | 5 ml | glass ampoule | 61,85 |
| **Standard mixture of mineral oils** | 500 mg/l mineral oil and 500 mg/l diesel in acetone | **1774.2** | 5 ml | glass ampoule | 99,90 |
| **Standard mixture of mineral oils** | 5000 mg/l mineral oil and 5000 mg/l diesel in n-hexane | **1773.2** | 5 ml | glass ampoule | 87,65 |
| **Stearyl stearate test solution** | 2000 mg/l in n-hexane | **1760.2** | 10 ml | glass ampoule | 117,20 |

# Analysis of Food

ROTH also offers reagents suitable for food analysis.
On the following pages, you will find the determination of
- Nitrogen according to Kjeldahl
- Sugar
- Mercury
- Trichinae
- Fat

and the determination of the
- Iodine value
- Acid value
- Peroxide value
- Saponification value

## Determination of nitrogen according to Kjeldahl

The most common technique for measuring the amount of nitrogen in organic matter is the Kjeldahl method, which is used in a wide range of sectors such as environmental analysis, food analysis, water analysis and agricultural analysis, as well as in the pharmaceutical and chemical industries.
In this traditional method, a precisely weighed sample is broken down using concentrated sulphuric acid, a process which digests its organic contents and reacts nitrogen to form ammonium sulphate.

$$(CHNO)_{(s)} \xrightarrow{H_2SO_4} CO_{2\,(g)} + SO_{2\,(g)} + H_2O_{\,(g)} + NH_4SO_{4\,(solv,\,H_2SO_4)}$$

A catalyst or catalyst mixture consisting of copper, selenium, mercury and/or titanium is added to speed up the reaction. Sodium or potassium sulphate is used to give the sulphuric acid a higher boiling point.
If the nitrogen is contained in a nitro, nitroso or azo compound, however, the mixture must be reduced with zinc before digestion takes place.
The nitrogen is now present in the sulphuric acid as ammonium sulphate. Adding a strong base (such as NaOH) neutralises the sulphuric acid and liberates ammonia from the solution.

$$NH_4SO_{4\,(solv)} + 2\,NaOH_{\,(aq)} \longrightarrow Na_2SO_{4\,(aq)} + 2\,NH_{3\,(g)} + 2\,H_2O_{\,(l)}$$

The ammonia is led into an acid (such as boric acid) by means of steam distillation.

$$B(OH)_{3\,(aq)} + H_2O_{\,(l)} + NH_{3\,(g)} \longrightarrow B(OH)_4^-{}_{(aq)} + NH_4^+{}_{(aq)}$$

The resulting strong base (borate ion) is back-titrated with a strong acid (hydrochloric acid or sulphuric acid). The excess weak boric acid is not captured in the process. A Tashiro's indicator that changes colour in the acid is used for titration. The amount of acid that has been used up can then be converted into the amount of nitrogen in the sample.

$$NH_4^+{}_{(aq)} + B(OH)_4^-{}_{(aq)} + HCl_{\,(l)} \longrightarrow NH_4Cl_{\,(aq)} + B(OH)_{3\,(aq)} + H_2O_{\,(l)}$$

To calculate the protein content of the sample, the varying nitrogen content of the amino acids must be checked and the relevant conversion factors applied. The nitrogen contained in food derives mainly from proteins, but different samples may also contain other sources of nitrogen.

## Kjeldahl tablets

| Product | Purity | Art. No. | Pack Qty. | € |

For additional product data and safety information, see chapter Chemicals A-Z.

# Determination of Sugar

## Fehling's test:

Fehling's test is used to identify reducing agents, such as aldehydes and reducing sugars. Combining the two separate solutions (Fehling's I and Fehling's II) produces a deep-blue tartrate-copper(II) complex. Adding a reducing sample then causes a red pigment consisting mainly of copper(I) oxide to precipitate out of the mixture. This change in colour does not happen in the presence of sucrose or ketones.

### Fehling's solution I

**for sugar determination, reag. Ph.Eur.**

Cupric sulphate solution, Copper(II) sulphate solution

**Danger** H318-H410

| | | | |
|---|---|---|---|
| **N055.1** | 1 l | glass | 31,10 € |
| Original pack 6 x 1 l | | | 29,55/1 l |

### Fehling's solution II

**for sugar determination, reag. Ph.Eur.**

Alkaline potassium sodium tartrate solution

**Danger** H290-H314

| | | | |
|---|---|---|---|
| **N056.1** | 1 l | glass | 44,00 € |
| Original pack 6 x 1 l | | | 41,80/1 l |

## Benedict reagent

As variant for Fehling's test, also for verification of reduced sugars. Due to the different composition, the Benedict reagent is less alkaline and more stable (due to the citrate) than the Fehling solutions.

### Benedict's reagent

**for sugar determination**

NEW

**Warning** H319-H411

**Type analysis:**

Appearance. ..... blue solution
Density (20 °C). ..... 1,15-1,19 g/cm³
Formulation: Sodium carbonate anhydrous, tri-Sodium citrate dihydrate, Copper(II) sulphate pentahydrate, water

| | | | |
|---|---|---|---|
| **0010.1** | 100 ml | dropp. bottle | 18,20 € |

## Luff-Schoorl method:

This method can be used to calculate the amount of reducing sugars, such as D-glucose, D-fructose, D-lactose and D-maltose, that a sample contains. In this method, the copper(II) ions in an alkaline solution are reduced by the sugar and determined by means of back-titration of the excess reagent added. Non-reducing sugars, such as D-sucrose, are not captured by this method. To determine the amount of this sugar present, it must first be broken down into reducing monosaccharides via acid hydrolysis.

### Luff-Schoorl's solution

**for sugar determination**

**Warning** H319-H411

| | | | |
|---|---|---|---|
| **X874.1** | 1 l | glass | 31,75 € |
| Original pack 6 x 1 l | | | 30,16/1 l |

## Carrez clarification:

The Carrez clarification technique is used primarily in sugar analysis to eliminate turbidity. Two solutions in equal parts are added to the solution to be clarified, which removes any disruptive colloids.

### Carrez solution I

**for determination of sugars and starch**

Zinc acetate and acetic acid solution

H411

| | | | |
|---|---|---|---|
| **9944.1** | 500 ml | plastic | 28,95 € |

### Carrez solution II

**for determination of sugars and starch**

Potassium hexacyanoferrate(II) solution

| | | | |
|---|---|---|---|
| **9950.1** | 500 ml | plastic | 30,00 € |

### Determination of sucrose and glucose content using the enzymatic method in accordance with DIN 10326.

## Determination of mercury

Mercury has been used in technical applications since ancient times. Its high mobility means that it is particularly prevalent in the environment. Yet huge amounts of it are continuously being released into the atmosphere, for example through combustion reactions.
Mercury forms organic compounds that are fat-soluble, which enables them to enter the food chain. The two most commonly used standard methods for analysing mercury are the AAS (atomic absorption spectroscopy) procedure and the ICP (inductively coupled plasma) technique. It goes without saying that the reagents used to prepare samples must not contain mercury. ROTH offers these reagents with a mercury content of less than 0,005 ppm.

| Product | Purity | Art. No. | Pack Qty. | Pack. | € |

# Determination of trichina

Trichina (*Trichinella*, ssp.) are small roundworms approximately 1 mm long that live as parasites in the skeletal muscles of mammals, birds and reptiles. They can be transferred to a new host (human or animal) through the consumption of raw meat containing infectious larvae in the muscle tissue. Meat intended for human consumption must be inspected in accordance with Regulation (EU) No. 2075/2005. ROTH offers reagents suitable for this purpose.

## Hydrochloric acid 25 %

**ROTIPURAN® ≥25 %, p.a., ISO**

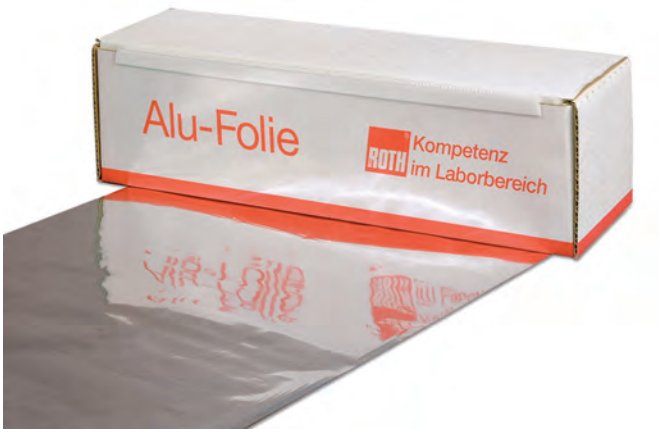
## Pepsin

**≥2000 FIP-U/g, for biochemistry**



From porcine gastric mucosa. For detection of trichina in meat.
M 35000 g/mol
Storage temp.: +4 °C

**Danger** H334-H335-H315-H319

Acidic endopeptidase, the inactive precursor of which, pepsinogen, is produced in the stomach mucosa. Pepsin cleaves proteins preferentially at carboxylic groups of aromatic amino acids such as phenylalanine and tyrosine. Highly active pepsine is preferably used for detection of trichina in pre-digested muscle meat of animals.
1 FIP unit (≈Ph.Eur. unit) of Pepsin activity will, during incubation at 25±0,1 °C for one minute, cause decomposition of haemoglobin to an extent comparable with the colour caused by reaction of 1 micromole of tyrosine with the same dye. 2 000 FIP-Units correspond to 1: 10 000 NF-U and 1: 12 500 BP-U.

**Application:**
Well soluble in water, stable in aqueous solutions of pH up to 5,5, unstable above pH 6,0. Irreversible inactivated in alkaline medium. Solution is stable in temperatures of up to 60 °C, and also in higher concentrations of urea and guanidine.
pH optimum: 1-2
Isoelectric point: 1,0

For additional product data and safety information, see chapter Chemicals A-Z.

**Fat- and protein-containing samples should be cleared using Carrez reagents:**

- Add sample to 60 ml water
- Subsequently add, while mixing after each step:
  a) 5 ml Carrez-I-solution, Art. No. 9944
  (or 7,2 g zinc sulphate heptahydrate, Art. No. K301 ad 100 ml)
  b) 5 ml Carrez-II-solution, Art. No. 9950
  (or 3,6 g potassium hexacyanoferrate(II), Art. No. P745 ad 100 ml)
- Adjust pH to 7,5 - 8,5 by adding NaOH (0,1 M)
- Fill volumetric flask up to mark, mix, and filter

## Iodine value determination

The iodine value is a measure of the unsaturated fatty acids in glycerides. The more olefinic double bonds there are in the fat, the higher the iodine value.

For additional product data and safety information, see chapter Chemicals A-Z.

## Acid value determination

The acid value expresses the acidic components of fats. To calculate this value, a sample is dissolved in a solvent and titrated with a solution of potassium hydroxide with phenolphthalein as the colour indicator. Only the free fatty acids are captured; the fatty acids bound in the glycerides are not.

## Peroxide value determination

The peroxide value of a substance denotes how much peroxide it contains. In a mixture of glacial acetic acid and chloroform, the peroxide oxidises the iodide into elementary iodine. The resulting quantity of iodine is then back-titrated using a thiosulphate solution (where a starch solution is used as the indicator). The blank solution tested in parallel is used to calculate the results.

For additional product data and safety information, see chapter Chemicals A-Z.

## Saponification value

The saponification value denotes the amount of potassium hydroxide required to neutralise free fatty acids and saponify bound fatty acids. The lower the average molar mass of the fat, the higher the saponification value. The sample is heated under reflux in a defined quantity of ethanolic potassium hydroxide solution and the non-used alkaline solution is titrated with hydrochloric acid.

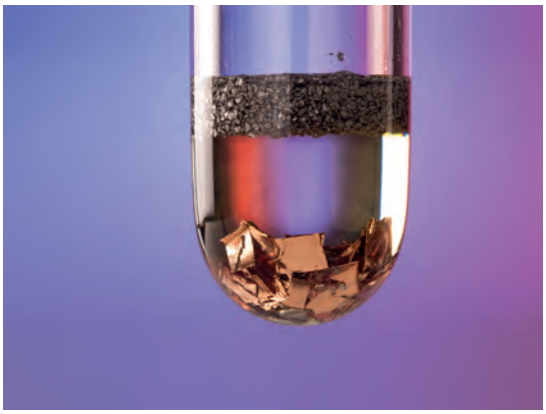
# Further deteminations

## Determination of viscosity



Viscosity is the measure of a fluid's resistance to flow. The lower a liquid's viscosity, the thinner it is and the more easy it is to pour; the higher a liquid's viscosity, the thicker it is and the harder it is to pour. The particles in viscous liquids are less mobile as they have to overcome the van der Waals forces and the bonds between the particles in them are stronger.

# Density determination

Sodium polytungstate (SPT) is perfect for preparation of heavy liquids. ROTH offers an environmentally friendly alternative to using zinc chloride and mercury saline solutions or highly toxic halogenated hydrocarbons to conduct the sink or swim analyses required for density determination.

**Properties:**
- Highly water soluble
- pH-neutral solution adjustable
- Maximum achievable density of the solution is 3,1 g/cm³ at 25 °C

**Advantages:**
- Non-toxic
- Non-flammable
- Odourless
- Low viscosity
- Easy to use
- Extremely easy to clean the sinks and floats with water
- Environmentally friendly

Manufacture of aqueous sodium polytungstate solutions with the following densities and consequent viscosities at 25 °C

| Mass of SPT used [g] | Mass of $H_2O$ [g] | End volume of solution [ml] | Concentration c in [wt.-%] | Density ρ [g/cm³] | Viscosity η [mPa•s] |

# Hydroxyl value

The hydroxyl value is a measure of the hydroxy group content of organic materials such as paints, resins, polystyrenes, solvents and lipids.
It represents the amount in milligrams of potassium hydroxide required to neutralise the quantity of acetic acid that combines on acetylation of one gram of the substance being tested.

# Fluoride value determination

In quantitative assays, TISABs (total ionic strength adjustment buffers) are used to set the ionic strength of a solution to a stable level using ion-selective electrodes. The ionic strength must be kept stable during the measuring process in order to prevent the potential from changing regardless of the molar concentration. The measurement of fluoride ions is highly susceptible to error; high pH values or aluminium(III) and iron(III) ions will falsify the results.

## TISAB solution I

**for determination of fluoride**

Total ionic strength adjustment buffer

NEW

Formulation: Acetic acid, Sodium chloride, tri-Sodium citrate dihydrate, Water

# Products in VLSI quality

ROTH's VLSI (Very Large Scale Integration) product line offers solvents and acids for cleaning and etching wafers for the semi-conductor industry. Both processes are essential for chip manufacture. ROTH offers a selected range of products.

## Solvents

### Properties:

- High purity
- Trace metal content generally between 10-50 ppb
- Particle-filtered, maximal 250 particles/ml

| Product | Purity | Art. No. | Pack Qty. | Pack. | € |
|---|---|---|---|---|---|
| **Acetone** | ≥99,5 %, VLSI Grade | **9780.1** | 2,5 l | plastic | 67,20 |
| | | | 5 l | plastic | 110,65 |
| **2-Butanone** NEW | ≥99,5 %, VLSI Grade | **0051.1** | 2,5 l | plastic | 95,70 |
| **Isobutyl methyl-ketone** NEW | ≥99,5 %, VLSI Grade | **0061.1** | 2,5 l | plastic | 74,20 |
| **Methanol** | ≥99,5 %, VLSI Grade | **9785.1** | 2,5 l | plastic | 54,75 |
| | | **9785.2** | 5 l | plastic | 98,80 |
| **N-Methyl-2-pyrrolidone (NMP)** | ≥99,8 %, VLSI Grade | **9786.1** | 2,5 l | plastic | 88,05 |
| | | **9786.2** | 5 l | plastic | 153,65 |
| **L(-)-Lactic acid ethyl ester** NEW | ≥97 %, VLSI Grade | **0036.1** | 2,5 l | plastic | 106,45 |
| **2-Propanol** | ≥99,9 %, VLSI Grade | **9781.1** | 2,5 l | plastic | 66,55 |
| | | **9781.2** | 5 l | plastic | 110,20 |

## Acids

### Properties

- High purity
- Trace metal content usually below 100 ppb
- Particle-filtered, maximal 250 particles/ml

| Product | Purity | Art. No. | Pack Qty. | Pack. | € |
|---|---|---|---|---|---|
| **Hydrochloric acid** | 37 %, VLSI Grade | **9787.1** | 2,5 l | plastic | 44,00 |
| **Hydrogen peroxide** | 30 %, VLSI Grade | **9790.1** | 2,5 l | plastic | 77,30 |
| **ortho-Phosphoric acid** | 85 %, VLSI Grade | **9788.1** | 2,5 l | plastic | 142,90 |
| **Sulphuric acid** | 96 %, VLSI Grade | **9789.1** | 2,5 l | plastic | 77,95 |

VLSI or Very Large Scale Integration means that a large number of transistors (now several 100 million) are located on one chip. Since the gaps are very small, roughly 3 µm, the solvents and acids must be of a correspondingly high purity and be particle-filtered. For VLSI, the number of particles is limited to 250 p/ml.

### Example specification:

### Acetone

**≥99,5 %, VLSI Grade**

2-Propanone, Dimethyl ketone

$C_3H_6O$

M 58,08 g/mol

**Danger** H225-H319-H336-EUH066

**Guarantee analysis:**

| | |
|---|---|
| Assay | ≥99,5 % |
| Bead number (≤0,5 µm) | ≤250 p/ml |
| Water | ≤0,5 % |
| Alkalinity | 0,5 µeq/g |
| Acidity | 0,2 µeq/g |
| Colour (APHA) | 10 |
| Chloride (Cl) | ≤0,00001 % |
| Phosphate ($PO_4$) | ≤0,00005 % |
| Ash content | ≤0,0005 % |
| Aluminium (Al) | ≤50 ppb |
| Antimony (Sb) | ≤10 ppb |
| Arsenic (As) | ≤10 ppb |
| Barium (Ba) | ≤20 ppb |
| Beryllium (Be) | ≤10 ppb |
| Bismuth (Bi) | ≤10 ppb |
| Lead (Pb) | ≤10 ppb |
| Boron (B) | ≤20 ppb |
| Cadmium (Cd) | ≤10 ppb |
| Calcium (Ca) | ≤50 ppb |
| Chromium (Cr) | ≤10 ppb |
| Iron (Fe) | ≤50 ppb |
| Gallium (Ga) | ≤10 ppb |
| Gold (Au) | ≤10 ppb |
| Potassium (K) | ≤20 ppb |

| Manganese (Mn) | ≤10 ppb |
| Molybdenum (Mo) | ≤10 ppb |
| Sodium (Na) | ≤50 ppb |
| Nickel (Ni) | ≤10 ppb |
| Silver (Ag) | ≤10 ppb |
| Strontium (Sr) | ≤10 ppb |
| Titanium (Ti) | ≤10 ppb |
| Vanadium (V) | ≤10 ppb |
| Zinc (Zn) | ≤20 ppb |
| Tin (Sn) | ≤10 ppb |
| Zirconium (Zr) | ≤10 ppb |

# ROTI®CALIPURE standards for your calibration needs

ROTH offers an extensive range of calibration standards. These products are manufactured from highly pure starting material and are specially tested for each application. The corresponding batch-specific certificate of analysis is available online. Each product series offers excellent value for money.

## Melting point standards

The melting point of a substance is the temperature at which the transition from a solid phase to a liquid phase occurs. The determination of melting point is a quick and easy method of determining the basic purity of substances. As the melting point is a characteristic variable for pure substances, it is also used for the identification of organic compounds. ROTH offers a selected range of melting point standards. To allow easy handling and ensure maximum safety, the standards are filled in small quantities protected from light and are ready-to-use straight away.

**Features:**

ready-to-use

- Suitable for checking purity
- Suitable for use independent of instrument type
- Ready-to-use

| Product | Purity | Art. No. | Pack Qty. | Pack. | € |
|---|---|---|---|---|---|
| **Anthraquinone** | Melting point standard 283-286 °C | **9754.1** | 1 g | glass | 30,00 |
| **Benzoic acid** | Melting point standard 121-123 °C | **9722.1** | 1 g | glass | 30,00 |
| **Benzophenone** | Melting point standard 47-49 °C | **9709.1** | 1 g | glass | 30,00 |
| **Carbazole** | Melting point standard 243-247 °C | **9752.1** | 1 g | glass | 30,00 |
| **Caffeine** | Melting point standard 235-238 °C, anhydrous | **9739.1** | 1 g | glass | 30,00 |

| Product | Purity | Art. No. | Pack Qty. | Pack. | € |
|---|---|---|---|---|---|
| **p-Nitrotoluene** | Melting point standard 52-54 °C | **9712.1** | 1 g | glass | 30,00 |
| **Phenacetin** | Melting point standard 133-135 °C | **9728.1** | 1 g | glass | 30,00 |
| **Salicylic acid** | Melting point standard 158-160 °C | **9731.1** | 1 g | glass | 30,00 |
| **Sulphanilamide** | Melting point standard 164-166 °C | **9734.1** | 1 g | glass | 30,00 |
| **Vanillin** | Melting point standard 81-83 °C | **9714.1** | 1 g | glass | 30,00 |

ready-to-use

## Conductivity standards ROTI®CALIPURE

Our conductivity standard solutions are made from high-quality reagents and therefore ensure maximum precision during calibration. They are ready-to-use and come supplied with a batch-specific certificate of analysis.

- 10 conductivity standards
- Variation in conductivity ±1 % (25 °C)
- Traceable to SRM from NIST

| Product | Art. No. | Pack Qty. | € |
|---|---|---|---|
| **Conductivity standard 5 µS/cm** | **2462.1** | 500 ml | 149,45 |
| **Conductivity standard 84 µS/cm** | **2432.1** | 500 ml | 27,45 |
| | **2432.2** | 1 l | 36,05 |

| **Conductivity standard 500 000 µS/cm** | **2467.1** | 500 ml | 62,90 |

# pH-Buffer Solutions, ROTI®CALIPURE

- Manufactured from high purity buffer substances
- No need for time-consuming drying and weighing of reagents
- The buffer solutions are adjusted to their respective pH values by comparison with standard buffer solutions (according to DIN 19266 and based on primary reference materials of the PTB and/or NIST)
- Quick and precise calibration of measuring equipment
- Stabilised against algae and bacterial action

# ROTI®STAR pH-buffer solutions

ready-to-use

- Tested in an accredited laboratory in accordance with **ISO 17025**
- Can be traced back to standard reference materials by NIST
- Certificate of analysis complete with information on measuring accuracy available online
- Produced according to a special recipe for maximum shelf life

## Buffer solution pH 4,00 ±0,01 (20 °C)

**ROTI®STAR**

Potassium hydrogen phthalate

**Type analysis:**

pH value (20 °C). ..... 4,00 ±0,01
Tested in an accredited laboratory acc. to ISO 17025.

| | | | |
|---|---|---|---|
| **9974.1** | 500 ml | plastic | 18,20 € |

## Buffer solution pH 7,00 ±0,01 (20 °C)

**ROTI®STAR**

Potassium dihydrogen phosphate/di-Sodium hydrogen phosphate

**Type analysis:**

pH value (20 °C). ..... 7,00 ±0,01
Tested in an accredited laboratory acc. to ISO 17025.

| | | | |
|---|---|---|---|
| **9977.1** | 500 ml | plastic | 18,20 € |

## Buffer solution pH 10,00 ±0,01 (20 °C)

**ROTI®STAR**

di-Sodium tetraborate/sodium hydroxide

**Type analysis:**

pH value (20 °C). ..... 10,00 ±0,01
Tested in an accredited laboratory acc. to ISO 17025.

| | | | |
|---|---|---|---|
| **9983.1** | 500 ml | plastic | 18,20 € |

## AL10 hand-held pH meter

By Aqualytic.
- Splash-proof membrane keyboard
- Manual single-point or double-point calibration via trimmer

**Technical specifications:**

| | |
|---|---|
| Measurement range/resolution | 0.01 to 14.00 pH |
| Accuracy | ±0.1 (pH 4.0-10.0)<br>±0.2 (pH 1.1-3.9 and pH 10.1-13.0)<br>±0.3 (pH 0.1-1.0 and pH 13.1-14.0) |
| Dimensions (L x W x H) | 208 x 110 x 34 mm |

**Delivery incl.** pH plastic electrodes with gel electrolyte and BNC connector, pH buffer solutions (pH 4.01 and pH 7.00, each 90 ml), protective cover for measuring in difficult conditions, case and E-type block 9 V battery.

| Art. No. | Pack Qty. | € |
|---|---|---|
| **YP68.1** | 1 | 197,80 |

**Accessories:**

| | | | |
|---|---|---|---|
| Spare pH plastic electrodes | **YP69.1** | 1 piece | 77,40 |
| E-Block 9 V battery | **1025.1** | 1 piece | 4,85 |

# ROTI®STAR Standards for AAS and ICP

**ROTH** has an extensive range of products which meets the highest standards of quality in the field of element standards and ion standards. The solutions and mixtures are made using materials of the highest purity, and therefore meet the requirements for instrumental analysis by AAS and ICP. All solutions are certified and can be traced to NIST standard reference materials. Solutions are produced according to **ISO Guide 34** in an accredited environment. The solutions are tested in a laboratory accredited to **ISO/IEC 17025** and supplied with a detailed, batch-specific certificate of analysis.

## Single Element Standards for AAS
## (Atomic Absorption Spectroscopy)

ready-to-use

AAS standard solutions are made from high-quality reagents, and therefore ensure maximum precision during calibration. Accuracy and precision for reliable measurement results.

- 42 single element standards
- Concentration 1000 mg/l (1 g/l)
- Container sizes: 100 ml and 500 ml
- 24 months shelf life for unopened bottle & 12 months after the bottle has been opened

### Single Element Standards for AAS 1000 mg/l (1 g/l) - ready to use

# Multi-Element Standards for Graphite Furnace AAS

ready-to-use

This multi-element standard is produced from ultra-pure raw materials and in accordance with strict quality guidelines. The traceability and standard reference material of the NIST is documented on the comprehensive certificate of analysis. The standard is suitable for the calibration of graphite furnace AAS units.

| Product | Elements | Composition | Matrix | Art. No. | Pack qty. (ml) | € |
|---|---|---|---|---|---|---|
| **GF AAS Multi-Element Standard Solution XVIII (concentration in mg/l)** | 16 | Ag (10), Al (100), As (100), Ba (50), Be (5), Cd (5), Co (50), Cr (20), Cu (50), Fe (20), Mn (20), Ni (50), Pb (100), Sb (100), Se (100), Tl (100) | 5 % $HNO_3$ | **9778.1** | 100 | 177,40 |

# Matrix Modifer Solutions for Graphite Furnace AAS

Matrix modifier solutions by ROTH are made from high purity starting materials (≥99,999 %) and delivered with a detailed batch specific certificate of analysis. The solutions can be used either diluted or as mixtures, and are suitable for eliminating matrix effects in graphite furnace AAS.

- Up to 70 measured trace impurities in ppm range and lower
- Guaranteed accuracy: ±1 %
- Container size: 50 ml
- 24 months shelf life for unopened bottle & 12 months after the bottle has been opened

| Compound | Matrix | Concentration | Art. No. | Pack qty. (ml) | € |
|---|---|---|---|---|---|
| **Ammonium dihydrogene phosphate** | 1 % $HNO_3$ | 20 g/l | **5150.1** | 50 | 62,25 |

| | | 10 g/l | **4842.1** | 50 | 274,15 |

For additional product data and safety information, see chapter Chemicals A-Z.

# Single Element Standards for ICP-OES
## (Inductively Coupled Plasma – Optical Emission Spectrometry)

The solutions and mixtures are made using materials of the highest purity, and therefore meet the requirements for instrumental analysis by AAS and ICP. All solutions are certified and can be traced to NIST standard reference solutions. Solutions are produced according to **ISO Guide 34** in an accredited environment. The solutions are tested in a laboratory accredited to **ISO/IEC 17025** and supplied with a detailed, batch-specific certificate of analysis.
Each standard solution is made of high purity starting materials (mostly ≥99,999 %), and its content is determined gravimetrically and by ICP. High quality acids (purified by subboiling distillation) and water are used for production of the solutions. This gives you first-class reference materials of the highest purity and quality.

- 68 single element standards
- Concentration 1000 mg/l (1 g/l) and 10 000 mg/l (10 g/l)
- Up to 70 measured trace impurities in the ppt range
- 24 months shelf life for unopened bottle & 12 months after the bottle has been opened

# Multi Element Standards for ICP-OES
## (Inductively Coupled Plasma – Optical Emission Spectrometry)

All solutions are certified and can be traced to NIST standard reference solutions.
Solutions are produced according to ISO Guide 34 in an accredited environment.
The solutions are tested in a laboratory accredited to ISO/IEC 17025 and supplied with a detailed, batch-specific certificate of analysis.
A series of mixtures of different element combinations and concentrations for standard environmental analyses.

- 16 different multi element standards
- Quality control standards
- Surface water analysis ①
- Sewage sludge analysis ②
- 12 months shelf life for unopened bottle & 6 months after the bottle has been opened

# Multi-element standards for the ICP-MS

## (Inductively Coupled Plasma - Mass spectrometry)

NEW ready-to-use

The standard solutions are manufactured from high-purity starting material (as a rule ≥99,999 %) under clean room conditions. Acids (purified by means of sub-boiling distillation) and water of highest quality are used to manufacture the solutions.

The solutions are certified and can be traced to NIST standard reference solutions. Solutions are produced according to **ISO Guide 34** in an accredited environment. The solutions are tested in a laboratory accredited to **ISO/IEC 17025** and supplied with a detailed, batch-specific certificate of analysis.

The range encompasses 19 different multi-element standards in various compositions for tuning, calibration and interference tests.

| Product | Elements | Composition | Matrix | Art. No. | Pack qty. (ml) | € |
|---|---|---|---|---|---|---|
| **ICP-MS Multi-Element Standard Solution (concentration in mg/l)** | 3 | Cr (4), Fe (20), Sr (4) | 2 % $HNO_3$ | **0381.1** | 100 | 90,30 |
| | | | | **0381.2** | 500 | 176,30 |
| **ICP-MS Multi-Element Standard Solution (1000 mg/)** | 4 | Ca, K, Mg, Na | 2 % $HNO_3$ | **6803.1** | 100 | 80,55 |
| **ICP-MS Multi-Element Standard Solution (10 mg/)** | 4 | Mo, Sb, Sn, Ti | 2 % $HNO_3$ / 0,1 % HF | **6807.1** | 100 | 83,85 |
| | | | | **6807.2** | 500 | 165,55 |

# ROTIPURAN® ULTRA / SUPRA

## Acids, Alkaline Solutions and Water for trace analysis via ICP-OES, ICP-MS, AAS and IC

**ROTH** provides two high quality product lines, **ROTIPURAN® Ultra & Supra** specially for research, trace analysis and electronics.
These ultrapure reagents are produced using a technologically complex distillation process (subboiling distillation) and are filled only into specially selected, suitable containers under clean room conditions. Very extensive production and quality controls guarantee extremely high quality.

Analysenzertifikat
CERTIFICATE OF ANALYSIS

## ROTIPURAN® Ultra

This ultrapure product line is characterised for its especially high purity **(in ppt-quality)** and fulfils the highest purity requirements. The metal content of these products is below 100 ppt [parts per trillion=$10^{-12}$] while key metals are under 10 ppt. These products are used in ultra trace analysis (via ICP-OES, ICP-MS, AAS, IC) and for applications in the electronics industry. The reagents are bottled and offered in high class fluoropolymer plastic bottles (PFA and FEP).

Features:
- Specified metal content: less than 100 ppt
- Preponderant metals are under 10 ppt
- More than 65 analysed metals
- Produced and bottled under clean room conditions
- Continuous process control for highest product purity
- Bottled exclusively in purified fluoropolymer bottles
- Highest purity and maximum product safety

## ROTIPURAN® Supra

This supra quality line **(in ppb-quality)** is perfectly suitable for sample preparation in trace analysis (e.g. via ICP-OES, AAS, IC, etc.). Over 60 elements are specified and their content is below 1 ppb [parts per billion =$10^{-9}$]. Bottled and delivered in special plastic bottles.

Features:
- Maximum metal contamination: <1 ppb
- 60 specified metals
- Produced and filled under clean room conditions
- Bottled in special lightweight bottles for greater safety and easier handling. 2,5 liter bottles have got a handle
- HF is delivered with additional drop spout for safe handling
- Extremely economical purity for most analytic applications

ROTIPURAN® Low Organic:
TOC (Total Organic Carbon) - content: <20 ppb

## Ultra / Ultra HF dispenser

For dispensing highly pure acids and alkalis.
Suitable for use in ultra trace analysis.

**Features:**
- **Free of metals**
- Made of high quality and highly pure plastics (PTFE, TFM and PFA)
- Calibrated and mechanically tested for precision and accuracy
- 38-430 thread (fits ROTIPURAN® Ultra products)

**Special features of Ultra dispenser:**
- Acid cleansed
- Manufactured in cleanroom (class 100)

**Special features of Ultra HF dispenser:**
- Specially for dispensing hydrofluoric acids
- Also suitable for analytical acids

When using bottles with a GL45 thread, please order fastening for dispenser KK11.1 separately.

| Model | Volume (ml) | Graduation (ml) | Tolerance (±ml) | Art. No. | Pack Qty. | € |
|---|---|---|---|---|---|---|
| **Ultra** | 0,5-5 | 0,5 | 0,02 | **KK97.1** | 1 piece | 2234,95 |
| **Ultra HF** | 0,5-5 | 0,5 | 0,02 | **KK98.1** | 1 piece | 1757,65 |

## Accessories for Ultra/Ultra HF dispenser

### Bottle holder

Stabilises bottles when using a dispenser. The four-screw system is suitable for both square bottles and round bottles. The bottle holder is designed for ROTIPURAN® Supra and Ultra bottles with capacities from 250 ml to 2 litres. Also suitable for bottles with a diameter from approx. 7,0 cm to 11,5 cm.

| Product | Art. No. | Pack Qty. | € |
|---|---|---|---|
| **Bottle holder** | **KK99.1** | 1 piece | 93,00 |

### Fastening for Ultra/Ultra HF dispenser to GL45

Made of PTFE. For bottles with GL45 thread, specially for the use of ROTIPURAN® Supra products with Ultra and Ultra HF dispensers.

| Product | Art. No. | Pack Qty. | € |
|---|---|---|---|
| **Fastening for ROTIPURAN® Supra (GL45)** | **KK11.1** | 1 piece | 256,95 |

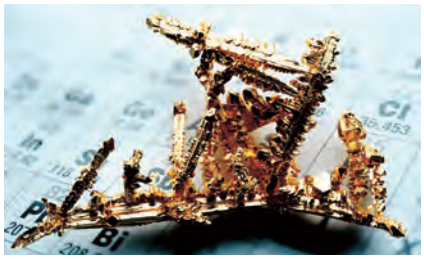
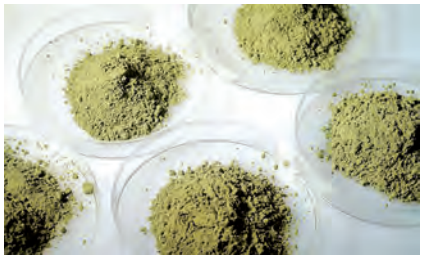
# ROTI®METIC

## (**M**etal **I**norganic **C**ompounds) Ultra Pure Metals and Inorganic Compounds

The ROTI®METIC product range comprises more than 140 high purity inorganic metals and metal compounds with purity levels ranging from 99,9 % (3N) to 99,9999 % (6N). Modern production technology as well as high quality and safety standards make it possible to achieve these high purity levels of metal traces from 100 ppm to 1 ppm.
Up to 60 trace metal compounds are analysed by HR-ICP, ICP-OES, AA, GD-MS and documented in the batch specific certificate of analysis supplied with the product.
Our ultra high purity metals and metal compounds are ideal for the following applications:



- Instrumental analytics
- Chemical analyses & syntheses
- Crystal growth technology
- Nanotechnology
- Photovoltaic technology
- Optical fibres
- Laser technology
- Photonics
- Fuel cells
- Catalysis



Our mission is to offer the quality and service you require in research & development and in production.

Excellent value for money and the option of ordering in semi-bulk are strong arguments in favour of the ROTI®METIC product range.

# ROTI®REMETIC

## Rare Earth Metal Inorganic Compounds

Our **ultra high purity rare earth metal compounds** work excellent for:

- Instrumental analytics
- Chemical analyses & syntheses
- Crystal growth technology
- Catalysis
- Doping agents
- Luminescent & fluorescent compounds
- Glas fibre technology
- Laser technology
- Fuel cells
- Oxidizing agents
- Electronic industry
- Ceramic manufacturing

Our mission is to offer the quality and service you require in research & development and in production. Excellent value for money and the option of ordering in semi-bulk are strong arguments in favour of the ROTI®REMETIC product range.

### Ultra-high-purity metal compounds

# ROTI®nanoMETIC

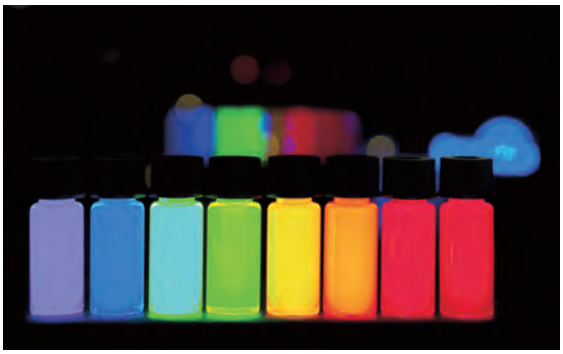
## Nanoparticles

Our nanoparticles are well suited for many applications and are supplied as a hydrophilic powder that can be easily suspended in aqueous solutions.

| Product | Purity | Art. No. | Pack Qty. (g) | € |
|---|---|---|---|---|
| **Aluminium oxide, nano** | ≥99,9 %, 40 nm | **8250.1** | 10 | 21,40 |
| | | **8250.2** | 50 | 81,60 |
| | | **8250.3** | 100 | 133,20 |
| **Copper, nano** | ≥97 %, 40 nm | **8279.1** | 5 | 33,25 |
| | | **8279.2** | 25 | 127,95 |
| | | **8279.3** | 100 | 461,20 |
| **Copper(II) oxide, nano** | ≥99 %, 25-45 nm | **8251.1** | 10 | 21,00 |
| | | **8251.2** | 50 | 78,40 |
| | | **8251.3** | 100 | 127,95 |
| **Titanium(IV) oxide, nano** | ≥99,9 %, 4-8 nm | **8254.1** | 10 | 55,80 |
| | | **8254.2** | 50 | 224,70 |
| **Zinc oxide, nano** | ≥99,5 %, 25 nm | **8278.1** | 10 | 28,95 |
| | | **8278.2** | 50 | 110,65 |
| | | **8278.3** | 100 | 203,20 |
| **Zirconium(IV) oxide, nano** | ≥92,5 %, 10-30 nm | **8255.1** | 10 | 27,85 |
| | | **8255.2** | 50 | 107,40 |
| | | **8255.3** | 100 | 198,90 |

For information on the handling of nanomaterials, see the WHO homepage.

## Phosphonic acids



Alkylphosphonic acids are perfect hydrophobization ligands, owing to their classical bifunctional chemical structure. They contain an non-polar organic hydrophobic alkyl chain and an active hydrophilic phosphonic acid group. These molecules are capable to strongly bind to the surface of different inorganic materials ($SiO_2$, $Al_2O_3$, $TiO_2$, $Fe_xO_y$, $ZrO_2$, ZnS etc.) forming a selfassembled coating layer. Phosphonic acids can also be used as ligands for the synthesis of nanoparticles to control the size and hydrophobic properties of the particles. Further they are well soluble in non-polar and many polar solvents. The acids are also soluble in water (especially upon addition of alkali) at lower concentrations.

### Phosphonic acids suitable for the production and modification of nanoparticles

| Product | Art. No. | Pack Qty. (g) | € |
|---|---|---|---|
| **Hexadecylphosphonic acid** | **8466.1** | 1 | 37,55 |
| | **8466.2** | 5 | 139,65 |
| **Octadecylphosphonic acid** | **8468.1** | 1 | 38,20 |
| | **8468.2** | 5 | 138,70 |
| **Tetradecylphosphonic acid** | **8465.1** | 1 | 38,60 |
| | **8465.2** | 5 | 138,70 |

## Quantum Dots (QD)

Quantum dots are fluorescent nanoparticles of certain semiconducting materials, whose electronic properties closely depend on the size of the particles. The fluorescence wavelength shifts towards red for larger particles, and to blue for the smaller ones. This allows coverage of the complete visible colour spectrum with quantum dots of different sizes and yet the same material. The possibility to control the size of the particles during their manufacturing, allows to precisely adjust their electronic and fluorescent properties. The inorganic nature of quantum dots makes them far more stable than organic fluorescent dyes. Moreover, the surface of quantum dot particles is modified with carboxylic groups, which makes them highly soluble in water and enables covalent conjugation with proteins and other molecules.

### Quantum Dots, hydrophilic

| Product | Purity | Art. No. | Pack Qty. (mg) | € |
|---|---|---|---|---|
| **Cadmium telluride** | λ max. 510 ±5 nm | **8256.1** | 5 | 63,35 |
| | | **8256.2** | 10 | 100,95 |
| **Cadmium telluride** | λ max. 570 ±5 nm | **8257.1** | 5 | 63,35 |
| | | **8257.2** | 10 | 100,95 |
| **Cadmium telluride** | λ max. 610 ±5 nm | **8258.1** | 5 | 63,35 |
| | | **8258.2** | 10 | 100,95 |
| **Cadmium telluride** | λ max. 710 ±5 nm | **8260.1** | 5 | 63,35 |
| | | **8260.2** | 10 | 100,95 |
| **Cadmium telluride** | λ max. 780 ±5 nm | **8261.1** | 5 | 63,35 |
| | | **8261.2** | 10 | 100,95 |

### Quantum Dots, hydrophobic

| Product | Purity | Art. No. | Pack Qty. (mg) | € |
|---|---|---|---|---|
| **Zn-Cu-In-S/ZnS** | Cd-free, λ max. 530 ±15 nm | **8609.1** | 5 | 50,45 |
| | | **8609.2** | 10 | 75,15 |
| **Zn-Cu-In-S/ZnS** | Cd-free, λ max. 560 ±15 nm | **8610.1** | 5 | 50,45 |
| | | **8610.2** | 10 | 75,15 |
| **Zn-Cu-In-S/ZnS** | Cd-free, λ max. 590 ±15 nm | **8618.1** | 5 | 50,45 |
| | | **8618.2** | 10 | 75,15 |
| **Zn-Cu-In-S/ZnS** | Cd-free, λ max. 610 ±15 nm | **8614.1** | 5 | 50,45 |
| | | **8614.2** | 10 | 75,15 |
| **Zn-Cu-In-S/ZnS** | Cd-free, λ max. 650 ±15 nm | **8616.1** | 5 | 50,45 |
| | | **8616.2** | 10 | 75,15 |
| **Zn-Cu-In-S/ZnS** | Cd-free, λ max. 700 ±15 nm | **8615.1** | 5 | 50,45 |
| | | **8615.2** | 10 | 75,15 |

# Elements

## Alloys

| Product | Purity | Art. No. | Pack Qty. | Pack. | € |
|---|---|---|---|---|---|
| **Alloy acc. to Wood** | used for metal heating baths | **1980.1** | 250 g | plastic | 35,40 |
| | | **1980.2** | 1 kg | plastic | 110,20 |
| **Nickel-aluminium alloy** NEW | 50/50 % Ni/Al powder, for synthesis | **0663.1** | 50 g | plastic | 17,10 |
| | | **0663.2** | 250 g | plastic | 75,15 |
| | | **0663.3** | 500 g | plastic | 134,40 |

## Aluminium

| Product | Purity | Art. No. | Pack Qty. | Pack. | € |
|---|---|---|---|---|---|
| **Aluminium granulate** | ≥99,5 %, gran., ~1-5 mm | **5280.1** | 250 g | glass | 18,85 |
| | | **5280.2** | 1 kg | glass | 34,30 |
| **Aluminium powder** | ≥99,5 %, powdered, <160 µm | **5285.1** | 250 g | glass | 27,45 |
| | | **5285.2** | 1 kg | glass | 69,80 |

## Antimony

| Product | Purity | Art. No. | Pack Qty. | Pack. | € |
|---|---|---|---|---|---|
| **Antimony** | ≥99,5 %, powder | **9258.1** | 100 g | plastic | 44,65 |
| | | **9258.2** | 500 g | plastic | 162,90 |

## Bismuth

| Product | Purity | Art. No. | Pack Qty. | Pack. | € |
|---|---|---|---|---|---|
| **Bismuth** | ≥99,5 %, powder | **2735.1** | 50 g | glass | 50,00 |
| | | **2735.2** | 100 g | glass | 84,85 |

## Calcium

| Product | Purity | Art. No. | Pack Qty. | Pack. | € |
|---|---|---|---|---|---|
| **Calcium** | ≥99,5 %, granules | **2729.1** | 50 g | glass | 70,45 |

## Carbon

| Product | Purity | Art. No. | Pack Qty. | Pack. | € |
|---|---|---|---|---|---|
| **Graphite** | natural, amorphous | **7614.2** | 500 g | plastic | 17,45 |
| | | **7614.3** | 1 kg | plastic | 26,35 |
| | | **7614.1** | 3 kg | plastic | 42,90 |

## Copper

| Product | Purity | Art. No. | Pack Qty. | Pack. | € |
|---|---|---|---|---|---|
| **Copper sheet** | sheet 0,1 mm thick, 60 cm wide | **8540.1** | 250 g | card board | 35,40 |
| | | **8540.2** | 1 kg | card board | 75,15 |
| **Copper beads** | ≥99,9 %, beads | **2728.1** | 100 g | glass | 39,70 |
| **Copper powder** | ≥99,8 %, p.a., <63 µm | **CP21.1** | 100 g | plastic | 17,75 |
| | | **CP21.2** | 500 g | plastic | 53,25 |
| **Copper wool** | ~99 % | **9597.1** | 100 g | plastic | 17,10 |
| | | **9597.2** | 250 g | plastic | 31,10 |
| | | **9597.3** | 500 g | plastic | 54,75 |
| | | **9597.4** | 1 kg | plastic | 98,80 |

## Gallium

| Product | Purity | Art. No. | Pack Qty. | Pack. | € |
|---|---|---|---|---|---|
| **Gallium** | 99,9999 % | **3761.1** | 5 g | glass | 79,05 |

## Gold

| Product | Purity | Art. No. | Pack. | € |
|---|---|---|---|---|
| **Sheets of gold** | 22 carat, block of 25 sheets 80 x 80 mm | **7605.1** | 1 piece (25 sheets) | 109,55 |

For additional product data and safety information, see chapter Chemicals A-Z.

## Indium

| Product | Purity | Art. No. | Pack Qty. | Pack. | € |
|---|---|---|---|---|---|
| **Indium, foil** | 99,99 % (4N), foil | **9803.1** | 10 g | plastic | 267,70 |
| **Indium shot** | >99,97 %, granulated | **3906.1** | 10 g | glass | 52,60 |

## Iodine

| Product | Purity | Art. No. | Pack Qty. | Pack. | € |
|---|---|---|---|---|---|
| **Iodine** | ≥99,8 %, p.a., ACS, resublimated | **X864.1** | 100 g | glass | 64,40 |
| | | **X864.2** | 250 g | glass | 117,20 |
| | | **X864.3** | 1 kg | glass | 413,90 |
| | ≥99,5 %, Ph.Eur., resublimated | **7935.3** | 100 g | glass | 48,30 |
| | | **7935.1** | 250 g | glass | 110,65 |
| | | **7935.2** | 1 kg | glass | 385,95 |
| | ≥99,5 %, resublimated | **7335.1** | 250 g | glass | 83,35 |
| | | **7335.2** | 500 g | glass | 146,75 |
| | | **7335.3** | 1 kg | glass | 278,45 |
| | | **7335.4** | 2,5 kg | glass | 557,95 |

## Iron

| Product | Purity | Art. No. | Pack Qty. | Pack. | € |
|---|---|---|---|---|---|
| **Iron** | ≥99,5 %, p.a., powdered | **3718.3** | 100 g | plastic | 18,20 |
| | | **3718.1** | 250 g | plastic | 33,25 |
| | | **3718.4** | 1 kg | plastic | 84,85 |
| | | **3718.2** | 2,5 kg | plastic | 177,40 |
| **Iron, reduced** | ≥96 %, powdered, extra pure | **9454.1** | 250 g | plastic | 17,10 |
| | | **9454.2** | 1 kg | plastic | 42,90 |
| | | **9454.3** | 2,5 kg | plastic | 81,20 |
| **Iron foil** NEW | 99,99 % (4N), foil | **0540.1** | 1 pieces | plastic | 106,35 |
| | | **0540.2** | 5 pieces | plastic | 471,95 |
| **Iron wool** | ~97 % | **9588.1** | 100 g | plastic | 11,50 |
| | | **9588.2** | 250 g | plastic | 19,60 |

## Lead

| Product | Purity | Art. No. | Pack Qty. | Pack. | € |
|---|---|---|---|---|---|
| **Lead** | ≥99,9 %, granules | **2734.1** | 50 g | plastic | 40,75 |
| | | **2734.2** | 100 g | plastic | 69,35 |

## Magnesium

| Product | Purity | Art. No. | Pack Qty. | Pack. | € |
|---|---|---|---|---|---|
| **Magnesium ribbon** | ≥99,5 %, tape | **4468.1** | 1 roll | box | 100,55 |
| **Magnesium powder** | ≥99,8 %, <75 µm | **CP20.1** | 100 g | plastic | 13,45 |
| | | **CP20.2** | 500 g | plastic | 38,60 |
| **Magnesium filings** | ≥99,9 %, acc. to Grignard, for synthesis | **AE61.1** | 250 g | tin | 17,75 |
| | | **AE61.2** | 500 g | tin | 26,80 |
| | | **AE61.3** | 1 kg | tin | 43,55 |

## Mercury

| Product | Purity | Art. No. | Pack Qty. | Pack. | € |
|---|---|---|---|---|---|
| **Mercury** | ≥99,9995 %, p.a. | **8530.1** | 100 g | glass | 41,85 |
| | | **8530.2** | 1 kg | plastic | 203,20 |
| | ≥99,999 % | **7593.1** | 100 g | glass | 31,10 |
| | | **7593.3** | 500 g | glass | 114,50 |
| | | **7593.2** | 1 kg | plastic | 192,45 |
| | ≥99,9 % | **7594.2** | 100 g | glass | 27,45 |
| | | **7594.1** | 1 kg | plastic | 181,70 |

## Nickel

| Product | Purity | Art. No. | Pack Qty. | Pack. | € |
|---|---|---|---|---|---|
| **Nickel foil** NEW | 99,99 % (4N), foil | **0529.1** | 1 piece | plastic | 91,30 |
| | | **0529.2** | 5 pieces | plastic | 418,20 |
| **Nickel powder** | ≥99 %, <63 µm | **CP22.1** | 100 g | plastic | 28,95 |

For additional product data and safety information, see chapter Chemicals A-Z.

## Pt

### Platinum

| Product | Purity | Art. No. | Pack Qty. | Pack. | € |
|---|---|---|---|---|---|
| Platinum wire | NEW ≥99,95 %, Ø 0,2 mm | **0737.1** | 25 cm | plastic | 80,55 |
| | | **0737.2** | 50 cm | plastic | 149,45 |
| | | **0737.3** | 1 m | plastic | 278,45 |
| | ≥99,9 %, Ø 0,3 mm | **8415.1** | 100 mm | plastic | 72,60 |
| | | **8415.2** | 500 mm | plastic | 241,90 |
| | NEW ≥99,95 %, Ø 0,5 mm | **0803.1** | 5 cm | plastic | 75,15 |
| | | **0803.2** | 10 cm | plastic | 134,40 |
| | | **0803.3** | 25 cm | plastic | 310,70 |
| Platinum black | 98,2-98,7 % | **8408.1** | 250 mg | glass | 42,90 |
| | | **8408.2** | 1 g | glass | 149,45 |

## Ag

### Silver

| Product | Purity | Art. No. | Pack Qty. | Pack. | € |
|---|---|---|---|---|---|
| Sheets of silver | thickness 4 µm, block of 25 sheets 95 x 95 mm | **9367.1** | 1 piece (25 sheets) | | 37,30 |
| Silver sheet | Sheet 100 x 100 x 0,1 mm | **8816.1** | 1 sheet | card-board | 72,60 |
| Silver wire | wire, Ø 0,1 mm | **8819.1** | 310 m | plastic | 149,45 |
| | ≥99,9 %, wire Ø 0,5 mm | **8821.1** | 25 g | plastic | 138,70 |
| | | **8821.2** | 100 g | plastic | 461,20 |
| Silver wool | ≥99,9 %, for elementary analysis | **9373.1** | 10 g | plastic | 67,65 |

## Na

### Sodium

| Product | Purity | Art. No. | Pack Qty. | Pack. | € |
|---|---|---|---|---|---|
| Sodium | ≥99 %, rods, in paraffin oil | **4469.1** | 250 g | plastic | 153,20 |

## S

### Sulphur

| Product | Purity | Art. No. | Pack Qty. | Pack. | € |
|---|---|---|---|---|---|
| Sulphur | ≥99,999% | **4669.1** | 10 g | plastic | 60,10 |
| | ≥99,5 %, ground | **9304.1** | 1 kg | plastic | 17,75 |
| | | **9304.2** | 5 kg | card-board | 54,75 |
| | | **9304.5** | 25 kg | plastic | 150,50 |

## Sn

### Tin

| Product | Purity | Art. No. | Pack Qty. | Pack. | € |
|---|---|---|---|---|---|
| Tin granules | ≥99,8 %, p.a., granulated | **4016.2** | 50 g | plastic | 44,65 |
| | | **4016.1** | 250 g | plastic | 166,65 |
| Tin beads | ≥99,8 %, beads | **2731.1** | 50 g | plastic | 36,45 |
| | | **2731.2** | 100 g | plastic | 66,55 |
| Tin foil | pure | **9296.1** | 1 roll | | 63,45 |

## W

### Tungsten

| Product | Purity | Art. No. | Pack Qty. | Pack. | € |
|---|---|---|---|---|---|
| Tungsten | ≥99 %, powder | **9835.1** | 50 g | plastic | 22,05 |
| | | **9835.2** | 100 g | plastic | 40,35 |
| | | **9835.3** | 500 g | plastic | 166,65 |

## Zn

### Zinc

| Product | Purity | Art. No. | Pack Qty. | Pack. | € |
|---|---|---|---|---|---|
| Zinc granule | ≥99,99 %, p.a., particle size: 5-15 mm | **AE99.1** | 250 g | plastic | 31,10 |
| | | **AE99.2** | 500 g | plastic | 50,45 |
| | | **AE99.3** | 1 kg | plastic | 83,75 |
| Zinc dust | ≥98 %, particle size <63 µm, stab. | **9524.2** | 500 g | glass | 28,95 |
| | | **9524.3** | 1 kg | glass | 40,75 |
| | | **9524.1** | 2,5 kg | glass | 71,95 |

For additional product data and safety information, see chapter Chemicals A-Z.

# Desiccants

Desiccants can absorb water and bind it chemically (reversibly or irreversibly) or physically.

**The main desiccants can be subdivided into four categories:**

- non-renewable chemical desiccants
- renewable chemical desiccants
- silica gels
- molecular sieves

## Non-renewable desiccant

| Dessicant | Suitable for | Not suitable for | Purity | Art. No. | Pack Qty. | Packaging | € |
|---|---|---|---|---|---|---|---|
| **Aluminium** | Alcohols | - | ≥99,5 %, powdered, <160 µm | **5285.1** | 250 g | glass | 27,45 |
| | | | ≥99,5 %, powdered, <160 µm | **5285.2** | 1 kg | glass | 69,80 |
| | | | ≥99,5 %, gran., ~1-5 mm | **5280.1** | 250 g | glass | 18,85 |
| | | | | **5280.2** | 1 kg | glass | 34,30 |
| **Calcium** | Alcohols | - | ≥99,5 %, granules | **2729.1** | 50 g | glass | 70,45 |
| **Magnesium** | Alcohols | -- | ≥99,5 %, tape | **4468.1** | 1 roll | box | 100,55 |
| | | | ≥99,8 %, <75 µm | **CP20.1** | 100 g | plastic | 13,45 |
| | | | | **CP20.2** | 500 g | plastic | 38,60 |
| | | | ≥99,9 %, acc. to Grignard, for synthesis | **AE61.1** | 250 g | tin | 17,75 |
| | | | | **AE61.2** | 500 g | tin | 26,80 |
| | | | | **AE61.3** | 1 kg | tin | 43,55 |
| **Phosphorous pentoxide** | Neutral and acidic gases, saturated aliphatic and aromatic hydrocarbons, acetylene, anhydrides, nitriles, alkyl and aryl halides, hydrogen sulphide | Alcohols, amines, acids, ketones, ethers, hydrogen chloride, hydrogen fluoride | ≥99 %, powdered | **9076.1** | 500 g | plastic | 23,55 |
| | | | | **9076.2** | 1 kg | plastic | 34,30 |
| | | | | **9076.3** | 2,5 kg | plastic | 76,25 |
| **Potassium hydroxide** | Alkaline fluids (e.g. amines) | Acids, esters, amides, phenols | ≥85 %, p.a., pellets | **6751.3** | 250 g | plastic | 16,05 |
| | | | | **6751.1** | 1 kg | plastic | 26,35 |
| | | | | **6751.2** | 5 kg | plastic | 91,30 |
| | | | | **6751.5** | 25 kg | plastic | 278,45 |
| **Sodium** | Ethers, saturated aliphatic and aromatic hydrocarbons, tertiary amines | Acids, acid derivatives, alcohols, aldehydes, ketones, alkyl and aryl halides | ≥99 %, rods, in paraffin oil | **4469.1** | 250 g | plastic | 153,20 |
| **Sodium hydroxide** | Alkaline fluids (e.g. amines) | Acids, acid derivatives, phenols | ≥99 %, p.a., ISO, in pellets | **6771.3** | 500 g | plastic | 17,10 |
| | | | | **6771.1** | 1 kg | plastic | 25,70 |
| | | | | **6771.2** | 5 kg | plastic | 92,35 |
| | | | | **6771.5** | 25 kg | plastic | 332,20 |
| **Sulphuric acid, concentrated** | Inert neutral and acidic gases and in dessicators | Unsaturated and other organic compounds, hydrogen sulphide, hydrogen iodide | 96 %, p.a., ISO | **4623.3** | 250 ml | glass | 18,85 |
| | | | | **4623.1** | 1 l | glass | 30,65 |
| | | | | **4623.4** | 1 l | plastic | 27,85 |
| | | | | **4623.2** | 2,5 l | glass | 61,20 |
| | | | | **4623.5** | 2,5 l | plastic | 64,40 |
| | | | | **4623.6** | 10 l | plastic | 117,20 |

For additional product data and safety information, see chapter Chemicals A-Z.

## Renewable desiccants

| Dessicant | Suitable for | Not suitable for | Regeneration at | Purity | Art. No. | Pack Qty. | Pack. | € |
|---|---|---|---|---|---|---|---|---|
| **Calcium chloride** | Saturated, olefin and aromatic hydrocarbons, alkyl halides, ethers, multiple esters, acetone | Ammonia, amines, alcohols, aldehydes, phenols, several esters, ketones | 250 °C | ≥98 %, dehydrated, powder | **CN93.1** | 500 g | plastic | 25,30 |
| | | | | | **CN93.2** | 1 kg | plastic | 38,20 |
| | | | | | **CN93.3** | 2,5 kg | plastic | 79,45 |
| | | | | ≥96 %, dehydrated, granular material | **CN92.1** | 500 g | plastic | 24,65 |
| | | | | | **CN92.2** | 1 kg | plastic | 37,10 |
| | | | | | **CN92.3** | 2,5 kg | plastic | 77,95 |
| | | | | ≥94 %, dehydrated | **A119.1** | 1 kg | plastic | 18,20 |
| | | | | | **A119.2** | 5 kg | plastic | 48,30 |
| | | | | | **A119.5** | 25 kg | plastic | 116,00 |
| **Calcium oxide** | Ammonia, amines, alcohols, nitrous oxide, ether | Acids, acid derivatives, aldehydes, ketones, ester | 1000 °C | ≥96 %, powdered, extra pure | **CN88.1** | 500 g | plastic | 14,95 |
| | | | | | **CN88.2** | 1 kg | plastic | 23,15 |
| | | | | | **CN88.3** | 5 kg | plastic | 83,35 |
| **Copper(II) sulphate** | Low fatty acids, alcohols, ester | Amines, nitriles, ammonia | Above 50 °C under vacuum | ≥98 %, p.a., anhydrous | **P023.1** | 250 g | plastic | 34,30 |
| | | | | | **P023.2** | 1 kg | plastic | 102,05 |
| | | | | | **P023.3** | 2,5 kg | plastic | 220,40 |
| **Magnesium oxide** | Alkaline fluids, hydrocarbons, alcohols | Acidic compounds | 800 °C | ≥98 %, Ph.Eur., light | **8280.2** | 500 g | plastic | 19,90 |
| | | | | | **8280.1** | 1 kg | plastic | 27,85 |
| | | | | | **8280.3** | 5 kg | plastic | 117,20 |
| **Magnesium sulphate** | Almost all compounds including acids, acid derivatives, aldehydes, esters, nitriles and ketones | - | First 200 °C, then red heat | ≥99 %, dried, extra pure, DAC | **0261.1** | 500 g | plastic | 15,30 |
| | | | | | **0261.2** | 1 kg | plastic | 19,60 |
| | | | | | **0261.3** | 2,5 kg | plastic | 35,40 |
| **Potassium carbonate** | Alkaline solvents (e.g. ammonia, amines), nitriles, chlorinated hydrocarbons, acetone | Acids | 158 °C, finely powdered from as low as 100 °C | ≥99 %, p.a., ACS | **P743.1** | 500 g | plastic | 26,35 |
| | | | | | **P743.2** | 1 kg | plastic | 40,75 |
| | | | | | **P743.3** | 2,5 kg | plastic | 88,70 |
| **Sodium sulphate** | Alkyl and aryl halides, fatty acids, ester, aldehydes, ketones | - | 150 °C | ≥99 %, p.a., ACS, ISO, powdered, anhydrous | **8560.3** | 500 g | plastic | 25,30 |
| | | | | | **8560.1** | 1 kg | plastic | 34,95 |
| | | | | | **8560.2** | 5 kg | plastic | 143,55 |
| | | | | | **8560.5** | 25 kg | plastic | 510,65 |

For further product information and safety guidelines, refer to Chemicals A-Z.

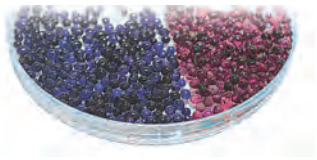
# Silica Gels

Silica gels protect moisture sensitive goods or chemicals during storage and transport. They are suitable for drying virtually all gases and solids.



**Silica gels have a broad spectrum of application in the laboratory and in technical and industrial sectors:**

- Possible applications in the laboratory are in desiccators, drying towers and in absorption tubes
- In the industrial sector they are mainly used in drying plants and with various types of packaging
- Are not suitable for drying liquids and alkaline substances

# Silica Gel Blue

Alternative product: economically priced and environmentally friendly silica gel.

- **Free of cobalt(II) chloride**
- Colour change from blue to fuchsia
- Regeneration in drying cabinet at approx. 80-100 °C for approx. 2-4 hours

## Silica gel blue

**2-4 mm, with colour inidicator, pearls**

Drying agent

Drying pearls blue; colour change from blue to fuchsia.
Silica gel with a mixture of different indicators. Free of cobalt(II) chloride.
Colour change form blue to fuchsia.

**Type analysis:**

Particle size. ..... 2-4 mm
Adsorption capacity:
20 % rel. humidity. ..... approx. 8 %
50 % rel. humidity. ..... approx. 20 %
Filled under protective gas. Change in colour from blue to fuchsia.

Regeneration at ~80-100 °C, approximately 2-4 hours.

| | | | |
|---|---|---|---|
| **2440.1** | 500 g | plastic | 17,75 € |
| Original pack 6 x 500 g | | | 16,86/500 g |
| **2440.2** | 1 kg | plastic | 27,45 € |
| Original pack 6 x 1 kg | | | 26,08/1 kg |
| **2440.3** | 2,5 kg | plastic | 54,75 € |
| **2440.4** | 10 kg | plastic | 181,70 € |

# Silica Gel Orange

The environmentally friendly, alternative product to blue gel, used in the past.

**Properties:**

- Total adsorption capacity is similar to blue gel (Silica Gel Blue)
- Large surface (approx. 750 $m^2/g$), enables high absorption capacity of steam
- Adsorption capacity: approx. 40 wt% at 80 % relative humidity
- Patented humidity indicator - **heavy metal free**
- **Colour change from orange to colourless at approx. 6 wt% load**

## Silica gel orange

**2-5 mm, with colour indicator, pearls**

Drying agent

Drying pearls orange; colour change from orange to colourless.

**Type analysis:**

Particle size. ..... 2-5 mm
BET-surface. ..... approx. 750 $m^2/g$
Adsorptive capacity:
10 % rel. humidity. ..... approx. 6,5 weight %
80 % rel. humidity. ..... approx. 42 weight %
Filled under protective gas. Colour change from orange to colourless at approx. 6 weight-% load. Regeneration at 130 °C, approx. 4 hours.

| | | | |
|---|---|---|---|
| **P077.4** | 500 g | plastic | 25,30 € |
| Original pack 6 x 500 g | | | 24,04/500 g |
| **P077.1** | 1 kg | plastic | 38,20 € |
| Original pack 6 x 1 kg | | | 36,29/1 kg |
| **P077.2** | 2,5 kg | plastic | 74,10 € |
| **P077.3** | 10 kg | plastic | 224,70 € |

# Desiccant Sachets

Desiccant sachets protect valuable and sensitive goods against dampness.

**Properties:**
- Manufactured from white long fiber paper
- Filling: Silica Gel Orange (colour change from orange to colourless at 15-20 wt% shows the degree of saturation of the sachet)
- The different sized bags and different volumes enable multi-purpose application.

**Application:**
Used in packaging for storage and transport to protect sensitive electronic instruments, equipment, machine parts, chemical products and goods against dampness.

**Regeneration:**
Is not possible for the desiccant bags, as the long fiber paper is not temperature-stable.

## Desiccant sachet Silica gel orange

**10 g (4x9 cm), with indicator**

**Type analysis:**
Adsorption capacity:
20 % rel. humidity. ..... approx. 10 %
40 % rel. humidity. ..... approx. 19 %
50 % rel. humidity. ..... approx. 23 %
Colour change from orange to colourless. Regeneration is not possible.

| Packaging | Art. No. | Pack Qty. | € |
|---|---|---|---|
| 10 g (4 x 9 cm) | **N077.2** | 75 pieces/box | 32,15 |
| 25 g (10 x 10 cm) | **N078.1** | 30 pieces/box | 27,45 |
| 50 g (9 x 12 cm) | **N079.1** | 20 pieces/box | 38,60 |

# Silica Gel without colour indicator

- Non toxic
- Regeneration at 130-150 °C; approx. 4 hours
- Easy to handle
- Can be mixed with Silica Gel Orange/Blue
- Straightforward disposal

Drying Agent
Silica Gel
$SiO_2$

## Silica gel industry grade

**pearls, without indicator**

Universal drying agent, drying of buildings.

**Suitable, for example, for:**
- drying buildings
- drying carpets and furniture
- and much more

**Application:**
- distributing approx. 6-8 kg/m². Caution! Standing water must be removed beforehand
- keep windows and doors closed. Turn off heating!
- depending on moisture level, the dry pearls can be removed after approx. 1-10 days
- checking for water absorption: dry 1 kg of moist product in oven for approx. 4 hours at 130-150 °C and weigh subsequently. If the weight difference (=water absorption) is approx. 360 g, the product should be replaced

**Type analysis:**
Appearance. ..... pearls, colourless to brown
Particle size. ..... 1-2,3 mm
BET-surface. ..... approx. 750 m²/g
Adsorption capacity:
10 % rel. humidity. ..... approx. 6 weight %
80 % rel. humidity. ..... approx. 45 weight %
Regeneration at 130-150 °C.

| | | | |
|---|---|---|---|
| **CN70.1** | 1 kg | plastic | 39,25 € |
| Original pack 6 x 1 kg | | | 37,29/1 kg |
| **CN70.2** | 5 kg | plastic | 142,45 € |
| **CN70.3** | 10 kg | plastic | 256,95 € |
| **CN70.4** | 25 kg | plastic | 590,20 € |

## Silica gel white

**0,5-1 mm, granules**

**Type analysis:**
Bulk density. ..... 650-770 g/l
Absorption capacity:
10 % rel. humidity. ..... ≥5 weight %
80 % rel. humidity. ..... ≥28 weight %
Regeneration at ~130 °C, approximately 4 hours.

| | | | |
|---|---|---|---|
| **9376.1** | 1 kg | plastic | 33,25 € |

# Silica gel water resistant

**Properties:**
- water resistant
- regeneration at 130-150 °C for approx. 4 hours
- can be mixed with other Silica gels
- protects other Silica gels from liquid water

## Silica gel water resistant
**2-5 mm, bead form**

**Type analysis:**
Particle size. ..... 2-5 mm
BET-surface..... ca. 650 $m^2/g$
Absorption capacity:
10 % rel. humidity. ..... approx. 4 %
80 % rel. humidity. ..... approx. 42 %
Regeneration at 130-150 °C.

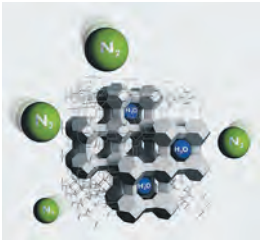
| **8109.4** | 10 kg | plastic | 223,10 € |

In order to achieve low residual water content over the silica gel, the capacity can only be utilised partially. The less silica gel is loaded with water the more intensively it dries. For example, to achieve a residual water content of 1 mg/l the loading must not be higher than 5,2 g water / 100 g silica gel.

DURAN WHEATON KIMBLE
Material DURAN®



## Desiccator sets
Made of DURAN®. Designed for use up to the maximum technically possible vacuum (0 mbar).
**Delivery without** porcelain dessicator plate. Please order separately.

① **Includes lid with knob, without connection**
For drying moist products as well as storage of moisture-sensitive substances.

# Molecular Sieves

For drying, cleaning or separating liquids and gases.

## Properties:

- Spherical metal aluminium silicates
- Spheres ∅ 1,6-2,5 mm and 2,5-5,0 mm
- Active surface: 600-700 $m^2/g$
- Activated at 500-600 °C; we nevertheless recommend activating the molecular sieve again before using it for the first time

## Typical application:

- In desiccators, drying tubes, columns
- For drying streaming gases
- For absoluting organic solvents
- For separating organic solvents

**Regenerating:**
- In drying cabinets at 200-300 °C
- Through pressure change or rinsing

**Critical molecular diameter for frequently occurring molecules, in Å (1 angstrom = $10^{-10}$ m = 0.1 nm)**

# Ion Exchanger

The ion exchanger offered in our range differ depending on their application and requirements. Three different types are available:

- **Mixed bed ion exchanger**
- **Classical cation and anion exchanger**
- **Cation and anion exchanger for analytical purposes**

**Typical applications:**
- Water treatment
- Pharmaceutical industry and biochemistry
- Production and purifying of chemicals
- Classical laboratory analysis

# Amberjet™ Mixed Bed Ion Exchanger

## Amberjet™

**mixed bed exchanger, highly pure**

Mixed bed resin made of highly regenerated strongly acidic cation exchanger and strongly basic anion exchanger. Especially suited for all demanding applications, e.g. for disposable cartridges in systems with highly purified water in the electronics industry. Manufactured by a special process allowing the production of highly purified water as far as organic impurities and others are concerned. Contains stoichiometric amounts of cation and anion exchanger capacities.

**Type analysis:**

# Dowex® Ion Exchanger

- **Anion exchanger, highly basic**
  Ion exchanger on a microporous styrene DVB copolymerisate base. Active group: quaternary ammonium compound type I
- **Cation exchanger, highly acidic**
  Matrix: polystyrene - DVB
  Active group: sulphonate

**DOWEX® Resin Properties**

| Description | DOWEX® 1 X | DOWEX® 50 WX |
|---|---|---|
| Type | Strongly basic anion exchanger | Strongly acid cation exchanger |
| Functional Group | Trimethyl ammonium | Sulphonic acid |
| Cross linkage (% DVB) | 2 or 8 | 2 or 8 |
| Ion form | $Cl^-$ | $H^+$ |
| Volume charge (%) | $Cl^-$ -> $OH^-$ + 20 % | $Na^+$ -> $H^+$ + 8 % |
| Effective working range (pH) | 0 - 14 | 0 - 14 |
| Selectivity for ions | $I^- > NO_3^- > Br^- > Cl^- >$ $Acetat^- > OH^- > F^-$ | $Ag^+ > Cs^+ > Rb^+ > K^+ >$ $NH_4^+ > Na^+ > Li^+ > Ba^{2+} >$ $Sn^{2+} > Ca^{2+} > Mg^{2+} > Be^{2+}$ |
| Total exchange capacity (eq/l) | approx. 0,6 - 1,4 | approx. 0,6 - 1,7 |
| Thermal stability | $OH^-$ form max. 50 °C $Cl^-$ form max. 150 °C | $Na^+$ form max. 120 °C $H^+$ form max. 80 °C |
| Moisture (%) | 39 - 80 | 40 - 82 |

# Ion Exchanger Roti®change

Roth's product range Roti®change contains ion exchanger, which are particularly suitable for analytical purposes. The corresponding polystyrene based resins were specially purified to reduce extractable residues to less than 1 mg/g resin.

### Cation exchange resins

Our cation exchange resins are available as 4 % and 8 % divinylbenzene (DVB) cross-linked polymers with sulphonate as active group. All cation exchange resins are provided in hydrogen ($H^+$) form.

Typical applications are: removal of ethidium bromide/propidium iodide from DNA samples; separation and preconcentration of amino acids, peptides and nucleotides; desalting (removal of cations) and separation of metal ions.

| Product | Purity | Art. No. | Pack Qty. | Packaging | € |
|---|---|---|---|---|---|

### Anion exchange resins

Our anion exchange resins are also available as 4 % and 8 % divinylbenzene (DVB) cross-linked polymers but with quaternary amines as active groups. All anion exchange resins are provided in chloride ($Cl^-$) form.

Typical applications are: exchange of anions of salts; cyclic nucleotide assays and fractionation of organic acids.

# Filtering Agents and Eluants

## Activated Charcoal

Activated charcoals are used in many areas within the chemical and pharmaceutical industry. The charcoal is available in powder or broken coal format and as extruded charcoal, depending on the application.

**Activated carbon and its application**

| Qualities of activated carbon | Art. No. | Air purification | Gas purification | Water purification | Chemical industry | Pharmaceutical industry |
|---|---|---|---|---|---|---|
| Powder carbon | X865 5963 | - | - | - | x | x |
| Carbon mould block | 0998 | x | x | - | - | - |
| Broken carbon | 5966 | - | x | x | x | - |

### Charcoal
**p.a., powder**
Adsorbent
Analytic activated carbon with extensive trace analysis.

Methylene blue adsorption (0,15 % solution). ..... ≥100 ml/g

| | | | |

| | fine, cryst., 0,4-0,8 mm | Filtration aids | **7898.1** | 2,5 kg | 20,65 |
| | | | **7898.2** | 20 kg | 61,20 |
| **Quarz wool** | chemically pure | Ideal for elementary analysis or as a final stopper in chromatography columns; filter aid. | **9208.1** | 10 g | 21,40 |
| | | | **9208.2** | 100 g | 138,70 |
| | | | **9208.3** | 250 g | 295,10 |
| **Sea sand** | p.a., purified by acid and calcinated | Filtration aids | **4309.2** | 500 g | 52,60 |
| | | | **4309.1** | 1 kg | 92,35 |
| | | | **4309.3** | 2,5 kg | 155,90 |
| | | | **4309.4** | 5 kg | 299,95 |
| | | | **4309.5** | 10 kg | 557,95 |
| | extra pure, purified by acid | Filtration aids | **8441.3** | 500 g | 28,95 |
| | | | **8441.1** | 1 kg | 46,15 |
| | | | **8441.4** | 2,5 kg | 93,45 |
| | | | **8441.2** | 5 kg | 179,45 |
| | | | **8441.5** | 10 kg | 332,20 |
| | | | **8441.6** | 25 kg | 751,45 |
| **Silicic acid** | for chromatography | Acc. to Ramsey and Patterson. | **0201.1** | 250 g | 20,65 |
| | | | **0201.2** | 1 kg | 55,80 |

For additional product data and safety information, see chapter Chemicals A-Z.

# Celite® - Silicate Basis

Prepared and standardized celite for application as a filtering aid or as carrier material in column chromatography.

**Composition:**
approx. 90 % $SiO_2$, 2-5 % $Al_2O_3$, 1-4 % $Fe_2O_3$ and various other oxides in a low concentration, that is why the Celite® may be slightly tinted.

### The complete Celite® range at a glance

| Product | Permeability (Darcy) | Art. No. | Pack Qty. | € |
|---|---|---|---|---|
| **Celite® 503** | 1,27-2,4 | **0007.1** | 2,5 kg | 52,60 |
| | | **0007.2** | 1 kg | 25,70 |
| **Celite® 512** | 0,28-0,76 | **0050.1** | 2,5 kg | 41,85 |
| | | **0050.2** | 1 kg | 22,50 |
| **Celite® 535** | 1,8-3,9 | **0009.2** | 1 kg | 19,90 |
| | | **0009.1** | 2,5 kg | 40,75 |
| **Celite® 545** | 3,5-5,5 | **0011.3** | 250 g | 11,75 |
| | | **0011.2** | 1 kg | 22,50 |
| | | **0011.1** | 2,5 kg | 32,15 |
| | | **0011.4** | 10 kg | 96,65 |
| | | **0011.5** | 25 kg | 181,70 |
| **Celite® Hyflo Super Cel®** | 0,73-1,64 | **0005.1** | 2,5 kg | 44,65 |
| | | **0005.2** | 1 kg | 24,20 |
| **Celite® Standard Super Cel®** | 0,16-0,36 | **0003.1** | 2,5 kg | 40,75 |
| | | **0003.2** | 1 kg | 21,40 |

| | | **0803.2** | 10 cm | 134,40 |
| | | **0803.3** | 25 cm | 310,70 |

- ▶ Magnesia scoops and magnesia rods see page 1687

**Flame colours of some metals**

| Metal | without glass | with glass |
|---|---|---|
| Barium (Ba) | yellow green | blue green |
| Calcium (Ca) | brick red | light green |
| Caesium (Cs) | blue | - |
| Potassium (K) | violet | crimson |
| Copper (Cu) | green | - |
| Lithium (Li) | red | - |
| Sodium (Na) | yellow | - |
| Rubidium (Rb) | violet | - |
| Strontium (Sr) | crimson | violet |

# Oxidizing melt

## Magnesia scoops

For the preparation of the oxidizing melt upon detection of chromium, manganese etc. For bead tests.
W 9 mm x l 100 mm.

| | | | |
|---|---|---|---|
| **6537.1** | 25 pieces | cardboard | 20,40 € |

## Potassium nitrate

**≥99 %, p.a., ISO**
Reagent for the oxidative disintegration of anorganic and organic samples.

$KNO_3$
M 101,11 g/mol

**Danger** H272

| | | | |
|---|---|---|---|
| **P021.1** | 500 g | plastic | 22,05 € |
| Original pack 6 x 500 g | | | 20,95/500 g |
| **P021.2** | 1 kg | plastic | 34,30 € |
| Original pack 6 x 1 kg | | | 32,59/1 kg |
| **P021.3** | 2,5 kg | plastic | 67,20 € |

## Potassium carbonate

**≥99 %, p.a., ACS**
Drying agent, disintegrating agent
Potash
$K_2CO_3$
M 138,21 g/mol

**Warning** H315-H319-H335

| | | | |
|---|---|---|---|
| **P743.1** | 500 g | plastic | 26,35 € |
| Original pack 6 x 500 g | | | 25,03/500 g |
| **P743.2** | 1 kg | plastic | 40,75 € |
| Original pack 6 x 1 kg | | | 38,71/1 kg |
| **P743.3** | 2,5 kg | plastic | 88,70 € |

# Phosphorous salt bead/ borax bead

## Magnesia rods

Ideal for flame analysis of sodium etc., for borax bead analysis of cobalt and for bead tests.
∅ 1,5 mm x l 140 mm.

| | | | |
|---|---|---|---|
| **6543.1** | 25 pieces | cardboard | 23,15 € |

## Sodium ammonium hydrogen phosphate tetrahydrate

**≥99 %, p.a.**
Reagent for Mg; phosphorus salt bead
Ammonium sodium phosphate, sec-Sodium ammonium phosphate
$NaNH_4HPO_4 \cdot 4\ H_2O$
M 209,07 g/mol

| | | | |
|---|---|---|---|
| **T882.1** | 500 g | plastic | 64,40 € |
